of Nechepso and Petosiris.¹ The literature of the magic oracles belongs to astrology as well as to magic. Another important source is the *Tabellae Devotionis*, so many of which have come to light in recent years.²

The magic papyri.—But most important of all are the magic papyri which continue to turn up from time to time in Egypt. Hubert³ gives the list of those published down to 1904; for later finds and their discussion, the reader is referred to Von Christ (*op. cit.*), L. Mitteis and U. Wilcken, *Papyruskunde* (Leipzig, 1912), the *Archiv für Papyrusforschung*, and the occasional reports in Bursian's *Jahresbericht des klassischen Altertums*.

The magic papyri belong for the most part to the period between A.D. 300 and 500. Their discovery is peculiarly fortunate in view of the fact that they belong to a type which came under the ban of the law, and which some of the later emperors, notably Diocletian, made sedulous efforts to destroy. They are not original and independent works, but merely handbooks of magic, and, as might be expected, the editorial tradition is very poor. There are often different versions of the same thing; sometimes the hymn or formula in one version will be considerably abbreviated as compared with the same hymn or formula in another version; again, certain habitual formulæ are often merely indicated. It is therefore extremely difficult to reconstruct any complete and trustworthy text of this type.

The authorities habitually quoted and the sources, so far as we can trace them, seem in some respects to bear out Pliny's statements in his account (*HN* xxx. 1 ff.) of the growth and development of magic. Pliny distinguishes three principal sources of ancient magic: (1) the Persian school, founded by Zoroaster; his 2,000,000 verses on this important subject (note the childish exaggeration characteristic of this sphere) were revealed and explained to the Greeks by Osthanes. Pythagoras, Empedocles, and Democritus belonged to this school, and also certain ancient Medes, Babylonians, and Assyrians. Democritus explained the magic books of Dardanus, which he had found in his tomb; they were written in Phoenician. (2) The second is the Jewish school, descended from Moses, Iannes, and Iotapes (*Pap. Mag.* p. 755; *Apul. de Mag.* 9; *Ex 7¹⁰⁻¹²*), and (3) the third is a Cypriote school.

It will be observed that Pliny makes no reference to the Egyptian school, which was particularly important and which, of course, is often mentioned in the papyri themselves. One of the most important authorities in magic alchemy is Maria, the Jewess, but the papyri also refer to real philosophers like Thales, Anaxagoras, Heraclitus, and Diogenes. The genuine magicians, i.e. the contemporary or recent authorities, are generally referred to under such names as Zosimus, Synesius, Olympiodorus, Pelagius, and Iamblichus. Now and then we find such curious and characteristic documents as a letter of the magician Nephotes to Psammetichus, a charm of Solomon, or a letter of Pitys, the Thessalian, to Osthanes. This gives some idea of the attitude of the Alexandrian magicians towards the tradition which they followed.

It is no longer possible to trace the Persian, druidical, and Brahmanical elements in this strange compound. Assyro-Chaldean influence must have been strong, but it appears to have been indirect. Jewish influence, on the contrary, was both strong and direct, the magic papyri being strongly affected by Judaism. Jewish magicians were in evidence,

¹ See W. von Christ, *Gesch. der griech. Literatur*, Munich, 1903, § 820, for editions, etc.

² See esp. W. S. Fox, 'The Johns Hopkins *Tabellae Devotionis*,' *A.J.P.* Suppl. to vol. xxxiii. [1912] and references.

³ *Op. cit.* p. 1508 ff.

and they doubtless encouraged the impression that they were the only depositories of the genuine tradition of real magic. But, as Hubert remarks,¹ they brought no organized system to bear upon the Græco-Roman type, but merely introduced certain powerful elements of magic. Especially important here was the Bible, which was presented in Egyptian by way of the Hermetic tradition, after being translated from Greek, and furnished part of the more or less peculiar mythology of magic at this time. Their god, as we should expect, is frequently mentioned in incantations, especially the different forms of his name (Aoth, Abaoth, Arbathiao, Abriao, Adonai, etc.). Especially frequent, too, are the names of Moses, Abraham, Jacob, Solomon, and the various archangels. F. G. Kenyon² has explained 'Abraxas' as a corruption of the Hebrew benediction *hab-brākhāh dābh-rāh*, 'pronounce the blessing,' which still survives in the magic of modern times as the familiar 'abracadabra.' Hebrew words more or less corrupted are frequently in the papyri, and Christian influence is also evident; it followed in the wake of Judaism, and, though naturally not so strong, is of the same general type.

But one of the most remarkable contributions of all is that of Egypt, as we might expect of a country so ancient, so full of pretentious wisdom, with a language so utterly strange, and an alphabet which to the ordinary outsider seemed so hopelessly complicated and mysterious. The last two qualifications alone—both sovereign for charms—are enough to establish the reputation of any country as a land of magic and magicians. It may be observed, however, that, unlike the Jews, the Egyptians contributed a complete, organized system of magic to the combination. The fact that, as we learn from the *Book of the Dead*,³ a magician could be prosecuted shows that the old Egyptians had long since separated magic from religion by the familiar criterion of official recognition. So far as the Greeks and Romans are concerned, the great name here is Hermes Trismegistus. He is not only the principal vehicle and interpreter of Egyptian magic, but, as we have seen, the Hermetic tradition is quite as powerful in the articulate presentation of the Hebrew contributions.

All these foreign influences on the theory and practice of Græco-Roman magic of this later period are more or less clearly traceable in the magic papyri. But it is to be observed that they are never clearly differentiated. Isis, e.g., reveals the wonderful art of magic to Horus. This is all well enough; Horus was one of the family. But Isis learned all her magic from one of the Hebrew archangels. It is equally surprising to see Sabaoth approached with Greek rites. Often special efficacy is gained by issuing a sort of general call to all the pantheon or—which, thanks to the doctrine of sympathy, amounts to the same thing—by adding to one god the names of the most revered gods in a number of nationalities. Magic naturally turns to the foreign religions. It also believes that the plural is more redoubtable than the singular. Hence the more or less chaotic pantheon of magic, especially in its more advanced stages, the symptomatic tendency to multiplication and mixture for purposes of power, which reflects to a certain extent the fact that magic is an outlaw, that it is not subject to official control, and that it has no assured position in the body politic.

V. *THEORY OF MAGIC*.—The procedures of magic, especially of magic so highly developed as was that of Greece and Rome, are, at first sight, bewilderingly complex. But the main ideas, the essential principles from which they all derive and upon which they

¹ *Op. cit.* p. 1513.

² *Greek Papyri in the Brit. Museum*, London, 1893 ff., I. 68.

³ ed. E. A. W. Budge, London, 1899, p. cli.

are all founded, are simple, universal, and eternal. The fundamental purpose of magic is to compel by supernatural means; the primary object and supposed result of every charm is some form of constraint. Possession or obsession (*κατοχός*) is a constraint, any form of metamorphosis (such, *e.g.*, as lycanthropy) is a constraint, *fascinatio* in all its numerous forms is a constraint. The ancients habitually associate the processes of magic with the ideas of binding, tying up, nailing down, and their opposites. A magic act is a *κατάδεσμος*, a *κατάδεσις*, a *defixio*, a *devinctio*; the removal of its effect is an *ἀνάλυσις*, a *solutio*, and the corresponding verbs are, *e.g.*, *καταδέω*, *defigo*, *λύνω*, *solvo*. The language of charms and the details of ritual are largely suggested and guided by some form of this fundamental idea. One sees it most clearly in such symbolic acts as the tying of knots, the driving of nails, and the binding of images.

The object of every magic act is to put beings or things into or take them out of a state in which certain movements, certain changes, certain phenomena must infallibly ensue. A character or condition is either produced or suppressed, a spell is either imposed or removed.¹

1. The doctrine of sympathy.—One of the great fundamental principles of magic art is the doctrine of sympathy; but, while the doctrine of sympathy explains much, it should not be forced to explain all. This would be expecting too much of such a phenomenon as magic, in spite of the fact that its deductions are, in their way, so amazingly logical. It is also true that magic is supposed to work in two different ways; it either reaches its object independently and directly and acts at once, as it were, automatically, or—and this was the prevailing theory of the Greeks and Romans—it reaches its object indirectly through the agency of some intervening power to whom its behests are addressed and by whom they are executed. The distinction is important and enlightening; but here, again, we must not apply it too rigidly. There are cases in which the characteristic features of both methods are more or less traceable. We must not expect too much of the magician; he is not always a clear thinker, and he has an inveterate habit of calling all known powers to his aid, whether they happen to be logically related or not.

The doctrine of sympathy is most clearly seen in the direct method. The simplest and most common form among the Greeks and Romans is that in which the magic power possessed or acquired by a given thing works upon the desired object by contact. The virtue of the amulet (see CHARMS AND AMULETS) is shared by the person who wears it, the virtue of philtres and *φάρμακα* of any kind is appropriated by those who take them as directed. It may be observed, however, that even here, so far as the Greeks and Romans were concerned, the supernatural power had already intervened in the preparation of the given article; and the magician's characteristic method of pluralizing for power is naively illustrated by the rule that in preparing a *φάρμακον* one should combine ingredients which individually are capable of producing the desired effect. The reasoning is evident. The large use of magic of this type, *i.e.* *φάρμακela*, helps to explain the magician's particular interest in the properties of plants and simples. For a similar reason the alchemist is particularly interested in the properties of stones and gems; some of them are sovereign for certain diseases, if ground up and taken inwardly with the appropriate ceremonial. Primitive medicine is a fearsome adventure for the patient. In rare cases the *mana* inheres in the object as such, but this is generally a secondary conclusion. As a rule, the *mana* is acquired, or merely accidental. Some objects are only conductors of *mana*—which explains why they can be

used for apparently contradictory purposes. Other staple ingredients in a large number of charms—such as honey, flour, rain-water, etc.—have lost their original significance. Objects are selected according to the usual rules—some real or fancied resemblance, especially the association with some god, etc. A certain thing, *e.g.*, is yellow, therefore it is good for jaundice. Such odd names for plants as 'Jove's Beard' or 'Venus' Ears' record associations with gods, and were doubtless originally secret. The place from which an object comes is often a decisive factor: articles found in the public baths were magic. The Christians considered certain filthy animals magic because they were associated with the devil. Certain names of plants and minerals are magic because they correspond to the planets.¹ Sometimes the decision is made from etymology, true or false; the *reseda* owes its power to its name only (*HN* xxvii. 131). The virtue of lead for certain purposes is due to the fact that it is heavy or cold or indestructible, etc.

One of the most important applications of the doctrine of sympathy is the use of symbolism.² As we have already seen, symbolism is even more characteristic of magic than it is of religion. Hubert³ defines two methods. In the one, which is particularly dramatic, the person or thing upon which we wish our magic to act is represented by a substitute. The most notable example of this class is the use of clay and waxen puppets. The second consists in prefiguring the desired action and result (*Tib.* i. vi. 53 f.; *Soph. Aias*, 1175)—

e.g., apply a stone to a wart (contact and sympathy), throw the stone away (symbolism), and the wart goes with it. Or, if you have a pain in the stomach, apply the stomach of a frog to the part affected, and your pain becomes his pain, etc. (*HN* xxii. 149; *Marcellus*, xxvii. 123).

The same idea of contact and sympathy creates the familiar rule of magic homeopathy, that the cause of a given thing is also its remedy.

But, so far as magic is concerned, perhaps the most momentous deduction from the doctrine of sympathy is the rule that the part may stand for the whole, that the two are inseparably connected; the part is able to draw the whole to itself, if aided by magic. What Vergil called the *cavvix* of Aeneas had a special function and a special significance in the pretended *solutio amoris* of the unhappy Dido (*Æn.* iv. 494 ff.). Without assuming the active co-operation of this principle, we cannot appreciate the true inwardness of the most striking performances of magic in classical antiquity. If, for instance, a magician can secure bones of the dead, he has a special and powerful means of calling up the dead to whom those bones originally belonged (*Tib.* i. ii. 46)—which is one important reason why witches were so often accused of haunting the graveyards (*Hor. Sat.* i. 8; *Lucan*, vi. 530), and in primitive times the principal reason why the corpse was so carefully watched until it was safe in the grave (*Petron.* 63; *Apul. Met.* ii. 21). So, too, if we wish to reach the living, it is very important to possess a lock of their hair, the parings of their nails, a garment, or anything nearly or remotely associated with them. Nothing is more intimately and entirely part and parcel of a thing than its real name. 'Rome,' it is said (*Tib.* i. ii. 57 f., with the present writer's note; *Macrobius* iii. ix. 2; *HN* xxviii. 18, iii. 65; *Plut. Quest. Rom.* 61 [p. 279 A]; *Serv. on Æn.* i. 277; *Solinus*, 1; *Lydus, de Mens.* iv. 73), is only the *alias* of the great city with world dominion. The true name, *i.e.* the name which would have enabled her enemies to conjure against her with magic, was a religious secret. So the clay or waxen image may be comparatively harmless until it has been

¹ Dieterich, p. 171 ff.

³ *Op. cit.* p. 1507.

¹ Hubert, *op. cit.* p. 1506.

ceremonially named with the true name of the person whom it is meant to represent.¹

Names are not the only words which are an integral part of the things which they represent. A similar relation exists between the verb, or the sentence, and the action described by it. Hence, of course, the theory of incantation as opposed to that of prayer in the modern sense. From this point of view the lines of Euripides (*Hippol.* 478 f.),

εἰσὶν δ' ἐπὶ φάσι καὶ λόγοι θελκτικῶν
φανήσεται τι τῆσδε φάρμακον νόσου,

echoed by Horace (*Epist.* I. i. 34 f.) in
'Sunt verba et voces quibus hunc lenire dolorem
Possis et magnam morbi deponere partem,'

are true not only of magic theory in general, but of the Græco-Roman conception of magic in particular. Incantation is rarely, if ever, absent from some stage of the act. The influence of the indirect method is seen even more clearly in the fact that sympathy is often created by the incantation which accompanies the act (e.g., *HN* xxvi. 93). In the exorcism of disease the incantation is often sufficient in itself. Again, a mere verbal comparison is sufficient, especially if accompanied by a gesture.

'Salvum sit quod tango!' ejaculates Trimalchio piously (*Petron.* 68), to avoid possible consequences when he touches his friend's arm to illustrate where and how the unfortunate character in his story was touched by the witch.

Given, therefore, the right words in the right order and pronounced in the right way, the desired result must ensue. But which words? Ancient formulæ connected with or naming the appropriate gods are, of course, valuable, but in many cases nothing can compare with ancient words in an utterly incomprehensible tongue. The most famous example in antiquity was the so-called *Ephesia Grammata* attributed to the Dactyli.²

But it is by no means necessary that an incantation should consist of what, even in the most general sense, could be termed articulate speech of any sort. Mere music, e.g., as such is distinctly magic. The great musicians of mythology—Amphion, Orpheus, Väinämöinen, etc.—are always magicians. We no longer attribute the power of music to magic in the literal sense, but primitive man can hardly be blamed for doing so. The ancient doctors made a considerable use of music in their practice, and we ourselves have learned that it is sometimes distinctly beneficial in certain obstinate nervous disorders of long standing.

Here, however, our particular concern is with a class of sounds which are anything but musical, but which are mentioned again in the literature of the Empire as being especially powerful and efficacious in magic incantations. Lucan, vi. 686 ff., tells us that all the sounds of nature were imitated by such an expert as Erichtho, and does not fail to add his usual and characteristic catalogue. But Lucan is too anxious to tell us all he has read in his uncle's library to be of any great value in a matter like this. Whatever they afterwards may have become, we can be sure that these phenomena were simpler and more specific, that they were probably inspired by some aspect of the doctrine of sympathy, and used for a special purpose.

The Romans habitually describe them by *stridor* and *stridere*. The sounds to which these words are applied are many, and vary from the filing of a saw to the creaking of a door and the shrilling of a locust. But they are all alike in being inarticulate, high-pitched, and disagreeable. The obvious and instructive parallel is the primitive Greek *γῆρυς*. The *γῆρυς* were specifically necromancers and, as we saw above (p. 271^b), they were supposed to have received their name from the most notable

peculiarity of their magic, viz. 'from their wailing and crying among the tombs.' So, long afterwards, in Græco-Roman times the charms described by *stridor* and *stridere* are very characteristic of *nekyomantia*. If so, and we can hardly doubt it, the inarticulate magic charms connoted by these two words should be just those described as 'wailing and crying among the tombs,' and their purpose should be to call up the dead. Such being the case, the two most common and characteristic uses of *stridor* and *stridere* outside the sphere of magic itself are illuminating. (1) One of these is that squeaking and gibbering of the dead to which the ancients so often refer:

'Ecce inter tumulos atque ossa carentia bustis Umbrarum
facies diro stridore minantur' (*Petron.* cxxii. 137); 'auribus
incertum feralis strideat umbra' (*Lucan.* vi. 628; cf. *Stat. Theb.* vii. 770; *Sil. Ital.* xiii. 600; *Claudian.* *in Ruf.* i. 126; *Ovid.* *Fasti.* v. 458; *Verg.* *Æn.* vi. 492 f.; *Hom.* *Od.* xxiv. 5; and *Hor.* *Sat.* i. viii. 40 f.).

By the doctrine, therefore, of sympathy the *stridores* of the necromancers were an imitation of the wailing and crying of the dead, and owed their efficacy to that reason. (2) *Stridor* is regularly used to describe the hoot of the *strix*, or screech-owl—that long-drawn, shuddering scream that suggests nothing so much as the wail of the banshee, the moaning of souls that can find no rest, the ominous cry of the *βαιοθάνατοι*, questing ghosts of those who died before their time (see *HECATE'S SUPPERS*). No wonder the *strix* is the most remarkable and ill-omened bird in classical folklore. Owls, disembodied spirits, or necromancers calling up those spirits—so far as the cry alone was concerned, how was one to be sure which was which? As a matter of fact, all three were more or less inextricably confused with each other, and there can be no doubt that the cry had much to do with the situation. The *strix* is associated with all sorts of witchcraft in antiquity, but especially and above all with vampirism in its various forms (see the present writer's note on *Tib.* i. v. 42). The classics are rich in examples of the type which happens to be more familiar to us, especially in the erotic sphere. The return of Protesilaus is a case in point (*Roscher, s.v.*), also the story of the Lamia (*Philostr.* *Apoll. Tyann.* iv. 25) immortalized by Keats, and the simple and touching tale told by Phlegon of Tralles (*Mirab.* 1) which is the prototype of Schiller's 'Brant von Korinth' and Gautier's 'Morte Amoureuse.'

But witches can turn owls whenever they like, and they do so regularly, when their object is some form of necromancy.

Ovid, *Amor.* i. viii. 13-18, speaking of Dipsas, the redoubtable saga with eyes of different colours ('pupula duplex'),³ says:

'Hanc ego nocturnas versam volitare per umbras
Suspicio et pluma corpus anile tegi;
Suspicio, et famast; oculis quoque pupula duplex
Fulminat et gemino lumen ab orbe micat;
Evocat antiquis proavos atavosque sepulchris
Et solidam longo carmine findit humum.'

But the ever present and most gruesome side of this idea, as of magic in general, is the sexual side. Most frequently the witch is like Pamphila in Apuleius (*Met.* iii. 21). She assumes the form of a *strix* to fly to her lover; she never comes to him as a human and normal woman. The fires of hell are in her eyes, the fires of hell are in her veins, the taste of blood and death is on her lips. She is the erotic vampire—the *succuba*, as she was called in the Middle Ages—who haunts her victim in his dreams and little by little draws to herself the very marrow in his bones. Hence it is that the Græco-Roman screech-owl, who, even at her best, as Pliny substantially says (*HN* x. 34), seems to make no effort to look or act like a well-meaning and self-respecting fowl of the air, belongs quite as

¹ E. Rohde, *Psyche*, Tübingen, 1907, p. 61; often in the *Psych.*

² See E. Kuhnert, in *Pauly-Wissowa*, v. 2771-2773, and references.

³ See K. F. Smith, in *Studies in Honor of B. L. Gildersleeve*, Baltimore, 1902, p. 287.

much to the kingdom of dreams as to the kingdom of birds. How can one be sure in any given instance whether the *strix* is a real *strix* or a witch in the form of one (Ovid, *Fusti*, vi. 141)? Indeed, as early as Plautus (*Pseud.* 820; cf. Propert. iv. v. 17) *striges* already meant 'witches' as well as 'screech-owls,' and this designation of what is evidently the Roman parallel of the old Greek *nycteis* records a popular belief which showed no tendency to diminish in later days.

2. Sources of magic power.—Our surviving testimony is insufficient to give us a very clear idea how the powers of the classical magician were defined or from what sources they were supposed to be derived. For the Egyptians, as Hubert¹ remarks, the magician was like the priest in being closely associated, if not actually identified, with the god whose power he was utilizing,² and perhaps in the ultimate issue this is everywhere the explanation of his power. Particularly notable was the development of this principle among the Alexandrian *theurgi*. Here, of course, the characteristic Græco-Roman preference for the indirect method afforded a favourable soil, but, without doubt, the chief factor was the direct influence of the Egyptian theory just mentioned.

But, granted that he does identify himself with the god, how does he compass it? Is it a gift, or does he acquire it, and, if so, how? The *theurgi* emphasized the theory that it was acquired, and the methods recommended indicate in themselves the effort to raise magic to the level of a religio-philosophical system permeated with the ideas and ceremonials characteristic of mysticism. Asceticism was recommended, but, above all, the magician must be an adept. Such persons may have a revelation coming to them more or less directly by way of the fallen angels or the archangels (Tert. *de Idol.* 9 f., *Apol.* 35). Indeed, Maria the Jewess was instructed by God Himself.³ Gods, kings, great philosophers, and sages of old loom large in this aspect of later magic. The 'Book of Moses'⁴ gives us a good idea of the complicated ceremonial through which the candidate was supposed to pass in order to arrive at the perfection desired. There were purifications, sacrificial rites, invocations, and, to crown all, a revelation of the *Kosmologia* (how the universe was made and the secrets thereof). This puts the adept in relation not with certain specific gods, as appears to have been the idea of the Egyptian prototype, but with the stars and planets, i.e. the universal powers. The magician, especially the magician-alchemist, derives his power from the acquaintance with the forces of nature. He has established *rapport* with the universe; and, as there is also *rapport* between all the parts of the universe, he has extended his power over the entire universe as a whole. This, of course, is the old doctrine of sympathy on a particularly grand and impressive scale. The result of the ceremony is that the magician, the *theurgus*, is himself no longer a man, but a god.⁵

This is a conception calculated to appeal to any man whose imagination is still in working order, but it does not emerge clearly in ordinary magic. It belongs rather to mystic magic, which was the special development of serious souls, some of them really great, who believed that this path would lead them to the undiscovered secrets of life, death, and immortality. To speak in terms of the average man and of the history of the art as a whole, the ideas which determined the powers of the magician were much the same as those which dictated the choice of a magic object or the con-

struction of a charm, and which, in fact, are fundamental in the art of magic as a whole. Generally speaking, magic is a gift and, as such, it is often due to some accident of birth or to some special privilege. In some cases it is inalienable; again, it can be outgrown or easily lost. Children, e.g., merely as such, sometimes possess it.¹ Virginity has always been considered an important condition of the power to prophesy (*Geopon.* xi. ii. 4; Plut. *de Defectu Orac.* 46).² The idea seems to be that the seeress is, as it were, married to the god and that infidelity to him is punished by loss of the power which he gave her. The entire world seems to be agreed that women, simply as women, are peculiarly gifted in this direction (Demosth. c. *Aristog.* i. 17; Aristoph. *Nubes*, 749; Lucian, *Dial. Deor.* xx. 10, *Dial. Meretric.* i. 2, iv. 4, *Bis Accus.* 21). We have already seen how important they are in the mythology of Greek magic, and this is true of all magic. They are less prominent in the magic of the mystics and their brethren, but this is itself symptomatic of the ideals and pretensions of the movement. In the genuine, traditional, immemorial magic of everyday life in Greece and Rome they never lost their importance. As a *pharmakis*, Medea was typical of her sex. The knowledge and practice of *pharmakela* as a branch of magic were always more or less confined to women.

The distant, the foreign, the strange, the unusual, even the horrible, are all important factors. 'Magic' is a primitive name for anything abnormal. Those who come from distant countries, especially if, like the Brāhmans (Philostr. *Apol.* *Tyan.* iii.), they are also the priests of strange and remote religions, are magicians. Hence, on the principle of 'omne ignotum pro magnifico,' there are distant countries in which all the inhabitants are magicians or possess the evil eye or some such uncanny gift. Any person with the evil eye is a magician; so, too, the ventriloquist (schol. Aristoph. *Vespæ*, 1014; Plato, *Soph.* 252 C; Plut. *de Defectu Orac.* 9). Anything abnormal about one's birth or pedigree is likely to give one magic powers. Persons born with a caul have the gift of prophecy. The child of incest, especially of deliberate incest, is bound to be a magician. This was harped on continually in the witch trials of the Middle Ages, but it is also prominent in ancient tradition, especially in connexion with the Magi themselves (Catullus, xc.; Xanthus, frag. 28 [*FHG* i. 43]; Sotion, *ap. Diog. Laert. proem.* 7; Strabo, p. 735). Sometimes whole peoples, clans, or families are supposed to be magicians (Herod. iv. 105);³ some—e.g., the Thibii (*HN* vii. 17)—owe it to the possession of the evil eye; others have some particular speciality.

The Ophiogenes, the Paylli, the Marsi, etc. (*ib.* xxviii. 30, vii. 13–15), can kill snakes simply by breathing on them, or can cure snake-bites merely by touching the wound with their hands. A certain family in Corinth could calm tempests (Hesych. and Suidas, s.v. *ἐνεμυροίται*), and so on. Many similar statements made by Alexandrian authors and others now lost are preserved by Pliny (*HN*, esp. bks. vii. and xxviii.).

In the majority of such cases the ability is more or less vaguely conceived of as inborn, in others it is a secret transmitted from generation to generation. But, whether inborn or imparted, magic is a secret. Indeed, initiates were sworn to secrecy in the later days among the mystics.

3. The powers invoked.—But the most characteristic feature of Greek and Roman magic is the universal prevalence of the indirect method and its influence on the development of the art. So far as Greece and Rome were concerned, the theory of demons—those spirits to whose action practically every phenomenon is due—was as characteristic of the world at large as it was of Plato and his

followers (Plut. *de Defectu Orac.* 10). Diseases were caused by specific demons, panic was caused by Pan; such figures as the Erinyes, Nemesis, Poena, Empusa, the *Μαίαι*, *Ἀνύκαι*, and *Βαρκορίβαι* are not only popular but very old. There are even demons whose only function is to execute the commands of the magic tablets deposited in the baths, and there are others who are merely *ἀνέμοιαι*, or emanations. The efficacy, e.g., of the *ἑρῆ* demands, as Hubert observes,¹ the creation of a demon or of a special god²—a curious but characteristic retention of the primitive view that nothing in this world can happen or be except by the individual exertion in every case of conscious, energizing will.

The magician may find it necessary or advisable to consider other spirits besides the specific agents of the phenomenon in question. He cannot be sure of success beforehand. He may make mistakes, and a mistake in a ceremonial is fatal. And, even if everything is correct, the ceremony may be entirely upset by something unexpected and unforeseen. In addition, therefore, to the specific energizing demon, he considers it prudent to summon to his aid such other powers as he can command. He calls on some appropriate god, e.g., to send him the necessary energizing demon, or he summons the spirit to whom the efficacy of the rite itself is due; hence the theory of the 'familiar,' the magician's own 'demoniac factotum,' which assumed such importance in the Middle Ages.

The object, therefore, of magic was to act upon and use the supernatural powers either as energizing spirits or as auxiliaries. Some of these powers occur only in the tradition of magic itself, but the large majority are common to both magic and religion. Most important here are the demons. Plato himself (Suidas, s.v. *μαγία*), as well as the average man, attributed to them the success of any magic rite.³ The magic charms of the later period are full of invocations to demons—demons of all kinds and descriptions and exercising every imaginable function, but all of varying degrees of inferiority to the great gods. In fact, as time goes on, the realm of the supernatural assumes more and more the aspect of an Oriental despotism with a thoroughly organized bureaucratic government, all in the hands of demons. There are secretaries and under-secretaries, guards, doorkeepers, messengers—a regular hierarchy of demoniac officials, whose rank and functions are established and fixed with meticulous exactness. The only private citizens in this government are the ordinary human man and the occasional person with 'influence,' i.e. the magician; and it is curious to see how soon and easily the latter assumes the methods and attitude of the influential citizen who lives under a similar government in this world. If he wishes to reach the ear of the all-highest at the other end of the line, he addresses the demon of lowest rank, the message is transmitted through the appropriate channels, and in time he gets his answer. Indeed, as in all such governments, the first demoniac underling may be so nearly human and, therefore, so much in sympathy with the magician himself as to take a really personal and lively interest in furthering the matter in hand. All this question of rank and functions was carefully discussed by Proclus and Porphyrius (*de Mysteriorum Aegyp.*), and, in fact, the prominence of it is particularly characteristic of their school and period. This school, it may be observed, made a distinction between good demons and bad demons, attributing the errors of *γογγυλα* to the latter. The demons were identified with the Jewish angels in their function of divine messengers, and even the old pagan gods, reduced to

the rank of demons, became messengers of the universal deity (Aug. *de Civ. Dei*, ix. 19), while the archangels, Michael, Gabriel, etc., take rank with the *archontes* of the Gnostics as tutelary gods of the planets (W. Anz, *TU* xv. [Leipzig, 1897] *passim*). With Christianity the old gods became demons, and all were considered evil. But magic, the conservative of conservatives, never gave them up, though all of them now without distinction were in the service of the devil.

One of the most important classes of demons connected with magic are the spirits of the dead, the *νεκρδαίμονες*, especially those who, like the *βαιοθάνατοι*, died violent deaths or otherwise before their time, or never received proper burial, and therefore cannot rest in their graves.⁴ The heroes, so to speak, have a somewhat higher social position, but they too are important in magic.⁵

A notable peculiarity of paganism as contrasted with its successor was the inability to make a sharp distinction between gods and demons. The obvious criterion would be power or disposition. Neither were trustworthy. Some demons were greater than some gods, and some gods were as unmistakably malignant as some demons were beneficent. The demons, therefore, were not the only powers to whom the magician addressed himself. The gods themselves practised magic (Apollod. i. ii. 1, iii. vi. 8); indeed, Pindar says (*Pyth.* iv. 213 ff.) that it was Aphrodite herself who taught Jason how to 'draw down the moon'; and so the magician would naturally turn to them (Apul. *de Mag.* 31). The preference is, of course, for the *di inferi*—Hades, Demeter, Persephone, Baubo, the Praxidikai, the Erinyes, Gaia, Cybele, especially those who, like Hecate, Selene, and Hermes, habitually pass back and forth between the two worlds.

The greatest of all, the goddess *par excellence* of magic and magicians throughout antiquity, is Hecate-Selene,⁶ the Dea Triformis of the cross-ways, and the queen of the ghosts, who sweeps through the night followed by her dreadful train of questing spirits. Her power is universal, but she is specially connected with the magic of love, metamorphosis, and *φάρμακα*. The most famous and dramatic incantations of antiquity are associated with her. The *lunula*, the *lune*, the *selenitis*, the redoubtable *spuma lunaris*, and the *rhombus* are only a few magic objects and properties directly associated with her. The schol. on Apoll. Rhod. iii. 478 even informs us that Circe was her daughter. At all events, Medea was her priestess, Musæus was called her son, etc. Next to her, perhaps, especially in the magic papyri, comes Hermes Chthonius, often confused with Hermes Trismegistus (Diog. Laert. *proem.* 7; Porphyry. *de Abstin.* ii. 16).⁷

But the *Κύριοι Θεοί*, the great gods, are also addressed, and not only the great gods of foreign races—which we should expect—but those of Greece and Rome. This habit, however, belongs more prominently to the babel of the later period. Here the habit of calling on a number of gods at once, or of reinforcing the name of some Greek god with the names of all the strange gods of foreign lands who are supposed to be identical with him, or of using *Ἰάω* as the name of the god of gods, or *Ἰάω*, in the feminine, to sum up, as it were, all the aspects of divinity, or of combining gods in the hermaphroditic form for the same purpose—all these are so many illustrations of the magician's inveterate habit of pluralizing for power. The result is, of course, that the divinities lose all personality and, as Hubert says, 'become mere factors of a divine total.'⁸ Nothing was left but the name, and even

this was more or less concealed or defaced in the magician's characteristic effort to get at the true name, the name of power for the now somewhat vague supernatural force which he wished to utilize. Having the name and also the image of the god, he could use the force for anything desired, it being understood, of course, that such accompanying ceremonials had been performed as were appropriate for realizing the mystic presence of the god.

4. *Rites and ceremonies.*—Thanks to this habit of pluralizing for power, of summoning from every direction all kinds of strange and, therefore, particularly irresponsible forces, a magic ceremony was even more complex than a religious ceremony. Especially notable in all ages is the number of conditions and precautions which have to be observed. This is characteristic of any cult in which the theory of incantation still survives. Under such circumstances the immediate conclusion always is that religion is a perilous pursuit. Any man who approaches gods with an invocation so worded and presented that it is a command which must be obeyed knows that he is handling an edged tool able to cut both ways. The gods resent the imperative, especially from an inferior, and will destroy him if they can. The Roman account of the death of old king Tullus shows how dangerous it was in their opinion—even in religion, much more in magic—for an amateur to start the complicated machinery of invocation. There was an old Greek saying that 'the witch who draws down the moon finally draws it down on herself.' The saying reflects the general idea, afterwards so strongly emphasized in the Middle Ages, that the magician, of all people, is foredoomed to something like the fate of Tullus Hostilius in the end. The Greek is also apt as a specific illustration. It was generally held that of all charms one of the most difficult and dangerous was 'drawing down the moon'—so dangerous, in fact, that the magician deemed it wise to arm himself in advance with a protective counter-charm against the very power whom he was about to invoke. The *Διαβολή πρὸς Σελήνην* preserved in the *Papyrus Paris*, line 3622 ff., is an interesting example of what was considered efficacious against the wrath and vengeance of *Πρόνια Σελήνη*, 'Our Lady Moon'—a suggestive forerunner of the 'magic circle' of which we hear so much in the more pretentious magic of the Middle Ages.

The magician must also observe certain rules, likewise characteristic of religion, which, to a large extent, are suggested by the nature of the powers with whom he has to deal.¹ He, or the person in whose interest the charm is being performed, or both, must be in such a condition that contact with the spirits evoked shall be without danger. Regulations vary, but among the most common are *ἀγνεία*, 'purity,' ablutions at stated intervals, anointings with oil, avoidance of certain foods (esp. fish), fasting, temporary chastity² (cf. Tib. II. i. 11 f.; the regular *secubitus* so often referred to by the elegiac poets, etc.). More rigorous and more numerous are the conditions attending the performance of the rite itself, and most important is the observance of nudity or its ceremonial equivalent.³ The costume must be flowing, i.e. without knots or fastenings of any kind, or it must be coarse, or of linen, and in the last case, either white or white with purple streamers (the ceremonial significance of colours has already been referred to).⁴ Having gone through the preliminary purifications and donned the appropriate raiment, the operator must then consider the attitude to assume. This

is vital. In most cases there are gestures which cannot be omitted.¹ Equally important is the magician's own state of mind. He must have faith, he must put all his soul into the accomplishment of the rite (Gargilius Martialis, 19).

The time at which the rite should be performed is also very important. This is largely determined by the habits and associations of the god to be addressed, and is an immediate deduction from the law of sympathy. For magic in general, but in particular for all magic connected with Selene-Hecate, sunset and the few minutes just before sunrise are very favourable; so, too, any phase of the moon, but, above all, the new and full moon. The stars and planets for the most part became important only after astrology gave greater precision to the sort of influence supposed to be exerted by each. As a matter of course, night is a better time than day.²

The place is quite as important as the time, and the choice of it is again a direct deduction from the law of sympathy, as regards either the god to be addressed or the person to be affected. Roads, streets, boundaries, and the threshold are all sacred in both magic and religion. The cross-roads suggest Hecate, the graveyard *nekromantia*. Both are favourite spots so far as the magician is concerned.

Finally, as we have just seen, there are ceremonies which the operator does not venture to perform unless he is armed with some sort of protective charm against the god whom he is addressing, or against any one who might interrupt the ceremony, or against the effect of possible counter-charms.

The best and clearest description of the ceremony, properly speaking, is given by Hubert.³ It involves the use of two kinds of rites. The purpose of the one is to accomplish the object itself of the ceremony by a logical application of the principles of magic action; the object of the other is to manufacture or, at least, to assure the presence of the actual magic power sufficient to work in the way prepared and thus to accomplish the purpose desired. In other words, to state it in terms of modern electrical science—the theory of which is curiously near to that of magic—he must construct the proper machinery and establish the proper connexions; then, before turning on the power, he must see to it that the power is really there.

The first class of rites, the machinery and connexions, calls for the use of a certain number of objects or parts which, in the end, generally come to be considered magic in themselves. One of the most common and dramatic is the magic wand, which is really a conductor of the magician's *mana*. The divining rod,⁴ though used in a different way and for a different purpose, derived its efficacy from a similar conception. The Etruscans used it in searching for hidden springs (Daremberg-Saglio, s.v. 'Aquillex'), and, as the writer of this article can testify from personal observation, as late as twenty years ago a similar method for discovering the best place in which to dig a well was still used occasionally in the American countryside. In addition to the magic wand and the divining rod, we have the apparatus of *dactylomantia* (Amm. Marc. XXIX. i. 29 ff.), the lamps in *lychnomantia*, the basins of water in *lecanomantia*, keys in their symbolic use, cymbals, the various substances referred to above, threads of different colours, portions of the dead, the *kyrē* (Pind. *Pyth.* iv. 213, and often), the famous *rhombus*, *turbo*, or *versigo*, i.e. the 'witches' wheel,' the rotation of which, by imitation and sympathy, was sovereign to influence the will of the person whom one wished to gain, etc.

² Abt, *op. cit.* p. 292 ff.

³ *Op. cit.* p. 1516 ff.

⁴ The examples of its use in classical literature are collected by E. Norden, *Jahrb. für Phil.*, Suppl. Bd. xviii. [1894] 317 ff., 319 n.

All these end by being considered magic in themselves, but, in view of what has been said, it will be seen that this idea is secondary. Their real function and purpose was to facilitate or render possible the action of magic power and, at least originally, they were chosen from that point of view.

Sometimes the ceremonial proper needs the assistance of some rite whose object is to put the person interested in a state to receive the benefit of the action desired. A case in point is the ceremonial of *incubatio*.¹ The purpose of *incubatio* is to surround a person with the appropriate conditions to secure for him the true and prophetic dream which he desires. Conditions are, as often, dictated by the law of sympathy. And, except that the nature of dreams was never quite clear to the ancients—and perhaps will never be quite clear to any one—the nameless theorists and thinkers by whom these conditions were first discovered and formulated appear to have been quite familiar with the results of J. Börner's famous dissertation afterwards incorporated and extended in W. H. Roscher's *Ephialtes: eine pathologisch-mythologische Abhandlung über die Alpträume und Alpdrücken des klassischen Altertums*, Leipzig, 1901.² Börner showed that, among other things, in a healthy person nightmare is usually due to partial suffocation caused by burying one's head in the pillow, coverlet, etc., that the rapidity with which the nightmare, the *incubus*, appears to approach the dreamer is always measured by the rate of suffocation, but, above all, that the appearance of the *incubus* itself is to a surprising extent determined by the sleeper's surroundings, especially by the material and texture of his coverings. Such being the case, though L. Laistner³ goes too far in his theory that the *Uralptraum*, the primeval nightmare, is the father of all mythology, we may at least suspect with Roscher that Pan's legs were the inevitable result of the style of bed quilts used by his primeval worshippers (cf. Latinus's method of securing an interview with Faunus in Verg. *Æn.* vii. 81 ff.), and, for that matter, that the *incubi*, *succubæ*, *striges*, and all their monstrous brood must have entered this world in the first place by the Ivory Gate. If so, it is certain that some of our most cherished legends, our best and most thrilling stories, and our finest poetry are literally the stuff that dreams are made of.

But of all magic operations none is more common and characteristic, more dramatic and impressive, or a better illustration of the doctrine of sympathy than the casting of spells (cf. Heliodorus, xi. 14, and the examples noted below). The special feature of this operation is due to the theory that, if the person whom we wish to reach with our magic is absent or far away, his place may be filled by a puppet, or some symbolical substitute for him. If, then, the ceremonial is appropriate, whatever we do to the puppet will be exactly repeated, literally or symbolically, as desired, on the person whom the puppet represents. Consecration of the one is immediately followed by consecration of the other (Verg. *Ecl.* viii. 74 f.), binding of the one by the desired condition symbolized by it in the other, running needles into the heart of the one by some effect on the other symbolized by such a process—as, e.g., wasting away to death with no apparent cause (Ovid, *Amor.* iii. vii. 29 f.; *Heroid.* vi. 21, and often). Sometimes one figure may stand for an indefinite number, as in the spells of Nectanebo (pseudo-Callisthenes, i. 1). One may cast a spell on spirits as well as mortals by this means (Eus. *Præp. Evang.* v. 12 ff.).

¹ L. Deubner's *De Incubatione*, Leipzig, 1904, is the standard work on this subject.

² *GL AJP* xlii. [1901] 283.

³ *Büchel der Sphinx*, Berlin, 1889.

Hence we have cases in which two puppets are used, one representing the person to be acted upon, the other the spirit by whom the action is to be performed (Hor. *Sat.* i. viii. 25 f.).¹ Occasionally even three figures appear to have been used (schol. Bern. on Verg. *Ecl.* viii. 75). Often they were hollow, and their power was enhanced by putting written incantations inside. As a rule, these puppets must be made of clay or wax, but occasionally other substances were just as rigorously prescribed. Eusebius (*loc. cit.*) speaks of such an image of Hecate made of pulverized lizards and the roots of rue. A sheet of metal or even of paper upon which the figure has been traced is often considered sufficient.² The value and philosophy of *exuviae* have already been mentioned. But one may use such arbitrary substitutes as the body of a bird, a sprig of myrtle or of rue, etc.³ Indeed, as we have already seen, the name is sufficient in itself. On the same principle, a written incantation placed in a tomb has the same effect as would a puppet⁴ (Apul. *Met.* i. 10, *de Mag.* 53).

The verbal portions of a magic rite are of the highest importance. In many cases they are the operator's instructions to the intervening demon in order that he may make no mistake as to the meaning and object of the symbolic rite. The puppet is inscribed with the name of the person whom it represents, and sometimes this is accompanied by a written statement of what is to happen to him. So, when one gathers a medicinal plant, one should be careful to utter the name of the patient who is to be benefited by it. Again, in constructing a *devotio*, one should specify in order each and every part in which it is desired that the proposed victim shall suffer.⁵

The indirect method is also directly responsible for the conclusion that incantations are a special help to the operator in the accomplishment of his second great task—the creation of magic power. Hence the use of the magic hymns and litanies, the object of which is to ensure the presence and active participation of the appropriate spirit, to indicate his duty, and, if necessary, to frighten him into doing it.⁶

We have seen how various objects, plants, simples, etc., originally selected as facilitating in some way magic *rapport*, finally came to be considered magic in themselves. Names and incantations underwent precisely the same secondary development. From being a means to an end they became magic *per se*. The further conclusion was then drawn that their power might be indefinitely increased by frequent repetition, by lengthening certain syllables to an extraordinary extent, by abstracting certain syllables and decorating them with affixes and suffixes, by rearranging them in different combinations, and especially by disposing them so as to form certain figures.⁷ Examples still surviving are 'abracadabra,' and 'sator arepo tenet opera rotas' (see *Thesaurus Ling. Lat.*, s.v. 'Arepo'). The *Ephesia Grammata* belong to the same type (Porphyr. *de Myster.* vii. 4). Mystery and power were further enhanced by the use of magic alphabets, by certain sacred inks, and so on. Numbers pass through the same experience and acquire the same magic power *per se*—

e.g., there are seven planets. If, therefore, we wish to invoke them, there is nothing so compelling as the pronunciation of the seven vowels or a sevenfold repetition of a ceremony,

gesture, or word (Eus. *Præp. Evang.* v. 14). Odd numbers have always been significant (Verg. *Ecl.* viii. 76, and often), three and multiples of three are sacred to Hecate, and certain special numbers like four, ninety-nine, etc., have a special importance.

In magic as in religion the object of sacrificial rites is to ensure the actual presence of the gods invoked. And here again the indirect method suggests that these rites are of material assistance to the operator in acquiring the desired power (Theocr. ii. 3, 10, 159). In the choice of what shall be sacrificed in any given instance the usage of magic as a rule does not differ materially from that of religion. This, of course, is quite natural. As a rule, the gods addressed are common to both and of equal importance in both; in fact, it is perhaps safe to guess that, so far as sacrifice is concerned, the usage of magic and religion is a common inheritance. For example, the notable preference of magic for black victims is not distinctive of magic. It simply means that, in accordance with the naive analogy set forth, for instance, in the old hexameter quoted by Eusebius (*Præp. Evang.* iv. 9)—

ταῖς δὲ μὲν οὐρανίοις, χθονίοις δ' ἐναλγέκτα χροῖσι,
'dark victims to the powers of darkness, light to the powers of light—

the gods to whom magic habitually addresses itself are the gods of the under world. So wine, honey, milk, perfumes, meal (Theocr. ii. 18, 33), certain cakes dear to these same gods, a cock to Hermes, a white dove to Aphrodite, etc.—all common to both religion and magic—are frequently employed. The use of blood is defined by Hubert as a sacrificial rite; it is at any rate—as in Sallust's account of the oath administered by Catiline to his fellow-conspirators—a striking illustration of the law of sympathy (Lucan, vi. 544). The sacrifice of human beings, especially of little children, even of the unborn babe torn from its mother, is a standing charge against magic in all ages (Hor. *Epod.* v.; Philostr. *Apoll. Tyan.* viii. 5),² and, for that matter, against any heretical sect with secret rites. The Christians in their time were charged with such abnormalities as infant-sacrifice and promiscuous incest at their meetings—precisely the same charges which, a millennium later, they themselves preferred with wearisome regularity during their long persecution of witchcraft, especially in connexion with the 'witches' Sabbath.' In most cases the charge of human sacrifice is as conventional as it is untrue; but it would be unsafe to deny it *in toto*. We can hardly expect such an outlaw, such a striver for extraordinary effects, as magic to abstain altogether from what was quite regular in the religion of more than one savage race, and which—in accordance with the familiar theory that extraordinary occasions demand extraordinary sacrifices—has been known to occur more than once at some grave crisis in the religious life of nations which, comparatively speaking, occupied a much higher plane of civilization. Finally, it may be noted that, as was the case with the incantations, names of the gods, etc., mentioned above, the things sacrificed, whatever they were, soon passed into the secondary stage of being considered magic *per se*.

One important aspect of our ceremony—quite as important in religion as it was in magic—remains to be considered. As we have seen, the operator must be careful to follow certain prescribed rules in order to get into the necessary and intimate spiritual relation with the gods whom he is addressing, and, therefore, with the sacrifice which he is conducting. The relation is abnormal and distinctly perilous. To get out of it safely is,

therefore, quite as important as to get into it safely; prescribed rules are as necessary for the one as for the other. The object of these rules is to end the ceremony, to limit the effects of it so far as the operator is concerned, to make it safe and possible for him to return to the conditions of everyday life. Above all, the remains of the sacrifice, unless he wishes to preserve them to produce some lasting effect (as, e.g., in a *devotio*), must be disposed of ceremonially. One may deposit them at some prescribed spot sacred to the god to whom the sacrifice itself was offered. The *καθάρματα*, for instance, the ceremonial remains of the sacrifice to Hecate (see *HECATE'S SUPPERS*), were deposited at the cross-ways. The more usual method was to eliminate them ceremonially by burning them, burying them, or throwing them into running water or the sea (Verg. *Ecl.* viii. 102, with the notes of Conington and Forbiger). The *Μαυρεία Κρονική* (*Pap. Paris.* 3095) shows that, at least in some cases, the ceremony closed with a prayer to the god in which he was invited kindly but firmly to go back to where he belonged:

Ἀπέλθε, δέσποτα, κόσμου προπατήρ, καὶ χώρησον εἰς τοὺς ἰδίους τόπους, ἵνα συντηρήῃ τὸ πᾶν. Ἰλαεὺς ἡμῖν, κύριε.

It will be seen, therefore, as Hubert observes,¹ that among the Greeks and Romans the standard ceremony of magic and the standard ceremony of religion, so far as their essential elements were concerned, were practically the same, even to the point of using the same names for these elements. Furthermore, with some comparatively slight exceptions, the gods of magic are equally important in religion, and, on the whole, they are treated with the same reverence. As we have seen, some of the abnormalities of magic are just as characteristic of religion, and they are generally due to the fact that, at the time when these abnormalities occur, both are specially concerned with the infernal gods. The worship of these gods, whether in religion or in magic, is visibly influenced by the universal idea that the under world is the reverse of ours. It is dark, silent, barren, loveless, childless, eventless, stationary—a complete contrast to the world above, a contrast regularly symbolized in rituals to the dead and their gods by such things as the use of the left hand instead of the right. It is, no doubt, this ancient idea of reversed conditions in Hades that suggested the most striking feature of the famous 'Black Mass' as practised by the early Christian magicians (Iren. *Hær.* i. xiii. 2). The normal 'White Mass' is addressed to heaven; if we reverse it, i.e. if we read it backwards, we address it to hell. But the Christian magician, in so far as he was a Christian, was bound to assume that his Black Mass was a wicked and impious rite. Hence the inevitable deduction was soon established that, the more wicked and impious magic could be, the greater and more terrible its power. For the magician of Græco-Roman paganism there seems to have been no such parodying of religious rites—above all, no such deliberate and malignant desecration of things considered divine as that of which we hear so much in mediæval magic and which appeared again in the modern cult of Satanism (*q.v.*), as described some years since by Jules Bois,³ and as utilized for purposes of fiction by J. K. Huysmans.⁴

Summary.—In so far as there was any real and essential difference between magic and religion in Græco-Roman paganism, the ultimate cause of it was largely, if not entirely, the steady maintenance of the ancient distinction of official recognition as defined and explained at the beginning of

¹ K. Kircher, 'Die sakrale Bedeutung des Weines im Altertum,' in *RFFV* viii. [1910].

this article. It is the business of magic, as long as it remains magic, to speak only in the imperative. It must, therefore, retain and emphasize those primitive doctrines—notably the doctrine of sympathy in all its forms—which are supposed to enable it to use the imperative successfully in addressing the gods. It is also the business of magic, partly because it is an outlaw and bound to assert its importance in order to live, to promise extraordinary, if not impossible, things—among them, things which the social and legal restraints of religion would not allow it to promise. In the course of its long and exceptionally brilliant history classical magic promises practically everything from a cure for warts to a receipt for personal immortality—all tried and true. Magic, therefore, was obliged not only to retain but to develop in every possible way those primitive aids to its imperative. It pluralized for power. And religion had done the same. But magic was an outlaw, it had no position in society, it was free to range at will, to gather into one portentous plural strange and terrible gods from the four corners of the earth, to combine them with the native gods, to re-arrange, re-interpret, disguise, mutilate, etc., in the ways described. In the long run, as we have seen, the pantheon of Græco-Roman magic was a pandemonium, and confusion worse confounded, in which the only relating principle seems to be the fact that the doctrine of sympathy in all its forms has been pushed to its uttermost limits.

To the very end magic was obsessed by the old imperative and, therefore, by the time-honoured means for securing it. When it rose in the social scale, it merely learned to be pretentious. Even when it had been adopted, so to speak, by some distinguished family like the mystics, had changed its name, and had been carefully educated and refined, it was still haunted by the old ideas, and generally ended by infecting with them its benefactors and teachers.

The same may be said of the contemporary development of popular magic. Our great authority here is the magic papyri. They all come from Egypt and are much affected by local influences; but, among other things, they show that, under the circumstances, the old rule of official recognition was eminently wise. In the civilization of Greece and Rome magic was given a rare, a unique, opportunity to make the most of itself. But, whether it improved the opportunity or not, the final result, as we see it in the papyri, is a striking illustration of its besetting sins. If it had clung to the native gods, as religion was forced to do, it is conceivable that, even with the heavy handicap of the imperative and its attendant vices, magic might have risen to comparative respectability. But its weaknesses were encouraged rather than checked. By the 2nd cent. the number of strange religions available, not to mention the semi-detached religious theories, had increased to an indefinite extent. The result was that from being a thing which, at least, could appeal to the imagination and the æsthetic sense, it steadily degenerated into utter absurdity as pretentious and complicated as it was dreary and commonplace.

But, fortunately for us, Græco-Roman magic in its best days was the familiar possession of all classes in a highly intellectual and highly imaginative people. Men of Ovid's calibre and training may not have believed in it to any extent, but there never was a time when magic as such became unfamiliar to any one. Even the major operations of magic were always being performed somewhere, and, as we have seen, the charge of magic was always kept alive in the courts. Hermione was far from being the only jealous woman to soothe her wounded pride by accusing her successful rival

of resorting to philtres. The charge was quite as characteristic of the Augustan age as it could ever have been of Homer's time (Tib. i. v. 41; Propert. iv. vii. 72). Nor was the charge by any means always unfounded. *Pocula amatoria* were a regular specialty of the *lena*, or go-between, and they actually were so frequently administered that the average man generally assumed that they were responsible for certain lingering diseases, especially certain mental or nervous abnormalities, for which he could see no apparent cause. Examples in point are the traditional account of the death of Lucretius and the contemporary explanation of the vagaries and perversions of Caligula's tempestuous brain (Jerome, *Chron. Euseb.*, 1924; Sueton. *Calig.* 50).

VI. *MAGIC IN LITERATURE*.—The more or less familiar presence of magic not only in folklore and legend, but also in ordinary everyday life, is reflected to an extraordinary extent in the written word. It is continually turning up in the arts, sciences, and professions, in law, religion, and philosophical discussion, in history, anecdote, and any other record of everyday life past or present. All this, however, is characteristic of any people among whom magic still survives as an active force, and it appeals for the most part only to such persons as the special investigator and the historian of manners and customs. But the most characteristic and interesting aspect of Græco-Roman magic is the deliberate exploitation of it in the interests of conscious literary art. One is inclined to assume, and perhaps justly, that this was particularly notable of such periods as the Hellenistic age, the time of Augustus and his immediate successors, and the Sophistic revival of the 2nd century. This use of magic was especially characteristic of poetry and of such types of prose as that of the highly rhetorical and semi-Romantic historians of the Alexandrian age, the Paradoxographers, the writers of *novelle* and tales of marvel, even the practice debates of the rhetorical schools, and, in later times, the throng of professional declaimers for whom those schools were ultimately responsible. But this aspect of classical magic is far from being a matter merely of period and department. On the contrary, nothing is more characteristic of it than the extent and variety, as well as the unbroken continuity, of its use in practically every department of artistic literature. No one could be more thoroughly alive to its æsthetic possibilities than was Homer himself, and he created a tradition of its literary use which not even the semi-Oriental and unutterably dreary fooleries of the papyri were able entirely to destroy.

In an article like this it is impossible as well as inadvisable to attempt a thoroughgoing investigation of the debt of creative literature to magic in antiquity. We must content ourselves with a passing reference to a few of those magic operations which are most frequently mentioned, and which by reason of their dramatic possibilities are best suited to the purposes of literary art.

One of the most notable of these is *nekyomantia*, calling up the dead to ask them questions. *Nekyomantia* is rarely absent from that catalogue of magic feats with which so many of the Roman poets seem impelled to supply us (Tib. i. ii. 42, and note). They also mention even more frequently three other feats which are particularly awesome, but for which the modern reader, at least, can see no adequate reason until it dawns upon him that they are merely a useful, though by no means necessary, preparation for *nekyomantia*. These are producing earthquakes, splitting the ground, and making the rivers either stand still or run backwards. The magician uses his earthquake to split the ground; the behaviour of the rivers is

merely a consequence of the quake. He splits the ground so that the ghosts can hear his incantation (i.e. be reached and affected by it) and then can come straight up to him from Hades (Sen. *Edip.* 571; Lucan, vi. 728). As we have seen, the literary use of *nekyomantia* begins with the famous passage of the *Odyssey* (xi. 24 ff.). The essential details of the ceremonial as Homer describes it were always the same not only in literary tradition but in actual life. Doubtless, Lucan felt that his own long and lurid description of Erichtho's special performance for the benefit of Sextus Pompeius before the battle of Thapsus (vi. 728 ff.) was the masterpiece of its kind. And so it is. It would be hard to find a more glaring illustration of what can happen to literature in an age when a furious lust for effect is not restrained by any principles of rhetorical self-control or common sense. *Nekyomantia* had a long and brilliant tradition in the drama. Examples still surviving are Aeschylus, *Persæ* (the ghost of Darius), and Seneca, *Edipus*, 560 ff. Indeed, ghosts were as common, it would appear, in the ancient as in the Elizabethan drama. *Κλίμακες Χαρονείας*, 'Charon's step-ladder,' was the popular name for the regular staircase by which the ghosts appeared on the stage as if from the world below. *Nekyomantia* was also quite a characteristic of comedy. In the later days of the Roman Republic Decimus Laberius wrote a mime entitled *Nekyomantia*, and we know that this and similar themes were characteristic of the mime as developed by Philistion and his immediate successors during and after the Augustan age. Brilliant examples in the satirical sphere are Horace, *Sat.* i. viii., and Lucian's *Nekyomantia*.

If we choose to emphasize the literary influence as such of the Homeric *Nekyia*, we can say that it is responsible for one of the most notable developments in classical literature. This is the theme of the Descent into Hades. The Homeric passage is directly responsible for the 6th book of the *Aeneid* and its numerous echoes in epic and narrative poetry both ancient and modern. Nor was epic the only department to be affected. The theme was a favourite in the Old Comedy of Athens, although, as it happens, the *Frogs* of Aristophanes is the only example now surviving. The same is true of the satirists and popular philosophers of the Alexandrian and Hellenistic ages. It was characteristic of their didactic methods to appropriate for their own purposes the traditional forms and themes of literary art, and one of the most notable was the *Kardáparis eis Aïdov*, which practically became conventionalized as a *miss-en-scène* for the presentation of doctrines and opinions. Allied to it are such examples as Horace, *Sat.* ii. v., Seneca, *Apocolocyntosis*, such works of Lucian as the *Dialogues of the Dead*, and Claudian's attacks on Eutropius. The *Epicharmus* of Ennius and probably certain of the lost satires of Lucilius and Varro were illustrations. The poet Sotades used it to a notable extent.

But, while *nekyomantia* is the most prominent and pervasive aspect of literary magic, the most famous and picturesque was the love-charm known as 'drawing down the moon.'¹ It is first mentioned in surviving literature by Aristophanes, *Nubes*, 750, again and again by later writers, and still survives, it is said, in modern Greece. It was the theme of no fewer than four masterpieces: a lost mime of Sophron in the time of Xerxes, the lost *Thetalle* of Menander (*HN* xxx. 7), the second *Idyl* of Theocritus (founded on Sophron), and the eighth *Eclogue* of Vergil (founded on Theocritus). Certainly, too, Lucian, *Philopseudes*, 14 ff., is a

¹ W. H. Roscher, *Selene und Verwandtes*, Leipzig, 1903, with a plate reproducing a vase-painting of the process; M. Sutherland, in *Studies in Honor of B. L. Gildersleeve*, p. 315.

masterpiece of its kind. The atmosphere reflects to the life that aspect of the 2nd cent. which suggests the modern *milieu* in which theosophy, spiritualism, and kindred ideas are wont to grow luxuriantly.

In this passage of Lucian we have the 'Professor's' story of how his disciple, Glaukias, was saved by the great 'Hyperborean' magician. It seems that Glaukias, a rich young orphan whose father had been dead about a year, fell fairly ill with love for the disdainful Chrysis—a genuine prototype of Jeany Grove and cruel Barbara Allen. His condition became so serious that the 'Professor,' as he says, 'felt it his duty' to secure the services of the great Hyperborean. Four minae had to be paid in advance—to supply the necessary sacrifices—and sixteen more if the operation was successful. By way of preliminary—which showed that the specialist was not only a great man but also a just and scrupulously conscientious man—he insisted on having an elaborate rite of *nekyomantia*, to call up the boy's late lamented father and ask his consent. The old gentleman was furious at first, but finally told them to proceed. A dramatic description of the ensuing ceremony follows—how the moon came down, how Hecate came up, how the ghosts flocked around, how, at the psychological moment, the distinguished operator 'told the sort of little Anne of Cleopatra which he had fashioned out of clay to go and fetch Chrysis.' Away flew the tiny thing at once. A few minutes later there comes a knock on Glaukias's door, in rushes Chrysis, throws her arms around him, *ὡς ἂν ἰμμαντότατα ἔρωτα* ('like a girl utterly crazy with love'), and there she stays till cockcrow! Then up rose the moon to heaven, down sank Hecate to Hades, and all the ghosts disappeared.

But the 'Professor's' listener is not duly impressed. Besides, he knows the girl. He doesn't see the use, he says, of calling on one Hyperborean magician, one goddess, and one clay ambassador to unite in overcoming the disdain of a girl who, as every one knows, is ready to follow a man to the North Pole and beyond for twenty drachmae.

Such books as the *Metamorphoses* of Ovid and the lost poem of the same name by his predecessor, Nicander, show that change of form was quite as characteristic of classical mythology and folklore as of the *Thousand and One Nights*. Transformation was Circe's specialty, and the Homeric account of her methods (*Od.* x. 212 ff.) has always remained the most famous literary account of the performance. Apart from the Homeric passage, the most vivid and circumstantial accounts of transformation by magic are those in which Apuleius (*Met.* iii. 21 ff.) and Lucian (*Asinus* [the common source of both was the lost romance of Lucius of Patras]) tell how the witch, Pamphile, made an owl of herself, and how, immediately afterwards, Fotis, her maid, made an ass of Lucius. But, as a rule, magic as such is not prominent in metamorphosis as a literary theme. This is, of course, quite natural; for in this particular feat the dramatic point is the transformation scene, and all else is likely to be subordinated, even in those cases where the transformation is confessedly due to magic. Vergil's sorceress, e.g., says that she has seen the werewolf transformation with her own eyes and that it was done by magic:

'Has herbas atque hæc Ponto mihi lecta venena
Ipse dedit Moeris (nascuntur plurima Ponto);
His ego sæpe lupum fieri et se condere silvis
Moerim' (*Ecl.* viii. 95 ff.).

But in all the famous werewolf stories of antiquity,¹ as in most of the stories told by Ovid, the magic element is either absent, ignored, or referred to so slightly that it calls for no special notice here. Magic command of the wind and weather is often mentioned, and nothing in the way of magic was more common in everyday life, but the one famous passage is that in which Æolus gives the bag of winds to Odysseus (*Od.* x. 19 ff.). Also unique—and terrible—is the spell of the evil eye cast by Medea upon the giant Talus (Apoll. Rhod. iv. 1652 ff.). Ovid (*Met.* vii. 160 ff.) gives a full and dramatic description of her charm for renewing the youth of Jason's father, Æson. More famous was her pretence of doing the same favour for the aged Pallas at the instance of his daughters (Apollod. i. ix. 27; Hygin. *Fab.* 24; Macrobi. v. xix. 9 f.). This was the theme of the lost *Περφόρου* 1 J. Heckenbach, op. cit. p. 38; Kirby Flower Smith, *JAC*, 1893, *Publicat. Modern Lang. Assoc. of Amer.*, 1894.

of Sophocles. Indeed, the lost plays of the Greek tragic poets would have been a wonderful field for the study of the use of magic for literary purposes.¹

Creusa's robe was a famous theme. Euripides (*Medea*, 1156 ff.) merely described the awful effect of it upon the wearer; Seneca (*Medea*, 740 ff.), the preparation of it. Which is the more artistic and effective may easily be seen by comparison.

On the other hand, there are types of magic in which it is precisely the preliminaries, the things which witches do because they have something terrible in prospect, that are full of dramatic possibilities. This is especially true of *nekyomantia*. As we have seen, the necromancers are always eager to get mortal remains in order to be better able to call up their late owners. Striking examples are Trimalchio's story in Petron. 63, and the dramatic experience of Thelyphron as told by him after dinner in Apuleius, *Met.* ii. 21 ff. So, speaking in terms of magic theory, the dreadful scene of Horace, *Epod.* v., was only a means to an end; the object of the witches was to secure the strongest possible love-charm. The liver is the seat of desire (Hor. *Odes*, iv. i. 12); therefore the liver is sovereign in a charm to produce desire. Now, when a savage wants snake-poison for his arrows, he irritates the snake for some time before he kills it, so that it may secrete more poison and that the poison may be more virulent. So, here, the idea is that the more the liver feels desire, so much the more it actually accumulates desire, as it were, and stores it up within. If, therefore, we can secure a liver still containing a maximum of desire so accumulated, we have a charm of maximum power for arousing desire in others. Hence, in this scene, the poor child who has been kidnapped by the witches for that purpose, is buried to the neck and left to die of a prolonged agonizingly intense desire for food and drink, which is deliberately aggravated as much as possible by always keeping food and drink before his eyes. After the child was dead, his liver was removed, and, upon being prepared with the appropriate ceremonial, became a love-charm of superhuman power, a *φάρμακον* secured in a special way for a special purpose.

The gathering of herbs is another preliminary of *φάρμακα*, which was fully appreciated for its dramatic possibilities. In literature the process is regularly associated with Medea (Apoll. Rhod. iii. 843 ff.; Valer. Flaccus, vii. 323 ff.; Ovid, *Met.* vii. 224 ff.; special emphasis was probably laid on this by Sophocles in his *Πυρρόβου*). She went out at night and by the light of the full moon cut her plants with a brazen sickle² held in her left hand and behind her back, i.e. *ἀμεταστρεπτή* (see *HECATE'S SUPPERS*).

So far as philtres are concerned, the most notable contribution to literature is what might be called the case of Beauty v. Magic in the court of Love.³ Its first appearance is in the scene between Hermione and Andromache (Eur. *Androm.* 205 ff.), to which attention has already been called. The subsequent tradition of the question at issue is a striking and characteristic illustration of the methods and development of ancient literary art. The topic was announced from the stage, discussed in the boudoir, argued in the schools of philosophy, enlarged upon in the schools of rhetoric (Menander, frag. 646 K.; Afran. 378 R.; Lucret. iv. 1278 ff.; Tib. i. v. 43, viii. 23; Ovid, *Med. Fac.* 35 ff., *Ars Amandi*, i. 299 ff.). At some time in the unrecorded past it was given a new turn and made the basis of a properly illustrative and sprightly anecdote in which the appropri-

ately magnanimous mother of a great conqueror—any great conqueror will do—was in the position of Hermione, but possessed the wisdom of Andromache. In Plutarch, *Conj. præc.* 23, the position is held by the mother of Alexander; the sands of Egypt have lately disclosed the fact that in Satyrus, *loc. cit.*, it was held by the mother of Darius. Others may yet appear.

But for any one who is at all interested in the development of magic for literary purposes the *Metamorphoses* of Apuleius is a veritable treasure-house. Those who have studied this unique book generally gain the impression that its author is a past master in the art of telling a tale of magic. Two examples may be given by way of illustration.

The first (*Met.* i. 11 ff.) is told by Aristomenes, and might be called 'The Witches' Revenge.' While travelling about Thessaly a short time previously, Aristomenes ran across one Socrates, an old friend whom he had not seen for several years. The man was a monument of rage, squalor, and wretchedness; he was also in a constant state of abject terror. He had drifted into a *haison* with a famous but elderly witch named Meroe, and, in fact, had been living with her, more or less perforce, for a number of years. Now he was trying to run away. Aristomenes decided to help his friend to flee the country. He took a room at the inn, made him presentable with a bath and some clothes, the two ate a heavy dinner, accompanied by too much wine, and retired early so as to be off betimes in the morning. Aristomenes barred the doors, and for greater safety pushed up his trundle-bed against them. Socrates fell asleep at once and snored loudly, but Aristomenes lay awake for hours. At last, about the third watch, just as he had dropped off into a doze, there was a horrible noise, the doors flew open and, indeed, came to the floor with such a crash that the bed with Aristomenes still in it was turned upside down. Then in walked Meroe and her sister, Panthia, the one carrying a leathern bottle, the other a sponge and a naked sword, and gathered about Socrates, who was still plunged in his magic slumber. Aristomenes could see all this from beneath his trundle-bed and hoped he had escaped observation, but in vain. Meroe was anxious to kill him at once with the sword, but Panthia thought it better to tear him limb from limb. 'No,' said Meroe, changing her mind, 'let him live, so that, when the time comes, he may cover his friend with a little earth.' With that Socrates' head was drawn to one side, and Meroe drove the sword into his neck just behind the left collar-bone. Then she plunged her arm into the gaping wound, and plucked his heart out. Meanwhile she caught all the blood in her bottle so skilfully that not one betraying drop escaped. When this was done, Panthia pushed her sponge into the wound, with the words:

'Sponge, sponge, born o' the main,
Haste ye, haste ye back again!
When you reach the river-side,
In the water slip and slide;
Water, water, flowing fast,
Bears you onward home at last.'

Then, after heaping nameless insults on Aristomenes, the two women left the room, the doors flew back in place, the bolts shot to (a regular occurrence in witchcraft; cf. Apoll. Rhod. iv. 41 ff.), and all was as before—all but the murdered friend. How was Aristomenes to explain that in the morning? He tried to escape, but the porter was obdurate and even suspicious. Then he went back in despair and attempted to hang himself from the window-frame. But the rope broke, and, what made it more horrible, he fell on the corpse—whereat the corpse leaped up in high dudgeon at being so rudely disturbed. After all, it had only been a dreadful nightmare, a warning against too much eating and drinking late in the day. Next morning the friends set out, and, when it was time, proceeded to take their breakfast beside a stream under the shade of a tree. Socrates was as pale as wax, but he ate heartily, and then, at the suggestion of Aristomenes, knelt down on the bank of the stream to drink. As he leaned over, his neck gaped open, and a sponge, followed by a few drops of blood, dropped out, fell into the water, and was swept away. In a moment he was dead. So then and there Aristomenes dug a shallow grave and covered his friend with a little earth.

The second story (*Met.* ii. 32 ff.) is unique as a satirically exaggerated illustration of what can be accomplished by the doctrine of sympathy when it is really given a fair chance. During his stay at Hypata young Lucius, the protagonist of the book, was entertained by his father's old friend, Milo. The rest of the family consisted of Milo's wife, Pamphila, who was a redoubtable sorceress, and Fotia, a beautiful slave-girl, with whom Lucius immediately fell in love. One night he went out to a dinner-party, and by the time he started for home it was very late and very dark—and the wine had been very strong. Just as he reached the door, the dim shapes of two great burly figures jostled up against him on either side. Thinking they were thieves, he leaped back, whipped out his sword, and ran them both through. He was barely awake the next morning, with a vague but awful memory of what had happened, when all the magistrates appeared, full of fear and office, and arrested him for murder.

The trial scene, which begins at once, is a masterpiece. It

all seemed like a nightmare to the prisoner at the bar, and his impressions are fully shared by the reader. What surprised him—and it surprises us too—was that the trial was held in the amphitheatre. Stranger yet, every seat was taken, and people had even climbed up on the pillars to get a better view. After the trial had gone on for hours, some one suggested that the prisoner must have had accomplices, and that he be put to the torture and made to name them. At this point the poor old mother of the two murdered ones came forward, and insisted that the unfeeling assassin be compelled to look upon his innocent victims. The corpses were brought in, lying side by side, and decently covered with a cloth. Lucius was forced, much against his will, to raise the cloth, and discovered not two stalwart men cold in death, but two wine-skins—horribly gashed by his ruthless falchion blade, but unmistakably wine-skins. A huge roar of laughter went up from the crowd. Mystified, but relieved, Lucius was escorted home in triumph. The day, he was told, was the regular festival of Rîsus, the goddess of laughter. His own contribution on this particular occasion had been so original and successful that the city had unanimously voted him a bronze equestrian statue. Lucius was still mystified and, indeed, somewhat resentful. As soon, however, as Fotis had the opportunity, she let him into the secret.

As Pamphila was passing the barber's shop the day before the 'murder,' she had caught sight of a blonde youth from Boeotia who was in the chair having his hair cut. She fell in love with him then and there, and went straight home and began preparing a charm to draw him to her. The necessary preliminary, of course, was the possession of something belonging to him. 'So,' as Fotis says in substance, 'I was sent out to steal a lock of his hair. But the barber caught me before I could get away, and our reputation in town is so bad that he made me give up the hair, which I had hidden in my dress. I was in despair. But on the way home I passed a shop in which a man was clipping the hair off some wine-skins. So, to save a beating, I picked up some of the yellowest locks I could find, and managed to palm them off on my mistress for the real thing. She took them, and began her charm about the time you started for the dinner-party. The charm worked only too well. The robbers whom you met and slew at our door were the original owners of those locks—two passionate wine-skins struggling madly to get at their love and melt at her feet. And so it comes that "non homicidam nunc, sed utricidam amplexer" ("the lover now in my arms is after all not a homicide, but a jugicide").'

But nothing, perhaps, is a clearer proof of the prominence of magic in everyday life than the fact that, as H. Reich has abundantly shown,¹ the favourite and most characteristic habitat of magic as a literary asset is the most popular type of drama in the ancient world. This is the *mimus* (see DRAMA [Roman], vol. iv. p. 904). Transformations of men and animals were frequent; all kinds of charms were performed; the effects of all kinds of powerful magic were represented. Witches, warlocks, magicians, prophets, ghosts, demons, popular divinities, Empusa, Mormo, Incubo, Anna Perenna, Ephialtes, etc., were all favourite characters. The play went on in fairyland quite as often as on the Imperial streets or in the Imperial country-side. And sometimes, no doubt, it was hard to tell which was which. And yet the *mimus* was realistic—the very name insists upon it. But the investigation of Græco-Roman magic emphasizes the undoubted fact that, after all, the realism of antiquity was not, and never could be, our realism. The native gifts of imagination and fancy were too enduring, the native inheritance of mythology and folklore was too rich and interesting, to allow it. Magic was one of those vices of intellectual youth which the Græco-Roman world never quite outgrew. But intellectual youth also has its virtues; and these two great Aryan races of the Mediterranean basin, in some other respects as well, retained to the last their unique and priceless gift of never really growing old.

LITERATURE.—This is given for the most part in the text. The best and most complete discussion of the subject is given by H. Hubert, in Daremberg-Saglio, s.v. 'Magia.' L. F. A. Maury, *La Magie et l'astrologie dans l'antiquité et au moyen âge*, Paris, 1860, is still valuable as a general survey. R. Heim, 'Incantamenta magica Græca Latina,' *Jahrb. für class. Philol.*, Suppl. Band xix. [1898] pp. 468-576, collects and discusses the actual texts of surviving charms and incantations. Particularly valuable for special topics is the *Religionsgeschichtliche Versuche und Vorarbeiten* (R.V.), ed. R. Wünsch and L. Deubner, Gießen, now in its 15th volume.

KIRBY FLOWER SMITH.

¹ *Der Mimus*, Berlin, 1903.

MAGIC (Indian).—I. HINDU.—Indian magic is essentially the profession of certain castes, though magical rites may be practised by laymen and magical properties are attributed to countless objects. The caste which is peculiarly devoted to magic as a vocation is that of the Yogis, which is primarily Hindu but has Muhammadan elements affiliated to it. The Yogi claims to hold the material world in fee by the magical powers which he has acquired through the performance of religious austerities, but this claim soon degenerates into superstition of the worst type, and the Yogi in reality is little better than a common swindler, posing as a *fagîr*. Thus, in the tale of the magic boat, the gift of it comes from a *sādhu*, or religious mendicant.¹ Brāhmins, however, possess much magical lore, though the practice of magic is not a Brāhmanical function and the sections which make a profession of it tend to form sub-castes. The Brāhmins are said to have secret books on the subject which contain over 50 *jotias*, or figures, consisting partly of numbers and partly of mystic symbols, cabalistic words, and geometrical figures not unknown to free-masonry; these are used for all kinds of purposes, including the causing of abortion, success in gambling, etc.,² as well as to ensure easy parturition.³

The Yogis in particular claim power to transmute base metals into silver and gold—a claim which enables them (and those who personate them) to reap a great harvest from the credulous.

This power is said to have been discovered by the Yogi Dina Nāth, who, passing one day by a money-changer's shop, saw a boy with a heap of copper coins before him and asked for some in alms. The boy replied that they belonged to his father, but offered him some of his own food. Touched by his generosity and honesty, the Yogi prayed to Viṣṇu for power to reward the boy, bade him collect all the copper coin he could find in his father's house, and then, melting it down, recited *mantras*, or charms, and sprinkled a magic powder over it, whereby it was changed into pure gold. This occurred in the time of Sulṭān Altamsh (A.D. 1210-36), who witnessed Dina Nāth's performance of a similar feat, and in commemoration of it had gold *mohars* struck with Dina Nāth's name on them as well as his own. These Dina Nāthi *mohars* are said to be still found. The secret of the *mantras* and the powder has been handed down, but is known only to the initiated.

1. Occasions.—Magical rites are practised at weddings, during pregnancy, at birth to procure offspring and ensure its safety and to determine and predict its sex, and to resuscitate the dead.

(1) *Marriage*.—The magic practised at a wedding is often symbolical. For example, just as naked women plough the soil in times of scarcity to ensure a crop, so at weddings a Telugu bridegroom of the Baliya caste performs a mimic ploughing ceremony, stirring up earth in a basket with a stick or miniature plough.⁴ Similar rites are in vogue among the Palli,⁵ Kamma,⁶ Sambadavan,⁷ and Tottiyar.⁸ The Kamma bride carries seedlings in her lap, apparently to be planted by the groom. Among the Kāpu a milk-post of *Odina Wodier* is set up, and, if it takes root and flourishes, it is a happy omen.⁹ An Unni bride plants a jasmine shoot, whose flowers she should present to the deity.¹⁰ The parting of the bride's hair with a thorn is probably an imitation of the ploughing rite.¹¹

The Indian conceptions that all life is one, and that life is something tangible or material, come out in several rites. Thus, at the beginning of a wedding, the Bedar scatter rice and gram (*dhāl*)

seed on some white-ant earth near five pots filled with water. By the time the wedding is concluded, these seeds have sprouted and are culled by the pair, taken to the village well, and cast into it—obviously to ensure their fertility.¹ An Idaiyan couple sow nine kinds of grain in seven trays,² and the Māla groom digs with his knife a few furrows, which his bride fills with grain and waters after he has covered it up.³ Apparently the widespread custom of pounding grain at weddings has a similar origin. This is done by five women, *e.g.*, in Bombay.⁴

The grindstone is also used among the Bhondāri in Madras; the bridegroom stands on it, while women bring a mill-stone and powder three kinds of grain with it; then he sits on the dais, and a number of married women each touch seven times with a grinding-stone an areca nut placed on his head.⁵ A Bedar couple are invited by the Brāhman priest to stand on a grinding-mill placed beneath the *pandal*.⁶

Among the Agamudaiyan a grinding-stone and a roller, representing the god Siva and the goddess Sakti, are placed in the north-east corner at the actual wedding, and at their side pans containing nine kinds of seedlings are set. Seven pots are arranged in a row between the stone and a branched lamp, and married women bring water from seven streams and pour it into a pot in front of the lamp.⁷ The grinding-stone is also used in Bombay.⁸

The future offspring of the union is symbolized among the Komati by a doll which is rocked in a cradle, but both the prospective parents profess lack of leisure to look after it.⁹ The Parivāram use a stone rolling-pin to represent the child, which the husband hands over to the wife, who accepts it as 'the milk is ready'.¹⁰ The Konga Vellāla bridegroom takes some fruit and a pestle to a stone, which he worships. It is supposed to represent the Kongu king whose sanction to every marriage used to be necessary, and the pestle represents the villagers; but the fruit is not explained, and the myth is probably aetiological.¹¹ A newly-married Bedar or Boya couple sit on a pestle, and are anointed after rice has been showered over them.¹² In Bombay the rice-powder is used to personate the baby.¹³

Fertility can also be communicated to a bride by placing a child in her lap, and fruit is an effective substitute for one.¹⁴ On the same principle women whose husbands are alive are admitted to take part in marriage rites,¹⁵ more especially if they have sons living; whereas widows and those whose children have died should be excluded, at least from the more significant rites.¹⁶ Similarly, widowers are excluded from certain functions.¹⁷ Unmarried girls may, however, take the place of married women; *e.g.*, among the Badaga, married women or virgins, preferably the bridegroom's sisters, go to a stream in procession to bring water for cooking purposes in decorated new pots.¹⁸

Water as a source of fertility also plays a great part in wedding rites. Thus bathing is an essential part of the ritual for both parties at weddings, and visits to a well or stream are very common. The use of pots full of water is to be explained in the same way. Thus among the Alitkar of Bombay a couple already married bring pots from a potter's house to that of each party to the marriage, and after an elaborate rite the boy pours water from a

jar. A jar also plays a prominent part in other rites, including a widow's re-marriage.¹

Fish being an emblem of fertility, they are often caught by the bridal pair—*e.g.*, among the Gudigāra of Madras;² the Holeyā let the fish go after kissing them.³ But the Kṣatriya, in Madras, only pretend to catch them,⁴ as do the Nambūtiri Brāhmins.⁵

The potter's wheel, symbolical of the creative power which fashions the earth as it fashions clay, is also in evidence at weddings. The clay is formed into a revolving lump, like a *linga*, and wheel and clay together bear a strong resemblance to the conjunction of *linga* and *yoni*.⁶

The Pole-star (Dhruva in northern India) is called Arundhati in Madras, and, as the wife of the *ṛṣi* Vasiṣṭha, is pointed out to the bride as the model of conjugal fidelity.⁷

(2) *Birth*.—Magical rites to procure children are very usual. A typical rite, often resorted to by barren women, consists in burning down seven houses. In Madras a Koyi woman sometimes throws a cock down in front of the cloth on which portraits of ancestors are sewn, and makes obeisance to it,⁸ and this cures her sterility. Bathing is also a cure for this misfortune, especially bathing over a corpse.

In the Andamans a pregnant woman sows seed.⁹ Pregnancy, moreover, involves peculiar risks necessitating the protection of magic¹⁰ and the avoidance of various acts, such as stepping over the heel-ropes of a horse,¹¹ which might apparently cause protracted labour, or crossing a running stream, which would result in miscarriage—a common belief in the Panjāb. In Travancore tamarind juice is dropped into a pregnant woman's mouth to cast out devils.¹²

When his wife's first pregnancy is announced, a Kota husband in Madras lets his hair grow long and leaves his finger nails uncut, and on the child's birth he is under pollution till he sees the next crescent moon.¹³ A Mukkuvan husband also lets his hair grow until the third day after the birth. A coco-nut, betel leaves, and areca nuts are laid at the place where he sits to be shaved, and the coco-nut is smashed to pieces by one of his own sept.¹⁴ A Nambūtiri Brāhman also remains unshorn while any of his wives are pregnant.¹⁵

Pre-natal divination to ascertain and magic to determine the child's sex are also common. Thus the Cheruman in Madras employ devil-drivers, who seat the woman in front of a tent-like structure with a coco-nut-palm flower in her lap. When cut open, the fruits predict the child's sex, the birth of twins, and the child's expectation of life or death. The goddess Kālī is supposed to be present in the tent, and prayer is offered to her to cast out the devil from the woman's body.¹⁶

Another rite which is believed to influence the child's sex is the so-called *simanta* of the Sūdras in Madras. In a first pregnancy, water or human milk is poured over the woman's back by her husband's sister.¹⁷

To ensure that the child shall be a male the *puṇḥavāna* is performed in the third month of pregnancy, the wife fasting that day until she is fed by her husband with a grain of corn and two beans symbolizing the male organ. Sometimes curd is poured over them before she swallows them, and she also pours juice of a grass into her right nostril.¹⁸

Quite distinct from this Brāhmanical rite is one observed in the seventh month in Travancore.

The woman goes to the foot of a tamarind tree, where she receives a thread seven yards long. This she entwines round a tree, and, if it breaks, either she or her child will soon die. Next day the thread is unwound, and her husband gives her a handful of tamarind leaves. On re-entering the house, he also gives her tamarind juice to drink, pouring it through his hands into hers. The priestess employed in this rite then pours oil on her navel, and from the manner of its fall divines the child's sex. As she drinks the juice, the woman leans against a cutting from a mango, which is then planted; and, if it fails to strike root, the child is doomed to adversity.¹

Among the polyandrous Kammālan the woman's brother gives her rice gruel mixed with juices of the tamarind, mango, and *Hibiscus*.²

In protracted labour the washings of a brick from the fort of Chākabu or Chakrabhyu Amin near Pehoa are potent, or it suffices to draw a plan of the fort and drink the water into which the picture has been washed off.³ The origin of this rite is obscure. The 'fort of Chākabu' is a game played by children: they make a maze on paper, and one child finds his way through it with a pencil. A dot within represents the treasure which it is supposed to contain. Vaiṣṇavas of the Vallabha *śaṅkṛadāya*, or school, often make their *ārti* in this shape.⁴

Difficult labour is dealt with in parts of Madras by calling in a woman who has had an 'easy time'; she presents the patient with betel, etc., and, if that fails, a line of persons drawn up pass water from hand to hand until it reaches the woman who had the 'easy time,' and she gives some of it to the sufferer. Here the luck or quality of the one woman is transmitted to the other.

In one caste, the Mālas of the Telugu country, who are Pariahs, the placenta is put in a pot in which are *nīm* leaves and the whole is buried, lest a dog or other animal should carry it off, which would make the child a wanderer.⁵

(3) *Death*.—A magical rite of resuscitation is practised by the Dāsaris, a class of priests who minister to Śūdras, in Madras. If a Dāsari is offended, he will revenge himself by self-mutilation or even by cutting off his own head. News of this is miraculously carried to all his caste-fellows, and, when collected, they display their magical powers by frying fish which come to life again on being placed in water, by joining together limes cut in two, and, finally, by bringing the suicide to life again. The rite can fail only if the victim's wife is in pollution or when the rite is not carried out reverently.⁶

2. *Agents*.—First-born children have power to stop rain. Muslims say that they can do so by stripping naked and standing on their heads, heels in the air. In Calcutta they need only make a candle of cloth and burn it.⁷ A first-born son leaning against anything will, it is believed in S. India, attract a thunder-bolt to it.⁸ Girls born in the asterism of Mūla are believed in S. India to place their mother-in-law in a corner, *i.e.*, make her a widow, and so such a girl, if her mother is not already a widow, finds difficulty in securing a husband.⁹

Just as charms are made out of various natural substances, so such substances often possess magical powers. The acacia is inhabited by a *jinn*, but its wood is unlucky only if used to make or mend a bed; no one will be able to sleep on it. Here

¹ Thurston, II. 418. This rite cannot be said to correspond to the *pūṣṣavāna*, which is intended to influence the sex of the child.

⁹ *Id.* § 575.

the spirit in the tree appears to endure it with magical properties; a man who conveys himself in servitude to the spirit of this tree will get all that he wants, but only at the risk of his life. For twenty-one days he must take a pot full of water daily to the jungle, and on his way back cast half of it upon a particular tree; on the twenty-first night he will be irresistibly drawn towards it; the devil will appear to him, and, if he escapes death, he will get all that he wants as the price of his bondage.¹ The tree called *barkhar* (*Celtis cruceasia*) has magical properties; any one cutting it down or tampering with it loses all his hair and becomes very ill. It yields a milk which raises blisters, and even to sit in its shade, while it is exuding it, has that effect. Indeed it is dangerous to sit in its shade at any time. This belief is current in the Murree Hills, in the Panjāb, but in that very part the Gūjars use annulets of *batkar* (its usual Indian name) to ward off the evil eye (*nazar*) from both men and cattle, and its fruit is also much relished.²

To cure scorpion bite the insect should at once be caught and burnt, and the smoke allowed to touch the bite.³ To cure *saya*, or consumption, in a child (said to be due to enchantment caused by ashes taken from a burning place and thrown over or near the child) the parents should give away salt equal to the child's weight.⁴ Toothache is cured by a magical rite which consists in spreading sand over a clean piece of board and writing on it the first six letters of the Arabic alphabet. The patient then holds his aching tooth between his thumb and index finger, and touches each letter in turn with a pointed instrument. When he reaches the sixth letter, if not before, he will be cured. At each he should be asked if he is cured, and, when he says that he is, he should be asked how long he wishes for relief. He should reply 'two years,' as that is the limit of the charm's efficacy.⁵

After a bad dream, a Gāro, in Assam, collects a reed-like grass and is beaten with it by a priest, who repeats certain exorcisms. Then they carry a cock to the nearest stream, kill it, and let its blood fall into a toy boat; the boat is launched, and as it starts the dreamer bathes in the water. The prayers, the chastisement, and the sacrifice appease the spirits, and the boat is allowed to carry off the ill-luck.⁶

On the first day of sowing sugar-cane, sweetened rice is brought to the field, and women smear the outside of the vessel with it, after which it is given to the labourers. Next morning a woman puts on a necklace and walks round the field, winding thread on a spindle. This custom is falling into disuse.⁷

Magic squares are in vogue among Hindus. Thus one which totals 90 lengthways cures quartan ague; one totalling 100 every way causes excess of milk in cows and women and of *ghī* in a churn; one totalling 130 every way will, if worn round one's neck or in one's *pagri* (turban), bring any person under one's power;⁸ and one totalling 15 each way brings luck and is commonly found on shops. Squares totalling 55 and 20 each way should be placed under one's seat to ensure success at play.⁹

⁷ *Karnāt Settlement Report*, p. 181.

⁸ *PNQ* I. § 482.

⁹ *Id.* § 537.

The power of magic is so great that by mere assertion of its potency a *ḥīr*, or demon, may be brought into subjection.

Fast the whole of a ninth lunar day falling on a Friday, and in the evening eat sweet rice milk. At 8 p.m. don red clothes perfumed, and make a circle of red lead on the ground. Sit in its centre with four cardamoms, some catechu, betel-nuts, and eight cloves. Light a lamp fed with clarified butter and say: 'Incantation can break down the stars' 5000 times—and a demon will be at your service.¹

II. *ISLĀM*.—Muhammadans classify magic as high (*'ulwī*), divine (*rahmānī*), low (*siflī*), and satanic (*shaitānī*). In divine magic perfection consists in knowledge of the greatest of God's names—the *ism-al-a'zam*, which is imparted only to the elect, and by which the dead can be raised. But God's other names, and those of Muhammad and of the good *jinn*, are also efficacious, and written charms are composed of them or of passages from the Qur'an, as well as of mysterious combinations of numbers, diagrams, and figures. Satanic magic is condemned by all good Muslims. It depends on Satan's aid and that of the evil *jinn*, who ascend to the lowest heaven and hear the angels so that they can assist magicians. Enchantment (*al-sihr*) is a branch of this magic; but, as it has been studied with good intent and with the aid of good *jinn*, there is a science of enchantment which may be regarded as lawful. Enchantment results in death, paralysis, affliction with irresistible passion, possession, or metamorphosis. Metamorphosis is effected by spells or invocations to the *jinn* accompanied by the sprinkling of dust or water on the object to be transformed. Against enchantment and other evils a talisman (*ḥilism*), i.e. mystical characters, astrological or otherwise magical, or a seal or image on which they are engraved, is effective. When rubbed, it calls up its servants.

Divination (*al-kihāna*), which is also practised by the aid of *Shaitān*, is obtained by magic, by invoked names, and by burning perfumes. Its forms are: *qārḥ al-mandal*, inscribing the enchanter's circle,² *qārḥ al-raml*, the moving of sand, *'ilm al-nujūm*, astrology,³ and *al-sijr*, or augury from beast and bird.⁴

The *Imām Zamānī* rupee is said to be dedicated to that *imām*, and is worn by Muhammadans on the right arm when starting on a journey.⁵

The names of 'Ali and the *imāms* are used in magical squares according to the *abjad*, or letter-value system of computation. Notices of the custom are not uncommon in Indo-Persian histories as having been practised on the Mughal court-ladies.⁶

Islamic medicine is acquainted with the olive of Bani-Isrā'īl, a stone found on the banks of the Indus. It is black with a little red and yellow, or olive-coloured with small white lines, and is used only for sprinkling over wounds and stings by Muslims. Hindus are said to worship it as a god, and to the Persians it is known as the *sang-i-Yāhu*, or 'stone of Jahweh,' or the *hajar al-Hunūd*, or 'stone of the Hindus,' in Arabia. Jasper (in Pers. *yashm*, Arab. *hajar al-bashaf*, or 'hard

stone'), when olive, green-yellow, or opaque green, is used in charms; and, when white, in medicine. The hair of a child will never turn white if a piece of it be tied on his neck at birth. If a piece is tied on the right wrist, he will be immune to witchcraft and the evil eye. Tied to a woman's thigh, it ensures painless labour; and, if by the light of *lailat al-qādir* (the night when Muhammad spake with God) a man be sketched over it and the picture worn over the head, the wearer will be safe from wounds in battle.⁷

III. *MAGIC AND RELIGION*.—It has been held by many scholars that in ancient India the confusion of magic and religion was rife, just as it survived among other peoples that had risen to higher levels of culture. H. Oldenberg⁸ regards the sacrificial ritual of the earliest known period as pervaded with primitive magic, and he tells us that the rites celebrated at marriage, initiation, and the anointment of a king are complete models of magic of every kind, and that the forms employed are of the highest antiquity. Sylvain Lévi⁹ observes of the sacrifices prescribed in the *Brāhmaṇas* that they have all the characteristics of a magical operation, effective by its own energy, independent of the divinities, and capable of producing evil as well as good; it is only distinguishable from magic in that it is regular and obligatory, so that both matters are treated in the same works. Thus the *Sāmavidhāna Brāhmaṇa* is a hand-book of incantations and sorcery, as is the *Adhvya Brāhmaṇa* portion of the *Saṁvīṁsa Brāhmaṇa*. M. Bloomfield¹⁰ also holds that witchcraft became intimately blended with the holiest Vedic rites, the broad current of popular superstitions having penetrated into the higher religion of the Brāhman priests who were unable and possibly unwilling to cleanse it from the mass of folk-belief which surrounded it. W. Caland,¹¹ in his introduction to the *Kausika Sūtra*, enlarges on the agreement between the magic ritual of the old Vedas and the shamanism of the so-called savage. Indeed, some authorities would derive Brāhman from *brāhman*, 'a magic spell,' so that, if they are right, the Brāhman would seem to have been a magician before he was a priest.¹²

On the other hand, J. G. Frazer¹³ also points out how in India, from the earliest times down to the present day, the real religion of the common folk appears always to have been a belief in a vast multitude of spirits of whom many, if not most, are mischievous and harmful. This belief subsists under the great religions, like Brāhmanism, Buddhism, and Islām, which may come and go; and in support of this thesis he cites Oldenberg for the Vedic and Monier Williams for the modern periods. It is to this deep-seated and universal belief in the existence of spirits, which fill all created matter—the sky, the earth, trees, beasts, the earthly waters and clouds—that many, if not all, magical practices are to be ascribed, at least in their inception. At every stage of a ritual sacrifice, e.g., spirits have to be appeased, and the very stake to which a willing victim is tethered for the sacrifice must be cut, shaped, and erected

¹ *NINQ* v. § 214.

² *Mandal* is doubtless from the Gr. *μάγδαλον*, and not connected with Skr. *maṇḍala*, a circuit or group of villages. The *μάγδαλον* was a kind of drum used to conjure up demons; hence an enchanter's circle.

³ It was taught by the two fallen angels Hārūt and Mārūt, who became enamoured of the songstress Zuhra, who ascended to the sky and mingled her splendour with the star Zuhra (Venus).

⁴ H. Wilberforce Clarke, *Divān-i-Hafiz*, Calcutta, 1891, ii. 616 f., citing the *Mishkāt-al-Maṣābiḥ*, ii. 394, 394, 395, 398, and will prevail see the *Sirāj al-raml* by Maulavi Boshan 'Ali and cited in *Divān-i-Hafiz*, ii. 831. It consists in writing the two quotients in *abjad*, and dividing by nine. Then, if both the quotients be odd or even, the lesser in number will conquer; if even, the greater in number will prevail.

⁵ *NINQ* i. § 695.

⁶ *PNQ* i. § 698.

⁷ *PNQ* ii. § 17, quoting from the *Makhzan al-Adwiyāt*, or 'Treasury of Medicine,' of Muhammad Husain of Delhi, 1761, published by Newal Kishore, Oawnpore and Lucknow.

⁸ *Die Religion des Veda*, Berlin, 1894, pp. 59, 177 (for particular examples of the blending of magical with religious ritual in ancient India see pp. 311 f., 369 f., 476 f., and 522 f.).

¹² O. Schrader, *Reallexikon der indogermanischen Altertums-kunde*, Strassburg, 1901, p. 637 f.

¹³ *GB*, pt. I, *The Magic Art*, London, 1913, i. 228 f., pt. vi, *The Scapegoat*, do. 1913, p. 89 f., citing Oldenberg, p. 89 f., and Monier Williams, *Religious Thought and Life in India*, do. 1893, p. 210 f.

with the most minute precautions against their sinister influences. Every point in sacrificial ritual is symbolical, but the guiding principle in it is not magical, but religious. By the part of the stake which is dug in the sacrificer gains the lower world of the fathers, by its middle part that of men, and by its top the world of the gods. But this winning of the three worlds is conditional on his success in averting the onslaughts of evil spirits. In the whole ritual of animal-sacrifice at the stake (*yūpa*), as prescribed by the *Satapatha Brāhmaṇa*, there is no trace of magic or of magical practices.¹

A question of minor interest is whether Indian magic was derived from or has influenced that of Arabia and the Nearer East. The Skr. word *śilpā*, 'black magic,' may be the original form of *siḥi*, or, conversely, the Arab word *siḥi* may have been Sanskritized as *śilpā*. A typical rite in *śilpā* illustrates the spiritual basis of belief in magic. When performed with the object of destroying an enemy, it is known as *cheh*, or *ghāt*, in the United Provinces. A vessel is filled with iron nails, knives, etc., and sent by certain incantations through the air until it descends on the victim's head and kills him. But, if a river intervenes, a sacrifice to the spirit called *ghatbai* (lit. 'ferryman'), which is supposed to guard the river, must be made to induce him to let the vessel cross.² Thus black magic has to reckon with the spirits, however it works and whatever its origin.

LITERATURE.—i. The Hindu literature is vast, but mostly unpublished. It comprises many treatises on special topics—e.g., the *Kashitauti* (?) *Sukdeo*, a Gurmukhi MS, contains only magic squares for all kinds of ailments.³ It commences with the Atharvaveda, upon which and other texts is based Alfred Hillebrandt, *Ritual-Literatur: Vedische Opfer und Zauber* (=GJAP iii. 2), Strassburg, 1897.

ii. The Shi'a Muhammadans, who are prone to occultism, have six books on magic: the *Ja'afar Jāma*, *Safinat al-nijāt*, *Tuhfat al-awām*, *Mahaj al-da'wat*, *Mukārim al-ikhlaq*, and *Awā'id Na'māniya*. The Sunnis also have books on magic: such are the *Mujarrabat-i-Dirbi* and the *Naqsh-i-Sulaimān*.⁴

H. A. ROSE.

MAGIC (Iranian).—i. Religion and magic.—Although religion and magic are two essentially different things, the interpenetration of the two is fairly common; but nowhere are they so intricately commingled as in Mazdeism.

First of all, a clear line of demarcation has to be traced between the real doctrine of Zoroaster, as it is expounded in the *Gāthās*, and the Later Avesta.

In the Gāthic hymns we find a religion of a highly moral character. It admits of no deity besides Ahura Mazda except personified moral entities, and it expressly undertakes a struggle against the lower beliefs and the magical practices of the people of the time. The cult of the *dāevas* in general and the nocturnal orgiastic sacrifices in which *haoma* (q.v.) was drunk by the worshippers were specially condemned.⁵

The Later Avesta also anathematizes the sorcerers (*yātu*) and witches (*pairika*), but many of the beliefs and practices which Zoroaster had associated with them have found their way back into religion. The whole subject is rendered all the more intricate by the fact that a coherent system has been formed from a combination of the superior elements of the Zoroastrian creed (sophisticated to a great extent by adaptation to a lower standard of religious thought) and the popular and inferior beliefs of the Iranian people, including much that is in origin magical. As is well known, this is the system called dualism (q.v.). It is based on the assumption that there are two cosmic elements, the one created by

Ahura Mazda, the real god, and the other by his adversary, Angra Mainyu. Every creature of the wise lord is good, but all that has been created by his foe is evil. Each creator has thus communicated to his creatures his own specific nature and power. His creatures both share in their lord's natural and supernatural power and must assist him in the incessant struggle which is going on between the good and the evil spirit—a contest which will not be settled before the end of this world.

It follows that good creatures have a power over evil ones and evil over good. Of course, we may imagine that a good being, when he neutralizes the evil deeds of his opponent, acts, after all, as a depository of his creator's power; but in practice it is as though he had a real and effective power of his own against demons.

A good work is an act of war, capable of helping effectively towards the triumph of good over evil and having, therefore, an efficacy of its own to conjure and oppose the noxious activity of evil creatures such as evil spirits; and this is very much like the efficacy ascribed to magical rites. The only difference between such an activity and magic is that, with the latter, material interests are generally at stake, whereas, in the majority of Mazdean religious acts, the concern is mostly supra-terrestrial, being the religious purity of the faithful (*asavan*) as a preparation for the future happiness of the blest. The contrary state, the impurity of the imps of the *druj* (*dregvants*), has to be destroyed.

2. Purification.—For the Zoroastrian the normal means of getting rid of an impurity acquired by sin is to outweigh it by merit¹—a process which, of course, is far from being magical. Sin, however, being in Iranian eyes not only a breach of order which has to be repaired by repentance and good works, but a positive product of the evil spirits, of the evil creation, produces a substantial, though invisible, pollution—a moral disease like a bodily illness—and death likewise results from some mysterious contrivance of the originators of all evil. A material means of removing that pollution is therefore requisitioned, just as a remedy by its beneficial properties, as a piece of good creation, cures an ordinary disease. The power of purifying man from impurity belongs in the highest degree to water—an eminently good element of Mazda's creation. Besides water, other substances—e.g., *gaomāza* (urine of cattle)—are supposed to have great power to purify. The rites of purification by means of these substances are strictly fixed, as in a magical proceeding: the priest has to sprinkle every part of the body in a definite order, beginning with the head, till the *druj* is expelled from the left toes, which are the last refuge of the evil spirit. Dogs have a specially powerful wholesome influence. More intricate ceremonies tending to the same result existed besides this relatively simple one—e.g., the great purification of the nine nights (*Pahl. barasnum nū sāba*) expounded in *Vend.* ix.; the ground is prepared, holes are dug, and furrows are drawn, according to a strict ritual; *gaomāza* is put into the holes, the patient rubs the ground, and is sprinkled with water and perfumes by means of a spoon and a stick of a fixed size, etc. The proceeding cannot, however, be completely identified with magic, because, however material the concept of purity may have been in the thought of the Iranian people at that time, it was, after all, a duty not confined to human interests in this world, because the activity of the purifying substances and acts derives from an essentially beneficent power, whereas the counter-spells, although tending to

neutralize noxious influences, are regarded as possessing a power of the same kind as the one which they oppose, and, lastly, because the rites, in spite of their magical tendencies, are devoid of all mystery. They are a public and accepted procedure, assumed—wrongly, of course—to date back to the Prophet's teaching, and forming part of the sacred struggle of good against evil. Man is supposed to make use of the weapons which Mazda has put into his hands for a contest in which he is serving the lord's interests. Nevertheless, it is clear that a real degeneration towards magic has taken place in these ceremonies, and also that many an ancient magical prescription for averting evils may have been introduced. This process is analogous to that which we observe in Mazdaism from Zoroaster to the Later Avesta period.

Moral beings, like the *amesha spentas* ([*q.v.*] justice, good spirit, piety, etc.), have been turned into—or, rather, identified with—the genii of fire, cattle, earth, etc., and Sraosha, 'obedience,' has become a good spirit protecting men during the night against demons and sorcerers, having the cock and the dog as his assistants in this task (*Bund.* xix. 33).¹

3. *Sacrifice*.—Of sacrifice we may say much the same as of purifications. Neither to the Indians nor to the Iranians was the sacrifice properly a magical act. Oldenberg² is quite right when he says that sacrifice is in Vedic times a gift to the god, which, in the mind of the sacrificer, is to influence the intentions of the deity, not by way of compulsion, but by securing his powerful goodwill. This conception, however, was likely to degenerate, and did. Indra and Agni are sometimes described as being mastered by the sacrificer.

Agni, the fire, is regarded as a miniature of the sun, the great fire, and, by kindling fire, one gets the sun to rise. Indeed, the *Satapatha Brāhmaṇa*³ says that the sun would not rise if the fire-sacrifice did not take place. A similar process can be traced in Iran, where the sacrifice is given its place in the general cosmic conflict, so that it

'is more than an act of worship; it is an act of assistance to the gods. Gods, like men, need food and drink to be strong; like men, they need praise and encouragement to be of good cheer. When not strengthened by the sacrifice, they fly helpless before their foes.'⁴

Sacrifice has thus a value of its own independently of the will of the gods. It is an act of war, helping God in His struggle against the evil creation, so much so that gods also have to practise cult:

'Aṣharmazd performed the spiritual Yazšn ceremony with the archangels (*amēshēdēnān*) in the Raptvin Gāh, and in the Yazšn he supplied every means for overcoming the adversary.'⁵

The value of sacrifice in itself is also to be discerned in the fact that it produces merits independently of the piety and attention of the sacrificer. If he does not obtain them for himself, they are not lost, but are collected in a store (*ganj*) of merits.⁶ The sacrifice of the *haoma* (=Ind. *soma*), although itself not really magical in principle, was specially prone to develop in that direction. The *haoma*=*soma*, in the thought of the proto-Aryans, was a plant wherein resided an extraordinary strength of life capable of giving immortality to the gods, who were supposed to live on it like the Homeric gods on *ambrosia*, and of giving a superexaltation of life to man, in whom it

caused intoxication. As was said above, the *haoma* orgiastic sacrifice had been banished from Gāthic religion in company with the magical procedure of the *daeva*-worshippers. In the post-Gāthic period we see it reappear, but it has been deprived of its savage character and turned into a mystical drink.¹ Not only was it supposed to confer a greater intensity of human life, but it was regarded as a highly beneficial spirit, imparting to man also the gift of spiritual life and a title to the supra-terrestrial reward.² It led to a division into two *haomas*.³ The one, the actual plant, was the yellow *haoma*, the other, supra-terrestrial, called the white *haoma*, was identified with the tree *gaokerena* (Pahl. *gōkarē*) 'that stands in the middle of the sea *Vouru-Kaša* . . . that is called "the All-healer" and on which rest the seeds of all plants.'⁴ It is by drinking the *gaokerena* that men on the day of the resurrection will become immortal. For that reason it was customary to put a drop of *haoma* on the lips of a dying Zoroastrian. *Haoma*, having been made the principle of all life and fecundity, was supposed to receive its healing power from Vohu Manah, and to be the son of Ahura Mazda. This mysterious power of the drink of life is an approach to magic, although it is extended to domains to which healing and vivifying power cannot normally attain—*e.g.*, the gift of swiftness to horses in races, of healthy children to pregnant women, and of bridegrooms to girls. Moreover, it is, in the traditions of the Indo-Iranians, closely connected with a mystical bird which took the *soma*=*haoma* from the place where it lay hidden and brought it to gods and men.⁵ The Avesta speaks of the bird Saēna, which is the Simurgh of the Persians, who make him play the same part as the bird Vārengana in Yt. xiv. 35 f.—a part which is completely magical.⁶

'Get thee a feather of the wide-feathered bird Vārengana, Oh Spitama Zarathushtra. With that feather thou shalt rub thy body; with that feather thou shalt curse back thine enemy. He who hath a bonum of the mighty bird or a feather of the mighty bird gaineth (divine) favour. No one, (however) magnificent, smiteth him or turneth him to flight; he first gaineth homage, he first (gaineth) glory; the feather of the bird of birds bestoweth help.'

Thus we have here to do with a real amulet.

4. *Spells*.—If the sacrifice is apt to degenerate into a magical rite, prayer may become a spell. The message of Zoroaster to man is a *manthra*, a noble word which properly means 'utterance,' 'word,' 'ordinance,' but has in the Later Avesta the meaning of 'spell' and, indeed, the sermons of the Prophet, instead of being a subject for meditation, are chanted in a dialect obsolete for ages, and have degenerated into mere spells, the exact pronunciation of their words achieving what their author sought by pure life and diligence in a noble calling.⁷ The finest Mazdean prayers, such as the *Ahuna Vairya* ([*q.v.*] Pārsi, *honour*)—a kind of profession of faith—have stiffened into a mechanical repetition of formulæ, and have acquired an infinite power of their own, so much so that they become a weapon for the Creator Himself. The *Bundahishn* (i. 21) narrates how Aṣharmazd, having recited the *Ahuna Vairya* and uttered its twenty-one words, confounded the evil spirit and secured the victory over him, in the first days of creation. The power of the same prayer and of some others is also expounded in *Vend.* xix. (cf. also Yt. xvii. 20). Recited as many times as is prescribed on every occasion, they help as a spell the purification of man, which is

an eating animal with an orange on the day of Adar in November as a way of securing happiness, giving garlic to one's friends on the Gōs ruz (14th Dec.), and boiling herbs on the same day, in order to get rid of demons, fumigation with liquorice on the day of Di-mihir ruz in order to avoid starvation or misery, eating apples and daffodils on the same day in order to secure success in one's enterprises, placing betel, walnuts, etc., on a pregnant woman's bosom, to make her fertile,¹ etc.

The power of fire against evil beings is illustrated by the lighting of a fire on the night of the Bahmān (Vohu Manah) festival (10th Jan.). This fire, on which perfumes were thrown, was lit under the image of the genius in order to repel wild beasts. During the whole night it was guarded by standing Persians.² Anquetil du Perron reports that on 15 Spendarmat the Parsis used to hold a spell, written on a sheet of paper, in the smoke of a fire, in which they had put pieces of horn from an animal killed on the festival of Mihr, cotton seed, resin, and garlic, in order to remove the *dēvs* (*daēva*) from their houses.³ The magic for rain has survived in the custom of pouring out water on 30th Jan. in order to obtain rain during the year.⁴

In the last days of the Persian year the souls of the departed are said to come and pay a visit to their relatives, who prepare a sumptuous meal for them. The souls—or, rather, the *fravashis* (*g.v.*)—are supposed to gaze at the food and smell it.⁵ This also, no doubt, is a survival of the beliefs concerning the *fravashis*.

The use of the Gāthic hymns and of the chief Zoroastrian prayers as spells against diseases or against the evil eye is current to this day among the representatives of the Mazdean faith.

¹ In order to avert the influence of the evil eye or to cure a child of some disease, a parent will occasionally hire the mobeds . . . to read from the Yasna, the Yashts, or the Khordah Avesta; and when women are childless, they will sometimes pay to have the Vendidad Sadah recited by the priests, in order that the curse of sterility may be removed.⁶

J. J. Modi knows of charms for diseases of the eye⁷ or for avoiding pollution from contact with all that comes from the human body—e.g., hair or nails.⁸ Amulets are also used for the same purpose.⁹

LITERATURE.—There is no special book on Iranian magic. The general bibliography on Mazdaism has to be consulted, especially the translation of the Avesta by J. Darmesteter (*AVG*, Paris, 1892-93); J. H. Moulton, *Early Zoroastrianism*, London, 1913. For spells and charms see literature at end of art. CHARMS AND AMULETS (Iranian). For Parsis cf. J. A. Decourdemanche, in *RZP* xdl. [1908] 209 ff.; D. Menant, *Les Parsis*, Paris, 1898.

A. J. CARNOY.

MAGIC (Japanese).—Japanese magic is such a vast subject that, if we were to treat it systematically, with all its logical divisions and subdivisions, it would be almost impossible to give even a bare index to the volume that would have to be written to describe it. We shall, therefore, dismiss everything that springs from foreign influences, and even in Japanese magic proper we shall ignore the general classifications under which the innumerable details supplied by the rich literature of the country might be arranged. We shall confine our attention to emphasizing the essential point, viz. the existence of magic in the very heart

of the national religion, in the most authentic documents of pure Shinto.

For this purpose we must apply chiefly to the ancient rituals (*norito*) collected in the *Engishiki* in the 10th cent., although several of these—and precisely those that contain most of the magical element—were certainly composed at a much earlier date, even before the most ancient mythico-historical works, the *Kojiki* and the *Nihongi*, which were written in the 8th century. By glancing over the most typical of these *norito*, and explaining them with the help of certain related passages in the *Kojiki* and the *Nihongi* or in other equally ancient sources, rather than by abstract classifications, we shall gain a vivid idea of what Japanese magic was in its most ancient and most original form.

The old rituals seem to have been not so much prayers as magical formulæ, solemn incantations, and we shall see that at the same time they were enveloped in powerful rites by which the magician priests of primitive Japan conquered their gods.

This magical spirit appears at the very beginning of the collection, in the 1st ritual, *Toshigoki no Matsuri*, which was said every year at seed-time to obtain a good harvest. The chief priest (*nakatomi*), who recited it in the name of the emperor, addressed the gods in these words:

'I believe in the presence of the sovereign gods of the Harvest. If the sovereign gods will bestow in many-bundled ears and in luxuriant ears the late-ripening harvest which they will bestow, the late-ripening harvest which will be produced by the dripping of foam from the arms and by drawing the mud together between the opposing thighs, then I will fulfil their praises by setting up the firstfruits in a thousand ears and many hundred ears, raising high the sake-jars, filling and ranging in rows the bellies of the sake-jars, in juice and in ear.'

Other offerings are then enumerated, among which we notice a white horse, a white pig, and a white cock. Now, a 9th cent. document, the *Kogoshūi*, gives the legendary origin of this detail: Mi-toshi no Kami, 'the god of the august harvest,' had cast his curse on the rice fields; but the diviners obtained from him, by the gift of these same white animals, the secret of a magical process which enabled them to save the imperilled crop. The ritual is, therefore, based on a history of magic. The main point to remember from this first text, however, is the conditional character of the offerings which are to obtain the desired result. The same precaution is found again, in the same words, towards the end of this document, where the officiant invokes the gods who preside over the departure of the waters on which irrigation depends. This ritual, therefore, is not so much a prayer as a contract, a matter-of-fact agreement, by which the gods receive in advance the remuneration promised in exchange for the services expected from them, and thus find themselves morally compelled to render them. We accordingly see at the very beginning the familiar nature of the relations between these very human gods and the priestly magicians who exploit their power.

In the 2nd ritual, *Kasuga Matsuri*, we again find this idea of the bond which must unite the offerings with the services rendered; for it is 'in consequence' of these offerings that the gods are asked to protect the sovereign and his court. We may also observe that, of the four gods worshipped in the temple of Kasuga, the first two, Take-mika-dzuchi and Futsu-nushi, were represented by magical swords (cf. *Kojiki*, tr. B. H. Chamberlain, 2nd ed., Tokyo, 1906, p. 36), and that the other two, Koyane and his wife, are connected with the famous eclipse in which that god, by his 'powerful ritual words,' helped to bring back the sun-goddess (*Kojiki*, 64).

There is the same spirit in the 3rd ritual, *Hirose Oho-imi no Matsuri*, devoted to the goddess of food.

primarily attained by the marvellous power of the substances and ceremonies mentioned above.

No wonder, therefore, if the *manthra* is mentioned as a regular means of curing diseases. *Vend.* xx. distinguishes healing by plants, by the knife, and by the *manthra*, the last being the most powerful. A series of formulæ is to be found there for repelling both diseases and evil beings. The prayer contained in *Vend.* xx. 11 is supposed to be peculiarly powerful. It is directed to Airyaman, the healing god *par excellence*. *Vend.* xxi. 18-23 is also a spell against all kinds of diseases, consisting of some fragments of other parts of the *Vendidad* and of some very well known prayers. These are the means that Airyaman has at his disposal for curing the 99,999 diseases created by Angra Mainyu for the bane of mankind (*Vend.* xxii.). Airyaman is an old Indo-Iranian god: in the Veda he is an *āditiya* (Aryaman) who is generally found in company with Varuna and Mitra. He is a beneficent and helpful god, but in Persia he has been narrowed down to the character of a healing god. He survives in Parsiism as the *izad* of heaven, but, in his quality of healing god, he is replaced by Faridūn (=Thraētaona), who, having killed the dragon Azi Dahāka, is supposed to be a powerful enemy to the works of evil spirits. The Iranians knew, moreover, of a healing fruit, which, according to *Bund.* iii. 18, Ahura Mazda pounded up before his coming to the ox, 'so that its damage and discomfort from the calamity (*zanišn*) might be less.'¹ On the same footing as the *manthra* for healing diseases must, of course, be put the numerous incantations and mystical formulæ for removing the pollution inflicted upon anything which has come into contact with a corpse. *Vend.* viii. 14 ff., *e.g.*, explains that a road whereon the dead bodies of dogs or men have been carried cannot be traversed again by men or flocks, till the yellow dog with four eyes or the white dog with yellow ears has gone three times across it and an *ātharvan* has gone along it, saying aloud the fiend-smiting words of the *honovar*. *Vend.* vii. 28 ff. contains the method of purifying wood which has been in contact with a corpse, and formulæ for all kinds of good elements infected by the same pollution (cf. *Vend.* x., xi., etc.). In such cases the *Gāthās* had become a mere spell (cf. *Vend.* x. 1 ff.). The reason of this custom with regard to corpses is originally a magical one, which has been fitted into the general Mazdean system. It is the old conviction of mankind that death, like illness, cannot occur without the maleficent intervention of some spirit, which has therefore to be averted. For a Mazdean to die was to pass into the power of the *druj* Nasu. Hence it was necessary to minimize the evil produced by this demon by protecting all good beings and substances from its power and freeing, as soon as possible, the beings or substances that had fallen into its hands. The intervention of maleficent beings and the utility of spells were felt in many other circumstances—*e.g.*, in the case of a woman on the eve of child-birth (*Vend.* xxi. 8, 12, 16), or when some accident occurred to cattle.²

5. Fire.—Among the elements which have to be kept carefully from any pollution, fire occupies a prominent position. It is well known that among the Parsis it enjoys a veneration which is not far from being superstitious. Here, the process is not a degenerative one, but rather the elevation of an elementary and, to a great extent, magical belief which is common to many nations, but which is specially Indo-Iranian (cf. art. FIRE, FIRE-GODS, § 6 f.). Fire is the great purifier, which illuminates the night, keeps off bitter cold and wild beasts, and, as such, is the great enemy of demons and

the friend and ally of man. It repels diseases, and it plays an important part in the proceeding of Indian magic, as is expounded in the *Atharva-veda*³—a name which is taken from the *atharvans*, who were originally priests of fire. The Iranian myth of Atar's victory over the serpent Azi Dahāka (*Yt.* xix. 45 ff.) belongs to the same order of thought. Indeed, fire, in the conception of the Persian *ātharvan*, keeps closer to its original part, inasmuch as it does not become, as in India, the agent which conveys to the gods the substances of sacrifice. It remains the great averter of everything impure, and must on no account be put in contact with anything that is not pure, least of all with corpses or with anything coming from the body. It has become an earthly form of the eternal, infinite, godly light, the purest offspring of the good spirit, the purest part of his pure creation,⁴ the weapon of Ahura (*Ys.* li. 9). It is the principle of all life, in men as well as in plants, the son of Ahura Mazda.⁵ We can distinguish several forms of it, among which the *bahrām* fire is the most sacred. It is supposed to be an emanation on earth from the fire above and the most powerful protection of the land against foes and fiends.⁶ It took its name from Verethraghna (Skr. *vṛtrahan*), in Indian myth the genius of victory and the slayer of the demon Vṛtra.

6. Influence of stars.—Astrology, as is well known, was the chief concern of the Magi, as the ancients describe them to us; but there is abundant evidence that this element of activity was not of Iranian origin. The proto-Aryan element of astrology was extremely small, in contrast with Babylonian religion.⁷ We have, however, the cult of Tistrya, the star (Sirius) which was regarded as a good genius that brought rain after having slain the drought demon Apaosā (*Yt.* viii. 20 ff.). It is a very good genius which, at the dawn of creation and before man was created, destroyed the noxious creatures by an effusion of beneficent waters. It would be an exaggeration to treat as real magic such beliefs concerning the part of Tistrya as we find in the Avesta. There is reason to believe, however, that in some parts of Persia rain spells were in use. The *Great Bundahishn* says:

'The plague created against Saistān is abundance of witchcraft; and that character appears from this, that all people from that place practise astrology: those wizards produce . . . snow, hail, spiders, and locusts.'⁸

On the other hand, it was a current belief among Iranians that planets had a malign influence; but this does not oblige us to admit that they had any belief in the influences of stars upon men's fate (cf. art. FATE [Iranian]).

7. Recent superstitions.—Among the superstitions prevalent among the Parsis and the Muhammadan Persians many customs, no doubt, go back to old Mazdean practices or, more probably, to popular beliefs which persisted beside the official creed.

The great power assigned, among the old Mazdeans, to plants in general, and in particular to some specially marvellous ones, as well as the extensive practice, among the Babylonian Magi,⁹ of natural or magical treatment of diseases by herbs, probably explains the important part played by plants in the superstitious customs attached to the ancient Persian festivals as described by Persian writers¹⁰—*e.g.*, rubbing with olive oil on the day of Naūriz as a riddance from sorrows during the new year, eating a pomegranate on the feast of Mihr (Mithra) to avert dangers, hitting

Her worshippers make a bargain with her; while bringing her various offerings, they promise her others if the harvest is very abundant.

The 4th ritual, *Tatsuta no Kaze no Kami no Matsuri*, is just as characteristic, and, moreover, relates its own legendary origin. For several years unknown gods have bungled all the crops, and the diviners have not been able to discover who these gods are. Then the sovereign himself 'deigns to conjure them,' and they reveal themselves to him in a dream. They are 'Heaven's Pillar's augustness and Country's Pillar's augustness,' the gods of the winds who maintain the order of the world. They require certain offerings, the founding of a temple at Tatsuta, and a liturgy, by means of which they 'will bless and ripen the things produced by the great People of the region under heaven, firstly the five sorts of grain, down to the least leaf of the herbs.' Here it is the gods who state their conditions. The people hasten to fulfil them 'without omission,' but evidently the recollection of past calamities has left some mistrust, for, when making the present offerings, they announce future gifts for the autumn: if, between now and then, the gods have deigned not to send 'bad winds and rough waters,' but to 'ripen and bless' the harvest, they will grant them the firstfruits of it. This will be their small commission.

We shall pass over the 5th, 6th, and 7th rituals, which are not so interesting, and come to the 8th, *Ohoto no Hogahi*, i.e. 'Luck-bringer of the Great Palace.' This title itself indicates the magical character of the document, and, in fact, we find the ritual defined in its own text in the words, *amatsu kusushi ihahi-goto*, 'the celestial magical protective words.' It is a formula the recitation of which wards off all calamity from the palace, as an amulet would do; this is shown by the importance ascribed to the perfect regularity of the words pronounced; for, in another passage, certain 'corrector'-gods (*naho*) are begged to rectify all the omissions that they may have seen or heard in the rites or the words of the ceremony. This ceremony itself throws abundant light on the magical character of the ritual of which it was a part. We have a description of it in the *Gi-shiki* of the 9th cent. (see E. Satow, in *TASJ*, vol. ix. pt. ii. [1881] p. 192 f.). A priestly retinue, in which we distinguish chiefly the *nakatomi*, the *imibe* ('abstaining priests'), and the vestals, goes through the palace in every direction; and in different places, from the great audience-hall to the bath-room, even to the emperor's privy, the vestals sprinkle rice and *sake*, while the *imibe* hang precious stones on the four corners of the rooms visited by them. We observe here an application of the custom, called *sammari*, which consisted in scattering rice to ward off evil spirits. Whatever is the reason of this custom—whether it is simply a bait thrown to the demons or perhaps a symbolical use of grains whose shape represents one of the aspects of the generative power, of the vital force which combats illness and death—the rite in question was very frequently practised in Japanese magic. Rice was scattered inside the hut in which a woman was about to be confined; in the divination at cross-roads (*tsuji-ura*; see art. DIVINATION [Japanese]), a boundary was sometimes marked on the road, where rice was also strewn, in order to take afterwards as an oracle the words spoken by the first passer-by who crossed this bewitched line; and an old legend tells how, when the son of the gods descended from heaven to Mount Takachiho, grains of rice were thrown at random in the air to disperse the darkness from the sky. Just the same is the magical use of jewels to combat evil influences. Through the whole of Japanese mythology there is the sparkle of jewels, some of which are talismans—

jewels which, at the time of an eclipse, the gods suspended to the highest branches of the sacred *cleyera*, and whose brilliance recalled the sun (*Kojiki*, 64); jewels which, in another famous story, enabled their possessor to make the tide flow or ebb at his will (*ib.* 150); jewels which even aimed at resuscitating the dead, as we shall see below. We can, therefore, easily understand the magical rôle of the red jewels which, paraded in the imperial apartments, caused the dark threats of the invisible everywhere to retire before their brightness. Still another point to be remarked is that, according to the description cited, the *imibe* recite the ritual 'in a low voice.' Polynesian sorcerers also said their prayers in a low singing, perhaps even hissing, tone, similar to the hissing, whispering voice which they attributed to their gods; and even in Japan, in the divination by the harp (*koto-ura*), one of the practices of the officiant was a complicated whistle. All this magical atmosphere which surrounds the ritual suits its text very well. It points out, first of all, the propitiatory rites which the *imibe* have accomplished in hewing down the trees intended for the construction of the palace. Then it recalls the mythical recollections which assure beforehand the efficacy of the formula recited. Then the protector-gods of the palace are entreated to ward off certain calamities, several of which—e.g., serpent-bites, or the droppings of birds falling through the smoke-hole in the roof—are ritual 'offences.' Lastly, in the same way as it invokes the corrector-gods for every possible omission, the text insists on this fact—that the 'innumerable strings of luck-bringing grains' have been made by sacred jewellers 'taking care to avoid all pollution and to observe perfect cleanness.' The care in all these details shows the magical importance attached to each of the rites of the ceremony, and to the most insignificant words of the incantation.

We shall omit the 9th ritual, *Mikado Matsuri*, 'Festival of the Sublime Gates,' devoted to the gods who guard the entrance of the palace against the evil influences of the 'crooked' gods (*maga*), and come to the 10th, which is much more important. This is the 'Ritual of the Great Purification' (*Oho-harahi*). This ritual was recited by the chief of the *nakatomi*, at the end of the 6th and the 12th months, to blot out all the transgressions, both moral and ritual, that the whole people had committed in the interval. The choice of these dates is in itself significant: the summer ceremony recalls the lustrations formerly practised on the eve of St. John in different countries of Europe, and the ceremony at the end of the year corresponds with the need of renewal experienced by the majority of men at this time, and which, in Japan, still takes the popular form of a dramatized exorcism called *tsuina*, 'expulsion of the demons.' The Great Purification included various rites; but the ritual is often mentioned as if it itself formed the whole ceremony—which proves the magical power ascribed to the words recited. This ritual begins by stating clearly that it is the emperor who 'deigns to purify and wash away' (*harahi-tamahi kiyome-tamafu*) the offences committed—from which we see that the gods who, a little later, are to be invoked to intervene really play a part inferior to that of the emperor, and act only, so to speak, at his command. The right of absolution which he exercises thus arises from the general sovereignty conferred 'respectfully' upon him by the celestial gods at the beginning of the dynasty, as the continuation of the text immediately recalls. Then follows the enumeration of ritual crimes, voluntary or not, which are to be effaced (see Revon, *Anthologie de la littérature japonaise*, Paris, 1910, p. 28 f.). We may select from this list at least two offences con-

nected with our subject. The one is the 'planting of wands' (*kushi-sashi*) in rice-fields, probably with incantations—a process which an ancient native interpretation explains as the erecting of magic boundaries on the field of which one claims to be proprietor, though perhaps it is an example of pointed wands secretly stuck into the mud to hurt the bare feet of a neighbour, just as, among the Malays, a person in flight retarded the pursuit of his adversaries by this means. The other offence (*maji-mono seru tsumi*) is the 'performing of witchcraft,' either in a general way (cf. *Kojiki*, 326 f.) or in particular against a neighbour's animals (if we connect this passage with the expression *kemomo-tafushi*, 'to kill animals,' which precedes it). In any case the Chinese character employed shows that it is a question of black magic; and that is why the *norito*, although it is itself a magical text, does not hesitate to condemn it. The ritual afterwards shows that, when these faults are committed, the great *nakatomi* has to prepare some twigs in a certain way, doubtless intended to form a sort of purificatory broom, then to recite 'the powerful ritual words of the celestial ritual' (*ama tsu norito no futo noritogoto*). The native commentators tried for a long time to find out to what mysterious incantation this passage could possibly allude, without seeing that it simply referred to the *norito* itself. This is the 'celestial' ritual which the gods revealed on high to the ancestor of the emperors, and whose 'powerful words' his descendant causes to be repeated—an expression intended to recall the intrinsic virtue of this formula. When the high priest recites it thus, according to the text of the ritual itself, the gods of heaven and earth will approach to listen, and all offences will disappear, being swept off, carried away to the ocean by the goddess of the torrents, swallowed by the goddess of the sea-currents, driven to the nether regions by the god whose breath chases before it all impurities, and there they will be seized at last by a subterranean deity who will banish them for ever. Clearly these deities are only the four wheels of the machine which the emperor sets in motion by the hand of the great *nakatomi*, the magician who knows the sacred words which even the gods obey. As for the rest, to make more certain, they bring a horse whose erect ears will incite these gods to listen attentively, just as the crowing cocks, the lighted fire—all these magical processes of the myth of the eclipse (*Kojiki*, 63-65)—would recall the sun, or as, in another account of the old Shinto annals (*Nihongi*, tr. W. G. Aston, London, 1896, i. 106), one had only to whistle to raise the wind. Then an order is given to the *urabe* ('diviners') to throw into the river the expiatory offerings, to which a mysterious sympathy unites the sins themselves, which will disappear along with the objects to which they have been attached. The ritual finishes, therefore, with a last example of the magic which has inspired the whole of it.

We may mention the 11th ritual along with this one. It is an invocation which the hereditary scholars of Yamato pronounced immediately before the ceremony of the Great Purification, and in which they presented the emperor with a silver-gilt human effigy, which would play the part of scapegoat by removing calamities from him, and a gilded sword on which he breathed before it was taken from him, with the same intention of driving away, after this magical transfer, both the sins committed and their material support.

Another ritual which is plainly magical is the 12th, the title of which, *Ho-shidzume*, 'Appeasing of the Fire,' shows that its purpose was not to worship the god of fire, but to banish him from the palace. As in the 10th ritual, the text first recalls

the celestial revelation which has confided to the emperor the 'powerful words' by means of which he is superior to this god. Then it recounts the atrocious crime of this 'child with the wicked heart,' who caused his mother's death by burning her when she gave him birth (cf. *Kojiki*, 32-33); and tells how Izanami herself, cursing this son who had caused her death, came up from the nether regions to give birth to the water-goddess, the gourd, the river-plant, and the princess of the clay mountains, four divine things whose magical use against fire she immediately taught. Then, in order that this wicked god 'may deign not to be terribly lively in the palace of the august sovereign,' he is loaded with offerings, which have the effect of captivating and subduing him. This ritual was accompanied by rites which consisted mainly in the lighting of a fire by the *urabe* in the four outside corners of the precincts of the palace, with the primitive apparatus (*hi-kiri-usu*) of which a specimen may be seen in the University Museum, Oxford.

The 13th ritual, *Michi-aho*, also aimed at employing certain gods to combat others. Those who were invoked on this occasion were three gods of roads and cross-roads, whose phallic character caused them to be looked upon as 'preventive gods' (*sake no kami*) against the epidemics sent by the demons. The ritual begins by reminding these protector-gods, without great reverence, that their duties were inaugurated in heaven itself, where they already served the son of the gods. It then dictates to them what they must do:

'Whenever from the Root-country, the Bottom-country, there may come savage and unfriendly beings, consort not and parley not with them, but if they go below, keep watch below, if they go above, keep watch above, protecting us against pollution with a night guarding and a day guarding.'

In return they are presented with offerings, which they are to enjoy while defending the great roads 'like a multitudinous assemblage of rocks,' and, finally, the celebrant insists once more on the 'powerful words' of his formula.

The next ritual, the 14th, was devoted to the *Oho-nihe*, 'Great Offering of Food.' Before eating the new rice of the year, the ancient Japanese performed a ceremony called *Nihi-name*, 'new tasting,' which had a propitiatory purpose towards the spirit of the rice (*Uga no Mi-tama*). The *Oho-nihe* was a more solemn *Nihi-name*, celebrated some time after the accession of the emperors, and constituting a sort of religious coronation for them. The ritual relating to this festival contains nothing very curious in itself; but it is interesting to find that the very complicated ceremony with which it was connected included a long series of preparations, in which magic occupied a large place, just as in the essential part of the festival, when the emperor in person, surrounded by ladies of honour who repeated a mysterious formula, shared in the repast which he had just offered to the gods.

The 15th ritual is another document whose magical value appears as soon as it is placed in its psychological surroundings. It is entitled *Mi-tama shidzumuru*, which shows that its purpose was 'to appease the august spirit,' i.e. the spirit of the emperor. It was a case of keeping the imperial soul in his body, of recalling it if it seemed to wish to escape—in a word, of renewing magically the vital force of the sovereign for the coming year and thus prolonging his life. This is the meaning of the ceremony called *Chinkonsai*, which was celebrated at the end of the year in the sanctuary of the priests of the court (see *Nihongi*, ii. 373). Now, the gloss identifies this festival with an ancient ceremony called *Mi-tama furishiki*, 'shaking of the august jewels,' which again plunges us into deep magic. The *Kinjiki* (ii. 2) says, in fact,

that, when the sun-goddess gave the investiture to the ancestor of the emperors, she bestowed upon him ten precious treasures:

'one mirror of the offing, one mirror of the shore, one eight-hands-breadth sword, one jewel of birth, one jewel of return from death, one perfect jewel, one jewel road-returning [evil things by the road they came], one serpent-scarf, one bee-scarf, and scarf of various things.' She added: 'In case of illness, shake these treasures and repeat to them the words: *Hi, fu, mi, yo, itsu, mu, nana, ya, kokono, tari*, and shake them *yura-yura* (onomatopoeia). If thou doest so the dead will certainly return to life.'

The objects enumerated by the sun-goddess are talismans, several of which occur in the most ancient Japanese mythology (see *Kojiki*, 86, 150, 324, etc.). As for the incantation, it represents simply the series of numbers from one to ten, which demonstrates its intrinsic power, independent of the meaning of the words. We know, besides, that the same incantation was recited at this festival by young sacerdotal virgins (*mi-kamu-ko*), who performed the sacred *kagura*, in imitation of the dance of Uzume in the eclipse myth (*Kojiki*, 64-65), while a *nakatomi* knotted threads, which were clearly meant to retain the imperial soul, and which he shut up in a closed vessel.

We shall omit rituals 16 to 24, which refer exclusively to the offices of the temples of Ise; it will be sufficient to mention in this group the formula of the 23rd ritual, for the installing of a princess as vestal:

'The offering of a sacred princess of the blood imperial to serve as the deities' staff, having first, according to custom, observed the rules of religious purity for three years, is to the end that thou mayst cause the Sovereign Grandchild to live peacefully and firmly as long as Heaven and Earth, the Sun and the Moon may last. I, the Great Nakatomi, holding the dread spear by the middle, with deepest awe pronounce this dedication of her by the Mikado to the end that she may serve as an august staff.'

We have here evidently a survival of the 'abstainer' of primitive Japan, whose asceticism assured on pain of death the good fortune and health of the village, in the same way as here the sacrifice of the imperial virgin is to guarantee the happiness and long life of the sovereign (cf. art. ASCETICISM [Japanese]).

The 25th ritual, of a more general interest, is entitled: *Tatari-gami wo utsushi-tatematsuru norito*, 'Ritual for the Respectful Removal of the Gods who send Plagues.' In the 13th ritual the gods of roads were made to intervene against these wicked gods; now they themselves are directly addressed. It is, therefore, a real formula of exorcism. The text begins by recalling how the supreme council of the celestial gods, wishing to 'pacify' the country before the descent of the future emperor, sent Futsu-nusli and Take-mikadzuchi, who triumphed over the terrestrial gods and 'silenced the rocks, trees, and the least leaf of herbs likewise that had spoken.' After this warning, undisguised and all the more plain because, according to the ritual, the wicked gods know well, 'by virtue of their divinity, the things which were begun in the Plain of high heaven,' numerous gifts are made to them to win them over—and not only the usual offerings of cloths, fish, game, vegetables, rice, and *sake*, but also, in a naive form, 'as a thing to see plain in, a mirror; as things to play with, beads; as things to shoot off with, a bow and arrows; as a thing to strike and cut with, a sword; as a thing which gallops out, a horse.'

Lastly, after having thus loaded them with numerous toys and abundant dainties, which they beg them to accept 'with clear hearts, as peaceful offerings and sufficient offerings,' they earnestly ask these 'sovereign gods' to be good enough, 'without deigning to be turbulent, deigning to be fierce, and deigning to hurt, to remove out to the wide and clean places of the mountain-streams, and by virtue of their divinity to be tranquil.'

Passing in silence a less interesting ritual (the 28th), we come at length to the last document of the collection, the 27th ritual, which is called

Idzumo no kuni no miyakko no kamu yogoto, 'The Divine Words of Good Fortune of the Chiefs of the Country of Idzumo.' These local chiefs, after having lost their civil sway, had preserved their religious power. It is they who to this day in this old province hand down the primitive fire-kindler which their legendary ancestor, the god Ame-no-hohi, had received from the sun-goddess herself, and which each chief priest of Idzumo bequeaths to his successor by the ceremony called *Hi-tsugi*, 'perpetuation of fire.' In this ritual the *miyakko* first announces that he will recite the formula, after many ritual preparations, to bring happiness to the reign of the 'visible god,' i.e. the sovereign. He then relates how Ame-no-hohi and, later, other celestial ambassadors were sent to earth to prepare for the descent of the son of the gods; how Ohonamochi, the divine king of Idzumo, who achieved the 'making of the country' with the help of a stranger magician, and who was the first to found a government in this important region of the archipelago, was persuaded by the celestial envoys to abandon his temporal rule to the son of the gods; how he then divided his souls, by a curious application of the Japanese idea which allows the possible separation of the multiple souls of man, attaching his 'gentle spirit' (*nigi-tama*) to a fetish-mirror which he caused to be placed in a temple of Yamato, while his 'rough spirit' (*ara-tama*) went to rest in the great temple of Idzumo; and how at length Ame-no-hohi received from above the command to bless the sovereign henceforth, that his life might be long, healthy, and happy (cf. *Kojiki*, 54, 58, 113-124). It is while carrying out this command that the descendant of Ame-no-hohi intervenes, as he himself declares. He brings to the emperor 'divine treasures,' whose magical rôle—fortunately for us—he clearly defines. There are, first of all, sixty jewels, white, red, and green.

'These white jewels are the great august white hairs (to which your Majesty will reach); the red jewels are the august, healthful, ruddy countenance; and the green-jewels are the harmonious fitness with which your Majesty will establish far and wide, as with a broad sword-blade, his lasting great august reign over the Great-eight-island-country which he governs.'

We have here, therefore, a typical case of the action of like upon like, which is one of the essential doctrines of primitive man, and which, in the present case, attaches to the different jewels a power corresponding to their colour. The formula continues by other applications of this principle of imitative magic:

'As this white horse plants firmly his fore-hoofs and his hind-hoofs, so will the pillars of the Great Palace be set firmly on the upper rocks and frozen firmly on the lower rocks; the pricking up of his ears is a sign that your Majesty will, with ears ever more erect, rule the Under-Heaven,' etc.

It is possible that at some time these rites may have become symbols; but it is impossible not to recognize in them, especially at the beginning, practices inspired by that primitive logic which has always and everywhere constructed magic on the same universal principles.

Ancient Shinto, therefore, as it appears to us in its most authentic liturgies, is a religion in which the magical element still prevails over the religious sentiment. The rituals are essentially magical formulae, addressed to magician gods (as is demonstrated by all their mythical exploits) by magician-priests (the *nakatomi*, the *imibe*, and the *urabe*), and encircled in magical rites. Magic is, therefore, at the base of the national cult of the Japanese, and it appears there with all the characteristics familiar to the student of comparative religion.

To finish with a vivid illustration, which, after the necessarily short descriptions given above, will show this magic in application in a typical and exact case, we shall choose as an example sorcery,

as it was practised in the most ancient times. The following is the curious account of the subject given in the *Kojiki* (326 f.):

'The Deity of Idzushi [the country of the 'sacred stones'] had a daughter, whose name was the Deity Maiden-of-Idzushi. So eighty Deities wished to obtain this Maiden-of-Idzushi in marriage, but none of them could do so. Hereupon there were two Deities, brothers, of whom the elder was called the Youth-of-the-Glow-on-the-Autumn-Mountains, and the younger was named the Youth-of-the-Haze-on-the-Spring-Mountains. So the elder brother said to the younger brother: "Though I beg for the Maiden-of-Idzushi, I cannot obtain her in marriage. Will thou be able to obtain her?" He answered, saying: "I will easily obtain her." Then the elder brother said: "If thou shalt obtain this maiden, I will take off my upper and lower garments, and distil liquor in a jar of my own height, and prepare all the things of the mountains and of the rivers, in payment of the wager." Then the younger brother told his mother everything that the elder brother had said. Forthwith the mother, having taken wistaria-fibre, wove and sewed in the space of a single night an upper garment and trousers, and also socks and boots, and likewise made a bow and arrows, and clothed him in this upper garment, trousers, etc., made him take the bow and arrows, and sent him to the maiden's house, where both his apparel and the bow and arrows all turned into wistaria-blossoms. Thereupon the Youth-of-the-Haze-on-the-Spring-Mountains hung up the bow and arrows in the maiden's privy. Then, when the Maiden-of-Idzushi, thinking the blossoms strange, brought them, he followed behind the maiden into the house, and forthwith wedded her. So she gave birth to one child. Then he spoke to his elder brother, saying: "I have obtained the Maiden-of-Idzushi." Thereupon the elder brother, vexed that the younger brother should have wedded her, did not pay the things he had wagered. Then when the younger brother complained to his mother, his august parent replied saying: "During my august life the Deities indeed are to be well imitated; it must be because he imitates mortal men that he does not pay those things." Forthwith, in her anger with her elder child, she took a one-jointed bamboo from an island in the River Idzushi, and made a coarse basket with eight holes, and took stones from the river, and mixing them with brine [*shio*], in the sense of 'hard salt', wrapped them in the leaves of the bamboo and caused this curse (*tokohi*) to be spoken [by her younger son]: "Like unto the becoming green of these bamboo-leaves, do thou become green and wither! Again, like unto the flowing and ebbing of this brine [again the word *shio*], but here with the meaning of 'sea-water'], do thou flow and ebb! Again, like unto the sinking of these stones, do thou sink and be prostrate!" Having caused this curse to be spoken, she placed the basket over the smoke [apparently on the hearth of the elder son]. Therefore the elder brother dried up, withered, sickened, and lay prostrate for the space of eight years. So on the elder brother entreating his august parent with lamentations and tears, she forthwith caused the curse to be reversed. Thereupon his body was pacified. This is the origin of the term "a divine wager-payment."

In this text we have a case of original sorcery, founded on sympathetic magic (a conception so well expressed by the Japanese word for 'magic,' *majinahi*, which conveys the idea of 'to mix'), but before the time when the progress of the arts and foreign influences could have given the idea of exercising sorceries on the effigy of an enemy. (For this later development see, e.g., the popular ballad of Shuntoku Maru, in *TASJ*, vol. xxii. pt. iii. [1894] pp. 294-308.) We are, therefore, in the presence of a thoroughly Japanese rite, whose ancient character is shown by its very obscurity, and which cannot be understood unless it is replaced in the midst of the primitive beliefs from which it came. First of all, the mother provides herself with the mysterious bamboo on which the life of her elder son is to depend. Purposely she does not gather it in any chance place; she takes it from an island—which already connects that object with the aquatic element. With this bamboo she weaves a basket, in which she takes care to leave eight holes, which will be the eight openings by which eight years of misfortune are to enter for the victim. In this basket she places river-pebbles, which, even more than the bamboo, come from the water. But it is from fresh water that they have come; and the nature of the rite demands that they should assume a maritime character. They are, therefore, put among brine; by this union the assimilation is made, and the sorcery can be accomplished. The only thing that remains to be done is to pronounce the formula, whose powerful words will act on all these things.

The victim will wither like the leaves of bamboo, in the same way as, in another legend (*Kojiki*, 238), the magical imprecation (*ukebi*) of a chief had made a great oak-tree suddenly decay; or, better still, in the same way as, by the effect of a general malediction, man, formerly immortal, was condemned to die as the flowers of the cherry-tree fade (*Kojiki*, 140-142). Then, as the high water falls back, the guilty one will be abased. Lastly, he will be seen foundering as a stone sinks when disappearing under the waves. This curse pronounced, the basket of perdition is placed in the smoke of the hearth; the green leaves become black; the threat is executed. Yet in the end the mother's heart hears the repentance of her son. She reverses the curse, i.e., the terrible magical formula is this time pronounced backwards (cf. *Kojiki*, 238), and immediately the body of the young man is 'pacified'; he returns to health, to life.

In this sorcery the most curious point is that which is connected with the sea element. The fate of the young man is, in fact, connected with the ebbing of the tide. We have here an interesting illustration, among the insular Japanese, of the belief so wide-spread among primitive races, according to which a mysterious harmony exists between the life of man and the flowing and ebbing of the sea. In this belief, it is when the sea is flowing in that one is born, becomes strong, prospers; it is when it is ebbing that one loses his energy, falls ill, and dies. The Japanese sorceress, the depositary of primitive traditions, is well aware of this secret agreement. She knows that, even far from the seashore, an artificial connexion can be formed between these two manifestations of a single force. Consequently she brings into connexion with the salt element these river-pebbles, into which the consecrated words will bring the very existence of her son; and the cursed one is immediately delivered up to the enchantment of the waters; he becomes like a pebble on the beach, the tide carries him away, drags him towards the brightnesses of life, then lets him fall back and roll in darkness and death. This story of witchcraft has, therefore, given us at one and the same time a typical case of Japanese magic and a new proof of the strange unity observable even in the most curious beliefs of humanity in general.

LITERATURE.—This has been cited in the article.

M. REVON.

MAGIC (Jewish).—The attitude assumed by Judaism towards everything not sanctioned by its own monotheistic teaching has also affected the practice which may be called 'magic,' and it thus becomes necessary, first of all, to obtain as clear a definition as documents of the OT and Jewish tradition allow as to what is to be understood by the term.

It must at once be pointed out that divination and charms (see DIVINATION [Jewish] and CHARMS AND AMULETS [Jewish]) are not part of Jewish magic, which, properly speaking, corresponds most closely to 'witchcraft.' The difference between witchcraft and other forms of magic is that the magician has nothing whatsoever to do with forecasting the future or with preventing any occurrence that is sure to happen in the ordinary course of nature. He has nothing to do primarily with spells or incantations, nor is the writing of any formula an indispensable condition for magic. Magic can only be 'performed'; no magic is effective unless it is the result of some 'operation'; the magician must 'act' in one way or another in order to accomplish his purpose; and herein lies the profound difference between magic and any other form of superstition—preventing and altering the regular operations of nature. The magician is not helping things to fruition; on the contrary, he

seeks to subvert the regular course of events. He is expected, if possible, to obscure the sun and moon, to bring the dead to life, to change human beings into animal shapes or *vice versa*: he is to produce fruit in winter, and, in fact, to do everything that is contrary to the regular laws of nature. The magician will kill, he will create strife—his activity will always be an evil one. He is not expected to do good; he will be the agent for vengeance, hatred, and everything that makes for strife, death, and destruction. But he cannot carry out his intention without an 'operation'; he must 'do' something in order to bring about the desired result. Unlike the diviner, who is guided by certain signs and omens, which he is able to understand and combine, so that he can read the future in the events of the present, and unlike the charmer, who can only undo the magician's evil work by certain spells, songs, formulae, and written amulets, the magician must perform a whole set of ceremonies quite independent of signs, omens, and spells. It is a new definition that is here offered, which, by circumscribing much more narrowly the field of superstition, is an endeavour to give to magic its real meaning. The magician's work, again, is not expected to be of a permanent character; it is temporary, and it can be undone by other means, or by other magicians who know the secret of the action and the means by which it has been achieved. In order, then, to disturb the laws of nature, to transform existing things, to shape and mould new creatures, the magician requires the help of superhuman powers. This is the very root and basis of magical art; the magician must be able to command the services of spiritual powers—demons, gods, or ghosts—malignant in their disposition and willing to do mischief.

Jewish magic presupposes the existence of such spirits, and occupies the borderland between orthodoxy and heresy, between Judaism and paganism. It is an art that lives in the twilight between truth and falsehood; and the line of demarcation shifts according to the change of theological views in the course of development and transition. It depends also upon the nature of those spirits and upon the theological attitude towards them—whether they are considered as forces opposed to God or as mere negative forces that are also creatures of God and yet unwilling, by their own innate wickedness, to do good. The conception of a rebellious angel who has been cast down from the heavenly heights because of his arrogance and insubordination does not enter into the sphere of Jewish magic, nor, with rare exceptions, have the gods of other nations become evil spirits subservient to the wish of the magician and willing to do his behest.

The Hebrew term for 'magic' is *keshef*, which, like all technical expressions connected with superstition, is of obscure origin; though many attempts have been made to elucidate its primitive meaning, not one has yet proved satisfactory. The primitive meaning of *keshef*, in the view of the present writer, is apparently 'hidden,' 'obscure,' 'a thing done in a secret manner,' which is the very essence of magic. The performance is a secret one, and even those who are allowed to witness it are slow to understand its meaning. The word *keshef*, with its various derivatives, occurs twelve times in the Bible. It is to be noted that all the references in the Pentateuch are to Egypt, while of the references in the Prophetic writings some are to Assyria as well as to Palestine itself. In 2 Ch 33⁹ Manasseh is described as having practised witchcraft as well as other forbidden things (cf. also Mal 3⁵); the wizards of Egypt are mentioned in Ex 7¹¹ 22¹⁸; in Babylon there is only one allusion to them, in Dn 2².

The LXX translates *keshef* by φάρμακον, which does not mean 'poison,' but, as in later Greek, a 'spell' cast by a magician. *Keshef* has remained the technical term in Hebrew literature. Witchcraft is called *kishshuf* in the Mishna and Talmud, and no words have been more widely used, and yet with a very definite meaning attached to them, than *kishshuf* and *m'khashshēf*, nor is there any doubt that the real meaning of this 'magic' is exactly witchcraft. It is clearly stated (*Sanh.* vii. 4, 11) that only he is to be called a magician who produces a real act, but not the man who produces an optical illusion, a kind of jugglery.

The fact that witchcraft is mentioned in connexion with Egypt (exclusively, in the Pentateuch, and occasionally, in other passages in the Bible) shows the probable source of the magical art known and practised in Bible times. The Egyptian *m'khashshēfīm* in Ex 7¹¹ 22¹⁸ perform precisely the acts defined above as the work of the magicians; they endeavour to change the order of nature. No details are given regarding the operation of the magician in the Bible; but from Is 47^{9, 12}, Mic 5¹², Mal 3⁵, Nah 3⁴, Jer 27⁹, and 2 K 9²² it is clear that, in the eyes of the prophets, the work of sorcery was tantamount to idolatry and to lewdness, possibly through the performance of some action by the magician. That some of the witches performed such acts in a state of absolute nakedness is an attested fact throughout the history of magic, and it is possible that the prophets had this in view when in speaking of witches they placed them on the same plane as harlots. It is noteworthy that the witch, and not the wizard, is mentioned in Ex 22¹⁸, Dt 18¹⁰. The sin of the *m'khashshēfāh* must have been so heinous that the law punished it with death. Witchcraft must, therefore, have been connected with idolatry (Mic 5¹²); it was characterized as an 'abomination' (Dt 18¹⁰), and was also described as *z'nūtīm*, 'lewdness' (Nah 3⁴, 2 K 9²²).

The scanty references in the OT, which show that the practice could not have been wide-spread in Bible times, become clear in the light of the tradition of Rabbinical literature. We learn to know through what powers the magicians were able to carry on their operations; the spirits become, as it were, more materialized.

The existence of demons is not denied; on the contrary, they are universally acknowledged, possibly through the influence of Babylon, and the Jewish belief of the period endeavours to account for them in a world created by God (see DEMONS AND SPIRITS [Hebrew] and DEMONS AND SPIRITS [Jewish]).

According to the *Pirkē Abhōth*, v. 9 (cf. C. Taylor, *Sayings of the Jewish Fathers*, Cambridge, 1897, *ad loc.*) and *Gen. Rab.* 7, *mazẓikīm* were created by God Himself at the close of the sixth day; but, as the Sabbath supervened before their creation had been completed, they remained half human, half spirit. They are not fallen angels, nor are they ancient heathen gods, but intermediate between angel and man, and mostly of an evil inclination.

How they are to be used—i.e. the art of witchcraft—has been taught to man by two angels who have forfeited all rights to the bliss of heaven. According to a legend found in the *Book of Enoch*, the *Chronicles of Jerahmeel* (tr. M. Gaster, London, 1899), and other Jewish Haggadic collections, the two angels Uzza and Azazel, who showed their discontent at the creation of Adam, and afterwards were sent by God, at their own request, to see whether they could withstand temptation, both fell in love with a woman and were punished by God. One of them hangs head downwards from heaven, and the other is chained behind the dark mountains; it was the latter who taught women the arts of witchcraft and cosmetics (*Jerahmeel*, ch.

25, and notes, p. lxxiii).¹ The Kenites, the descendants of Cain, were the pupils of these angels, and, according to the *Book of Jubilees*, corrupted the descendants of Seth and brought about the Flood. According to another tradition, the *mazzikim* and *shedhim* were the children of Adam and Lilith, the *shedhah* who leads the procession of *shedhim*, and who, during the one hundred years that Adam was separated from Eve, consorted with him (*Zohar*, i. 176; cf. *ERE* iv. 614^a). Lilith plays a great rôle in magical literature; she later becomes the demon who kills infants at birth and, together with her companions, is constantly mentioned in Aramaic inscriptions on magical bowls from Assyria and Babylon (see below). The demons are both male and female, and they also endeavour to consort with human beings—a conception from which arises the belief in *incubi* and *succubae*—and it is through these demons that the magician is believed to be able to carry on his work.

In apocryphal and legendary literature we get a clearer glimpse of the beliefs prevalent among the Jews concerning magic and magical operations. Faith in demons and demoniacal powers seems to have been established by that time; at any rate, these beliefs are far more in evidence, and do not seem to be seriously contested. The character of these spiritual potencies is somewhat indefinite, except in the *Book of Enoch*, where, as we have seen, angels who had fallen in love with human women use such powers as instruments for deception and sorcery. In the book of Tobit another side of this belief is shown in which we may begin to see a differentiation between a white magic, or a magic tolerated by Judaism, and that kind of magic which ranked as pure paganism, and which probably would fall under the category of the witchcraft for which the death penalty was prescribed by law. Here we find the angel Raphael himself helping, by means of fumigation, to counteract the work of a demon who, falling in love with Sarah, had become an *incubus*, and would, therefore, kill any one who intended to approach her. The spirit thus exorcized was Asmodeus, who is recognized in the later demoniacal hierarchy as the king of the evil powers.² The position of Belial, or Belial (the name given also in Samaritan tradition to the evil spirit who deceived Eve), is, in the *Ascension of Isaiah* and other apocryphal writings, not so clearly defined, but in any case he is an evil spirit approximating to the character of Satan in the book of Job (cf. BELIAL, BELIAR).

To obtain the assistance and help of these powers, certain means had to be devised: gifts or sacrifices were made in order to win them over and gain control over them. Maimonides,³ in interpreting Dt 32¹⁷, 'they sacrificed to *shedhim*,' says that the gift most acceptable to the evil spirits was blood, and that their willing help was obtained by giving them the blood of the sacrifice as food; the magician must partake of the blood, thus sharing the food of the evil spirits, so as to become their associate. To this sacrifice, which was not limited to the shedding and partaking of blood, other ceremonies had to be added, all best understood as sacrifices; just as the fumigation or burning of incense in the temple is an offering to God, so fumigation and the burning of incense must be understood primarily as gifts very acceptable to the spirits, who are not sufficiently materialized to enjoy material food (cf. the Biblical parallelism of

magic with idolatry, noted above). In addition there was the lighting of candles and the use of a knife with a black handle which is mentioned by Rashi to *Sanh.* 101a, and which can be understood only as a symbolical sacrificial knife. Philtres must be served in glass bowls (*Babha meṣa*, 2a). Fasting and other ceremonies are all intended to propitiate the evil spirit, and this is what made magic and magical operations objectionable to Jews and an 'abomination' to Judaism. Yet Rabbis made allowance for weaknesses of human nature and, except on rare occasions, avoided rigorous measures against witchcraft. But when necessary they did not shrink from them. During the first centuries of the Christian era the whole of what might be termed the civilized world—Egypt, Babylon, Greece, and Rome—stood under the absolute sway of belief in evil spirits. It was partly Babylonian tradition that ascribed every form of evil and harm to the action of the *shedhim* and *mazzikim* and produced a large literature of invocations and magical formulæ for harm and for protection, and partly the Egyptian tradition of magical operations and ceremonies of a mystical and magical character. During Talmudic times it seems to have been believed that some *shedhim* were harmless, and, though they were looked upon as evilly inclined and malignant, a friendly intercourse with them does not appear to have been considered contrary to Jewish law. Thus a Rabbi once assisted in a dispute between two *shedhim*, in which one who had taken unlawful possession of a place belonging to the other was vanquished and a few drops of blood were found floating on the well where they dwelt (*Levit. Rab.* 24); but, on the other hand, Abaya saw a seven-headed monster coming out of a well and killed it.⁴ The attitude of the Rabbis was justifiable so long as it did not lead to real idolatry.

The belief in the power of the Ineffable Name (see CHARMS AND AMULETS [Jewish], NAMES [Jewish]) was as old as any belief in witchcraft. As soon as the existence of evil spirits could not be denied, they also were given mysterious names, and it was held that, the moment the magician possessed the secret of their names, he could win their assistance, provided it was not contrary to the will of God. Legend says (*Pal. Targ.* to Gn 25^{1st}) that among the first who obtained mastery over these demons and the knowledge how to deal with them for their own purposes were the children of Abraham by his wife Keturah, to whom he had imparted the knowledge of the mystical names of the demons (the names of the unclean). It was through the names of these evil spirits that 'the prophet of the heathen,' as Balaam is called, was able to perform his witchcraft and was expected to harm the Israelites. He was considered to be the greatest magician of old, and, according to *Pal. Targ.* to Nu 25¹, he taught the daughters of Moab to practise sorcery and witchcraft and thus enticed the young men to idolatry and immorality, which brought the plague upon Israel. It is also said that Balaam tried to escape by flying in the air, but Phinehas, through the Holy Name, was able to fly higher and smite him. The magicians in Egypt who unsuccessfully withstood Moses were Jannes and Jambres (so already in *Pal. Targ.* to Ex 1), well known in apocryphal literature as the great magicians at the court of Pharaoh (cf. also 2 Ti 3⁸). According to the Samaritan *Apocrypha of Moses*, the sorcerer who predicted the birth of Moses was a certain Palti. The Samaritans trace the origin of sorcery and witchcraft to the 'Book of Signs' given to Adam before he left Paradise; but in Jewish and Christian

¹ This is one of the earliest mentions of a seven-headed dragon, which plays such an important rôle in fairy-tales.

¹ For an Egyptian parallel to this legend ascribing the origin of magical art to the teaching of an angel who had fallen in love with a woman see M. Berthelot, *Collection des anciens alchimistes grecs*, Paris, 1837-38, i. 31.

² Later the host of *shedhim* had other rulers and princes besides Asmodeus (cf. Jerus. *Sh'k.* v. 49b, *Gen. Rab.* 20, *Levit. Rab.* 5, and later Midrashic compilations).

³ *Guide*, iii. 56.

apocryphal literature it is the 'Book of Adam,' or the 'Book of Rāzīl,' a title afterwards given to a handbook of practical *kabbālā* full of such mystical names of angels, rulers, princes, stars, planets, and sublunar worlds. Still less could the Rabbis object to belief in power over these demons when they remembered that even the Temple in Jerusalem was said to have been built by Solomon with the assistance of the *shēdhīm*—a legend which rests on a peculiar interpretation of the word *shiddāh*, occurring in Ec 2⁸. So firm was the later belief in Solomon's power over the *shēdhīm*—and whatever was allowed to Solomon could not be refused to any other Jew—that Josephus has preserved to us (*Ant.* VIII. ii. 5) the tradition of Eleazar, who came before the Roman emperor Vespasian, and was able to drive away an evil spirit by using the ring of Solomon and certain herbs.

In the Solomonic cycle Asmodeus is mentioned as their king, and Lilith, Mahalat, and Agaron are also described later as leaders of evil spirits, while even a demon Meridianus has been evolved out of Ps 91⁴. Once the grouping of spirits was conceded, numbers came from various quarters to swell the host. Among these we find reference, in the Talmud, to the princes or rulers over oil and eggs,¹ rulers over the thumb or, rather, thumb-nail, and over crystal—all shining objects used, no doubt, for crystal-gazing (*q.v.*). It was a time of syncretism, in which everything that helped either to do or to avert evil was eagerly sought by the credulous. The work of the magician was wrapped in obscurity; his books were kept secret, and his operations were accessible only to the adept, whence much of the practical operation is almost lost to us. What has survived is, with few exceptions, the accompanying formulae by which these various spirits and invisible powers were invoked or subdued either for evil, as in most cases, or for good. In the Greek magical papyri some fragments of the formulae are extant, but very little of the operations. Much more seems to have been preserved in the Hebrew *Sword of Moses* (ed. and tr. Gaster, *JRAS*, 1896, pp. 149-198), of extreme antiquity, and in some MSS of practical *kabbālā*, or practical occultism, mostly in the possession of the present writer (one of the prescriptions in these is given below). A large number of bowls, many of them dating from the first centuries of the Christian era, have been found in Babylonia with Hebrew and Syriac inscriptions, these vessels being used by the ancient magicians for the purpose of making the incantation or conjuration written on them effective. The inscriptions in question contain whole lists of demons and spirits who are in the service of the magician or whose power he is expected to check. A large number of them have been published by J. A. Montgomery (*Aramaic Incantation Texts from Nippur*, Philadelphia, 1913), and one (no. 32) may here be reproduced as showing the state of mind and the beliefs of the people. The translation is independent and differs somewhat from that given by Montgomery.

¹ This bowl is prepared for the sealing of the house and the wife and the children of Dinai, son of Ispandarmad, that the Terrifier (fright) and evil Dreams may depart from him. The bowl I lifted up and I have watered (drained) it, an operation like that which was established by Rab Joshua bar Perahyah, who wrote against them—a ban against all Demons and Devils and Satans and Liliths and curses which are in the house of Dinai, son of Ispandarmad. Again: he wrote against them a ban which is for all time, in the name of Arame, Atatōt Atōt, within T, Atōt Atōt, the name a scroll within a scroll. Through which are subjected heaven and earth and the mountains; and through which the heights are raised (lifted) up; and through which are fettered the magician, Demons and Devils and Satans and Liliths and curses; and through which he passed over from this

world and climbed above you to the height (of heaven) and learned all counter-charms for hurt and for healing to bring you forth from the house of Dinai, son of Ispandarmad, and from everything that belongs to him. I have dismissed you by the ban, and it is bound and sealed and countersealed, even as ancient lines (of writing) which do not fail and men of old who were not surrounded (tied). . . . Again: bound and sealed and countersealed is this ban in the name of YHWHYHWHYH, YHWH, YHWH, A. (Amen), Amen, Amen, Selah.

Sealed and protected are the house and dwelling of Dinai, son of Ispandarmad, from the Terrifier (fright) and evil Dreams and the Curse. And sealed and protected be [his wife and son] from the Terrifier and evil Dreams and Curses and Vows and . . . Hallelu. Amen.

This inscription has been selected because it contains the name of the famous Joshua (Jesus) b. Perahyah who was so important a figure in the time of John Hyrcanus at the end of the 2nd cent. B.C. He was the teacher and friend of R. Simeon b. Shetah, whose dealings with the witches of Ashkelon are mentioned below. In the apocryphal stories about Jesus a noteworthy part is assigned to this Joshua b. Perahyah, who had fled to Egypt, where he was believed to have learned the art both of working and of combating magic.

The Jerus. *Talm.* (*Sanh.* vii. 19, fol. 25d) tells a curious legend concerning this same R. Joshua, who is made the contemporary of R. Eleazar and R. Gamaliel. These three came to a place where they found a young man whose manhood had been taken away by a witch. R. Joshua sowed flax seeds on the table, and they sprouted in an instant and grew up. Out of the midst a woman with dishevelled hair suddenly appeared—the witch. R. Joshua seized her and ordered her to loosen the spell, but she refused, whereupon he threatened to divulge her name. She then answered that she could not undo the spell, because the things had been thrown into the sea. R. Joshua then ordered the angel of the sea to throw them up, and thus the young man was restored to health, and later became the father of R. Judah b. Bethera.

In the light of the Babylonian bowls, it is not improbable that this is a story of Joshua b. Perahyah, but, as nothing was known of his magical powers, it was transferred later to another Rabbi also named Joshua.

The Rabbis had no doubt as to the origin of witchcraft: it came from Egypt. According to *Kiddushin*, 49b, ten measures of witchcraft have come down into the world, nine of which have gone to Egypt, while one has spread throughout the rest of the world. The Talmud names one or two witches who are said to have practised in Jerusalem, among them being Yōhnā, the daughter of R. Hibi (*Sotāh*, 22a), famous as a witch affecting childbirth.

One day, whilst she was assisting a woman in travail, a neighbour came into her house. Hearing a noise in a vessel like that of a child in the womb, she lifted the cover; the noise ceased, and the woman was easily delivered. Hence it was recognized that Yōhnā was a witch.

Evidence of the Egyptian origin of witchcraft and of its purely temporary character—as is shown by the fact that, if put to the proper test, it vanishes—is seen in the Talmudic story of Z'eri.

He bought an ass in Alexandria, but, when he attempted to cross the river on it, it turned into a plank the instant it touched the stream, for no witchcraft can withstand running water. All who saw him laughed at his discomfiture, but he recovered the money which he had paid for the ass. Another Rabbi, Jannai, being offered a drink of water, poured some of the liquid on the ground, whereupon the rest turned into scorpions. He then compelled the witch to drink and she was transformed into an ass, on which he rode into the market. There another witch, recognizing her, broke the spell, and the Rabbi was then seen to have the witch for his steed (*Sanh.* 67b).

As soon as magical operations came to be regarded as idolatry, sterner measures were taken, one of the foremost opponents of magic being R. Simeon b. Shetah (*Sanh.* 44b, and *Rashi, ad loc.*), who lived in the time of King Jannæus and Queen Alexandra (1st cent. B.C.). He went to Ashkelon, where, with the assistance of eighty pupils, he caught eighty witches actually practising their magic arts, and he hanged them all in one day.

¹ This idea of a witch who holds the soul, or the eyes, or the heart in close imprisonment in certain vessels which, when broken (the contents being restored to the owner), restore life, health, and sight occurs frequently in fairy-tales and is derived from Egyptian tradition.

¹ The rulers of the egg must mean those who obtained an insight into the work of the spirits or mastery over them through looking intently into the yolk of an opened egg (*Sanh.* 67b).

The details are of much interest, for they show a complete continuity of practice from that day onward. The women procured food and drink in a miraculous manner, and in the midst of their feasting did not disdain to invite the Rabbi's pupils to share in their banquet. Each of the young men then took one of the witches in his arms and lifted her from the ground, whereby she lost her magical power, the reason given for this procedure being that no harm could befall a witch as long as she touched the earth.

It was, however, found necessary to bring some order into the chaos of magic, for the Rabbis could not transgress a clear prescription of the Bible, and a sin which was punished with death could not be passed over lightly. On the other hand, what was a deadly sin for the followers of one creed might be tolerated by those following another; a heathen might be allowed to be a magician and not fall under the ban of the Law, while a Jew was strictly forbidden to follow such practices, and, *vice versa*, a Jew might be considered a magician by the followers of another creed. To a Jew all heathen practices and even religious ceremonies might be magic, and the Rabbis, therefore, divided magic into three categories. First, the death penalty by stoning (Lv 24²¹) was inflicted only on those who practised magic and performed magical operations. The second class consisted of those who merely acted as jugglers or produced optical illusions, and who were warned not to indulge in such practices, but were not punished. A third type of magic was that by which operations and identical results obtained by the Holy Name were not only tolerated, but actually sanctioned. A difference was thus made between the use of the names of the unclean spirits (magic) and the names of the clean ones (*kabbala*). By the former are meant demons and spirits, by the latter angelic powers. At the same time mastery over demoniacal beings might be obtained through the mediation of heavenly powers.

Thus, when R. Simeon b. Yohai and other sages went to Rome, they caused a demon, ben Timalion, to enter the emperor's daughter; and, when they arrived at the city, they were able to cure her by expelling the spirit (briefly told in *M'utah*, fol. 17, a-b, enlarged form in A. Jellinek, *Bei ha-Midrash*, Vienna, 1893-78, vi. 123-130; also Rashi, *ad loc.*; Gaster, *Exempla of the Rabbis*, London, 1896, no. 19; M. Seligsohn, in *JE* xi. 860 f.).

Thus was established a compromise which was facilitated by the manifold meanings attached to the word *ruah*, 'spirit,' used even in the Bible for both a good and an evil spirit coming forth from the Lord, possessing man and departing from him. So strong was the belief in the harm which such evil spirits could produce that, as far back as the time of the Mishna, a light might be extinguished on the Sabbath if an evil spirit was feared (*Mishn. Shab. ii. 5*); and in the Bible *ruah* is already occasionally applied to evil spirits, demons, and devils (Jg 9²³, 1 S 16¹⁴⁻¹⁵, 23 18¹⁰, 1 K 22²⁴, Zec 13²).

Despite the stern attitude taken by the Rabbis, magic flourished among the Jews, for the adepts of this science often deluded themselves as to the true character of their art. Not only did they continue their forbidden practices and their operations for evoking spirits and subduing demons, but in their formulæ they introduced names of spirits and demons gathered from every form of warring creed and ancient tradition, and gods and spirits long dead and forgotten were retained in magical practices and invocations. Gnostic, Babylonian, and Egyptian names, and even such appellations as Soter, Alpha, Omega, and Evangelion are found side by side with *S'bhäth* and *Shaddai*. Actual specimens of these conjurations are very rare, for the magician would never disclose his mode of operation, but the following example (taken from the present writer's Cod. no. 443, fol. 136) is characteristic of the peculiar mixture of names and powers used by the magician.

'And they are called "the princes of bdellium." Take bdellium and write upon it with olive oil! ¹AUGUR (or) AUGURIA;² and take a boy seven years old and anoint his hand from the top of the thumb to the end of the finger; and put the bdellium into his hand in the anointed place and seize his hand; and you shall sit upon a three-legged stool and put the boy between your loins so that his ear shall be against your mouth and you shall turn your face towards the sun and say in his ear: "Aungil, I adjure thee in the name of the Lord God, God of Truth, God, Keeper of the Hosts, ALPHA, AIDU,³ that thou shalt send from thee three angels." Then the boy will see (a figure) like (that of) a man; and say (the charm) twice more, and he will see two (figures); and the boy shall say unto them: "Your coming be in peace!" And then tell the boy to ask of them that which you wish. And if they will not answer him, the boy shall adjure them, and say: "KASPAR, KULEI, EMAR (or) BLATZISAR,⁴ the master and I adjure (you) with a second adjuration that you tell me that thing or who has committed that theft." And know that he who wishes to do this must do it on a clear, cloudless day, and in winter time at mid-day.'

The most remarkable product of this type of syncretism is the *Sefer Mafteah Shl'omoh* ('Key of Solomon'), a complete facsimile of which has been edited by H. Gollancz (Oxford, 1914).

No legal command could eradicate so deep-seated a belief as that in magic and magician, and, though it is true that it was forbidden, almost on pain of death, to become a pupil of a magician (*amgushit*) (*Shab. 75b*), yet his help might be invoked to break a spell in the case of a man who had become seriously ill through witchcraft. This was done almost to modern times (*Tur, Yoreh de'ah*, § 179, and the commentary of R. Joseph Caro [see QARO, JOSEPH], *ad loc.*).

Belief in magic received an additional impetus through the mysterious teachings of the *Zohar*, which, from the 14th cent., held almost unbroken sway over the mind of the majority of the Jews. In it the Talmudic legends concerning the existence and activity of the *shedhim* are repeated and amplified, and a hierarchy of demons was established corresponding to the heavenly hierarchy. Halls of the nether world and their demon rulers are fully described in the *Zohar* (Ex. 246b-288a) and exorcism of the *shedh* or any evil spirit was recognized as within the power of every man fully versed in mystical lore and in the mystical names of God. Many a tale is told of such expulsion of demons by holy and pious men, such as Heliodorus in Catania in the 8th cent. (L. Zunz, *Zur Gesch. und Lit.*, Berlin, 1845, p. 486); and others are mentioned by Manasseh in his *Nishmat Hayyim* (Amsterdam, 1652), bk. iii., which is full of information concerning belief in demons and the power of the pious to master them and use them for their own purpose. Even the scholarly and learned Rabbis of the 17th cent. clung to the belief, while in the legendary lore of the Middle Ages such men as Maimonides (*q.v.*), Ibn Ezra (*q.v.*), R. Judah the Pious, Rashi, and Nahmanides (*q.v.*) were all credited with magical powers, and many a legend is told of their operations. Rabbi Jehiel of Paris has even found a place in Victor Hugo's *Notre Dame de Paris* as a wonder-working Rabbi, and no less famous was R. Loeb of Prague (17th cent.), who was regarded as a great magician and was credited with having a clay famulus that was able to perform wonderful deeds, since it had under its tongue a plate on which a mysterious name had been engraved. The Ba'al Shem (†1760), who founded the sect of the Hasidhim, had many encounters with the *shedhim*, as described in his biography (*Shikhah Ba'al Shem Tob*, Berdichev, 1815 ff.), and a collection of miraculous deeds performed by him and after him by wonder-working Rabbis of the Hasidhim as detailed in the *K'hal Hasidhim* (Lemberg, 1864); nor should we forget the legendary contest, de-

³ *Quesya* (?)

⁴ The three kings from the East, Kaspar, Melchior, and Baltazar—a curious invocation in the mouth of a Jewish magician. It is evident, from the corrupted form of the names, that the copyist did not understand what he was writing.

scribed in an anonymous chapbook, between a bishop magician and a red Jew, who had come from beyond the waters of the mysterious river Sambat-yon, for upon the issue of the struggle depended the life of the Jewish communities in Germany. To this very day the Jews in Syria perform such magical operations as fumigation, libations, and offerings of oil, bread, and lighted candles, which are put in the four corners of an empty house to propitiate the *shēdīm* before the people venture to enter the dwelling and make the proper dedication. Gradually, however, the belief in the *shēdīm* is waning, and the literature of practical *kabbālā* is slowly but steadily being discarded. Indeed, much of Jewish magic to-day is, in reality, little more than a concession to ignorance. When a Rabbi was asked why the aid of a magician may be invoked in case of serious illness, he replied, according to Joseph Karo (commentary on *Tur, Yoreh De'ah*, ch. 179), that, although there was no basis of fact for the procedure, such an appeal might soothe and comfort the patient, and therefore he saw no objection to it. This is practically the answer which is given in modern times when the people are asked why they continue to believe in the harm done by demons, and in magical operations intended to propitiate them and to obtain relief and safety. It is merely a temporary comfort to those who are loath to give up old beliefs which are now recognized as vain imaginations.

LITERATURE.—In addition to the books mentioned in the text see the Literature at artt. CHARMS and AMULETS (Jewish), DIVINATION (Jewish), and BIRTH (Jewish). M. GASTER.

MAGIC (Slavic).—The Slavic countries are a peculiarly rich field for the study of folk-lore, as they were not Christianized until the 10th cent., remained isolated from Western influences, and have conserved their written traditions.

On the vast uplands of the northern steppes man's relations to nature were characteristic. The Greeks, in their narrow, diversified, hilly country, developed a corresponding mythology, varied and beautiful; the modern Western European, a city-dweller, turns to nature in a romantic manner, semi-religiously idolizing what is to him unwonted and fresh. But to the Slav peasant nature was business, his everyday surrounding, beside which nothing else existed. He was rather unimaginative and quite ignorant. Whilst the Norsemen and the Greeks created mythologies out of natural phenomena, the Slav, in the drear monotony of his plains, fell into neither the deep religious fatalism of the Scandinavians nor the bright imagery of the Greeks; he simply saw that the sun ripened and the sun scorched; that the earth was moist and fertile or parched and frozen; that he was environed by unknown powers to be obeyed or to be subdued; he addressed prayers and incantations to them in a prosaic, almost rationalist, attitude of mind, without adoration, with merely a recognition of inevitable dependence. His spells and invocations (the bastard descendants of heathen rites) were unsound science, but good rationalism. A. N. Rambaud¹ says that the primitive Slavs adored matter and never felt the incentive to personify, idealize, or philosophize it; perhaps it was a mere acceptance of necessity.

The Pomeranian Slavs, the only Slavs who had access to the sea, had a very elaborate ritual, and worshipped many-headed images in temples, not in groves, like the other Slavs. Their greatest oracles and pilgrimages were in the isle of Rügen; these pagan shrines were destroyed by Valdemar I. of Denmark in 1168.

The recollection of this sacred island has strongly

¹ *La Russie épique*, Paris, 1876, p. 215.

influenced Slav myth and magic. The word Rügen is derived from the same root as the English 'rough,' and is called in Early Russian Ruyán. Now the word Buyán comes from a synonymous root, and looks like a translation of the Teutonic name Rügen; and it is thus a safe and probable theory to identify the fabulous island of Buyán with the historical shrine of Rügen—all the more so as the mysterious stone Alátyr is thought perhaps to mean amber, which was an article of Baltic commerce.

When Christianity had effaced the old Slavic nature-gods, the need for which they stood still remained—that of dealing with nature, coaxing and dominating her, and mastering her secrets. Fragments of the old ritual, degenerating into incomprehensible patter, continued to be used at the old sacred haunts, but these incantations were clandestine; though the beings invoked were believed in, they were considered illicit or hellish; heathendom had changed into magic.

Every village had its magician or witch-doctor. These practitioners certainly possessed great knowledge of healing, as herbalists and masseurs; but, where all nature consists of discontinuous miracles, such cures had to be accompanied with the ritual that was calculated to conciliate the powers and convince the patient.

The Russian sorcerer lived alone; he had learnt the magic formulae, and had been instructed by the woodsprites (*lesi*), the goblin of the hearth (*domovói*), the fairies of the fields and the water (*polevoi*, *vodyanói*). Such practitioners are known by many names—e.g., *znákhár*, *koldún*, *kudésnik*, *vedún*, *vorozéy*, etc.; the women-witches are called *vedúma*; and to them more extraordinary powers are attributed. These magicians hand down their wisdom to their youngest children—a custom signifying that this magical knowledge was derived from non-Aryan peoples, and taken over by the Aryan conquerors.

It is said that the *znákhár* has physical marks—a troubled eye, a grey complexion—that he mutters, has a hoarse voice, and so on. Unless he communicates once a year, earth will not receive his body, and then he wanders after death as a vampire, sucking others' blood. Witches are credited with the power of flying, and are supposed to have marvellous muscular strength and a spotted skin. They are said to forgather in the gusts and whirls of snow at cross-roads; a pious man should cross himself when he comes upon such whirling columns, for in them the witches dance. If a knife be thrust into such a column, it will drop to the ground blood-stained; and it then becomes an implement for sorcery—e.g., a man crossed in love may use its broad blade to wipe out the track of his maiden in the snow.

The wizard is believed to have terrible powers; among the Galician Rusins, e.g., if the *znákhár* inserts a knife under the threshold of his intended victim's dwelling, the victim is snatched away by a whirlwind, and detained until the knife is removed.

The magical formulae are very curious. They are framed for every occasion of need; and, to be efficacious, they must be spoken in one breath without any departure from the text—only thus can the powers of nature be quelled, and the wizard be the lord of creation. The following is the text of a charm against lead, copper, and iron bullets:

'In the lofty chamber, at the river mouth, beyond the river Volga, a fair maiden stands, stands and decks herself, commends herself to valorous folk, glories in deeds of war. In her right hand she holds bullets of lead, in her left bullets of copper, on her feet bullets of iron. Do thou, fair maiden, ward off the guns of the Turks, the Tatars, the Germans, the Circassians, the Russians, the Mordvins, of all tribes and foes;

superstitions—a peculiar place is occupied by those of the Anglo-Saxons, as the Frankish regulations are in great measure verbally dependent upon them. They warn against 'divinationes,' 'auguria,' 'somnia,' 'mathematici,' 'emissores tempestatum,' and especially against 'incantationes diabolicæ,' 'flacteria,' and 'ligaturæ.' As yet excommunication was the extreme penalty for transgression. The Venerable Bede (*HE* iv. 27) relates that, during a time of pestilence and high mortality, recourse was had to adjurations and spells. The abbot Regino of Prüm has incorporated an entire series of the decrees of councils dealing with the subject in his work *de Synodalibus Causis* (A.D. 906; *PL* cxxxii. 187 ff.), and from that work much has been borrowed by Burchard of Worms, who wrote about the beginning of the 11th century (*PL* cxi. 537 ff.).

That similar ideas and usages were still flourishing in England at this period is shown by Ælfric's *Passio S. Bartholomæi Apostoli*, with its injunction that no one shall seek to regain health by using a ligature of medicinal herbs or praising a herb in a 'magic song.' The ecclesiastical ordinances of Eadgar and the Northumbrian priests' laws contain regulations to the same effect. Among the Northern Teutons likewise canon law directed its mandates against superstition and magic.

Till well on in the 16th cent. synods and councils of the Church were constantly under the necessity of dealing with the use of spells and amulets and the evils arising from them. Thus can. 9 of a papal bull enacts for the Lateran Council of 1514 that *sortilegia* made by invoking demons, by incantations, or by other superstitious practices are unlawful. Clerics who offend are to be punished at the discretion of their superiors, and laymen are to be excommunicated or visited with civil penalties.

In dealing with such offences, the national codes of the various Teutonic peoples do not show the same unanimity as the Church. The Teutonic nations that came into existence on Roman territory found it necessary to base their legislation against magic directly upon the ordinances of Roman law. The earliest Teutonic code, the *lex Visigothorum*, enacted (bk. vi. tit. 2, 4) that those who 'quibusdam incantationibus' bring hailstorms upon the fields and the vineyards 'ducentenis flagellis publice verberentur et decalvati deformiter decem convicinas possessiones circuire cogantur inviti.' Rotharis, king of the Longobardi, sternly prohibited the belief in cannibal witches. Among the Germans, as among all other races, the feeling prevailed that one who practised malefic magic must at all costs be got rid of, whether by expulsion from the tribe or by death. But, on the other hand, we have a variety of testimony from Northern Europe which seems to show that the practice of magic was not in all circumstances deemed criminal.

In the civil law of the Anglo-Saxons, from the 7th cent. onwards, we find penal enactments against superstition and magic, and in particular against the employment of spells and amulets. The laws of Alfred the Great dealing with magic are founded mainly on the Biblical denunciations of the practice. Of similar character are the legal ordinances directed against the occult art among the Northern Teutons. The older Icelandic canon law of the 12th cent. ordains that those who tamper with incantations or witchcraft shall be punished by banishment.

The evil against which the enactments of the Teutonic codes were mainly directed was malefic magic (*maleficium*). Until the 8th cent. we find no similar enactments against other superstitions which eventually gathered round the belief in witchcraft. But the belief in the existence of cannibal witches and in witches' flights was ex-

plicitly forbidden by ecclesiastical and civil legislation, though Ivo of Chartres (c. A.D. 1100) thought it possible that witches exerted some influence upon the sexual functions. The Church, however, notwithstanding all its exertions, was by no means successful in ridding the people of their magic beliefs and practices. Both continued to flourish abundantly in the department of medicine, thanks to the recrudescence of the old neo-Platonic—in reality, the Babylono-Egyptian—doctrine of demons. At an early period medicine had become the monopoly of the cloister; the demons of disease were exorcized by the priest; and to relics, to the rosary, and to the 'Agnus Dei' were ascribed the greatest virtues. Those who in sickness and trouble applied to the priests were treated by means of the amulet and the incantation, so that as late as the 16th cent.—at a time, that is, when a medical profession in the proper sense existed—adjurations were still resorted to by doctors.

The attitude of the Church towards the belief in magic was twofold. On the one hand, it accepted magic as an indisputable reality. On the other hand, it ranged itself with the civil legislation in an uncompromising opposition to certain dangerous popular superstitions. But in the 13th cent. came a momentous change in the Church's standpoint. The doctrine of Satan was now made the basis of the doctrine of magic and witchcraft. The nightly journeys of witches, the transformation of human beings into animals, the sexual intercourse of men with female demons, and the operation of sorcery in the sexual functions—all these things were now accepted as facts not to be gainsaid. Then in the 14th cent. the two currents of heresy and sorcery, which had hitherto run side by side, became amalgamated with each other, and merged in the belief in witchcraft. While among the Teutonic tribes the practice of magic had hitherto been penalized—to speak strictly—only because of the mischief which it might work, in the 13th cent. the civil legislatures in Germany likewise resolved upon a new policy. The Old Saxon code (*Sachsen-spiegel*) sent those who practised magic of any kind to the stake, and its example was followed by other municipal and territorial codes. In spite of the rigour of the Inquisition, it is true, the earlier penal law (which threatened with excommunication the users of incantations, amulets, or other magic devices) was still pleaded for by the councils and by certain outstanding men among the clergy. But the Inquisition at length silenced every stricture against its competence to deal with magic. By the civil legislation of the 16th cent. those who dealt in magic and soothsaying were punished mainly by fines; the death-penalty was scarcely ever mooted. On the other hand, the Hamburg criminal code of 1508 enacts that the punishment of malefic magic shall be death by fire, and this clause was taken over by the Imperial legislation—the 'peinliche Gerichtsordnung Kaiser Karls v.'—while we find that the criminal code of the Electorate of Saxony (1572) sentenced witches to death by fire, and its example was followed by the legislation of the several States. The persecution of witches was gradually introduced into the various territories of Germany during the second half of the 16th century. In England the earliest processes of this kind seem to have been trials for real or alleged attacks upon the person of the sovereign, as from the reign of Henry VI. But in England the laws against witchcraft were in general much more lenient than was commonly the case on the Continent. Witch-persecution in England dates from about the middle of the 16th cent.; in Scotland cases are found as early as the beginning of that century. With regard to Sweden, we are not in a position to say whether witches were burned

before or during the Thirty Years' War. These measures, however, were incapable of extirpating the belief in magic—just as the Reformation itself failed to destroy it, though the delusion certainly received a telling blow from the Reformers. As to the question whether sorcery has a foundation in fact, the Reformers themselves shared the ideas of their age, and the final deathblow to the belief in witchcraft and sorcery was administered by the reconstituted sciences of modern times.

Even in the earliest ages a clear line of demarcation was drawn between lawful and unlawful magic. The latter was treated by all races with the utmost rigour, and not seldom punished with death. Among the Teutons, as elsewhere, incantations and amulets were utilized as a means of securing protection and profit to the individual and his belongings, and also to work injury upon others, and their possessions. The magic spells of the Teutons may therefore be arranged in two main divisions, according to the purposes that they were intended to serve: (1) magic formulae supposed to secure protection and advantage; (2) magic formulae intended to injure others. But, as the subject itself suggests, the former class may be further divided according to the effects which the spells were intended to produce. Their object might be either (a) to drive away an existent evil, to 'exorcize' it, or (b) to avert a possible evil by means of a 'blessing.' This dichotomy of the first main group, however, will not be found exhaustive, and it is necessary to mark off another subdivision. Magic formulae were used not only for the purpose of dislodging present and averting future evils, but also as a means of inducing spirits to throw light upon the future, and upon hidden things generally. In so far as this (c) prophetic magic (as it may be called) had often to do with things which lay in the future, it comes into close touch with the class of magic formulae designed to prevent possible evil. But, while the received spells can for the most part be assigned to one or other of these four *genera*, many particular species may be differentiated within the larger groups. The number of different varieties will in general correspond to that of the various purposes which the formulae were meant to serve.

Magic can be overcome only by counter-magic; such was at one time the universal postulate of the occult art. In primitive times, however, all sorcery consisted in words and symbols, generally conjoined with actions. Thus, with reference to the Germans, Tacitus (*Germ.* x.) states that, when the deity was consulted by means of the lot, the priests held aloft the magic wand engraved with symbols, muttering incantations the while. Sundry Anglo-Saxon spells specify the appropriate action to be performed. Thus the incantation for bewitched soil gives precise directions regarding the requisite symbolic actions and sacrificial usages. For the formula against the machinations of witches the instruction runs: 'wið færstice feferfuige and seo reade netele, ðe þurh ærn inwyxð, and wegbrade: wyll in buteran'; then at the end, 'nim þonne þæt sæx, ado on wætan.' But word and action had already been frequently employed independently of each other, and it is not surprising that the word came to be used apart from all accessories or symbolic actions. The Teutonic conviction that magical effects could be directly produced by the spoken word must doubtless have found expression in the particular form of the spell. But the simplest—and hence, no doubt, the oldest—vehicle of direct influence is the express command, and, accordingly, such command must have formed the nucleus of the Teutonic incantation. Two examples of Teutonic spells may be given here. The first is a formula from the 9th–10th cent., which has come down to us bearing the title 'contra vermes'

(C. von Müllenhoff and W. Scherer, *Denkmäler deutscher Poesie und Prosa* 3, i. [1892] 17):

'Gang út, nesso, mid nigon nessiklinon
 út fann themo marge an that bæn,
 fann themo bène an that fleg,
 út fann themo flegge an thia hnd,
 út fann thera hnd an thesa strála,
 drohtin, uerthe só!'

With this may be associated the Anglo-Saxon 'blessing of bees,' the 'wyð ymbe,' from a Cambridge MS of the 11th century. After a direction regarding a magical action, and a verse explanatory thereof, it continues (C. W. M. Grein and R. P. Wülcker, *Bibliothek der angelsächs. Poesie*, i. [1883] 319f.):

'Sitte ge, sigewif, sigað to eorpan!
 næfre ge wilde to wudu fleogan!
 Beo ge swaagemindige mines godes,
 swa bið manna gehwilo metes and epeles.'

It is quite conceivable that spells of this kind should exist independently, and unattached to any preliminary narrative. This has been observed also by Schröder in his article 'Über das Spell' (*ZDA* xxxvii. 259):

'Probable as it is that at a certain stage of civilization the action of the *galdr*, i.e. the spell in the proper sense, or of certain species of it, was produced in connexion with the narration of a particular mythical incident, yet there is not the slightest doubt that in other periods the epic narrative and the magic formula are disjoined, and may each maintain a separate existence.'

Besides these adjurations strictly so called, which were complete in themselves, and which may be regarded as the earliest Teutonic spells, there comes down to us from the same age another species—that in which an epic narrative is prefixed to the formula proper.

The classical examples of this type are the two Merseburg incantations, and the Anglo-Saxon spell against the practices of the witch is constructed on similar lines. The substance of the introductory portion—the narrative—is generally borrowed from mythology. The procedure was to relate some incident traditionally associated with an effect identical with or similar to that which the formula was meant to produce. It was not necessary to say in so many words that the spell should now operate with like efficacy; the bare recitation of the story invested the formula with all the potency required. But this dependence of the formula upon the narrative certainly indicates a change of view regarding the power of the formula. The performer has lost his earlier reliance on his own capacity, and this must, accordingly, be reinforced from without.

While this epic type of spell is often referred to as the primitive Teutonic form, the facts would seem to imply its secondary character, though its root may indeed lie in paganism, but in any case the recitation of a short narrative before the actual formula is not peculiar to the Teutons—let alone the Western Teutons—this form of spell being traceable among other races and in much more remote times. It was certainly known to the Romans and the Hindus. But, as a matter of fact, there is evidence to show that it was not even a distinctively Indogermanic usage, since it is found also among the Babylonians and the Egyptians. An Egyptian papyrus of the XXth dynasty (now in Turin), for instance, contains a spell which in its whole design shows a striking resemblance to the Merseburg incantation for fracture of the leg. In the Babylonian and Egyptian spells, too, precisely as in the Teutonic, the scene of the narrative part is always laid in the mythological sphere. In view of the vast influence exercised by the Oriental, and especially the Babylonian and Egyptian, magical ideas upon the nations of the West, it is a tempting conjecture that Oriental models may have been largely instrumental in propagating the narrative spell among the Indogermanic peoples of Europe—first of all in the Greek and Roman area, and then derivatively in the Teutonic. At all events, the theory that the Teutons had a primitive type of spell consisting of a prose narrative followed by a rhythmical formula, as adopted by Schröder (*loc. cit.*), is beside the purpose. The primordial element was certainly the formula, the narrative being added later; and, as we have seen, each could

be used by itself alone. We find, moreover, that in Christian times quite different introductions were combined with the real nucleus of the spell. We must therefore think of each part as distinct in itself, and in no degree the less so because in the recitation 'saying and singing' came alternately. In all probability the spells were simply muttered in an undertone; there is a large mass of evidence—and not from Teutonic sources only—pointing to this mode of recital.

Thus the missionaries who came to evangelize the Teutonic tribes found two types of indigenous incantations, viz. the purely imperative and the narrative. As the Church was unable to put an end to heathen customs and practices, or the use of magic formulæ, it adopted the policy of assimilating everything that could in any way be reconciled with its own views, hoping that by the device of clothing the objectionable thing in a Christian garb, it might succeed in eradicating the superstitions of the heathen. It likewise endeavoured to transform the ancient formulæ, and here probably its first, as also its most urgent, task was to eliminate the heathen characters from the narrative spells and put Christian ones in their place. These new formulæ were generally composed in verse, and were embellished with rhyme. Their narrative portions exhibited Biblical characters, such as Jesus, Mary, the apostles, and others, in perfectly appropriate situations—a fact which in itself conclusively shows that the spells in question originated in ecclesiastical circles. Such imitations of heathen formulæ composed by the clergy are relatively numerous, and date for the most part from the 11th and 12th centuries.

From this narrative species of Christian spell, again, was in part evolved a new type. This took the form of a comparison or allegory, and its rubric ran thus: 'As such and such a result was brought about then, so let it be produced now.' Very few of the surviving spells of this type are in metrical form; the great majority are in prose.

A further form of blessing, for the use and diffusion of which the clergy must again be regarded as mainly responsible, derives its origin from the special Roman Catholic ceremonies known as the sacramentals. New formulæ were formed on the pattern of the 'exorcisms,' 'benedictions,' and 'consecrations,' or these were simply translated into the vernacular. This species is probably not older than the 13th century.

Mention must also be made of a type of magic formula in regard to which the monks played merely an intermediate rôle. This group consists mainly of formulæ handed down in ancient medical writings. The design of most of these is the cure of disease, but adjurations for use in digging up medicinal plants were also transmitted in this way. These formulæ were, of course, mostly in the Latin language. Their potency lay mainly in phrases and letters—magic words and characters largely of Eastern origin, being derived from Babylonian, Egyptian, and Jewish magic. This group, accordingly, comprises the most ancient type of spell, which, it is to be observed, always exhibits an unintelligible jumble of words. From the earliest times, indeed, this very unintelligibility was the indispensable condition of the efficacy of the spell. From the 13th cent., however, we must take account also of another contributory source of the superstition which is concerned with words and letters—and, it may be added, numbers also. This was the religious philosophy of the Jews, as set forth in the works of the Kabbalā (q.v.).

These leading types will suffice to classify the great majority of magic formulæ, and even the hybrid, composite, and other derivative varieties which inevitably made their appearance in the

course of centuries. But the prime factor in such secondary formations was doubtless oral tradition, to the action of which a large proportion of the spells would certainly be subject at some stage of their development. The learned formulæ of the Church are usually of considerable length, and in their full form would have relatively little vogue among the common people. From these larger spells, accordingly, certain typical portions were excerpted, and then used independently. The popular mind laid the main emphasis upon the nucleus of the spell—the formula proper; and examples of this type become numerous from the 16th century. In these the strict parallelism of the earlier ecclesiastical blessings is to some extent abandoned. It was now considered sufficient to say: 'As surely as this act has taken place, so surely may this effect ensue.' Sometimes, in fact, the place of the parallel is taken by the antithesis. It became the practice, further, to draw upon still more remote quarters for the conclusion of the blessing, and to introduce formulæ which in themselves had formerly done duty as blessings, so that the formulæ of blessing, being supplemented by invocations of God and multiplied petitions, often actually approximated to the character of prayer itself.

When we consider the mass of Teutonic formulæ—even with the 16th cent. as the ulterior limit—in relation to the purposes which they were meant to serve, we see that the multiplicity of forms mentioned in the *Hávamál*, the *Sigrdrifumál*, and the *Homilia de sacrologiis* is by no means an exaggeration. Adjurations against disease certainly constitute the largest class. Many maladies were believed to be due to malignant demons and unfriendly magicians, and were therefore combated by the magic formula. But the same means was employed in dealing with diseases about the origin of which there was no uncertainty. The remedies employed in such cases were supposed to acquire peculiar efficacy by having a spell uttered over them.

Nor was it human beings only who in their distresses were benefited by spells. As had been believed from the earliest times, protection was equally indispensable for the lower creatures most closely associated with human life, viz. the domestic animals. In their case also, therefore, magic formulæ were used to ward off disease and other evils. The dog, and especially the shepherd's dog, was protected in this way from the dangers to which it was exposed from wild beasts. People were very specially concerned, however, to guard against the bite of mad dogs. A certain blessing, 'ad pullos de nido,' was supposed to help the growth of chickens. The purpose of the somewhat numerous 'bee-blessings' was to keep the insects from swarming.

There was, besides, a multitude of adjurations for animals other than the domestic. People tried to rid their houses of flies, mice, and rats by appeal to the power of the formula; wolves were adjured not to hurt the cattle in the fields; serpents, to be easily caught. The bite of the serpent was averted by spells, and by means of adjurations the reptiles were induced to yield up the potent ophite stone, and to be obedient to all commands. The tooth and the right forepaw of the badger acted as charms against all kinds of injury, and with the shoulder of a toad a man could win the love of whomsoever he chose.

In the therapeutics of ancient and mediæval times an important place was assigned to medicinal herbs. It was of vital moment, however, that these herbs should still retain their supposed virtues after being plucked, and certain magical formulæ were believed to ensure this. The practice was to adjure either the whole world of herbs,

which represent the next stage of Vedic literature, being concerned with explaining and interpreting the details of the ritual, supply much information regarding the magical notions and observances with which the sacrificial ceremonial was permeated. The Upanisads, though a continuation of the Brāhmaṇas, are philosophical rather than religious, but their speculations on the nature of *brahman* and on the supernatural powers acquired by knowledge and asceticism are charged with magical notions.

The final phase of Vedic literature, which comes down to c. 200 B.C., is represented by the Sūtras. These concise manuals, especially those dealing with domestic life (*grhya*), and to a less extent those concerned with customary law (*dharma*), show how the observances of everyday life were saturated with magical beliefs and practices (cf. also art. LITERATURE [Vedic and Classical Sanskrit], §§ 8-12).

3. Importance of the subject.—A knowledge of Vedic magic is obviously important to the investigator of magic in general, for here we have magical material, bearing on every aspect of human life, which began to be recorded well over 3000 years ago, and which can, from that time onwards, be historically studied in continuous successive literary stages, extending over more than 1000 years. Such facilities are afforded by no other ancient literature as regards either the antiquity or the quantity and quality of the evidence afforded. The material in Vedic literature does not require to be laboriously gathered together from scanty and scattered references, as is necessary elsewhere. It is here supplied not only in great abundance, but, for the most part, in an easily accessible collected form. Its aid is, moreover, essential to the student of Indian religion: without it he would arrive at erroneous or exaggerated conclusions as to the purity and advanced character of the beliefs and practices of that religion in its earliest form.

4. Sacrifice and magic.—Considering that in the Rigveda we have a collection of prayers, and in the Atharvaveda one of spells, are we justified in supposing that the spheres of religion and of magic were already separated in the Vedic period? By no means. It is, indeed, certain that the sacrificial invocation had by that time assumed a literary type, and that the hymns of a magical character found in the Rigveda are very few and late. It must, however, be borne in mind that the prayers of the Rigveda, being addressed to the great gods, offered few opportunities for references to magical practices, while the ritual which the hymns of the Rigveda were intended to accompany, and which is fully described in other Vedic texts, is, though carried out by the sacrificial priests, from beginning to end saturated with magical observances. Again, where there is a group of ceremonies directed to the accomplishment of a particular purpose and, therefore, favourable to a greater prominence of the magical element, such as the wedding and funeral rites, we meet with quite a network of magical usages bearing the stamp of extreme antiquity. It is thus impossible to suppose that the sacrificial priests of the Rigveda, the composers of the old hymns, should have occupied an isolated position, untouched by magical practices derived from a much earlier age and afterwards continued throughout the priestly literature of later times. In fact, a close examination of the hymns of the Rigveda actually affords evidence that even in them the belief in magical power independent of the gods is to be found. Thus in one hymn (x. xvi.) the sacrificing priest Devāpi begins with the intention of appealing to the gods for rain, but then himself brings down the waters by the magical powers of his sacrificial art: 'the sage Devāpi sat down to the

duty of Hotṛ priest, familiar with the goodwill of the gods; he then poured down from the sea above to the sea below the heavenly waters of rain' (v. v.). Every page of the Brāhmaṇas and of the ritual Sūtras shows that the whole sacrificial ceremonial was overgrown with the notion that the sacrifice exercised power over gods and, going beyond them, could directly influence things and events without their intervention. An incipient form of this notion already appears in the Rigveda, where exaggerated sacrificial powers are in several passages mythically attributed to ancient priests; e.g., 'with mighty spells the Fathers found the hidden light and produced the dawn' (vii. lxxvi. 4); 'the Fathers adorned the sky with stars, like a black steed with pearls; they placed darkness in night and light in day' (x. lxviii. 11); 'with their kindled fire the Angirases (ancient priests) found the cows and steeds hidden by (the demon) Paṇi' (i. lxxxiii. 4); they 'by their rite caused the sun to mount the sky' (x. lxii. 3); 'the ancient fire priest' Atharvan by sacrifices first prepared the paths; then the sun, the guardian of ordinances, was born' (i. lxxxiii. 5). The ancient priest Viśvāmītra, by directly invoking the rivers, made them fordable for the tribe of the Bharatas (iii. xxxiii. 1-12). The composers of all such passages must have attributed to the sacrifice in their own day the powers which they thus projected into the past.

An examination of the ritual literature shows that the dividing line between a sacrificial act, which is meant to propitiate the gods, and a magical act, which is intended to control the course of things, is by no means always definite, but that the two are often intermingled. Thus the morning sacrifice at sunrise, of which we read in the Rigveda (e.g., iv. li. 7), when the fire is kindled and an offering is made to the fire-god, in the *Satapatha Brāhmaṇa* (ii. iii. 1. 5) assumes a magical character, the fire being kindled to produce sunrise: 'By offering before sunrise he (the sacrificer) makes him (the sun) to be born: he would not rise, if he were not to sacrifice in it (the fire).' A similar view seems already to be expressed in a verse of the Rigveda: 'Let us kindle thee, O Agni, that thy wondrous brand may shine in heaven' (v. vi. 4). Again, there are several passages in the Rigveda (e.g., ix. xlix. 1, xcvii. 17, cvi. 9, cviii. 9 f.) in which the Soma ritual is spoken of in the magical character of producing rain direct, without influencing the goodwill of the gods that shed rain.

The blending of a sacrificial and a magic rite may be of two kinds. A ceremony which is primarily sacrificial may assume a magical character by the nature of the object which is offered for the attainment of a special purpose.

There can be little doubt that only food eaten by man originally constituted the sacrifice offered to the gods in fire. On the Vedic sacrificial ground there was, by the side of the fire, the litter of grass (*barhis*) on which the gods were conceived as sitting to receive the offering. On the conclusion of the ceremony the *barhis* was thrown into the fire, originally, no doubt, to render it innocuous after, by the divine presence, it had become dangerous to profane contact. To the *barhis* corresponds, in the ancient Persian ritual, the *baresman* (a bundle of twigs; see art. BARSON) on which the sacrificial offerings were placed, and which was the seat of the gods. This indicates that the oblation in fire was an Indo-Aryan innovation; and that the burning of the *barhis* not improbably formed the transition to the fire-sacrifice.

The ritual literature furnishes innumerable examples of sacrifice receiving a magical turn by the employment or addition of a non-eatable substance, as when a man wishing for cattle offers the dung of a couple of calves (*Gobhita Grhyasūtra*, iv. ix. 13 f.); or when poison is added to an offering in order to destroy ants (*Kaushika Sūtra*, cxvi.). On the other hand, objects suitable for direct magical manipulation could easily be turned into an offering by those habituated to the sacrificial idea in order to invest magical acts with the garb of sacrifice. Thus the

or a definite number of them (cf. the Anglo-Saxon 'nine-herb spell'), or, again, some particular herb. But still further manifestations of the potency of herbs could be elicited. They could be made to secure the traveller against fatigue, to act as a defence against weapons, and to protect the cattle from sorcery and the crops from hailstorms. They could also help one to win love, to open locks, to ascertain truth, and to read both the future and the past.

Then the magic formulæ served to protect men not only against disease, but also against the malice of their fellows and the threat of misfortune. By their aid a person sought to safeguard himself—especially when on a journey—against the artifice of his enemies, to blunt their weapons, and to free himself from prison. By the same means he could defend himself against malefic magic, and against the bewitching of his food and drink. Other formulæ possessed the power of procuring friendship, love, and favour, and of gaining justice before a legal tribunal. Wives sought, through the medium of magic, to turn the harshness of their husbands into love. An astute merchant of the 16th cent. would even try by a spell to induce people to buy up his stock of stale wares.

Human life was thus surrounded by a rampart of spells, and property likewise was in similar fashion made proof against evil influences. Houses were secured by spells against burglary and fire, and corn in the granaries was kept from decay. If anything was lost or stolen, the magic formula could restore it, and even lead to the discovery of the thief. The same means were also used to protect, and to increase, the fruits of gardens and fields.

The number of extant magic formulæ designed to work harm is quite insignificant—a circumstance which is, no doubt, due to the rigorous treatment meted out from the earliest times to the practice of malefic magic. Such hurtful spells might be used by the malicious to sow dissension between old friends, to change the love of a married couple into hatred, to bring every conceivable disaster upon another, and even to overwhelm with destruction all that he possessed.

MAGIC (Vedic).—1. Definition.—The sphere of cult and ritual has two aspects in Vedic literature—religion and magic. The former (see art. VEDIC RELIGION) represents the relation of man to the gods and lesser divine beings. Its object is to cultivate their goodwill by means of hymns as well as sacrifice, and thus to induce them to bestow in return the benefits which man desires. The essential character of Vedic religion, therefore, is propitiatory and persuasive. Magic, on the other hand, endeavours to gain its ends by influencing the course of events, without the intervention of divine beings, by means of spells and ritual. Its essential character is, therefore, coercive. Both aim at the same result, but in different ways. Religion achieves its purpose indirectly by inclining the will of a powerful ally through prayer and gifts, for instance, to destroy an enemy; magic does so directly by operating with the impersonal (and imaginary) causal connexion between the means which it employs and the effect to be attained, as burning the effigy of an enemy in order to burn the enemy himself. Its practice was in part auspicious and beneficent, as the ritual for the obtaining of offspring or luck, of rain or victory, but it was largely maleficent in the interest of individuals and not of the community, and, therefore, as being dangerous, was condemned by the priesthood, except in so far as it was applied by themselves.

2. Literary sources.—The sphere of religion, as considered apart from magic, is chiefly represented by the earliest product of Indian literature, the Rigveda, which consists almost entirely of hymns addressed to various gods, in which their greatness and their deeds are praised and all kinds of welfare are prayed for, and which are intended to accompany the ritual of the Soma sacrifice (cf. art. HYMNS [Vedic], § 7 f.). Only a dozen of its 1028 hymns are concerned with magic, about one half of them being auspicious, the rest maleficent in character. As to any magical rites connected with the sacrifice, the Rigveda gives us no information. On the other hand, magic is the main and essential subject-matter of the Atharvaveda (art. HYMNS [Vedic], § 11); it is a collection of metrical spells, largely to be accompanied by ceremonies aiming at the welfare of the magician or the injury of his enemies. The Yajurveda (art. HYMNS [Vedic], § 13) occupies an intermediate position between these two Vedas as regards magic. In its original part, which consists of prose formulæ, the gods are only secondary, bearing a kind of mechanical relation to the sacrificial ceremonial with which these formulæ are associated, and which they follow in its minutest details. Its character is thus of a magical rather than a religious type. The great development, in this period, of an intricate ritual and the concentration of sacerdotal thought on its perfect performance had led to the new conception that sacrifice was not meant to propitiate the gods, but directly to control the natural course of things.

The prose theological works called Brāhmanas,

that is, of injurious substances would become a *ning je*; for instance, arrow tips might be offered that *ier* to destroy an enemy (*ib. xlvii. 44*). In *landway* the sacrifice came to assume the rôle of *neeting* away demons; of helping a woman to *over-* *image* her rivals; of enabling a prince to conquer his of *thes* or to return from exile; and of producing *repre* other magical results. The gradual mixture *muni*; religious and the magical in the direction is *ful*; latter led the whole system of sacrifice to the *pe*; this character in the later Vedic period.

power's causes contributed to this result. The belief in the *stance* at the sacrifice, and in the mysterious success *instanc* by the sacrifice, encouraged an increasing application the *chiral* practices as the ceremonial system became more who *sear*. Secondary observances of the sacrificial ritual might *ferility* its to explain accidental features of the ceremonial that of *sto* the discovery of effects allied to magic. Priests *vincible* foster belief in the magical power of sacrifice in *9. Mag* could be increased by the mixture of prayer and *spell* *main* the prayer accompanying the sacrifice the magical effects of *spell* were assumed, such effects would naturally be attributed to the sacrifice also.

5. Predominantly magical ritual.—There are several groups of rites which, though belonging to the *sp* *e* of sacrifice, are predominantly magical in *cha*-*acter*. They are partly connected with family and partly with public life. The most important of these are:

(1) *The wedding ceremony.*—What little worship of the gods is found in this group of rites is almost restricted to the cult of Agni, the domestic god, who was constituted a witness of the marriage, and who, in the form of the domestic fire, was to accompany the young pair through life. On the other hand, the ceremony was surrounded by magical acts, of which the following were the principal. The bride's hand was grasped that she might be delivered into the power of her husband. She stepped on a stone to acquire firmness. She took seven steps with him in order to establish friendship. She ate the sacrificial food with him to create community of life. When she reached her husband's house, she sat down on a red bull's hide to ensure fertility. The son of a woman who had borne only living male children was placed on her lap in order to fulfil the hope of healthy male progeny. Later, during pregnancy, a magical powder was placed in her nose to secure the birth of a son.

(2) *Initiation.*—Of the various religious ceremonies which were performed during boyhood, and which display the same predominantly magical character, the chief was that of initiation (*upanayana*). This, though not mentioned in the Rigveda, goes back to pre-historic times, as is shown by the parallel Avestic ceremony, and is the Vedic transformation of a rite by which, on the attainment of puberty, a boy was received into the community of men. In India it was regarded as a second birth, as being the entry into a new life, when the boy was introduced to a religious teacher with a view to Vedic study. The outward signs of the initiation are the girdle, which is wound three times round the pupil's waist, and the sacred cord, worn over the left shoulder and under the right arm, with which he is invested. The ceremony includes a number of observances and involves various tabus in regard to food, some of which will be mentioned below (see also VEDIC RELIGION, § 64, and cf. INITIATION [Hindu]).

(3) *Public rites.*—The public ceremonies of Vedic times were performed on behalf not of the clan or tribe as such, but of an individual, who in these cases was the king. The most prominent of them, aiming at the attainment of certain definite purposes, are magical in their main elements. At the royal consecration (*abhisheka* [q.v.]) the king sits on a throne made of wood from the *udumbara* fig-tree, which to the Indian was the embodiment of all nourishment. The seat was covered with a tiger-skin, the emblem of invincible strength. The contents of a cup made of *udumbara* wood, filled with butter, honey, and rain-water, were poured over the king in order to communicate to him their strength and abundance. The royal inauguration (*rājāsūya*) is a further series of rites, chiefly of a symbolical character (cf. 12 (b)) intended to ensure a successful reign. A still more imposing ceremony was the Vajapeya, the two main features of which, a conventional race and another symbolic observance, have a magic purpose (12 (b)); cf., further, art. ABHISHEKA. Finally, the horse sacrifice (*asvamedha* [q.v.]) was the highest sacrificial expression of regal power, which was undertaken for the fulfilment of all the most ambitious wishes of the king, and in which the victim indicated the desire to transfer the swift might of the horse to the sacrificing monarch.

6. Priest and magician.—The magician of pre-historic ages, who manipulated only the lower ritual concerned with demons and natural forces, had long before the time of the Rigveda (at least as early as the Indo-European period) developed into the priest, who dealt with a higher cult in which

he invoked and sacrificed to gods. In the later Vedic period of the Yajurveda, however, we find the priest to a considerable extent reverting to the rôle of a magician; for he now constantly appears, independently of the gods, driving away evil spirits or influencing the powers of nature by the use of spells and other expedients of sorcery. In various lesser rites the priest acts quite in the style of pre-historic times. Thus he makes the bride step on a stone to ensure steadfastness; he causes fish to be eaten for the attainment of speed; he produces an imitation of rain that it may actually rain—here he is not a servant of the gods, but a magician. Yet even in the earliest period, that of the Rigveda, the sacrificial priest was a magician as well (though by no means necessarily the only magician, for both here and later references are made to sorcerers whose magic is directed against the sacrificial priest). It cannot be supposed that even the most advanced minds among the priests regarded prayer and sacrifice as the only means of securing welfare, while rejecting magic as an ineffective and reprehensible superstition. Magic was still to some extent used by those who had occasion to apply it, as is apparent from the character of some hymns of the Rigveda which, although late, form part of its canonical text. But not the employment of every form of magic was approved nor the practice of magic as a profession, doubtless because alliance with evil spirits and the use of maleficent magic were liable to injure the community. This is sufficiently clear from the words of the author of a passage of the Rigveda: 'May I die to-day if I am a sorcerer (*yātudhāna*), or if I have harassed any man's life; then may he lose his ten sons who falsely calls me "sorcerer"; he who calls me, that am no sorcerer, a practiser of sorcery, or who, being a demon, says that he is pure, may Indra strike him with his mighty weapon, may he sink down below every creature' (VII. civ. 15f.). It was because the Atharvaveda contained a body of maleficent spells that it did not attain to canonical recognition till after it had become associated with the sacrificial cult by the addition to its text of numerous hymns borrowed from the Rigveda. On the other hand, in the Atharvaveda itself (*e.g.*, V. viii., VII. lxx.) magic is expressly approved when directed against the sacrifice offered by an enemy; and the ritual texts are full of directions for the sacrificer who wishes to destroy his enemy, in particular, when he desires to give his sacrifice a magical turn for the purpose of inflicting injury. The post-Vedic *Code of Manu* even contains the express statement (xi. 33) that the magic spells of the Atharvaveda are the Brāhman's weapon, which he may use without hesitation against his foes. In the Upanishads the magician-priest has become a philosopher who has passed from the path of ritual (*karma*) to that of knowledge (*jñāna*); but his mode of thought is still full of traits derived not only from sacrificial, but from magic lore. Of such a nature are his conceptions of the world-soul (*brahman* [q.v.]) and of the identity with it of the individual soul (*ātman* [q.v.]), as well as his speculations on the sacred syllable *om* (analogous in sense to 'amen'). Such, too, is his doctrine of *karma* (q.v.) as an impersonal power which, free from any divine influence, rules future existences with inexorable force. The same mental attitude is indicated by his approval of the grotesque and forcible exercises of Yoga, which is an inextricable blend of philosophy and magic. By the aid of Yoga he believed himself capable of acquiring the ability to make himself minute and invisible, to increase his size infinitely, to multiply his body, to remember his former existences, and so forth.

7. Asceticism and magic.—There is evidence that from the earliest Vedic period ascetic prac-

tices (*tapas*, lit. 'heat'), primarily exposure to heat, but including other forms of self-mortification, such as fasting, abstinence, and silence, were regarded as a means of attaining various supernatural powers resulting from the ecstatic condition induced by them. Thus the Rigveda says (X. cxxxvi. 2) of those who are in such a frenzied condition that 'the gods have entered into them.' A poet of the same Veda tells (VIII. lix. 6) how, in a vision produced by austerity (*tapas*), he saw the old creations of ancient sages, the first sacrificers, in the remotest past of the human race. There are many other Vedic passages ascribing similar powers: dream is born from the soul filled with austerity (Atharvaveda, XIX. lvi. 5); speech born of austerity penetrates to the gods (*Taittiriya Āraṇyaka*, v. vi. 7); he who has practised great austerity reaches the sun (Rigveda, X. cliv. 2); after practising austerity Indra won heaven (X. clxvii. 1); the magical power of austerity peculiar to the Brāhman will bring calamity on the man who injures him (X. cix. 4). Austerity confers the power to produce the mightiest creations: the goddess *Aṣṭakā*, performing austerity, produced the greatness of Indra (Atharvaveda, III. x. 12); the seers were born of austerity (XI. i. 26, XVIII. ii. 15, 18). In many passages of the Brāhmanas the creator *Prajāpati* is described as gaining by the practice of austerity the power to evolve out of himself the worlds and all living creatures; and in one place (*Satapatha Brāhmana*, X. iv. 4. 2) he appears as practising such asceticism that from all his pores came forth lights, which are the stars. The Brāhmanas also tell how various mythical beings attained by austerity to a high degree of enlightenment that revealed to them some secret of sacrificial lore. It is for such magical effects that austerity is required as an essential element in the preparation for various particularly holy sacrificial rites. Thus the Soma sacrifice is preceded by a consecration (*dīkṣā*) of the sacrificer in which he practises austerity lasting, according to some authorities (*ib.* XIII. i. 7. 2), till complete physical exhaustion ensues.

8. **Magical conditions and agencies.**—Magical effect is largely, if not altogether, based on contact (very often impalpable), which has to be brought about if the agency is beneficial to oneself, or to be prevented if the agency is injurious to oneself. The result desired is attained by the use of spells and rites of various kinds. The place selected for the practice of magic, except when it is an element of the sacrificial ceremonial, is generally a lonely one. A cemetery, the seat of flesh-eating demons, is a specially suitable place for its operations. A cross-road is a favourite locality to divest oneself of evil influences. A secluded part of a house, a shed, and solitary spots in field or forest are also used. The time at which many operations of hostile magic take place is night; but that of others depends on their circumstances or their purpose. Direction is an important element. Thus the south is the home of demons and *manes*; hence performers of rites connected with them must face that point of the compass. In auspicious rites walking and other kinds of movement are directed from left to right, following the course of the sun, while in funeral and other uncanny ceremonies the direction is invariably reversed, the performers moving from north to south.

(a) *Spirits and demons.*—Some of the lesser spirits are concerned only with one activity, such as presiding over the fields and helping at harvest; others, with *Arbudi* at their head, are invoked to spread terror and death among enemies on the field of battle (Atharvaveda, XI. ix. 1 ff.). The characteristic of most of the rest is to cause damage and destruction in the sphere of human life. These demons are usually called by the

generic name of *rakṣas*, *yātu*, or *piśācha*; many of them also have individual design. Their appearance is for the most part human, though often with some kind of deformity; they not infrequently have an animal or shape, such as that of a dog, wolf, owl, or vulture. They also appear in assumed figures, human or animal; thus at funeral rites they intrude in the form of the souls of the ancestors to whom offering is made; and they approach with various disguises. The sorcerer himself (as the spirits serving him) might assume human form and thus injure his enemies. By such transformation is already expressed in the Rigveda, where hostile magicians are spoken of as becoming birds and flying about at night (X. civ. 18). Setting demons in motion is releasing them loose against an enemy. Thus in the Rigveda (X. ciii. 12) the demon of disease is let loose against a hostile army with the spell: 'Go forth, *Apvā*, to confuse their mind; so seize their limbs; attack them; burn them with thy heat in their hearts; let the foe fall into deep darkness.' Such spells might be accompanied by magical acts, such as letting loose a white-footed ewe, in which the power of disease was supposed to be embodied, against the hostile army.

Evil spirits are thought to be everywhere—in the air, but most of all in human dwellings; otherwise they especially infest the place where four roads meet. The time of their activity is chiefly evening and night; at night they seek to kill the sacrificer who has undergone consecration (*dīkṣā*). But they are particularly active during the night of new moon. Their usual mode of attack (mentioned in both the Rigveda (VIII. xlix. 20) and the Atharvaveda (V. xxix. 6-8, VII. lxxvi. 4)) is to enter into a man, especially through the mouth; they then eat his flesh, suck his marrow, drink his blood, and create disease of every kind; they also cause madness and take away the power of speech. They are chiefly dangerous on the most important occasions of domestic life—at births, weddings, and funerals. One of the main objects of their attack is the sacrificer: the Rigveda speaks (VII. civ. 21) of the *Yātus* that seize the sacrificial food, and the Atharvaveda contains (VII. lxx. 1 f.) the spell of a magician desiring to destroy the sacrifice of an enemy through the wiles of a demon. Hence the sacrificial ceremonial is, from beginning to end, accompanied by formulae directed to defence against demons. These evil spirits, moreover, do harm to man's property, drinking the milk of his cows, eating the flesh of his horses, and damaging his dwellings. In short, every moment of life, every act, every possession is assailed by hosts of invisible foes, the allies of human workers of calamity.

(b) *Injurious substances.*—Closely allied to these demoniac enemies are the numerous substances—the most general expression for which in the Vedic language is *tanu*, or 'body'—which, conceived chiefly as impersonal, though sometimes still tinged with personality, perhaps represent an advance of thought. Hence the boundary-line between personal demons and impersonal agencies is not fixed; thus the term *pāpman*, 'evil power,' as a masculine is used in the former, as a neuter in the latter sense. Nor are even injurious creatures like snakes, ants, and worms clearly distinguished from evil spirits, being often spoken of as demons to be driven away. Examples of impalpable agencies are the 'substance' of disease, of hunger and thirst, of guilt, even of such abstractions as sonlessness; or the intangible influence proceeding from auspicious or baneful stars and from the waning or waxing of the moon. These are supposed to fly about in the air and to affect man by various forms of contact. The sphere of magical operations is greatly extended by the belief that, if a 'substance' or power is embodied in any creature or object—e.g., irresistible strength in a tiger—that power is inherent in all its parts and in all that is connected with it. Such a power, therefore, resides not only in the flesh of an animal, but in its skin, horn, hair, and so on. Again, the essence of water dwells in aquatic plants like the *avakā* (*Blyxa octandra*), and in aquatic animals like the frog; the nature of the boar is present in the soil

that is torn up by its tusks; the force of lightning is latent in a splint of wood from a tree that has been struck; the virtue of one's native land exists in a clod taken from it; a man is connected with the earth by his footprints; even an image or a name is conceived as containing a part of the essence of the beings or things which they represent or name. As all such powers are communicable by contact, the whole sacrificial ritual is full of rules as to the persons or things which the performers are to touch, for thus the beneficial power of the sacrifice is transferred to them. For instance, the skins of various animals communicate the characteristic quality attributed to them: one who seats himself on the hide of a bull acquires fertility; on that of a black antelope, sanctity; on that of a he-goat, plenty; on that of a tiger, invincible power.

9. **Magical procedure.**—The operations of magic are mainly directed against hostile agencies, either by preventing their contact with the operator or by bringing about their contact with an enemy. Auspicious rites, besides being much less numerous, are often only another aspect of offensive magic, and will, therefore, be treated under the various types of action, partly auspicious and partly hostile, employed in magical ceremonies (§ 12).

10. **Defensive magic.**—This type of magic, though consisting in warding off injurious powers, is not always expressed in the form of hostility when demons are concerned; it may then be attended by a certain amount of propitiation. Thus in the Atharvaveda (I. xii. 2) deterrent homage is paid to a demon of disease: 'Thee, lurking in each limb with burning, we, paying homage, would worship with oblation'; lightning is similarly addressed (I. xiii. 2): 'Homage to thee, child of the height, whence thou gatherest heat; be merciful to ourselves; do kindness to our offspring'; also instruments and ministers of death: 'To those weapons of thine, O Death, be homage; homage to thy benediction, homage to thy malediction; homage to thy favour, O Death; this homage to thy disfavour' (VI. xiii. 1. 2). Again, sacrifices to demons are often mentioned (*Baudhāyana Dharmasūtra*, II. i. 32); and in the general sacrificial cult they receive their share, which, however, consists only of inferior offerings, such as blood and offal. Hostile words or actions are often accompanied by spells expressive of homage. *Hiranyakeśin Grhyasūtra* contains a direction (I. xvi. 20 f.) that a brand burning at both ends should be thrown at a jackal (regarded as possessed by the evil powers of death), and that the animal should at the same time be worshipped with the Vedic verse, 'Thou art mighty, thou carriest away.' In a rite concerned with serpents the reptiles are addressed with homage, while the intention to destroy them is also expressed (*Sarpabali*, xi.). A ceremonial intended to ward off ants (*Kausika Sūtra*, cxvi.) begins with propitiatory offerings and spells; but, if these fail, they are followed with a poisoned oblation surrounded by symbols of hostility and accompanied by an invocation of the gods to destroy their eggs and progeny. Propitiation, however, plays but a very subordinate part in this type of magic.

1. **PREVENTIVE MAGIC.**—On the principle that prevention is better than cure the procedure of defensive magic is largely prophylactic, everything being avoided that might attract injurious powers. The precautions taken are of the following kinds.

(1) **Avoidance of contact.**—The touch of beings in which maleficent spirits or substances were supposed to dwell was eschewed. Thus to touch the mother during the ten days of impurity after childbirth was regarded as dangerous; and the stones used in erecting an altar for Nirrti, the

goddess of dissolution, were put in their place without being directly handled. The access of injurious powers through other senses was similarly avoided. Thus listening to impure sounds involved risk. Precautions were taken not to see impure or dangerous persons or things; the sight of offerings to the dead or to the uncanny god Rudra was to be avoided; and those who were departing from a place where inauspicious ceremonies had been performed, such as those concerned with the dead, with demons, with the goddess Nirrti or the god Rudra, abstained from looking back. On occasions when evil spirits were likely to be in the neighbourhood care was taken to prevent their coming too near. Thus a bundle of twigs was tied to the corpse on the way to the burning ground in order to efface the footsteps and so hide the path from the demons; and the sacrificial fire of the departed, having by his decease become a seat of death-bringing powers, was removed by some aperture other than the door.

(2) **Fasting.**—One of the chief precautionary measures against the attacks of hostile powers was abstention from food, in order to prevent them from entering the body. It is, therefore, a leading element in the preliminary consecration (*dikṣā*) for the Soma sacrifice. With reference to this, one of the Sūtras remarks (*Āpastamba Śrautasūtra*, X. xiv. 9): 'When an initiated man (*dikṣita*) grows thin, he becomes purified for the sacrifice.' A special form of fasting was the avoidance of particular kinds of food. Thus the performer of the new and full moon sacrifice had, on the eve of the ceremony, to refrain from eating either flesh or the kind of food which he was going to offer on the following day. The teacher who has invested a pupil with the sacred cord may not eat flesh for a night and a day; while the student himself has to refrain from eating salted food and drinking milk for three days after the ceremony; he must also abstain from food altogether for three days, or a day and a night, before he enters upon a particularly holy part of his Vedic course. A newly married couple must, during the first three nights following the wedding ceremony, avoid all salted or pungent food. The efficacy of fasting is illustrated by the precept (*Gobhila Grhyasūtra*, IV. vi. 13) that one who desires to gain a hundred cart-loads of gold should observe the vow of fasting during one fortnight.

(3) **Abstinence.**—Another safeguard is the practice of chastity. This is enjoined for three nights after the wedding ceremony in order to ward off the attacks of demons that destroy offspring. It is observed by the performer of the new and full moon sacrifice on the night before the rite takes place; for a day and a night by the teacher who initiates a pupil; for twelve nights by the offerer of the Sabali sacrifice; during the course of the Dikṣā by him who undergoes that consecration; and by the Vedic student during the whole period of his apprenticeship.

(4) **Asceticism.**—This expedient appears in various forms. One of them is exposure to heat; it is an element in the Dikṣā ceremony, a special formula being quoted for use when the initiated man breaks into perspiration. Sleeping on the ground is prescribed, during the same length of time as abstinence for the newly married couple, the Vedic student, and the performers of the Dikṣā consecration, of the new and full moon ceremony, and of the Sabali sacrifice. As a safeguard against demons dangerous to the sleeper, watching through the night is enjoined during the Dikṣā ceremony, and on the eve of setting up the sacrificial fires and of the new and full moon sacrifice. Silence is to be observed by the sacrificer undergoing the Dikṣā consecration, by the man about to set up the three

sacrificial fires, and by the Vedic student on various occasions. Holding the breath, which was regarded as an important form of asceticism, appears, for instance, in a rite during the funeral ceremony. It may here be added that austerities of various kinds had to be undergone by one preparing to cure epilepsy, before he was qualified to perform the magical ceremonies intended to effect the recovery of the patient.

(5) *Concealment*.—Another means of guarding against the attacks of hostile powers was concealment of one's person or of its parts, as seclusion in a shed and covering the head during the observances of the Dikṣā ceremony; or putting on garments to make oneself unrecognizable; or hiding the hair of the head and beard or nails cut off at sacramental rites, such as the initiation of the Vedic student (cf. § 8 (b)).

(6) *Amulets*.—Charms worn on the body were frequently employed both for the negative purpose of warding off evil influences from one's person (amulets) and for the positive purpose of attracting prosperity (talisman). Sometimes the same charm serves both purposes; thus the pearl destroys demons, disease, and poverty, and at the same time bestows welfare and long life. Amulets were for the most part made of wood, but also of various other substances. Their efficacy is regarded as dependent on the particular power of repulsion inherent in them, and is not infrequently spoken of as imparted by the gods. They are called god-born, are said to have been given by gods to men, to have been strengthened by the gods, or to have had their power communicated to them by the gods, who co-operate with them; the gods themselves are described as having once been successful by the power residing in them; by amulets Indra overcame the demons (Atharvaveda, x. iii. 11). Their potency sometimes emanates from their names. An amulet derived from the *varāṇa* tree (*Crataeva Roxburghii*) destroys enemies because, according to the meaning attributed to the name (ib. x. iii. 5), it drives off (*vārayati*). An amulet made of this wood is thus addressed in the Atharvaveda (x. iii. 14, 11): 'As the wind and the fire consume the trees, the lords of the forest, so do thou consume my rivals; this *varāṇa* upon my breast, the kingly, divine tree, shall smite asunder my foes, as Indra the demons.' One of the amulets most frequently mentioned in the Atharvaveda is that made from the *jaṅgīda* tree, which protects from diseases and demons. Again, a long hymn of the same Veda (VIII. v.) dwells on the aggressive powers of an amulet fashioned from the wood of the *śrakṭya* tree, which destroys foes, demons, and sorceries. Cf., further, art. CHARMS AND AMULETS (Vedic).

ii. *REMEDIAL MAGIC*.—Magical operations are performed not only to ward off maleficent powers that are threatening, but also to expel them after they have taken possession of their victim in the form of diseases or ailments. The Atharvaveda is full of spells directed against these. Many such incantations make no mention of any concrete remedies with which their use was accompanied; but the evidence of the Sūtras shows that these incantations, at least very often, formed part of a magical rite in which concrete remedies were an element. Examples of simple spells for the cure of diseases are the following: 'As the rays of the sun swiftly fly to a distance, thus do thou, O cough, fly forth along the flood of the sea' (VI. cv. 3); and 'The disease that racks and wastes thy limbs, and the sickness in thy heart, has flown as an eagle to the far distance, overcome by my charm' (v. xxx. 9). Curative spells are, however, more usually accompanied by the express employment of material objects, chiefly plants. The hymns of the Atharva-

veda abound in references to such remedies. These represent the earliest beginnings of medical lore in India. The border-line between magic and primitive science here is not always definite, for in some cases the plant used with the spell may have been an actual cure for a particular disease, while in other cases its application was purely magical, as that of the herbs used to promote the growth of hair on bald heads (these were doubtless as ineffective as the hair-restorers of modern times). The following are two charms from the Atharvaveda intended for this particular cure: 'That hair of thine which drops off, and that which is broken root and all, upon it do I sprinkle the all-healing herb' (VI. cxxxvi. 3); 'Make firm their roots, draw out their ends, expand their middle, O herb! may thy hairs grow as reeds, may they cluster black about thy head!' (VI. cxxxvii. 3). The Atharvaveda contains many spells in which the *kusṭha* plant (probably *Costus speciosus* or *arabicus*) is invoked to drive out fever; two of its hymns (I. xxiii. f.) are meant to cure leprosy by the use of a dark plant; one (VII. lvi.) operates with a herb that destroys snake poison, and another (VI. xvi.) with a plant against ophthalmia. Fractures are cured by the plant *arundhatī* (IV. xii.), and wounds by the use of the peppercorn (VI. cix.). The use of ointment is associated with one hymn of the Atharvaveda (IV. ix.), of which this is one of the spells: 'From him over whose every limb and every joint thou passest, O salve, thou dost, as a mighty interceptor, drive away disease.' Water not infrequently appears as a magical remedy, and its general curative powers are thus expressed by the following spell of the Atharvaveda (VI. xci. 3): 'The waters verily are healing, the waters chase away disease, the waters cure all ailments; may they prepare a remedy for thee.' It also cures individual diseases, as excessive bodily discharges: 'The spring water yonder which runs down from the mountains, that do I render healing for thee, in order that thou mayest contain a potent remedy' (II. iii. 1); or heart-disease: 'From the Himavat mountains they flow forth, in the Indus is their gathering place: may the waters, indeed, grant me that cure for heart-ache' (VI. xxiv. 1). *Pāraskara Gṛhyasūtra* (III. vi. 2) describes how water is used in a magic operation for the cure of headache: the performer moistened his hands and passed them over the eyebrows of the sufferer with the spell: 'From the eyes, from the ears, from the whiskers, from the chin, from the forehead I drive away this disease of the head.' Another remedy is the horn of an antelope, used against a hereditary disease named *kṣetriya*: 'Upon the head of the nimble antelope a remedy grows! He has driven the *kṣetriya* in all directions by means of the horn' (Atharvaveda, III. vii. 1).

ii. *Offensive magic*.—Aggressive operations against maleficent powers cannot always be distinguished, especially in regard to demons, from that form of defensive magic which is directed to warding off their attacks. Hence the expedients adopted are to some extent the same for both purposes.

i. *MEANS EMPLOYED*.—(1) *Fire*.—Fire was one of the chief direct means of driving away demons and all hostile sorcery. Thus in the Rigveda Agni, the god of fire, is frequently invoked (I. xii. 5, xxxvi. 20) with such verses as: 'Burn, O Agni, against the sorcerers; always burn down the sorcerers and the allies of the demons.' This use of fire, probably the earliest in cult, though overlaid with its later and much more extensive sacrificial application, still survives in the Vedic ritual. Thus a special fire called the 'lying-in fire' (*sūtikāgni*) is introduced into the lying-in chamber (*sūtikā-grha*). Of this fire the author of one of the domestic Sūtras remarks (*Hiranyakeśin Gṛhyasūtra*, II. iii. 6f.):

'Sacred rites, except fumigation, are not performed with it; he fumigates the child with small grains mixed with mustard seeds'; he then adds a number of spells to drive away various demons that prowl through the village at night, that drink out of skulls; Agni is invoked to burn their lungs, hearts, livers, and eyes. At the sacramental ceremony of cutting the child's hair a fire is kindled while a number of auspicious verses are recited; as nothing is said of its application to sacrificial purposes, it was presumably meant to ward off demons. Of similar significance were the fire employed at the investiture of the Brāhman student, behind which both he and his teacher step, and that kindled when the pupil entered upon his course of Vedic study. That this was the significance of the fire beside which the Soma sacrificer watched during the night in the Dikṣā ceremony is certain, because it is expressly said (*Taittirīya Samhitā*, vi. i. 4. 6) that Agni is here appointed 'for the destruction of the demons.' It can hardly be doubted that in the great sacrificial ritual of the three fires the southern fire was understood to have the magical power of dispelling demons, for the south is the direction from which the souls of the dead and the injurious spirits allied to them approach. In the funeral ritual a brand was taken from the southern fire and laid down pointing to the south, while a formula was pronounced in which Agni was invoked to drive away all demons that, assuming manifold forms, might venture near. At the conclusion of the funeral ceremony a fire was used by the survivors for the purpose of warding off the powers that cause death. Fire was also on various occasions carried round what was to be protected against the attacks of evil spirits. Thus a brand lighted at both ends was moved round the funeral offering; and a firebrand was also borne by the priest round the victim, the post, and other accessories of the animal sacrifice.

(2) *Water*.—Water is another efficacious means of repelling hostile agencies, as is indicated by the statement (*Maitrāyaṇī Samhitā*, iv. viii. 5) that 'the demons do not cross the waters.' We have already noted some examples of the use of water in curing diseases and ailments. Water is further regarded as a chief means of removing possession by evil spirits. At the birth ceremony water is supposed to wash away all injurious powers from the new-born child. A purifying bath is prescribed before entering on various ceremonies, as the Dikṣā, to remove supernatural substances that might be inimical to their success. Thus the bride and bridegroom take a bath or perform ablutions before the wedding ceremony. In rites of expiation especially, bathing and washing play an important part. Various ceremonies also conclude with a bath in order to obviate the risk of taking back into ordinary life the magical influence inherent in the rite. Such is the case at the end of the Dikṣā, when clothes and implements used during the ceremony are also laid aside. The significance of the bath taken by the Brāhman student at the end of his apprenticeship is similar. There is, further, a rule that after the utterance of spells addressed to uncanny beings, such as the dead, demons, or Rudra, one should purify oneself with water from the contact with those beings which has thus been incurred. The urine of cows was specially esteemed as a means of purification, being perhaps at the same time regarded as communicating the abundant nutritive power inherent in the animal. As long as a magical condition is meant to continue, bathing or washing is avoided; hence dirt is the characteristic of one who, by means of asceticism (*tapas*), aims at acquiring special magical power.

(3) *Plants*.—We have already seen that plants were frequently used along with spells as a magical

cure of disease. Cognate to this medicinal employment is the application of herbs to the purpose of securing the love of a man or a woman, and of promoting or destroying virility; of both these classes of charms the Atharvaveda contains many examples. But they are also resorted to for other objects. Thus some are employed against demons and sorcerers, others to counteract curses, and several are associated with battle-charms. Aquatic plants, together with frogs, as representing water, are combined with spells to quench fire. Bdellium (*guggulu*), the fragrant exudation of a tree, frequently occurs in the ritual as, by its odour, driving away demons of disease or frustrating a curse.

(4) *Stones, etc.*—In the wedding ceremony, as we have seen, the bride stepped on a stone to ensure steadfastness. A stone, as representing a dividing mountain, was regarded as a means of keeping off evil spirits, and with this intention it was employed in the funeral ritual to separate the living from the dead, where also a clod of earth taken from a boundary was similarly used. In the same ceremony a mat was laid down while the formula, 'This is put between against calamity,' was pronounced (*Kausika Sūtra*, lxxxvi. 14). A wooden fence was placed round the sacrificial fire, the purpose being 'to strike away the demons' (*Taittirīya Samhitā*, ii. vi. 6. 2).

(5) *Lead*.—This metal was frequently employed in magical operations, as, e.g., in wiping off dangerous substances. The Atharvaveda contains a hymn (i. xvi.) in which lead was used against demons and sorcerers, this being one of its spells: 'If thou slayest our cow, if our horse or our domestic, we pierce thee with lead, so that thou shalt not slay our heroes.'

(6) *Weapons and staves*.—These appear on various occasions as a protection against demons. Thus a man who woos a bride is accompanied by one armed with a bow and arrows. At the wedding ceremony little staves are shot into the air, with the formula: 'I pierce the eye of the demons that prowl around the bride who approaches the fire' (*Mānava Gṛhyasūtra*, i. x.). At the royal inauguration the priest beats the king with a staff, saying, 'We beat evil away from thee' (*Kātyāyana Śrautasūtra*, xv. vii. 6). The staff is a part of the ritual equipment in the Dikṣā ceremony, its significance here being explained by the *Satapatha Brāhmaṇa* (iii. ii. 1. 32) thus: 'The staff is a thunder-bolt to drive away the demons.' The Vedic student, as peculiarly liable to the attacks of evil spirits, is provided with a staff at the rite of investiture. This he must always carry, never allowing any one to pass between it and himself; he parts with it only at the end of his apprenticeship, when he casts it away into water, along with his girdle and other sacred objects. On entering the next stage of religious life the Brāhman receives a new staff made of a different wood, the purpose of which is sufficiently expressed by the spells employed at the accompanying rite: 'Protect me from all powers of destruction on all sides,' and 'Destroy all hosts of enemies on every side' (*Hiranyakeśin Gṛhyasūtra*, i. xi. 8). A wooden implement shaped like a sword, technically called *sphya*, and very variously applied in sacrificial rites, has evidently the significance of a demon-repelling weapon. At the sacrifice to the dead the *sphya* is passed over the altar with the words, 'Smitten away are the devils and demons that sit on the altar' (*Sāṃkhyaṇa Śrautasūtra*, iv. iv. 2).

ii. *MAGICAL ACTION*.—Certain types of action are regarded as producing a magical effect in various rites. They may be grouped as follows.

(a) *Hostile*.—(1) To make a noise is believed to be an efficacious means of driving away demons. At the solstitial festival drums were beaten in order to scare evil spirits, which were deemed to

be especially powerful at the time of the shortest day. A gong was sounded at the ritual for exorcizing the demon of epilepsy. At the funeral ceremony a din was produced by shattering pots.

(2) A frequent method of removing injurious influences is to *wipe them off*. Thus lead or a black thread of wool was used as an aid in the process. In particular, the *apāmārga* (*Achyranthes aspera*) plant (popularly interpreted to mean 'wiping out') was most variously employed in this sense. The Atharvaveda contains several hymns with which the plant is applied, the following being one of the spells in which this action is expressed (iv. xviii. 8): 'Having wiped out all sorcerers, and all grudging demons, with thee, O Apāmārga, we wipe all that evil out.' The *Satapatha Brāhmaṇa* remarks (v. ii. 4. 14) that by the aid of this plant the gods wiped away fiends and demons. Among other magical applications of this action may be noted the requirement that one who has seen an evil dream should wipe his face.

(3) Another means of getting rid of demons or injurious powers is to *shake, cast, or strip them off*. The black antelope skin used at a sacrifice is shaken out with the words, 'Shaken away is the demon; shaken away are the goblins' (*Vājasaneyi Saṃhitā*, i. 14). After feeding the souls of the dead, the officiant shakes the hem of his garment in order to remove the souls that may be clinging to it. At the conclusion of the funeral ceremony, the bundle of twigs, used to efface the footsteps of death, is thrown away for fear of the dangerous substance which it may have derived from those footprints. For similar reasons clothes worn at uncanny rites, such as funerals, are cast aside. Injurious substances are deemed to be stripped off by passing through some aperture the person to whom they adhere. This notion is found even in the Rigveda (viii. lxxx. 7), where Indra is said to have cured the girl Apālā, who suffered from skin disease, by drawing her through an opening in a car. It is doubtless a survival of this form of purification when, in the wedding ceremony, the aperture of the yoke of a car is placed on the head of the bride.

The removal of injurious substances is not always a mere riddance, but is often also a transference to remote places or to other objects animate or inanimate. The Rigveda and the Atharvaveda contain several formulae or spells to relegate evil agencies to particular places or persons in the far distance. Thus hostile magic is expelled beyond the ninety streams (Atharvaveda, viii. v. 3, x. i. 16); the disease Takman (a sort of fever) is sent away to far-off peoples, such as the Gandharians and the Magadhas (ib. v. xxii. 14); evil deed and evil dream are banished to the divine being Trīṭa Aptya in the remotest distance (Rigveda, viii. xlvii. 13-17). Injurious agencies are also transferred to others at particularly uncanny spots, especially cross-roads. A garment containing certain impurities is removed to a forest, suspended from a tree, or hung over a post, to which its dangerous influence is conveyed, and thus rendered innocuous (Atharvaveda, xiv. ii. 49f.). Snake-poison is removed to a firebrand, which, being then thrown at a snake, returns the danger to its source (*Kaṇṇika Sūtra*, xxix. 6). Fever is transferred to a frog as an antidote representing water (Atharvaveda, vii. cxvi. 2); while jaundice is conducted in a homeopathic manner to a yellow bird (ib. i. xxii. 4).

(b) *Auspicious*.—(1) A very prominent part is played by *eating* in the communication of beneficial influences; contact with injurious substances, which would, of course, be equally well effected by eating, is avoided by fasting (cf. § ro. i. (2)). The Vedic ritual contains innumerable examples of the magical power conveyed by the eating of sacrificial food. The eating of the food is regarded as communicating the blessing embodied in it; and in the most various forms the view appears that the sacrificial substance conveys the special kind of power implied in a particular sacrifice. Thus, when the religious teacher initiates his pupil, he gives him the remnant of the offering with the formula, 'May Agni place his wisdom in thee.' On the occasion of the ploughing festival a mixture of the milk of a cow that has a calf of the

same colour and dung, bdellium, and salt is eaten. At the ceremony for the obtaining of male offspring the wife has to eat a barleycorn and two grains of mustard seed (or two beans), one of which has been laid on each side of it (as symbolizing a male being). The act of two or more persons eating together establishes a community between them; at the wedding ceremonial the bride and the bridegroom eat together, and at the royal inauguration the king and the priest.

Based on the idea that an animal, when eaten, communicates its special characteristics to the eater is the correspondence in sex, colour, and other qualities between the victim and the god to whom it is offered. To Indra a bull or (less often) a buffalo, to which he is often compared, is sacrificed; to the Āśvins, twin gods of the morning, a reddish he-goat, for 'of reddish colour, as it were, are the Āśvins' (*Satapatha Brāhmaṇa*, v. v. 4. 1); to the goddess Sarasvatī a ewe of certain qualities; to Agni, with his column of dark smoke, a he-goat with a black throat; to the Sun and to Yama (god of death), two he-goats, one white, the other black. A cognate magical correspondence appears in the offering of a black victim in a rite for the obtaining of rain: 'It is black, for this is the nature of rain; with that which is its nature he wins rain' (*Taittirīya Saṃhitā*, ii. i. 8. 6). When the destruction of enemies is intended, a blood-red victim is offered by priests dressed in red and wearing red turbans.

(2) There are several ceremonies in which *anointing* is applied for the attainment of auspicious ends. In the Dikṣā rite the sacrificer is anointed with fresh butter to give him unimpaired vigour and sound sight. In the animal sacrifice the stake is anointed with clarified butter for the purpose of bringing blessings to the sacrificer. At the royal inauguration the king is anointed with a mixture of butter, honey, rain-water, and other ingredients, which communicate to him the powers and abundance inherent in them. At the same ceremony the king anoints himself with the fluid contained in the horn of a black antelope and refrains for a year from cutting his hair, which has been moistened by it. At the Sautrāmaṇi rite, an expiatory part of the Soma sacrifice, the priest consecrates the king by sprinkling him with the fat gravy of the sacrificial animals: 'With the essence of cattle, with the highest kind of food, he thus sprinkles him' (*Satapatha Brāhmaṇa*, xii. viii. 3. 12).

(3) *Charms*, made for the most part of wood, but also of other materials, were frequently attached to parts of the body for various auspicious purposes. A talisman made of wood from the *parna*-tree (*Butea frondosa*) was worn in order to strengthen royal power (Atharvaveda, iii. v.); a bridegroom, while reciting a hymn of the Atharvaveda, fastened to his little finger, by means of a thread coloured with lac, a talisman made of liquorice wood to secure the love of his bride (*Kaṇṇika Sūtra*, lxxvi. 8 f.); at the full moon ceremony the sacrificer tied on his person talismans made of lac, together with all sorts of herbs, for the attainment of prosperity; while sowing seed, the husbandman put on a talisman of barley. The Vedic student who, at the conclusion of his apprenticeship, has taken the purifying bath ties a pellet of *badara* (*Zizyphus jujuba*) wood to his left hand and fastens a pellet of gold to his neck; he then attaches two earrings to the skirt of his garment, and finally inserts them in his ears. A talisman of gold secures long life: 'He who wears it dies of old age,' in the words of the Atharvaveda (xix. xxvi. 1). To ensure conception a woman puts on a bracelet with the spell, 'An acquirer of offspring and wealth this bracelet has become' (vi. lxxx. 1).

(c) *Indifferent*.—(1) *Burying* was a frequent secret method of conducting magical substances to others, generally with hostile intent. The Atharvaveda is full of spells expressing fear of magic buried in sacrificial straw, or fields, or wells, or cemeteries. Objects belonging to a woman who is to be injured—a garland, hair, a twig for cleaning the teeth—together with other things productive of misfortune are placed between three stones

in a mortar (a symbol of crushing) and buried. The luck of a person thus attacked might be restored by digging up the objects, while an auspicious spell was uttered. The *Satapatha Brāhmaṇa* relates (III. v. 4. 2 f.) a myth how the demons buried charms in order to overcome the gods; but the latter, by digging them up, made them inoperative. The Soma sacrifice even contains a ceremony the express purpose of which is to dig up the magical objects buried by rivals or enemies. This idea of burying things sometimes has an auspicious intention, as when a mixture of milk, dung, bdellium, and salt is buried in order to promote the welfare of cattle (*Kaṣika Sūtra*, xix. 19).

(2) The action of *looking* at an object may be either beneficial or injurious. It has the former effect, e.g., when the sacrificer says (*Vājasaneyi Sāṃhitā*, v. 34) to the priest, 'Look at me with the eye of Mitra' (the sun-god); or when a guest addresses the sweet food that is offered to him, saying, 'With Mitra's eye I regard thee' (*Āśvalāyana Gr̥hyasūtra*, I. xxiv. 14). But the evil eye (q.v.), e.g. of the serpent, brings disaster on him towards whom it is directed. At the wedding ceremony the bridegroom secures himself against the evil eye of the bride by anointing her eyes and saying, 'Look not with an evil eye, bring not death to thy husband' (*Pāraskara Gr̥hyasūtra*, i. 4; *Sāṅkhāyana Gr̥hyasūtra*, i. 16). In the *Atharvaveda* (IV. ix. 6) ointment is conjured against the evil eye with the spell, 'From the evil eye of the enemy protect us, O salve'; the *janḡida*-tree is invoked against the evil eye of the hostile-minded (XIX. xxxv. 3); and a certain plant is employed with the spell, 'Of the enemy who bewitches with his eye we hew off the ribs' (II. vii. 5; cf. XIX. xlv. 1). On the other hand, the evil effect produced by an inauspicious object on him who sees it is shown by innumerable directions enjoining avoidance of such sights. Thus the Vedic student who, at the conclusion of his apprenticeship, has taken his purifying bath must not look at an enemy, a malefactor, a corpse-bearer, or ordure. For similar reasons, one returning to the sacrificial ground should not look round after performing an inauspicious ceremony, such as an offering to the goddess *Nīrti* or a rite for the slaughter of demons.

(3) The action of *circumambulation*, which occurs very frequently in the Vedic ceremonial, is regarded as having a magically auspicious effect when the performer walks round an object in sunwise fashion by keeping his right hand towards it (*pradakṣiṇā*). Both living and inanimate things are three times circumambulated in this manner; e.g., priests thus walk round other priests or the victim, and the wives of the king walk round the dead sacrificial horse. Sacrificial altars and temples, the ground where a house is built, as well as houses (as a protection against serpents), are circumambulated. This rite is especially often performed with the sacrificial fire, as at the wedding ceremony and at the initiation of the Vedic student. Water is circumambulated at a wedding, as also a new house, while water is at the same time sprinkled round it. When the ceremony is inauspicious, the direction is reversed, the left hand being kept towards the object. This is done especially in funeral rites at the burying ground and at cross-roads. Thus the mourners walk three times round the unlucky fire deposited where four roads meet, with their left sides towards it, beating their left thighs with their left hands. When a patient is to be cured of snake-bite, the priest walks round him to the left. When a servant who is disposed to run away is asleep, his master, making water into the horn of a living animal, walks three times round him to the left, sprinkling the water round him with the spell, 'From the mountain on which thou wast

born, from thy mother, from thy sister, from thy parents, and thy brother, from thy friends I sever thee' (*Pāraskara Gr̥hyasūtra*, III. vii. 2). Movement both in the auspicious and in the reverse direction is not restricted to walking. Thus in the sacrifice to the dead the officiant grasps a water jar with his left hand and pours out its contents from right to left; he also holds the ladle in his left and deposits the offering on the grass in the same direction (cf., further, art. CIRCUMAMBULATION).

12. *Sympathetic magic*.—A special type of magic is that which has been called 'sympathetic,' being the influence exercised on a remote being or phenomenon by means of a telepathic connexion between it and what is manipulated by the magician. It may be either beneficent or injurious.

(a) *Effigies*.—An image is frequently made and operated on for the purpose of producing a similar effect on the victim. Thus an enemy is destroyed by piercing the heart of his clay effigy with an arrow, or by transfixing his shadow. His death is also produced by melting a wax figure of him over the fire, or by killing or burning a chameleon as representing him. The elephants, horses, soldiers, and chariots of a hostile army are imitated in dough, and sacrificed piece by piece so as to bring about its destruction. The magician annihilates worms by stamping on or burning twenty-one roots of the *uṣīra* plant, while he pronounces the spell, 'I split with the stone the head of all worms male and female; I burn their faces with fire' (*Atharvaveda*, V. xxiii. 13). In order to exterminate the field vermin called *tarda*, a single *tarda*, as representing the whole class, is buried head downwards, its mouth being tied with a hair so as to prevent its eating grain (*Kaṣika Sūtra*, I. 19). With a view to smashing the limbs of evil spirits pegs are driven into the ground. One who pounds the Soma-shoots for sacrifice directs the blows against his enemy by fixing his thoughts on him during the operation.

The sympathetic connexion is sometimes very remote, as when implements or materials are used in which a particular power is regarded as inherent. Thus an exiled prince receives food rendered magical by being cooked with wood that has grown from the stump of a tree, symbolizing the restoration of fallen fortunes. At a ceremony for the removal of troublesome ants a sacrificial ladle of *bādhaka* wood is employed simply because the name of the tree means 'remover.' At a rite to destroy demons the dipping spoon is made of wood from the *palāśa* (*Butea frondosa*) tree as representing the magical spell (*brahman*), which is a slayer of demons. When the sacrifice for the restoration of an exiled prince is performed, earth and other material from his native country are employed. At a sacrifice for victory in battle, soil torn up by a boar is taken for the altar (*vedi*), with a view to communicating the fierceness of that animal to the combatants on behalf of whom the offering is made.

(b) *Imitative processes*.—The higher cult concerned with the three sacrificial fires abounds with rites in which the desired effect is produced by an imitation of the event or phenomenon. Thus the kindling of the sacrificial fire in the morning develops into a magical rite to make the sun rise; and the dripping of the Soma-juice through the purifying sieve becomes a rain charm. At the ceremony of the royal inauguration, the conventional chariot race in which the king wins is meant to gain for him speed and victorious might. On various occasions in the ritual a game of dice is played; this has clearly the magical purpose of securing luck and gain for the sacrificer. At the solstitial ceremony an Aryan and a Śūdra (representing a white and a black man) engage in a struggle for the possession of a circular white skin, the former ultimately wresting it from the latter; the magical aim of this performance is the liberation of the sun from the powers of darkness. In the same ceremony, as well as at the Soma and the horse sacrifice, there are certain sexual observances the obvious purpose of which is to produce fertility in women. A good example of the imitative method is the procedure

meant to deflect a river into another channel. The new course is first watered; it is then planted with reeds; and, finally, representatives of water, such as a frog and the aquatic plant *avakā*, are deposited on it; the imitation is believed to produce the reality.

(1) This type of magic is very frequently found in the particular form of *rain-making*. Such is the purpose when, at the solstitial festival, a cowhide is pierced with arrows—probably an imitation of the myth of Indra's release of the waters by piercing the rain-clouds (which frequently appear as cows in the Rigveda). On the same occasion girls dance round a fire with jars full of water which they pour out, while they sing a song calling upon the cows to bathe. At the ceremony of piling the fire-altar jars of water are emptied on the ground, on which rain is thus said to be shed, and grain is sown on the spot. When an otter is thrown into the water, rain falls in abundance; or, if any one desires rain, he casts herbs into the water, submerges them, and then lets them float away.

(2) A modified form of sympathetic magic is *divination*, the aim of which is to find out what is hidden or future, largely from the occult correspondence between the representation and the reality. Dreams and sacrificial and funeral rites are the most significant representations; these can be interpreted by spiritual persons who possess an inner illumination, strengthened by the power of *Wasceticism* and other magical means. From the direction taken by a cow at a particular point in the ritual it may be inferred that the sacrificer will attain his purpose. If at a certain sacrifice the fire flames up brightly, the sacrificer will obtain twelve villages; if the smoke rises, he will obtain at least three. The fire kindled in a special way between two armies about to fight prognosticates the result of the battle by the direction of the smoke. The observer who, at a funeral, notes which of the three sacred fires catches the corpse first can tell whether the soul of the deceased is in heaven, in air, or on earth.

The following examples of divination are of a more general type. If one wishes to know whether an unborn child will be a male, the son of a Brāhman must touch a member of the mother; supposing the member has a masculine name, the child will be a boy. When it is desired to ascertain whether a girl will make a good wife, she is bidden to choose between various clods taken partly from auspicious soil (as that of a furrow or a cowshed), partly from an unlucky spot (as a cemetery or cross-roads); her choice betokens her character and her future. A special form of prognostication is the foretelling of weather by old Brāhmanas from the smoke of dung.

Mixed with the knowledge of the future obtainable from a symbolic process is that derived from gods or spirits, by interpreting the movement, the flight, or the cry of animals or birds specially connected with gods or spirits, such as the wolf and hyæna, the owl, crow, pigeon, and vulture. Thus, in one of the two hymns of the Rigveda concerned with augury, the bird crying in the region of the Fathers (the south) is invoked to bring auspicious tidings (II. xlii. 2). Again, in one of the Sūtras, the owl 'that flies to the abode of the gods' is addressed with the words, 'Flying round the village from left to right, portend to us luck by thy cry, O owl' (*Hiranyakeśin Grhyasūtra*, I. xvii. 1. 3). The direction from which the wooer will come is indicated by the flight of crows after the performance of the rite for obtaining a husband for a girl. Such omens seem to be a later development, resulting from the simplification of the symbolical method of divination by isolating a single feature of a complex process.

13. Oral magic.—Magical formulæ are usually

accompanied by some ritual act; but the spoken word in the form of a spell, a curse, or an oath also has a magical effect by itself.

(a) *The spell*.—The spell has generally a metrical form, being sometimes an old religious verse degraded to magical use. Though the formula is magical in application, it is in form often a mixture of prayer and spell, the gods being mentioned or invoked in it; e.g., 'Between the two rows of Agni Vaiśvānara's teeth do I place him that plans to injure us when we are not planning to injure him' (*Atharvaveda*, IV. xxxvi. 2; cf. XVI. vii. 3); 'Thy ninety-nine spirits, O Night, shall help and protect us' (XIX. xlvii. 3-5). It is, indeed, characteristic of the hymns of the *Atharvaveda* to contain the names of numerous deities, while the panegyrics of the *Rigveda* are addressed to one only; e.g., 'Heaven and Earth have anointed me; Mitra has anointed me here; may Brhaspati anoint me; may Savitr anoint me' (VII. xxx. 1). The magician very usually threatens or commands in his own person; e.g., 'I plague the demons as the tiger the cattle-owners; as dogs that have seen a lion, they find not a refuge' (IV. xxxvi. 6); 'As the lightning ever irresistibly smites the tree, so would I to-day beat the gamblers with my dice' (VII. 1. 1); 'Swift as the wind be thou, O steed, when yoked to the car; at Indra's urging go, swift as the mind; the Maruts shall harness thee; Tvaṣṭr shall place fleetness in thy feet' (VI. xcii. 1). But he also often mentions in his spell a parallel case, in order to effect his purpose, like the symbolical process in sympathetic magic; e.g., 'With the light with which the gods, having cooked porridge for the Brāhmanas, ascended to heaven, to the world of the pious, with that would we go to the world of the pious, ascending to the light, to the highest firmament' (XI. i. 37); 'As one pays off a sixteenth, an eighth, or an entire debt, thus we transfer every evil dream to our enemy' (VI. xlv. 3); 'As the rising sun robs the stars of their brilliance, so I rob of their strength all the men and women hostile to me' (VII. xiii. 1); 'The cows have lain down in their resting-place; the bird has flown to its nest; the mountains have stood in their site; I have made the two kidneys stand in their station' (VII. xvi. 1). A frequent feature of spells, in order to make sure of striking the injurious spirit, the seat of evil, or whatever else is aimed at, is the enumeration of a whole series of possibilities; e.g., 'Out of eyes, nose, ears, brain, neck, back, arms I drive the disease' (II. xxxiii. 1 f.). If, however the demon is known, this knowledge is emphasized as bestowing magical power over him; e.g., 'This is thy name; we know thy birth; this thy father, this thy mother.'

On the most varied occasions spells are uttered without any accompanying rite. The application of one that may be pronounced by a man on entering a court of justice is thus described (*Pāraskara Grhyasūtra*, III. xiii. 6): 'If he should think, "This person will do evil to me," he addresses him with the words, "I take away the speech in thy mouth, I take away the speech in thy heart; wherever thy speech is, I take it away; what I say is true: fall down inferior to me." Spells are also uttered, e.g., when a man mounts an elephant, a camel, a horse, a chariot, when he comes to cross-roads, when he swims across a river, and in many other situations.

A formula sometimes consists of two or three words, or even of one word. If a man has spoken what is unworthy of the sacrifice, he has only to murmur 'Adoration to Viṣṇu' as an expiation. The daily repetition of the single sacred syllable *bhūm* averts death from him who utters it; 'he has nothing to fear from serious diseases or from sorcery' (*Goddhila Grhyasūtra*, IV. vi. 1). Again, the mere mechanical repetition of a prayer meant for a totally different purpose may have a magical effect. Thus, the celebrated *Gāyatri* verse of the *Rigveda* (III. lxi. 10)—'We would attain that excellent glory of Savitr the god, that he may stimulate our prayers'—if

muttered 3000 times, frees a man from the sin of accepting unlawful presents. Even the formulaic use of a stereotyped dialogue secures the desired result. Thus, when the rite of parting the hair of a woman is performed, the husband asks her, 'What dost thou see?' 'Offspring,' she replies.

(b) *The curse*.—A special form of the magically effective spoken word is the curse. The earliest examples of it in Vedic literature are mythological. In the Yajurveda (*Taittiriya Samhitā*, II. vi. 6. 1) Agni curses the fish for betraying his hiding-place in the waters, predicting that men shall kill it by means of various artifices: 'Hence men kill fish with various artifices, for they are cursed.' In *Tāndya Brāhmaṇa* (VI. v. 11) the gods curse the trees with the threat that they shall be cut down with an axe the handle of which is made from themselves. That the employment of actual curses was also common in early Vedic times is obvious, and is confirmed by the occurrence of many spells intended to counteract them or to make them recoil on him who utters them. The Atharvaveda contains several such; e.g., 'Avoid us, O curse, as a burning fire a lake; strike him that curses us, as the lightning of heaven the tree' (VI. xxxvii. 2); 'Let the curse go to the curser, we crush the ribs of the hostile eye-conjurer' (II. vii. 5; cf. V. xiv. 5, x. i. 5). Plants, such as the *apāmārga*, are invoked to free from the calamity consequent on a curse. The *Satapatha Brāhmaṇa* contains several passages showing the potency attributed to curses. Thus it is there said (II. i. 4. 19, III. ii. 1. 9) that, 'if any one were to curse him, saying, "May the sacrifice turn away from him," then he would indeed be liable to fare thus'; 'Were any one to curse him, saying, "He shall either become demented or fall down headlong," then that would indeed come to pass.' It is there also said that he who curses a Brāhmaṇa possessed of certain knowledge leaves this world bereft of his strength and the result of his good deeds. In her Sūtras those who raise their hand to pronounce a curse are said to be one of the seven kinds of assassin (*Viṣṇu-smṛti*, v. 191).

(c) *The oath*.—This is really a curse directed against oneself, as is indicated by the verb *śap*, which in the active means 'to curse,' but in the middle 'to curse oneself,' 'to swear.' It calls down on oneself and one's belongings loss of life or possessions in this world and the next as a penalty for telling an untruth or breaking one's word. Thus, in the ceremony of royal inauguration the priest causes the king to swear the following oath (*Āitareya Brāhmaṇa*, viii. 15): 'All the merit of my sacrifices and gifts from the day of my birth to the day of my death, my position, my good deeds, my life, my offspring shall belong to thee, if I deceive thee.' If the oath is broken, the punishment ensues; e.g., the Yajurveda (*Taittiriya Samhitā*, II. iii. 5. 1) relates how, when the moon-god did not keep the oath which he had sworn to the Creator Prajāpati, he was attacked by the disease of consumption.

MAGICAL CIRCLE.—For the 'operation' of 'conjuring' spirits the mediæval sorcerer sat in the centre of a circle described on the ground. This formed a spiritual barrier, protecting him from ghostly attacks, while enabling him to question his 'familiar' or other spirits from a coign of supernatural vantage.

*Circuli sunt munimenta quaedam quae operantes a malis spiritibus reddunt tutos.*¹

The concepts of circle, circular, and encircling lend themselves naturally to dramatic ceremonialism, and ideas of continuity, finality, and eternity have been appropriately expressed by circular symbolism.

In Scandinavian mythology a serpent engirdles the earth. Popilius Lenas, delivering an ultimatum from the Senate of Rome to King Antiochus, drew with his staff a circle round himself in which he awaited the reply.²

The circular form of certain shrines and religious structures may involve some symbolism, possibly astrological. According to the Talmud, a round house and a three-cornered house do not become unclean—e.g., from the contagion of leprosy—whereas a square house does.³ Possibly the sacred number 3 renders the three-cornered house immune; possibly, again, the three corners represent the points of supernatural weapons.⁴ In the case of the round house the idea may be that nothing can cling to its smooth outline.

The circle as a supernatural protective barrier has several analogies in primitive custom, and variations of form involve corresponding variations of meaning. Throughout, from the earliest examples to the latest, importance is usually attached to the material or the instrument with which the circle is traced.

Among the Shuswap Indians the bed of a mourner is surrounded by thorn-bushes, the object being to ward off the ghost of the dead person.⁵ The Bellacoola Indians, also of British Columbia, have a similar practice. Besides surrounding the bed with thorns, mourners cleanse their bodies while standing in a square formed by thorn-bushes, as a protection against the ghost.⁶ Here the mystic *zareba* depends not on its shape but on its completeness in the geometrical sense.

Water and fire, excellent bulwarks both in human warfare and in spiritual conflict, and, possibly for this reason, among others, regarded as supreme cleansers, are often used to avert evil influences.

The Laotians had a custom of keeping a fire burning in a circle around the bed of a mother for some weeks after child-birth. In Abyssinia the bed was surrounded by blazing herbs, while the mother herself was held in the circle by 'stout young fellows.'⁷ In a moving or dynamic form the fiery circle was used for the same purpose in Scotland. Morning and night fire was carried

⁷ J. G. Fraser, in *JAF* xv. [1886] 841.

round the mother till she was churched, and round the child till it was christened. In some parts of Scotland a fir-candle was whirled three times round the bed where mother and child lay.¹

It has been suggested that in some such cases the idea was to prevent the soul in its critical state from leaving the body, but the greater proportion of cases certainly depend on the idea of protecting the patient from external evil, though the fire-treatment of childbed may have originated simply in a primitive clinical intention of producing comfort or obviating complications.

In China candles are kept alight round the coffin to 'give light to the spirit,' or to light him on his way.² The Caribs burned a fire round the grave.³ A Chinese charm consists in laying a circle of ashes round the dead man; it is supposed to resuscitate him.⁴ The Romans carried water or fire round mourners on their return from the funeral.⁵

The curious custom of circumambulation as a mark of honour was practised by Hindus, Greeks, and Celts.

In ancient India, walking round a person three times to the right (sunwise) was a ceremony of honour,⁶ as it was among the Gauls and Celts.⁷ The ancient Indians walked round the funeral pyre, as Achilles drove round the pyre of Patroclus⁸ (see art. CIRCUMAMBULATION). The ancient Indians also practised the rite as a cure for a sick person.⁹ Possibly the idea of protecting a person with a mobile, living ring is behind the honorific variety.

In Nias a candidate for the priesthood consorts with spirits in the mountains; when he returns home, he splits a young tree and creeps through the fissure, 'in the belief that any spirit which may still be clinging to him will thus be left sticking to the tree.'¹⁰ Highlanders of Scotland used to send their sheep through hoops of rowan to 'ward off the witches.'¹¹ Similar customs are found in N. Europe and England as cures for sickness.¹²

The Lapps wore a brass ring on the right arm by way of protection against the ghost of the dead person.¹³

Frazer instances superstitions about rings—arm or finger rings—suggesting that the idea is to keep the soul in the body. For this purpose magic cords are tied round wrist, ankle, or body among various peoples.¹⁴

'To keep the soul in or the demons out' is a question where convergence of practice is natural. In ancient India the medical magician encircled the bed of a woman at child-birth with black pebbles to ward off demons.¹⁵ This is in line with primitive practices mentioned above, but a suggestion of V. Henry possibly connects it with Babylonian magic: he finds in old Indian magic traces of the double pentacle, or Solomon's Seal, the famous constituent of the mediæval magical circle, consisting of two equal and equilateral triangles, cutting each other so that the resulting segments are equal. The underlying idea may be that the points of the star pierce the invisible enemies.¹⁶ The Indian data alone show a connexion, by means of this astrological element, with the Semitic, and it is from the Semitic practice that the magical circle of mediæval Europe, along with a considerable body of astrological magic, was developed. This is a remarkable case of permeation from one source. Semitic magic and its conquest of Europe may be described, not altogether fancifully, as a left-handed compliment to Semitic religion and the conquest of Europe by the Bible.

The Babylonian texts continually refer to the *usurtu*, which Thompson justly identifies as 'the prototype' of the magical circle, possessing the properties of a 'ban.'

The *asipu*-priest recited over the sick an incantation: '(The man) of Ea am I, . . . the messenger of Marduk am I, . . . the circle of Ea is in my hand.'¹

In more detail, the sick person was safeguarded by an enchanted circle (of the nature of a tabu-mark) made with flour or other material, 'as a kind of *haram* through which no spirit could break.' The priest first performed a ceremony of atonement, in which a kid was sacrificed. He flung the kid away, and then described the circle. 'Enclose the man with kusurra (flour), flour of lime, surround the shut gate right and left. The ban is loosed.'² A mixture of meal and lime seems to be intended; both substances possessed virtue. The 'flour of Nisaba (the corn-god)' was the 'ban of the great gods.'³ In another ceremony, before the god Nergal, the priest described with lime a circle round seven winged figures,⁴ and in yet another flour and water were used for drawing the circle.⁵ Here Thompson compares the mediæval use of the Host as a protection against vampires and witches. The Babylonians described the mixture as the 'net of the corn-god.' Similarly the Jews of Jerusalem employed the virtues of food against evil influences, scattering a mixture of food round the bed of a sick person.⁶ A Semitic parallel to the idea of stripping off evil by passing through a ring, or arch, or other circumscribed opening is found in a cure for headache, which consisted in making a circle round a desert-plant with meal, plucking it up before sunrise, and tying it on the head. When the plant was removed, the headache disappeared simultaneously. On the same principle an ailing limb was cured by tying round it a charmed thread, and then casting this away, along with the sickness.⁷

The development of magic, white and black, in Europe, and its remarkable exploitation, lasting till well after the scientific period had begun,⁸ were bound up with Semitic animism, or rather dæmonism, if the distinction may be observed. The causes producing a state of culture in which every man of science was a necromancer and conjurer of spirits do not concern us here, but the invariable employment of the magical circle for the conjuration of spirits is typical of the culture of those ages. The primitive Babylonian practice was now divorced from medical magic. As applied to the evocation of elemental demons, whose aid was invoked for alchemical research or prophecy or evil magic against individuals, its main purpose was to protect the sorcerer from the dangerous servants whom he called up.⁹ At the same time the geometrical possibilities of the circle appealed to the mathematical instincts of the scholar, and geometry perhaps owes something to magical experiments upon the circle. Kabbalistic lore was also called upon for the exploitation of names and numbers of power, to be inscribed in the circle. Here begins the positive virtue of the circle, which, in connexion with the universal concepts of the figure, made it something more than a protective barrier. It became rather a mystic focus of power, and had at least the merit of concentrating the alchemist's or astrologer's thoughts. Lastly, the astrological elements of the zodiacal system were applied to it, and it thus became an intermediary between chemistry and astronomy, as the focus to which were attracted the infernal and supernal powers alike.

The Arabic and Hebrew developments of magic in the early centuries of the Middle Ages are obscure. The account given by Psellus of a *Hecatinus circulus*, *Ἑκατίνος στροφάλος*, calls for notice, though its meaning is confused. He writes:

'Hecate's circle is a golden sphere, enclosing a sapphire in the centre, turned by a throng of bull's hide, and having characters through the whole of it. They made conjurations by turning this; and they are wont to call such things *tyyres*, whether they have a spherical or triangular or any other shape whatever. Shaking these, they uttered unintelligible or beastlike sounds, laughing, and striking the bronze. It accordingly teaches the operation of the rite, or the notion of such a circle, as possessing secret power. And it is called "Hecate's" as being dedicated to Hecate; and Hecate is a divinity among the Chaldeans.'¹⁰

⁹ *Id.* ii. 105; the circles 'are certain fortresses.'

¹⁰ *Expositio oraculorum Chaldaeorum* (PG cxxii. 1188).

This account may be simply confusing the Babylonian magical circle with the Greek magical wheel (*kyklos, torquilla*); but, just as the mediæval circle was made material and portable in the form of metal amulets and talismans, so it is possible that Græco-Chaldæan superstition may have developed the circle into a wheel like the *kyklos*. The fact that such 'wheels' were sometimes triangular or of other shapes is an interesting hint in the direction of the pentagrams and other figures with which the mediæval circles were filled. Psellus notes that the object of the *invocatio* was oracular, the idea, no doubt, being to evoke spirits for the purpose of forcing them to predict future events. As for the Greek wheel on which the *kyklos*, wryneck, was tied, there is considerable doubt as to its nature.¹

The magical circle of mediæval occultism had innumerable varieties, according to the purpose, the time, and the species of spirit to be invoked; and it also varied according to the predilections of the operator. The following may be considered typical examples of the method of description and formulæ of blessing and of invocation. The magician, after purifying himself, collected his paraphernalia, including his magic wand, blessed candles and holy water, magical sword or knife, and so forth, and traced the circle, usually 9 ft. in diameter,² with his wand or sword. He then blessed the circle, a typical blessing being:

'In the name of the holy, blessed, and glorious Trinity, proceed we to our work in these mysteries to accomplish that which we desire; we therefore, in the names aforesaid, consecrate this piece of ground for our defence, so that no spirit whatsoever shall be able to break these boundaries, neither be able to cause injury nor detriment to any of us here assembled; but that they may be compelled to stand before this circle, and answer truly our demands.'³

More elaborate formulæ include such terms as:

'Sanctify unto myself the circumference of nine feet about me, . . . from the East, Glavrah, from the West, Garron, from the North, Cabon, from the South, Berith.'⁴

Good spirits seem to have been invoked but rarely; necromancy was also rare, though two forms of this were used, one in which the body and the other in which the 'shadow' of the dead was conjured. Evil spirits of power were the usual object of conjuration, and extraordinary precautions were taken in the process.⁵

'Now, if any one would call any evil spirit to the circle he must first consider and know his nature and to which of the planets it agrees and what offices are distributed unto him from the planet. This being known, let there be first sought out a place fit and convenient and proper for his invocation according to the nature of the planet and the quality of the offices of the same spirit as near as it can be done; as if their power be over the sea, rivers or floods, then let the place be the sea-shore, and so of the rest. Then choose a convenient time for the quality of the air (being serene, quiet, clear, and fitting for the spirits to assume bodies). . . . Let the circle be made at the place elected, as well for the defence of the invocant as the confirmation of the spirit. And in the circle write the divine general names and all those things which do yield defence to us; and with them those divine names which do rule his planet, and the offices of the spirit himself; likewise write therein the names of the good spirits which bear rule in the time you do this and are able to bind and constrain that spirit which we intend to call.

We may add characters and pentacles⁶ . . . frame an angular figure with the inscription of such convenient numbers as are congruent amongst themselves to our work. . . . Further, we are to be provided with lights, perfumes, unguents and medicines, compounded according to the nature of the spirit and planet which agree with the spirit by reason of their natural and celestial virtue . . . holy and consecrated things necessary not only for the defence of the invocant and his companions, but also serving for bonds to bind and constrain the spirits; such as holy papers, lamens,⁷ pictures, pentacles,

swords, sceptres, garments of convenient colour and matter. Then let the exorcist (*sic*) and his companions enter the circle.'¹ If, after a prayer to God and an invocation, the spirit refuses to appear, 'reiterate the same three times, from stronger to stronger, using contumelies, cursings, punishments, suspension from his power and office, and the like.' If the spirit make a doubtful assertion, it must be tested by oath; the operator stretches his sword out of the circle and swears the spirit by laying his hand on the sword.²

At last, when the operation is beginning to have effect, 'there will appear infinite visions, apparitions, phantasms, etc., beating of drums, and the sound of all kinds of musical instruments; which is done by the spirits, that with the terror they might force some of the companions out of the circle.' At this point, 'holding the pentacle in his hand let him [the operator] say, Avoid hence these iniquities.'³ The spirit invoked would now normally appear.

A plain circle was the exception. In some, two diameters were drawn in the form of a cross,⁴ but, as a rule, the circle included a pentagram or combination of pentagrams. Two intersecting pentagrams, viz. two equilateral and equal triangles cutting each other so that their segments are equal, constituted Solomon's Seal;⁵ this seems to have been often regarded as more efficacious than the circle itself. These triangles were described before the circle, a frequent method being to draw a 9 ft. square, then the diagonals, and then the circle round the square.⁶ An inner circle was described at a distance of a foot from the outer, and between these were inscribed various 'names of power,' or injunctions to the spirits, Alpha, Omega, On Adonai, El-Zebaoth, Tetragrammaton, Elohim, Jahweh; 'I forbid thee, Lucifer, to enter within this circle,' 'Obey me, Frimost,' being examples of these.⁷ The mystic combination *Agha* was a favourite. Dove's blood, especially that of a white dove, was sometimes used for writing these names and formulæ.⁸ The circle, figures, and names might be described with holy water, charcoal, or consecrated chalk; when the magical knife was used for the drawing, the lines were sprinkled with holy water. This knife, which also served to frighten the spirits,⁹ should have a black handle of sheep's horn, and the steel should have been tempered in the blood of a black cat and the juice of hemlock. For more important operations, especially in black magic, as when using the 'great kabbalistic circle,' the tracing should be done with the magical stone Emetille.¹⁰ A curious refinement was a gate in the circumference, by which the operator and his associates might go out and in; on leaving the circle, they closed the gate by inscribing names and pentacles.¹¹ The more elaborate circles were filled with names and kabbalistic figures and 'characters.'¹² Candles and vervain crowns were placed within the circle, and the operator had with him gold or silver coins to fling to the spirit when evoked, the 'seals' to be shown to the spirit, and talismans, generally made of coloured satin embroidered with silver. Incense was burned within the circle, or it was perfumed with musk, and holy water was sprinkled over it. When the preparations were complete, the operator and his associates stood or sat in the centre of the circle, often in small circles marking their places, and the operator began his invocation of the spirit required.¹³

The 'great kabbalistic circle' was made with strips of the skin of a sacrificed kid. These were

⁶ Pentacle (properly=pentagram) is used of any talisman with figures (not necessarily angular) incised or embroidered within a circle.

⁷ Linen or vellum plaques inscribed with figures.

fixed in the ground or floor by nails. Five concentric circles, close together, formed a strong protective circumference. A triangle took the place of the pentagram, and three small circles were described for the stations of the operator and assistants.¹

The elaboration of geometrical design and astrological figures within the circle was connected with its positive efficacy for conjuration and control of the spirit. Thus Giordano Bruno writes:

'O! quanta virtus est intersecutionibus circulorum et quam sensibus hominum occulta! Cum caput Draconis in Sagittario exstiterit, diacadio lapide posito in aqua, naturaliter spiritus ad dandum responsa veniunt.'²

Consultation of the stars and seasons was essential.

'Oportet in constituendo circulo considerare quo tempore anni, qua hora circulum facias, quos spiritus advocare velis, cui stellae et regioni praesint, et quas functiones habeant.'³

For summoning chance spirits or seeing visions generally, a circle was made (probably at cross-roads) and perfumed, and the operator had to walk round its circumference, east to west, till he was giddy.⁴ For necromancy the churchyard was an appropriate site.⁵ The operator wore elaborate vestments, and was anointed with holy oil.

The circle was invariably obliterated on the conclusion of the operation.⁶ A similar practice of destroying the traces of magical rites is regular throughout the history of magic, even in primitive culture.

The talismans, pentacles, or seals, used freely by the magician, depended largely upon the magical circle which was described round them. Here, as in the large operating circle, the more concentric circles, the more potent the efficacy. Against the attacks of spirits they were very powerful, 'presiding with wonderful influence.'⁷ They were exhibited to the spirit on its appearance; by their means the operator bound the spirit, and was able to prevent it from departing 'without a licence.' The issue of the licence was an important detail; if it was omitted, the death of the operator might result.⁸ The first virtue of a seal was from the star under whose influence it was, and, accordingly, it would be made of gold, if the planet were the sun, of iron, if the planet were Mars.⁹ Seals 'of the names of God' were most powerful. Others had the names of angels, such as Raphael, Michael, Gabriel, inscribed between two concentric circles. Those which may be distinguished as pentacles proper had a Solomon's Seal surrounded by a circle.¹⁰ The most usual form had enclosed within the circle the 'table' of a planet. These tables, it is interesting to note, were 'magical squares' in the mathematical sense (see below). Each planet, and each of the other forces, had its own magical squares.¹¹ The Seal had an obverse and a reverse, and was the size of a large medallion.¹² In connexion with the pentagram, this figure was a synonym for health. It was also developed into a continuous figure, by combining two, resulting in five, not six, points.¹³

The 'characters' of spirits were taken by the operator within his circle. These were in a book, which, when completed, was consecrated in a triangle described just outside the circle.¹⁴ When a spirit appeared, it was asked to place its hands on its 'character' and swear.¹⁵

Medieval amulets for general use were frequently stamped with the magical circle in its numerous

varieties, as also were talismans of various make. The latter were effective, as a rule, only in co-operation with a ring engraved with 'characters.' This was worn on the finger, and the talisman on the arm or body.¹ The magician's wand was sometimes pliant and could be made into a circle, the ends being joined by a gold chain.² Described on parchment, the magical circle served as a basis for astrological calculations. This use was prevalent wherever Arabic culture penetrated. Thus, in Malaysia at the present time the circle is employed for all kinds of divination. To select a lucky day for a journey or business, a circle enclosing a heptacle is used, but every alternate day is skipped, the lines of the continuous heptacle running from, e.g., Sunday to Tuesday, Thursday, Saturday, Monday, Wednesday, Friday, Sunday, and so on.³ This heptacle is an ingenious development of the double pentacle. Magic squares of three or five numbers enclosed in a circle are less frequently used. Another form of divinatory circle has only radii from the centre. Colours emphasize the various parts of these circles.⁴

As a mathematical curiosity, the so-called magical circle is a development from the magical square, known since the earliest Arabic science. The latter is a square divided into smaller squares in each of which a number is written, and so arranged that the sum of the numbers in any row, horizontal, vertical, or diagonal, is always the same. The magical circle, or circle of circles, has numbers in concentric circles with radial divisions, possessing the same property as the rows in the magical square.⁵

LITERATURE.—In critical literature, R. C. Thompson, *Semitic Magic*, London, 1908, and G. C. Horst, *Zauber-Bibliothek*, Mainz, 1822, are the best of a very few. Francis Barrett, himself an adept, remains the most useful of the uncritical exponents, in his *Magus*, London, 1801.

A. E. CRAWLEY.

MAGYARS.—See HUNGARIANS.

MAHĀBAN (Skr. *mahā*, 'great,' *vana*, Hindi *ban*, 'forest').—A sacred town in the Mathurā District of the United Provinces and Oudh, on the left bank of the river Jumna; lat. 27° 27' N., long. 70° 45' E.; famous as the scene of the adventures of Kṛṣṇa as a child.

Here and at Gokul (*g.v.*), as might have been anticipated, the places where the young god was attacked by the witch Pūtānā, where he played his pranks in the dairy and was saved from the falling wooden mortar, and where he overcame the demons Tṛṇāvarta and Śakata are now shown. Mahāban was, in reality, only the water-side suburb of Gokul, which has now appropriated much of its sanctity, possibly because Mahāban never recovered from its sack by Mahmūd of Ghazni in A.D. 1017 (H. M. Elliot, *Hist. of India*, London, 1867-77, ii. 458, 460). In the fort are found fragments of Buddhist sculptures, and it is believed that Mahāban was the site of some of the Buddhist monasteries which, in the time of the Chinese pilgrim Fa-Hian, stood on both banks of the river. The existing temples are modern and mean. Only one is of any importance, that dedicated to Mathurānāth, Kṛṣṇa as lord of Mathurā. The most interesting building, however, is that known as Aṣṭi Khambhā, 'the eighty pillars,' which also has the name Chhathi Pālā, so called because women come here to be purified on the sixth day (*chhathī*) after child-birth, and here the cradle (*pālā*) of the infant god is exhibited. In its original form it seems to have been a Buddhist building, afterwards used for Hindu ceremonial, and finally converted into a Muhammadan mosque.

The style of the colonnades closely resembles that of the more famous building of the same class near the Qutb Minar at Delhi (*q.v.*), and both buildings have been ascribed to the same age, the close of the 12th cent. A.D. The most remarkable feature in this building is that one half of the southern end consists of the shrine of a Hindu temple almost undisturbed, with the original roof still in position.

LITERATURE.—The history, legends, and architecture of the place have been fully described by F. S. Growse, *Mathura*¹⁸, Allahabad, 1883, p. 272 ff., and A. Führer, *Monumental Antiquities and Inscriptions in the North-West Provinces and Oudh*, do. 1891, p. 103 f.; *IGI* xvi. [1908] 427 f.

W. CROOKE.

MAHĀBHĀRATA.—The *Mahābhārata* is an epic poem of India in eighteen books, containing altogether about 400,000 verses of eight and eleven syllables each, although these verses are united into stanzas (called *śloka* and *triṣṭubh*) of four verses each, so that the Hindus call it a poem of a lakh (100,000) of stanzas. The books are of very unequal length, varying from a few hundred to several thousand stanzas, and there is also a supplementary book—the *Harivaṃśa*—of 16,000 stanzas. The matter of the poem is partly narrative and partly didactic. The epic proper contains about 20,000 stanzas embedded in and embellished by moral, political, religious, and metaphysical dissertations, the whole forming a heterogeneous mass of tale and teaching, which gradually accumulated around the epic kernel. As a tale the *Mahābhārata* ('Great Bharata' story) represents in its oldest form the *purāṇa*, or ancient tale, in distinction from the *kāvya*, or studied, elegant poem, of which the other epic, called the *Rāmāyana* (*q.v.*), is the representative. It is probably older in its oldest parts than the *Rāmāyana*, and yet in its entirety much later. It belongs rather to western ('Midland') India, while the *Rāmāyana* belongs to the east. It celebrates Kṛṣṇa as representative of Viṣṇu on earth, while the *Rāmāyana* celebrates Rāma. Finally, it has not the unity of the *Rāmāyana*, nor was it written by one poet, as was the *Rāmāyana*. According to a tradition still extant in the work itself, the *Mahābhārata* at first contained only 8800 stanzas and was subsequently increased to 24,000, after which it was again enlarged by the addition of numerous episodes till it reached its present size. The chief individual characters in the poem are known in part in ancient literature, but not the popular characters, the heroes of the winning side in the story as now extant. The war waged was between the old and the new; the date of the poem as it stands cannot, therefore, be that of the antique characters of the Brāhmanic age. As a whole, the poem dates from about the 2nd cent. B.C., extending to the 2nd cent. A.D., or, with the margin allowed by some scholars, its period extends from 400 B.C. to A.D. 400, this representing the centuries during which the whole poem was developed into its present shape. The additions since A.D. 400 must have been slight, though it is possible that one of the most probable references to Christianity in the poem, contained in the story of the White Island (xii. 335–339), was among such 'latest additions.' The material wrought into the poem is in part older than the poem itself, probably by centuries, especially the narrative and didactic episodes, some of which seem to be of Buddhist origin. But the mass of the poem is greater than the epic narrative itself, and this mass, being largely didactic, led to the theory that the epic was originally didactic only, the narrative of human conquest being utilized as a frame on which to hang interminable sermons. This theory, put forth by Dahlmann, was further burdened with the thesis that the encyclopædic epic dated from pre-Buddhist times and was the work of one author;

but neither this most improbable hypothesis nor the basic theory—to wit, that the epic proper was merely ancillary to the didactic mass—has obtained general recognition. It is merely the exaggeration of a truth not denied by any one, viz. that moral and narrative poetry have always been more or less commingled in India. If the hypothesis of Dahlmann could be established, it would, of course, tend to show that Buddhism had been very much over-rated as an originator of ethical teaching. Very simple critical tests show, however, that such great antiquity can be assigned to the *Mahābhārata*; the metre alone proves that belongs to a period much later than that of Buddhist beginnings. The epic is first mentioned in the *Gṛhyasūtras*, withal not the earliest (*Āśvalayana Gṛhyasūtra*, iii. 4), to which there is no cogent reason to ascribe an antiquity greater than the 3rd cent. B.C., and it is not impossible that even this reference may be interpolated. In the 2nd cent. A.D. the Greeks refer to an Indian Homer (Dio Chrysostom, *Orat.* liii. 6), and this perhaps implies the supposititious author or compiler Vyāsa, to whose activity the Hindus give the name of authorship of the epic, as they say that Vyāsa compiled or arranged the Vedas—a story without any historical importance. Not more successful has been the counter-theory of Holtzmann, who holds that the epic was much later than the Christian era. He would date the *Mahābhārata* from the 5th to the 9th cent. A.D., and thinks that the story as we have it is an inversion of an older epic, in which not the Pāṇḍus but the Kuru were the characters originally besung by some earlier poet, and that it is due to the retention of older material that sins ascribed to the Pāṇḍus and their ally Kṛṣṇa have been kept in the poem of to-day. This theory also has failed to find recognition, in part because it ignores the weight of inscriptional evidence, which shows that, half a millennium before the *Mahābhārata*, according to this theory, had been completed, it was already of the size it is now.

The completed *Mahābhārata* represents an age well acquainted with foreign nations, even Greeks, Scythians, Persians, and Chinese being occasionally referred to in it (*e.g.*, v. 19); it represents also a time of empire, when, however exaggerated, the conquest of all India was regarded as quite a possible feat. It shows a superficial knowledge of the extreme north and south and a very intimate knowledge of Middle India. Castes are recognized as orders of society naturally, or, rather, divinely, established (*e.g.*, xii. 72, 297). Heterodox beliefs are freely discussed; outlandish morals are gravely reprobated (*e.g.*, viii. 45). *Satī* is approved, but is not regarded as imperative; the ethical standard is high. Buddhist remains and Hindu temples are mentioned (*e.g.*, iii. 190). Different epochs have amalgamated their beliefs in regard to the gods. In one episode the Vedic gods are paramount; in another the authority of Brahmā is supreme; elsewhere Viṣṇu is the one great god, or Śiva alone is God and Viṣṇu is his representative. Only one late passage recognizes the Trimūrti, or triad of Brahmā, Viṣṇu, and Śiva, as three forms of one god (iii. 272).

The *Mahābhārata* begins with an Introduction, or Book of Beginnings, which tells how the childhood of the heroes was passed and gives their origin, and also, incidentally, the origin of gods and men in general. For the story, it may be compressed into the following statements. Two brothers, Dhṛtarāṣṭra and Pāṇḍu, are educated by their uncle Bhīṣma. The former brother grows up and marries a western woman, Gāndhārī, who has a hundred sons, called Kuru. Pāṇḍu has two wives, one of whom, Mādrī, commits *satī* at his

death; the other, Prthā or Kuntī, survives Pāṇḍu and brings up his five children, called the Pāṇḍus, who are really sons of the gods, whom Kuntī and Mādrī had invoked. These sons are Yudhiṣṭhira (son of the god Dharma, or Right), Bhīma (son of the wind-god), Arjuna (the chief hero of the epic, son of Indra), and the twins Nakula and Sahadeva (sons of the Aśvins, or Dioskouroi). After this Introduction, which, like most childhood-recitals, in general late, comes the 'Sabhā,' the title of the second *parvan* (book), taken from the assembly the gaming-hall (*sabhā*), where the epic drama begins. At Hastināpur (about 60 miles north of Delhi) the Kurus hold an assembly, to which they have invited the Pāṇḍus, who, after various adventures, had built a town at Indraprastha (near Delhi). The Kurus intended to cheat the Pāṇḍus out of their kingdom by a game of dice, since they were afraid of the waxing power of their cousins. Yudhiṣṭhira plays away all his wealth and kingdom, and finally his brothers and himself. Then he plays Kṛṣṇā, the daughter of Drupada, polygamous wife of the five brothers, and loses her. Once more he plays, all that he has lost against term of exile, and on losing again he and his brothers and wife are driven ignominiously forth to live for twelve years in the forest. The third book is called 'Vana' ('Forest'), and narrates the life of the exiles. It is a storehouse of legend and tales, such as the story of Sāvitrī, and that of Nala and Damayanti, told to relieve the tedium of exile. The fourth book receives its name 'Virāṭa' from the name of the king with whom the Pāṇḍus take refuge at the close of the twelfth year. They stay in town collecting allies and assisting Virāṭa against attacks by the Kurus. They are at first disguised, and incidents of court life form the main part of this book, which is obviously, in its details, a late part of the epic. The fifth book is called 'Udyoga' ('Preparation for War'). Kṛṣṇa (Viṣṇu) is now enlisted upon the side of the Pāṇḍus, as, with her brother's consent, Arjuna has married his sister after eloping with her. The following four books are named from the leaders in the battle which now takes place, 'Bhīṣma,' 'Droṇa,' 'Karna,' and 'Salya.' Bhīṣma and Droṇa are the uncle and teacher respectively of the cousins now at war. Into the 'Bhīṣma Parvan,' at the beginning of the battle, is inserted the long poem called *Bhagavad-Gītā* (q.v.). This book ends with the fall of Bhīṣma, and Droṇa then assumes the leadership of the Kurus. Numerous encounters are described with wearisome iteration, and Śiva is lauded as the great One God. Karna, the half-brother of the Pāṇḍus, son of the sun-god, had been insulted by the refusal of Kṛṣṇa to recognize him as a worthy knight when she chose her husband, and had taken part with the Kurus against his brothers. He now leads them into battle, but is slain by Arjuna. This leads to the 'Salya Parvan' (ninth book), in which Salya is made leader of the Kurus; but, with the exception of a few warriors, they are all routed and slain, and the chief Kuru prince is killed (after the battle) by Bhīma. The tenth book is called 'Sauptika' ('Night-Attack'), and describes how the surviving Kurus make an attack by night on the camp of the victors, killing all the army except the Pāṇḍus themselves. It is followed by a short book called 'Strī' ('Women'), which gives an account of the lamentation of women over their dead. The war is now over; but Bhīṣma has miraculously survived, and in the long didactic books called 'Śānti' and 'Anuśāsana' he is resurrected to preach religion and philosophy, and give rules of ethical behaviour. Yudhiṣṭhira is crowned emperor, and in the fourteenth book, called 'Āśvamedhika' ('Horse-Sacrifice'), he performs the horse-sacrifice,

which is the sign of undisputed lordship (see art. *Āśvamedha*). Into this book is inserted (16-51) the *Anugītā*, a poem imitative of the *Bhagavad-Gītā*. The fifteenth book, called 'Āśramavāsika' ('Hermitage'), takes up the life of Dhṛtarāṣṭra and his queen, who, with Kuntī, the Pāṇḍus' mother, retire into the woods, where they are burned. The sixteenth book, called 'Mausala' ('Club-Battle'), tells of the death of Kṛṣṇa and his brother Baladeva, and the fate of their city Dvārakā, which was flooded by the sea. The family of Kṛṣṇa, the Yadus (Yādavas), are cursed by a Brāhman, and destroy each other. The seventeenth book, 'Mahāprasthānika' ('Great Renunciation'), tells how the Pāṇḍus give up their kingdom and climb to heaven by way of the northern mountains; this is supplemented by the last book of the epic proper, called 'Svargārohana' ('Ascent to Heaven'), describing the journey. To this is later added the *Harivaṃśa* ('Genealogy of Viṣṇu'), a long account in three sections of the life and family of Kṛṣṇa as a form of Viṣṇu. It has, in part, the characteristics of a Purāṇa (q.v.), and is, without doubt, a subsequent addition, dating perhaps from the 2nd cent. of our era, though generally regarded as still later.

The *Mahābhārata* may be viewed as a rich store of philosophical and religious lore as well as a tale, and as embodying important geographical and historical data. It undoubtedly reflects some real contest, which may have taken place about a millennium before our era. It extols the lunar race (the other epic, the *Rāmāyaṇa*, extols the solar race), and derives the heroes from kings who descended from Soma, the moon-god, himself the son of the seer Atri. Budha, son of Soma, had as wife Ilā, a daughter of Ikṣvāku of the solar line. Their son was Purūravasa, whose son, Ayus, was the father of Nahuṣa, the father of Yayāti, from whom came Pūru and Yadu, the ancestors of all the lunar race, Yadu being the ancestor of Kṛṣṇa, and Pūru being the ancestor of Bharata and Kuru, whose descendant, Śāntanu, was the father of Bhīṣma (above) by the goddess Gaṅgā (the river Ganges). Śāntanu's wife, Satyawatī, was also the mother of Vyāsa and of Vichitravīrya, who died without children; but Vyāsa raised up children for him, and these were Dhṛtarāṣṭra and Pāṇḍu. If these legends be reconstructed historically with the aid of the Purāṇic lists of kings, they show that a real historical background is reflected in the maze of myth. The polyandry of the Pāṇḍus is a trait of certain hill-tribes, and is not unknown on the plains; it is undoubtedly a genuine bit of tradition which serves to mark the Pāṇḍus as a ruder race than the old and long-respected Kurus.

An attempt to group the participants in the great war according to their place of origin has been made by F. E. Pargiter (*JRAS*, 1908, pp. 309-336, and 1910, pp. 1-56), who seeks in this examination to determine whether the theory of successive invasions leaving inner and outer rings of Aryans in India can be substantiated thereby; but the result seems to leave considerable doubt as to such invasions having left traces in the poem, though the theory of successive invasions may be substantiated on other grounds. The didactic teaching of the epic is not confined to any one part of the work, and from a general view of this teaching it is evident that a later pantheistic system has become amalgamated with the dualistic doctrines of the Sāṅkhya philosophy in its later theistic tendency as represented by the Yoga. This mixed system is represented not only in the *Bhagavad-Gītā*, but in the *Anugītā* and in the philosophical chapters of the twelfth and thirteenth books. The outcome of the systematic speculation is in accord with the teaching of the Vedānta, but the terminology and basic ideas are those of the

Sāṅkhya system throughout. The chief interest of the religious doctrine lies in the insistence upon the loving devotion of the worshipper and the saving grace of the supreme spirit (see BHAKTI-MĀRGA). Kṛṣṇa as a form of Viṣṇu is not revered (as later) in his child-form, nor is anything made of his being the lover of milk-maids, though both traits are recognized. They come out strongly in the *Harivaṁśa* and later Purāṇas, and it is perhaps not unjustifiable to conclude that they did not form part of the worship as originally adopted into Brāhmanism.

Directly opposed to Kṛṣṇa-Viṣṇuism is the Śiva-cult also found in the epic, as already indicated. This cult appears to have been set against that of the Kṛṣṇa-worshippers by the more orthodox upholders of Brāhmanism, although neither Śiva nor Kṛṣṇa was a Vedic god. But Śiva had long been recognized as a form of the Vedic Rudra, and, though probably at first a popular god, like Kṛṣṇa, he was already accepted by the Brāhman priests. The parts of the poem exalting Śiva as All-god or as the One God are not early; on the contrary, they bear the marks of later composition and the trait now so familiar, that of phallus-worship, appears only in a few late passages. As this aspect cannot be in itself a late feature, it must have acquired the seal of respectability only by degrees, being probably repugnant to the orthodox priests of Brāhmā. The special sectarian cults or forms of cults as advocated in the Purāṇas are unknown in the epic. The cult of Viṣṇu is that of the pantheistic All-god; the cult of Śiva is that of the only One God. But, with the opposing claims of each sect, each god gradually assumes the distinctive attributes of the other. Viṣṇu is the one theistic god and Śiva is the pantheistic All-god. Each in turn claims to be maker, preserver, and destroyer; and Brāhmā also, though originally creator-god, becomes destroyer as well, till all three, the sectarian Kṛṣṇa-Viṣṇu and Śiva and the older Brāhmā of Brāhmanism, coalesce into the 'one god with three forms,' or, as the Hindu says, 'three gods and one form.' Besides these great gods it is noteworthy that a revival of sun-worship leads to strange exaltation of the sun as supreme god (but only in late passages), probably because of the identification of Viṣṇu with the sun on the one hand and the later Persian sun-worship on the other; for, though the epic was probably rounded out to its present size by the 2nd cent. of our era and was virtually complete in all probability as an epic two or three centuries before (by 100 B.C.), yet numerous episodes and laudatory hymns have been added at all times, as may be seen by the manifold additions in the recently published southern text of the epic, which contains thousands of verses in great part of this character (in part, narrative). Of such sort also are the hymns to Durgā and probably also the exaltation of Skanda as the great army-leader of the gods, raised far above his earlier conception. All these later additions are of priestly sectarian origin. The original lay of the Bharata war may also have been of priestly rather than of popular origin, though 'hero-lauds' sung by hired minstrels are not unknown in early literature. But it was part of the business of the king's chaplain to recite laudations in his honour, and it is not impossible that some chaplain of the epic kings may have expanded the theme, for not only the king living but 'dead kings and their glory' formed the topic of lays and eulogies. The completed *Mahābhārata* was intended for recital, but this was in dramatic form, so that even to this day it is acted as well as recited by the purveyors of amusement at country fairs.

LITERATURE.—M. Monier-Williams, *Indian Wisdom*, London, 1876; J. Dahlmann, *Das Mahābhārata als Epos*

und Rechtsbuch, Berlin, 1893, *Genesis des Mahābhārata*, do. 1893; Adolf Holtzmann, *Das Mahābhārata*, Kiel, 1892-95; C. V. Vaidya, *The Mahābhārata: a Criticism*, Bombay, 1904; R. Garbe, *Das Bhagavadgītā*, Leipzig, 1905. See also for general analysis and extracts: J. Muir, *Original Sanskrit Texts*, London, 1855-72; A. Weber, *Indische Literaturgeschichte*, Berlin, 1870; A. A. Macdonell, *History of Sanskrit Literature*, London, 1890; M. Winternitz, *Gesch. indischer Literatur*, Leipzig, 1909, i.; L. von Schroeder, *Indiens Literatur und Kultur*, do. 1887; for special studies see E. Washburn Hopkins, *The Great Epic of India*, New York, 1901, and *Epic Mythology*, Strassburg, in press. A. M. Pizzagalli, *Nāstika, Cārvāka e Lokāyatika*, Pisa, 1907, and *La Cosmogonia di Bhṛgu*, Milan, 1910, has contributed useful studies of epic problems. Otto Strauss, *Ethische Probleme aus dem Mahābhārata*, Florence, 1912, gives a careful survey of the didactic material regarding the better life on earth. H. Jacobi, *Mahābhārata*, Bonn, 1908, provides a table of contents, index, and concordance. V. Fausbøll, *Indian Mythology according to the Mahābhārata in Outline*, London, 1908, furnishes a good epitome of epic mythology. See also S. Sørensen, *Index to the Names in the Mahābhārata*, do., 1904 ff. A critical ed. of the *Mahābhārata* is still a desideratum. The best edd. are, for the Northern text, Bombay, 1890, and for the Southern, do. 1906-11; the only complete tr. are by Protap Chandra Roy, Calcutta, 1884-96, and Manmatha Nath Dutt, do. 1905-1906.

E. WASHBURN HOPKINS.

MAHĀBODHI.—See GAYĀ.

MAHĀR, MHĀR, MEHRĀ.—One of the menial or depressed castes of W. India and the Deccan, numbering 3,342,680 at the Census of 1911. Their name is very doubtfully connected by G. Oppert (*Orig. Inhabitants of Bharatavarsa or India*, London, 1893, p. 28 ff.) with that of the ancient Indian Malla; and, according to J. Wilson (*Indian Caste*, Bombay, 1877, ii. 48), they gave their name to the country of Mahārāṣṭra, from which the Marāṭhās take their title. They are practically all Hindus by religion. Another caste, the Dhed or Dher, is sometimes included with them, and, if not identical, they are allied, with the Holeyā menials of the Madras Presidency (E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, ii. 329 ff.).

In the Central Provinces 'the Mahārs say they are descended from Mahāmuni, who was a founding picked up by the goddess Pārvatī on the banks of the Ganges. At that time beef had not become a forbidden food; and when the divine cow, Tripād Gayatri, died, the gods determined to cook and eat her body, and Mahāmuni was set to watch the pot boiling. He was as inattentive as King Alfred, and a piece of flesh fell out of the pot. Not wishing to return the dirty piece to the pot, Mahāmuni ate it; but the gods discovered the delinquency and doomed him and his descendants to live on the flesh of dead cows' (E. V. Russell, *Central Provinces Ethnographic Survey*, pt. ix., Allahabad, 1911, p. 84; cf. E. J. Kitta, *Census Report, Berar*, 1881, p. 114 n.).

Their religion is of the primitive animistic type, with a veneer of Hinduism. In the Khāndesh District they keep the regular Hindu fasts and feasts, and worship the popular gods of that country—Viṣṇu, or Viṭhobā; Śiva as Khāndobā; Mahāsobā, an evil spirit who abides in an unhewn stone smeared with red lead; Bhairabā, or Śiva in his terrible Bhairava form; and the Mother-goddess in the form of Āi Bhavāni, whose image they keep in their houses. Besides these they worship snakes and the spirits of their dead ancestors (*BG* xii. [1880] 118 f., xvii. [1884] 172 ff.). At a temple in Kāthiāwār the Dhed worship what is really an image of Viṣṇu reposing on his serpent Seṣa as Hāni, who is said to have been a deified woman of the caste. Women who are unable to nurse their babies and owners of cows which give a scanty supply of milk vow to wash this image in milk if their milk be increased (*BG* xiii. [1894] 415).

In the Central Provinces 'the great body of the caste worship the ordinary deities Devī, Hanumān, Dāhā Deo, and others, though, of course, they are not allowed to enter Hindu temples. They principally observe the Holi and Dusharā festivals and the days of the new and full moon. On the festival of Nāgpanchmi they make an image of a snake with flour and sugar and eat it. At the sacred Ambā tank at Rāntek the Mahārs have a special bathing-ghāt set apart for them, and they may enter the citadel and go as far as the lowest step leading up to the temples: here they worship the god and think that he accepts their offerings. They are thus permitted to

traverse the outer enclosures of the citadel, which are also sacred. In Wārḍha the Mahārs may not touch the shrines of Mahādeo, but must stand before them with their hands joined. They may sometimes deposit offerings with their own hands on those of Bhimsen, originally a Goṇḍ god, and Mātā Devī, the goddess of smallpox.

In Berār they worship a curious collection of deities, among whom are included the archangels Gabriel, Azrael, Michael, and Anādin, all of whom, they say, come from Pāndharpur. In Berār the worship of these archangels was probably borrowed from the Muhammadans; but in Gujarāt it was apparently taken from Christianity.

It seems that the attraction which outside faiths exercise on the Mahārs is the hope held out of ameliorating the social degradation under which they labour, itself an outcome of the Hindu theory of caste. Hence they turn to Islam or to what is probably a degraded version of the Christian story because these religions do not recognise caste, and hold out a promise to the Mahār of equality with his co-religionists, and in the case of Christianity of a recompense in the world to come for the sufferings which he has to endure in this one. Similarly the Mahārs are the warmest adherents of the Muhammadan saint Sheikh Farīd, and flock to the fairs held in his honour at Girār in Wārḍha, and Prātāpgarh in Bhandāra, where he is supposed to have slain a couple of giants (Russell, p. 90 ff.).

W. CROOKE.

MAHATMA.—See THEOSOPHY.

MAHĀVASTU.—The *Mahāvastu*, one of the most noteworthy books of Buddhist antiquity, is a huge confused compilation of legends 'on the origins of Buddhism, on the persons of its founder [up to the gift of the *jetavana*] and his first disciples—in a word, on that *ensemble* which, with infinite varieties of detail, crossed and ramified in every way, is the common property of all Buddhists.' Besides all this, it includes a gnomic treasure, which is also traditional, an enormous mass of *jātakas* ('birth-stories') and tales, certain dogmatic speculations (see below, § 3), interminable lists of Buddhas—'needless digressions, mere padding—two, three, four accounts and more of the same episode, from different sources, sometimes contradictory, sometimes following one another, sometimes scattered through the book, dovetailed into one another, dismembered, lacerated.'¹

The interest attaching to the *Mahāvastu* is of many kinds: (1) it is a book of *vinaya* ('discipline') of one of the ancient sects, and its history, so far as it can be traced, is instructive; (2) it is a vast repository of legend and folklore, which, when compared with Pāli literature, supplies innumerable documents on the nature and primitive state of Buddhist tradition; (3) the *Mahāvastu*, from the point of view of dogmatic ideas, marks a period or a transition stage between the Hinayāna and the Mahāyāna; and (4) its language, too, deserves attention.

1. History and contents.—The *Mahāvastu*, or, according to the colophon (which is open to suspicion), *Mahāvastu-avadāna*, claims to be a part of the *Vinayapitaka*, of the 'recitation' (i.e. the canon) of the Lokottaravādin Mahāsāṅghikas of the Madhyadesa.

(1) The Mahāsāṅghikas are one of the old sects or branches of the Order, the other branch being that of the Sthaviras or Theras (see SECTS [Buddhist]); from the beginning it probably had special rules of *vinaya*, or 'discipline.' (2) The expression Lokottaravādin, 'believer in the supernatural character of the *bodhisattva*' (see below, § 3, and art. BODHISATTVA), indicates a dogmatic school. It is possible that there were Mahāsāṅghikas who were not Lokottaravādins. It would not be difficult to eliminate from the *Mahāvastu* the passages which have a Lokottaravādin tendency. (3) The Madhyadesa, or 'middle country,' of the Buddhists

¹ Barth, *Journal des Savants*, 1899, pp. 463, 623.

comprises N. India, Magadha, Kosalā, and Videha; but there were Mahāsāṅghikas outside of the Madhyadesa, notably the Pūrvasailas and the Aparasailas, who were also Lokottaravādins.

In order to understand the word *mahāvastu* and to see how the *Mahāvastu*, in which discipline takes only a very small place, can belong to the section on 'discipline,' it is necessary to go far back.

The disciplinary literature (*Vinaya*) was from the beginning composed of two parts: (1) the formula of confession (*prātimokṣa*, *pāṭimokkha*), a list and classification of grave and venial faults, to which an explanatory and historical commentary was soon added: on what occasion such and such a prohibition was made by the Master; in the Sarvāstivādin school this commentary is called *Vibhāga*, in the school of the Pāli language *Vibhāga*; and (2) the statutes of the Order, a collection of the texts (*karmavākyā*, *kammavācā*) relating to ecclesiastical acts (ordination, fortnightly confession, etc.) and of rules referring to ordination, confession, the cenobitic life during the rainy season, to parishes, medicines, beds, and schisms. These texts and rules were also embedded in a historical commentary. In the Pāli canon they are divided into two sections (*khandhaka*), in two chapters or books (*vagga*)—the 'Great Vagga' and the 'Little Vagga' (*Mahāvagga* and *Chullavagga*), the latter being devoted to subsidiary questions. There is the same division in the canon of the Sarvāstivādins, under different titles: the *Kṣudrākavastu* (*vastu*, 'thing,' 'topic,' 'point of discipline or doctrine,' 'story'), corresponding to the *Chullavagga*, and the *Vinayavastu*, which, although it does not bear the title 'Great,' corresponds to the *Mahāvagga*.

One of the characteristics of the *Mahāvagga* (and the *Vinayavastu*) is that, especially in its first part, it assumes the form of history. It contains a short epitome of the origin of the Order, which is perfectly justified as an introduction to the *vastu* of ordination: it was in a book of discipline that the most ancient writers, for want of a better planned library, deemed it expedient to place some pages from the life of the Buddha—his illumination, his first sermon, etc. The editors of the *Vinayavastu* (which is, as we have said, the *Mahāvagga* of the Sarvāstivādins), who came long afterwards, took far more liberties: in the first ten chapters their work preserves the character of a historical treatment of monastic discipline; but the last chapter (devoted in principle and in title, like the corresponding chapter of the *Mahāvagga*, to the internal strife of the Order) contains not only a fresh statement of the biographical elements of the first chapter, but also the history of Śākyamuni from the beginning of time, related in a continuous account down to the schismatic intrigues of Devadatta; a list of the *chakravartin* kings, the creation of the universe and life of primitive men; and the history of the Śākyas (ancestors of Śākyamuni); legends of the birth of Śākyamuni, his education, his departure, his mortifications, etc.—a *summa* of ancient traditions among which are to be found documents which have an independent existence in the Pāli canon (e.g., the *Ajāṇṇasutta*). Of the five hundred pages in the eleventh chapter of the *Vinayavastu*, little more than forty are devoted to the schism which gives its name to the chapter, and which, in all probability, was at first its only *vastu*, its one subject. In a word, the *Vinayavastu*, as a whole, is a faithful replica of the *Mahāvagga*; but it shows a very wide use of interpolation.

It is different with the *Mahāvastu*, and the manifest contradiction between the title and the contents raises a delicate question. Such a title

implies that the book was, like the *Mahāvagga* and the *Vinayavastu*, meant to be a history of disciplinary rules. As a matter of fact, of thirteen hundred pages about twenty treat of discipline (especially at the beginning, two lines on ordination), and certain parallelisms with the *Mahāvagga* cannot be mistaken; e.g., there is 'a series of stories in the *Mahāvastu*, in the Pāli *Mahāvagga*, and in the Tibetan *Vinaya* which hold together, and really seem faintly to reproduce a common prototype' (Barth, *loc. cit.* p. 464). But, on the whole, the *Mahāvastu* is a collection of legends without any connexion with discipline.

One can easily understand how a primitive *Mahāvastu*, a historical treatment of discipline, would be fed (Barth says *nourri*) by a mass of heterogeneous materials, differing in date and character, which, by their inorganic or chaotic accumulation, would explain all that non-disciplinary literature which forms ninety-nine hundredths of the present *Mahāvastu*. This task of enlarging and of 'feeding' was carried on in all the Buddhist sects, for a longer or shorter time, with more or less moderation; and what is true of the literary units is still more true of the canonical collections. Although we at present know nothing about the library of the Mahāsāṅghikas, we may suppose that it had no shelves in which the *jātakas*, *suttas*, and stanzas would be arranged. The only course was to gather together in the *Mahāvastu* all that seemed precious.¹ The development of the *Mahāvastu*, therefore, if it had remained to any extent a history of discipline, and if some pieces of the framework of the *Mahāvagga* were perceptible, would seem quite simple. Must it be admitted that the last compilers of the *Mahāvastu* systematically cut away the elements of *vinaya* already sunk in the legendary mass? Or that, in the fearful disorder in which the literature of the *Mahāsāṅgha* was weltering, these elements fell into oblivion? Or that the *Mahāvastu* was never in any respect, except its title, a replica of the *Mahāvagga*? The three hypotheses seem equally inadmissible.

Some light is perhaps afforded by the history of the *Dīvyāvadāna*. E. Huber (and after him S. Lévi²) has proved that this book is, above all, a collection of anecdotes and legends taken from the *Vinaya* of the Sarvāstivādins. The extracts have not always been made very consistently, and some fragments of *vinaya* proper—disciplinary rules—are to be found in the *Dīvyāvadāna*. The history of the *Mahāvastu* is probably similar. The colophon gives it the name of *Mahāvastu-avadāna*: is this to be translated 'the narrative part of the *Mahāvastu*'? In the Pāli *Vaggas* the various episodes are linked to the history of the *Vinaya* by explicit references or allusions; these, without exception, are wanting in the *Mahāvastu*: 'So those same episodes which in the *Mahāvagga* and the *Chullavagga* are more or less prolix and discursive chapters of a treatise on discipline are here mere narratives, which end by making the *Mahāvastu* a book of stories.'³

However this may be, 'the materials which have entered into the composition of the *Mahāvastu* are of widely different ages; . . . the source of the compilation is certainly ancient, since it forms part of the canon of one of the ancient schools. It must be admitted, therefore, that it took a long time to be formed, for it is certain that it was not completed until very late.' The mention of astrologers under a Western name (*horāpāthaka*) and that of the writings of the Chinese and of the Huns, Peliyakṣa (Felix?), Ujjhebhaka (Uzbek?), indicate the 4th or 5th century. At that date, however, 'the persistence, in the prose, of the ecclesiastical jargon, which will be discussed below [§ 4], is an astonishing fact.'⁴ We must, therefore, admit late interpolations and carry the date of the compilation a little further back. In order to realize the character of this compilation, it must be

noticed that 'the editors do not allow themselves to invent anything, and do not dare even to correct the most flagrant contradictions.'¹

2. Comparison with Pāli canon.—There are numerous parallel passages in the *Mahāvastu* and Pāli literature. Minayeff, Oldenberg, above all Senart and Barth, and, lastly, Windisch, have called attention to many, but not to all. Differences which seem to be marks of sect are rare. We are able to study the unsettled state of Buddhist tradition and the infinite diversity of arrangement and treatment of the same materials.

'In these examples, the amount of similarity is of all degrees, from simple community of subject and vague resemblance to complete identity. The latter, however, is rarely attained, and never for long. . . . The similarity, especially in the verses, is to a large extent an exterior one; it is shown in mode of expression, in general assonance, in words more than in matter, in sounds more than in words; the stanza is the same, when the meaning is sometimes quite different, like an egg of which nothing remains but the shell. . . . They all go back to one original. . . . The probabilities are not always in favour of the Pāli edition. But for the *ensemble* of the fragments as well as for the detail of their rendering, it is the Pāli that is the best on the whole and that gives the best representation of the original version.'²

It is well known that all the comparisons set up between the Pāli canon and the other canons arrive at the same conclusion. The Pāli writings were fixed and codified first.

3. Relation to Mahāyāna and Hīnayāna.—The *Mahāvastu* may be said to form the bridge between the Old Vehicle and the New. As is seen in art. MAHĀYĀNA, the two Vehicles are not incompatible, and the book may present certain characteristics peculiar to the Great Vehicle while remaining unacquainted with the others.

(1) The 'Buddhology' of the *Mahāvastu* marks a stage between the conception of Buddha as a simple mortal (Little Vehicle) and that of Buddha as a quasi-eternal god sending illusory images down to this world (Great Vehicle). The Buddha of the *Mahāvastu* is a superman. He feels neither hunger nor thirst; he lives in ignorance of carnal desires; his wife remains a virgin. It is from consideration for humanity, in order to conform to the customs of the world (*lokānuvartanā*), that he behaves as a man, or that he gives to men the false impression that he is behaving as a man. In technical terms, he is *lokottara*, 'superior to the world.'³

(2) The infinite multiplication of Buddhas in the past and in the present is also a characteristic of Mahāyānist tendency. It must be noticed, however, that the Sarvāstivādins, who are reputed to be free from Mahāyānism, allow that several Buddhas may co-exist, though in different universes, or 'fields of Buddha.'

(3) Much more marked is the tendency of one of the chapters of the *Mahāvastu*, entitled *Daśa-bhūmika*, 'the book of the ten bhūmis'—successive steps by which the future Buddhas have to mount up to the state of Buddha.

'It is to the beings who aspire resolutely to the condition of Buddha that the *Daśabhūmika* ought to be set forth . . . for they will believe; the others will only cavil' (I. 198).

The *Mahāvastu*, therefore, has incorporated a book which is addressed, in so many words, to the men who wish to become, not *arhats*, but Buddhas, i.e. to the men who enter the Vehicle of the future Buddhas, the Mahāyāna.⁴

¹ Barth, *loc. cit.* p. 624.

² *Ib.* p. 627.

³ The text says that his body is *manomāya*, 'mind-made.' This expression has been discussed by E. Senart and A. Barth (see art. BODHISATVA). According to the *Abhidharmakośa*, it means, not 'mental body,' 'body formed of mind,' but 'body created by the mind,' without intervention of seed and blood. Such is the body of the creatures called *aupapādūka*, 'apparent,' one of whose characteristics is that, on dying, they leave no trace.

⁴ Several other instances of Mahāyānist tendency are discussed by Senart and Barth (*loc. cit.* p. 526). Different interpretations may be suggested from that of these two scholars for

¹ See the Introductions and notes of E. Senart, and cf. Barth, *Journal des Savants*, 1899, p. 623 f.

² *T'oung-pao*, II. viii, 1907, 106 ff.

³ Barth, *loc. cit.* p. 529.

⁴ *Ib.* p. 629.

this sentiment implies a living god—though the *Abhidharmakośa* employs the term. Veneration of relics, *stūpas*, etc., is useful and recommended; it is good, it is helpful, as penance (*tāpas*) is, but it is not essential.

(5) Ancient Buddhism is not merely a vehicle of *nirvāṇa*; it also teaches how to be re-born in heaven, in the world of Brahmā.

Three Vehicles are usually distinguished: (1) the Vehicle of the Śrāvakas, (2) the Vehicle of the Pratyekabuddhas, (3) the Vehicle of the bodhisattvas. The first two together constitute the Little Vehicle, the third the Great Vehicle (see E. Burnouf, *Le Lotus de la bonne loi*, Paris, 1852, pp. 52, 315, 309; H. Kern, *SBE* xxi. [1884] 80, *Manual of Indian Buddhism*, p. 61; *Dharmasādhya*, ed. F. Max Müller and H. Wenzel, Oxford, 1885, p. 2, and sources cited on p. 35; E. J. Eitel, *Handbook of Chinese Buddhism*², London, 1888, s.v. 'Triyāna'; cf. *Buddhāvamsa* [PTS, London, 1882], Commentary, p. x f., where the Śrāvaka-Pratyekabuddhas are opposed to the Samyak sambuddhas). There is no difference between the Vehicle of the Śrāvakas and that of the Pratyekabuddhas; both arrive at the same *bodhi*, or illumination, and the same *nirvāṇa*; but, while the Śrāvakas appear at a time when the Law of the Buddha is known, and profit by the teaching of others, the Pratyekabuddhas attain to *bodhi* themselves at a time when the Law of the Buddha has disappeared; while the Śrāvakas preach (*śrāvayanti*; *śrāvaka*, translated 'hearer', means rather 'preacher' [see *SBE* xxi. *Saddharmapuṇḍarīka*, iv. 53]), the Pratyekabuddhas do not convert except by miracles. There are still other differences, but they are of no importance to the Vehicle of salvation (see *Abhidharmakośabhāṣya*, ch. iii, Fr. tr., London, 1915, p. 103 and notes; Chandrakīrti, *Mahāyānakāvātāra* (Fr. tr., *Museon*, new ser., viii. [1907] 2 ff., quoting literary authorities). It is natural, then, for the Vehicle of the Śrāvakas and the Vehicle of the Pratyekabuddhas to be fused in the Little Vehicle (Hīnayāna [q.v.]).

2. Great Vehicle.—The new Buddhism adopts the name of *mahāyāna* ('great vehicle'). The word *yāna* ('vehicle') is used to express the same idea as that conveyed by the 'supramundane path' (*lokottaramārga*), the 'path leading to *nirvāṇa*.' But, as we shall see, there are various kinds of Mahāyāna, and this fact explains the diversity of definitions and the evident difficulty in which early writers—e.g., the Chinese pilgrims—found themselves when they tried to explain the difference between the Little and the Great Vehicle.

The Great Vehicle consists of (1) the practice of the virtues (*pāramitās*) of a bodhisattva or future Buddha (i.e. *pāramitāyāna* [*naya*] or *bodhisattvayāna*); by it one becomes a Buddha (*buddhayāna*); (2) the wisdom or knowledge of vacuity (*prajñāyāna* or *jñānamārga*); (3) devotion; it is the path of devotion (*bhaktimārga*).

(1) *Career of the bodhisattva*.—The books which profess to belong to the Great Vehicle (*Mahāyāna-sūtras*) tend to assert that *nirvāṇa* cannot be attained by the ancient method. To obtain deliverance from desire, ignorance, and existence it is necessary to practise all the virtues and acquire all the knowledge of the Buddhas, to enter on the career of a future Buddha (*bodhisattva-charyā*) and pursue it for centuries. Instead of 'Great Vehicle,' it may therefore be called 'Vehicle of the future Buddhas' (*bodhisattvayāna*), or 'Method of the perfect virtues, charity, patience, etc.' (*pāramitānaya*).

Now the Buddha Śākyamuni, during his former existences, has always lived in the world. It is possible, therefore, to enter the 'Vehicle of the future Buddhas' though married. Nothing, however, prevents monks from making the 'vow to become Buddhas' by this vow they mount the 'Vehicle of the future Buddhas,' but by their monastic observances they belong to the 'old Buddhism,' and form part of one of the disciplinary schools of the Śrāvakas. Young laymen often take the vows of monks, and, after acquiring merit in this way for a time, renounce them in order to take the vows of a future Buddha.

(2) *Vacuity*.—The books that treat of philosophy explain that the ancient dogma, 'The soul is nothing but a complex of transitory elements (*skandha*),' is perfectly accurate, but unsatisfying; they would

add that these elements themselves do not exist in themselves, but are 'void' (*śūnya*). (For the two ways of understanding vacuity, and the two schools of the Great Vehicle, see artt. MADHYAMAKA and VIJÑĀNAVĀDINS.) The doctrine of vacuity (*śūnyatā*) is the second characteristic of the Great Vehicle. But a layman or a monk can perform the 'vow to become a Buddha' without thinking out the doctrine of vacuity. The 'theologians' themselves declare that, as the beginning of the saintly career is entirely devoted to charity, it is not good to give too much thought to philosophy, i.e. to universal nothingness. On the other hand, an adept of the Little Vehicle who does not believe in the necessity of becoming a Buddha may adhere to the doctrine of vacuity and become imbued with it, in order to attain *nirvāṇa* as an *arhat*, i.e. in this present life. Some texts even explain that, if the doctrine of vacuity is really indispensable to the attainment of *nirvāṇa*, it is sufficient, without the career of the future Buddha.

(3) *Devotion*.—A third characteristic of the Great Vehicle is the worship of the Buddhas and 'future Buddhas' of high rank (see art. BODHISATTVA). The Buddhas are great gods, almost eternal, who sit upon thrones in heavens surrounded by saints, and send 'magic bodies' down to earth to save men. The worship of the Buddhas may exist independently of any desire to become oneself a Buddha and independently of philosophic speculation.¹ There is therefore a Great Vehicle that is merely devotional: (a) the Buddha (Amitābha, e.g.) is a god in the full meaning of the word, eternal or almost so (Amitābha, 'infinite splendour', is sometimes called Amitāyus, 'infinite life'); (b) the only concern of the faithful is to be re-born in the paradise of this god, 'the blissful world' (*Sukhāvati*), the western paradise, by the grace of the god and with the help of the holy saints Avalokita, etc.²

This Mahāyāna, purely devotional and with monotheistic tendencies, is not a 'Vehicle of future Buddhas.' In the books discussing it (*Sukhāvatīyūha*, etc.) there is practically no reference to *nirvāṇa*. This Vehicle is a Buddhist form of the Hindu *bhakti*, or devotion. *Bhakti* must be accompanied by highly orthodox acts of worship, which are recommended in the Hīnayāna: worship of *stūpas*, *maṇḍalas* in honour of the Buddha, abstinence from food before worshipping Buddha, etc. But the Mahāyānist *bhakti* is laden with litanies and formulas; it declares that rites efface sin, and attributes salutary virtue to the reading of the *sūtras* and the repetition of the name of the Buddhas—which is not quite orthodox.

It is to be noticed that the worship of Buddhas, Tārās, etc., is compatible with the strict orthodoxy of the Hīnayāna, as has been remarked in regard to Jainism, which is very idolatrous and yet attached to the Hīnayāna.³

3. *Vedāntic and Tāntic Vehicle*.—The Mahāyāna, as analyzed above, is, from the philosophical point of view, a phenomenalist system, and, from the religious and mythological point of view, polytheism with monarchical and devotional tendencies. From early times phenomenism and polytheism led to conceptions of immanence and monism.⁴ In the days of Asaṅga (A.D. 4th cent.) men believed in an Ādibuddha (q.v.) who would play the part of Brahmā in his various aspects as Brahmā, or Kṛṣṇa divine, or Kṛṣṇa incarnate. These speculations upon immanence and emanation, which often mingle with the doctrines of the Mahāyāna proper,

¹ For the combination of the cult of the Buddhas and compassion, or charity, with meditation on vacuity, see art. BODHISATTVA.

² See artt. AMITĀYUS; BLEST, ABOVE OF THE (Buddhist); cf. Matsumoto Bunzaburō, *Gokuraku jōdo ron* ('Study of the Pure Land Sukhāvati'), Tokyo, 1909, and *Mitoku jōdo ron* ('Study of the Pure Land of Maitreya'), do. 1911 (Fr. tr., M. N. Péri, in *Bull. de l'École franç. d'Extrême-Orient*, xi. [1911] 439 ff.).

³ A. Barth, 'Le pèlerin chinois I-tsing,' in *Journal des Savants*, 1898; cf. the remark of Winternitz, *Geschichte*, ii. 157, on the Buddha in Buddhaghosa: 'eine Art Halbgott wie in den Mahāyānasūtras.'

⁴ See Pousin, *Bouddhisme. Opinions sur la dogmatique*, p. 391; also his papers on the three bodies of a Buddha and allied subjects in *J.E.A.S.* 1910, p. 129, and *Museon*, new ser., xiv. [1913] 257; cf. D. T. Suzuki, *Outlines of Mahāyāna Buddhism*, London, 1907.

are the basis of the 'Vehicle of formulæ' (*mantrayāna*), the 'diamond method' (*vajrayāna*), also called the 'Tāntric Vehicle' (*tantrayāna*). This Vehicle is Vedānta in Buddhist disguise as regards its doctrine, and Saivite and pagan as regards its mythological representations and its rites. Its goal is the condition of a Buddha, its doctrine that (1) every being is, in his inmost nature, a Buddha, and (2) every being can, by meditation, spells, (*sādhana*), and theurgic practices of all kinds (often erotic), 'realize' this Buddha nature at little expense (see TANTRISM).

4. Is the Mahāyāna the only Vehicle?—This is an interesting question and worthy of our attention. Do the Mahāyāna teachers regard the Mahāyāna as the only Vehicle of salvation? I-tsing's remarks may be accepted as giving the general opinion:

'These two systems [Mahāyāna and Hīnayāna] are perfectly in accordance with the noble doctrine [of the Buddha] . . . Both equally conform to truth and lead us to Nirvāṇa.'¹

But the scholastic literature and the *Mahāyāna-sūtras* of course give different and often narrower views. Maitreya-Asaṅga says that 'the meditation (*dhyāna*) of the Hīnayāna, though impure, leads to salvation';² but for Śāntideva the Hīnayāna is of only relative truth, and its followers are upon a path that has no issue;³ Chandrakīrti sees no virtue in the Hīnayāna except its teaching of 'vacuity' (see MADHYAMAKA): there are old *sūtras* which proclaim vacuity (*śūnyatāpratisamyukta*); in an extreme case *arhat*ship and *nirvāṇa* may be attained by meditation on these *sūtras*—in an extreme case, we say, because the follower of the Hīnayāna has no part in the spiritual aids that are reserved for the future Buddha; he does not have the great 'means' (*upāya*) of salvation, compassion, great compassion (*mahākaruṇā*), i.e. the desire and the vow to save all creatures; the possession of wisdom (*prajñā*) is unavailing, since he lacks the great 'means' of remission of sins and elimination of passion. In fact, there is only one Vehicle, as the *Lotus of the True Law* (*q.v.*) and several *sūtras* teach very clearly. The only way to salvation is to become a Buddha. But this demands a long career; so the Buddha has shown men a nearer goal, the *nirvāṇa* of the *arhat*, that they may not lose heart—like a caravan-leader who creates a magic town in the midst of the forest, far from the end of the journey, that the travellers may think they are near their destination, and take heart to advance.⁴ 'The men who mount the Vehicle of the Śrāvakas cannot obtain deliverance by the Vehicle of the Śrāvakas'; embracing a false *nirvāṇa*, they are like a lover who embraces his mistress's corpse; they have, however, advanced nearer to the true *nirvāṇa*. At death, they falsely think that they have attained deliverance and exemption from re-birth; they are re-born, for they are not yet delivered, but they are re-born beyond the world (*tridhātu*), in the 'pure realm' (*andśravadhātu*), in lotuses which open their petals to the rays of Amitābha and other Buddhas. There they learn the true Vehicle, make the *bodhi* vow, and enter, through numerous lives, upon the career of a future Buddha.⁵

The Chinese texts studied by J. J. M. de Groot (*Code du Mahāyāna en Chine*, Amsterdam, 1893, p. 94) reduce the Hīnayāna to the observation of monastic rules, taking no notice, either purposely

or through ignorance, of all the Noble Path and meditation of the truths. They say that the Little Vehicle, thus understood, leads to re-birth in the very inferior paradiſes of the world: Kāma (see COSMOGONY AND COSMOLOGY [Buddhist]); it is therefore a Vehicle that leads to the gods (*devas*), according to de Groot's translation, and not a Vehicle of salvation.

5. Speculative doctrines of the Mahāyāna.—These are examined in the artt. MADHYAMAKA and VIJÑĀNAVĀDINS, which discuss the two chief philosophic schools of the Great Vehicle. The doctrines connected with the 'career of the future Buddha' (*bodhisattvacharya*) are treated in art BODHISATTVA. Many details might be added on the technique of meditations; but the works on this subject (*Abhisamayālaṅkāra*, *Bodhisattvaśāstra*) have not been published, and present very serious difficulties.

6. Discipline (Vinaya) of the Mahāyāna.—The Indian schools of devotion (*bhakti*) are often no strict as regards morality and discipline. There existed, accordingly, lax Mahāyāna, inclining to Tantrism, which preached salvation and the remission of sins by the recitation of formulæ, etc. independently of rules of conduct.

But there is also a rigid Mahāyānist 'monachism', sometimes adhering to the ancient *Vinayas* sometimes introducing new ones.

(1) The *Ākāśagarbhasūtra* says:

'If a Bodhisattva [i.e. an adept of the Great Vehicle] begin to think: "The Bodhisattva does not require to study the law which forms part of the Hīnayāna; he need not make it a rule for himself. What is the use of accepting this rule? What is the use of this rule?"—if he thinks in this way, he is guilty of error, and renders himself very culpable.'

Śāntideva speaks in the same strain:

'The adept of the Great Vehicle will never give his hearer the vain hope of acquiring purity by simply reading the books of the Great Vehicle, and reciting formulas, while abandoning the rules of conduct.'

One fully realizes I-tsing's statement:

'Which of the eighteen schools [of the Hīnayāna] should be grouped with the Mahāyāna or with the Hīnayāna is not determined. . . . Both [Mahāyāna and Hīnayāna] adopt one and the same discipline (Vinaya).'⁶

Monks and convents practising the strict monastic observance of the ancient *Vinayas* adopted the dogmas and worship of the Mahāyāna; Yuan Chwang therefore mentions monks who were 'Mahāyānists of the Śthavira-school and all perfect in Vinaya observance'.⁷ It has been supposed that the *Vinaya* of the ancient Mahāśāṅghika sect was the most popular in Mahāyānist convents, because it was in a Mahāyānist convent that Fa Hian found the Mahāśāṅghika *Vinaya*,⁸ because the Mahāśāṅghikas seem to have been the forerunners of the Mahāyāna.⁹

(2) The Mahāyāna apparently introduced into the discipline some new rules concerning the use of milk and meat. The Sarvāstivādins (Hīnayāna) allowed the use of meat under certain conditions; the Mahāyānists condemned it. I-tsing tells a touching story of a young Mahāyānist, Chittavarman, who was refused ordination in a Hīnayāna convent until he renounced, in tears, his principles of diet.¹⁰

Sooner or later, however, the Mahāyāna created a new *Vinaya* for itself—a *Vinaya* that was independent of the ancient *Vinayas*, that had a different purpose in view and that could be, and was often

expected to be, used together with the ancient *Vinayas*. The ancient *Vinayas* were for the use of monks; the Mahāyāna *Vinaya* is the 'Vinaya of the future Buddhas,' or, more exactly, 'of incipient future Buddhas' (*ādikarmika bodhisattva*). (a) It was while making the vow to become a Buddha that Śākyamuni, prostrating himself at the feet of a Buddha, became a 'future Buddha'; this vow is valid, not only for present existence, but also for numerous future existences; like the vows of a *bhikṣu* (see KARMA), it creates 'discipline' (*samvara*), the obligation and, to a certain extent, the 'grace' (the moral power) to perform certain duties. We have no longer a Buddha in our midst to receive such a vow from us; we must be content to take the 'discipline of a son of Buddha' (*sugatātmaśāsamvara*) before a qualified person (*sāmvārika*), or, in the absence of such, before all the Buddhas of the quarters.¹ (b) The future Buddha must practise the perfect virtues (*pāramitās*); theologians have therefore to explain how he is to fulfil the virtues of giving, energy, and meditation. (c) He commits errors; he must know how to confess them, before whom (*i.e.* Buddhas of confession), and how to obtain pardon. (d) The ancient devotional practices, worship of *stūpas*, etc., are not sufficient for devotees of Avalokita, Amitābha, and Tārā; fixed rules of worship must therefore be made.²

We have no exact information regarding the oldest forms of the *Vinaya* for *bodhisattvas*. But documents which give an accurate idea of the rules of life of the Mahāyānist monk will be found in the *Brahmajālasūtra* (tr. de Groot, *Code du Mahāyāna en Chine*), and in the 'Daily Manual of the Shaman' (S. Beal, *A Catena of Buddhist Scriptures*, London, 1871, p. 239). The ritual of the office in honour of Avalokita (Beal, *Catena*, p. 398) indicates the nature of the cult.

(3) The Mahāyānist monks belonged to one of the Hīnayāna schools, and fulfilled the obligations of future Buddhas³ in addition to those of their own school. Later, there were monks who adhered solely to the monastic code of the Mahāyāna (the type given in de Groot, *Code du Mahāyāna en Chine*), which became a complete code in itself, a conglomeration of different *Vinayas*. Finally, it is always possible for a monk to renounce his vows and return to the world; the Great Vehicle favoured this tendency inasmuch as it had a special 'code of the future Buddha' for the use of married people.⁴ It is understood, however, that ordination to future Buddhahood can be granted only to persons who are at least Upāsakas, 'devotees,' who have taken the three refuges and are ritually bound by the five vows (not to kill, etc.).⁵

(4) The relative importance of duties for monks who are at the same time 'future Buddhas' is not always clear. I-tsing declares that he is not writing 'concerning those who claim to follow the practice of a Bodhisattva rather than the Vinaya rules.'⁶ Śāntideva cites an extreme case—the story of the monk who had practised continence for a long

time (84,000 years) consenting to satisfy the desires of a woman so that he might fulfil the requirement of benevolence and kindness that is the essential law of future Buddhas.¹ For them the sins of hatred are very serious, while the sins of desire are venial. The very spirit of the Mahāyāna, therefore, may perhaps be responsible for the singular development of Kashmir monasticism, viz. married monks.²

II. HISTORY AND ORIGINS OF MAHĀYĀNA DOCTRINES.—As we have seen, the Mahāyāna differed from the ancient Vehicle in three points: (1) the substitution of the 'career of a future Buddha' for the 'conquest of the quality of arhat'; in other words, the substitution of the *bodhisattva*, who might be a layman, for the *bhikṣu*, 'monk'; (2) the creation of a new ontological theory, 'the doctrine of the void' (*śūnyatā*) or of 'the non-existence in themselves of the constituent elements of things and of the human ego' (*dharma-nairātmya*), superimposed upon the doctrine of 'the non-existence in itself of the human ego' (*pudgala-nairātmya*); and (3) the transformation of the Buddhas into great mythological gods, almost eternal; the deification of 'future Buddhas' as helping providences; and, by a parallel development, the practice of devotion (*bhakti*) towards these 'great beings' (*mahāsattva*) instead of the respect and meditation practised by the ancients towards the Buddha; what was formerly venerated in the Buddha, what men 'took refuge in' (*śaraṇa-gamana*) when taking refuge in the Buddha, was the complex of the moral and intellectual qualities in virtue of which a certain person is Buddha. To admire and meditate on these qualities is an excellent means of gaining morality, tranquillity, *nirvāṇa*. The Mahāyānist addresses himself to living, gracious, paternal gods.

There are, therefore, three formative elements in the Mahāyāna; and its history means the history of the development and inter-relation of these three elements. This comprises three distinct histories; for, though the three elements are sometimes united, they are often separate; and, though their development has been parallel, or almost so, they have no connexion from the logical point of view. We may safely attempt to give the scheme the evolutionary curve of these three elements, but it is very difficult to give chronological dates or precise details in the evolution.

1. Career of the bodhisattva.—Ancient Buddhism holds that Buddhas are very rare, but the Mahāyāna invites all who desire salvation to enter on the career of a future Buddha. This is a fundamental change from the dogmatic point of view, and involves a corresponding change in morale: in short, the monk believed that the quickest way to reach *nirvāṇa* was by meditation; he worked entirely 'for himself' (*svārtham*); the activity of the future Buddha, on the contrary, is, above all, altruistic (*parārtham*).

Our literary evidence on the stages of this transformation is unsatisfactory. On the other hand, it is easy to guess the motives behind it. The following factors are of great importance.

(1) The ideal of ancient Buddhism, the *arhat* useless to others and an utter egoist, to the extent of insensibility, appeared mean when compared to the Buddha, the being of compassion and pity. Hence the 'saint for himself,' the 'delivered while

¹ *Śikṣasamuchchaya*, p. 167.

² See M. A. Stein, *Kāthapa's Rājatarāgini, a Chronicle of the Kings of Kashmir*, London, 1900, p. 74: 'In one half of the monastery she placed those Bhikṣus whose conduct conformed to the precepts; and in the other half those who, being in possession of wives, children, cattle and property, deserved blame for their life as householders' (on the date see Introd. p. 81). Cf. Hodgson, *Essays*, p. 52, and various predictions of the *Mahāyānasūtra* as to the decadence of Buddhist law.

¹ See *Bodhisattvabhūmi*, I. 10, fol. 62, and the fragments of the *Bodhisattvaprātimokṣa* (B. Nanjio, *Catalogue of the Chinese Translation of the Buddhist Tripiṭaka*, Oxford, 1883, nos. 1096-1098), quoted in *Śikṣasamuchchaya*, p. 11. On the vow of the future Buddha see Srijāna, *Bodhipathapradīpa* (JETS 1, [1898] 89), and art. BODHISATTVA, vol. II, pp. 746, 748 f. The *Bhadra-chari-pravādhana* has been published by Watanebe, Strassburg, 1912. The *Vinayas* of the Mahāyāna were first placed under the patronage of Upālī (*Upālīpariprechhā*); later they were more completely cut off from the tradition of the Hīnayāna.

⁶ Cf. Takakusu's tr., p. 197.

still alive,' so long the dream of India, was no longer held in honour. The creation of the type of the Buddha, the hero of charity, saving the world at the cost of so many lives consecrated to the world, reveals tendencies in ancient Buddhism towards the doctrine of the 'career of the *bodhisattva*' open to all.¹

(2) The question arose, further, whether the *arhat* actually obtains *nirvāṇa*. Formerly the *arhat* was required to show, not only 'morality,' 'harmlessness,' but also 'feelings of benevolence' for the mass of human creatures, as it is only just to mention, but his 'equipment of merit' appeared somewhat slight, and we may suppose that men were even then tempted to ask whether his 'equipment of knowledge' was sufficient. Metaphysics and psychology had made progress. Many existences are necessary, they may have said, to obtain 'knowledge' sufficient for deliverance; just as, in order to achieve deliverance from desire, love of self, and love of existence, the first necessity is devotion to others.

(3) It is possible, also, that faith in *nirvāṇa* was shaken, or that, not knowing exactly what *nirvāṇa* was, men were somewhat afraid of it, and devoted their attention rather to the acquisition of celestial powers and the bliss of the Buddhas (now transformed into very happy and long-lived personages) (see below, 3).

The *Daśabhūmika*, a very technical work on the 'career of the future Buddhas,' was translated into Chinese between A.D. 265 and 316; the *Mahāvastu* (q.v.), of much earlier origin, gives a lengthy account of the stages or degrees (*bhūmi*) of this career. According to Chandrakīrti (*Mādhyamakāvatāra*), the Hinayāna knows nothing of the 'Vehicle of the future Buddhas,' which is the characteristic trait of the Mahāyāna.

2. Vacuity.—We have more extensive information on the philosophic doctrine. Here we are dealing with a development rather than with a transformation: (1) the principles of analysis and speculative annihilation applied by ancient Buddhism to the ego and the great unities (the body, the chariot) were now applied to the *dharma*s ('elements of things'), the minute elementary realities constituting the ego and the great unities; this is the Mādhyamika system (see art. MĀDHYAMAKA); and (2) the ancient idealist tendencies were developed which saw in thought the cause of all: 'All that we are is the result of what we have thought; it is founded on our thoughts, it is made up of our thoughts' (*Dhammapada*, i. [SBE x. (1898) 3]). Hence the conclusion that matter does not exist; thought alone exists.²

The two philosophical schools of the Mahāyāna (*Mādhyamikas* and *Vijñānavādins*) are both in line with the most ancient tradition. Nāgārjuna, the great master of the former, is placed in the 2nd cent. A.D.; but there is a great deal of Mādhyamika philosophy in the Pāli canon,³ and the *sūtras* of the *Prajñāpāramitā*, where this philosophy is predominant, are ancient.⁴ Chandrakīrti establishes

¹ The *Chariyapitaka*, not one of the most ancient books, is the first in Pāli literature to mention the doctrine of the *paramitās*, 'perfect virtues' necessary for making a Buddha, 'a doctrine that plays no part in the older books' (Rhys Davids, *Buddhist India*, London, 1903, p. 177). The doctrine of the *bodhisattva*, the theory of his charity, merits, etc., is relatively highly developed in the *Abhidharmakośa* and its sources (Sanskrit Buddhism of the Hinayāna).

² But its existence is not *paramārthika*, 'absolute'; it is only *samvyaśārika*, 'contingent,' as will be seen in art. VJÑĀNAVĀDINS.

³ H. Oldenberg (*Buddha*, Stuttgart, 1914, p. 328) disagrees with the present writer on this point.

⁴ The *Prajñāpāramitā* was translated into Chinese between A.D. 147 and 164. We are told that the Pūrvaśāllas and the Aparasāllas possessed a *Prajñā* in Prakrit (Wassilief, *Buddhismus*, p. 291), which is quite possible. They were Lokottaravādins (see art. BODHISATTVA, vol. II, p. 742b). But what is the date of this *Prajñā*?

the fact that the true doctrine of the void was known to the Hinayāna, or, to be more exact, that the Buddha had already taught this doctrine in his first revelation, in the *sūtras* of the Hinayāna. But, it will be asked, if this Vehicle, the Vehicle of the Śrāvakas, teaches the non-existence in themselves of the elements of the ego (*dharmanairātmya*), where is the need of the Mahāyāna? The Mahāyāna, replies Chandrakīrti, teaches not only the *dharmanairātmya*, but also the stages of the career of the future Buddha, the perfect virtues (*paramitā*), the resolutions or vows to save all creatures, the application of merit to the acquisition of the quality of Buddha, the great compassion (*Mādhyamakāvatāra*, tr. in *Museon*, new ser., viii. 272), whence the Mahāyāna was necessary.

3. Devotion.—As regards the deification of Buddhas and worship of Buddhas and *bodhisattvas*, we have a sure date in the Chinese translation (between A.D. 148 and 170) of the *Sukhāvatīvyūha*, the book in which the monotheistic religion of Amitābha (see above, I. 2. (3)) is formulated.¹ The Gandhāra monuments, the exact date of which is not known, but which can hardly be later than the 1st cent. A.D., take us back even further than the earliest date of the Chinese translation. They show, or at least may be held to show, the worship of the *bodhisattvas* associated with that of the Buddhas.²

On the other hand, we know from the documents of the Hinayāna that the worship of the Buddha is of great antiquity. In the art. ADIBUDDHA the present writer has mentioned some of these documents, and (although he no longer sees in certain passages the quasi-deification of the Buddha which he saw in 1908) they show that the Buddhists, or at least certain Buddhists, came to the conclusion that Śākyamuni did not descend in person to the earth, but was content to send his image (cf. DOCTISM (Buddhist)). This is, in substance, the teaching of the Great Vehicle on Buddha—the Buddha almost eternal and saving beings by means of magical creations. Scholars who admit the authenticity of the *Kāthāvatthu* as a whole are compelled to locate this belief before the time of Aśoka. Without believing in the authenticity of this very composite book, the present writer would willingly admit that the deification of the Buddha and his 'almost' eternity belong to a period long before the formal documents.

It is almost certain, too, that this transformation of the Buddha may be explained by the natural evolution of the Buddhist dogma on Hindu soil. The resemblance between the Buddha reigning peacefully in a paradise and sending images of himself down to this world, on the one hand, and Kṛṣṇa, gladdening beings in his own world (Goloka) and appearing in a human form, on the other, is striking, and contains a valuable lesson.

Nevertheless, it must be noted that, although Śākyamuni plays an important rôle in the *Lotus of the True Law* and in the Mahāyānist literature of which he is the revealer, he does not seem to have such a leading part in the religions of the Great Vehicle. In the first rank are Maitreya,³ the future Buddha, more living than Śākyamuni, and especially personages of obscure origin, Avalokiteśvara (see art. AVALOKITEŚVARA), Amitābha,⁴ Vairocana, Vajrapāṇi, and many others, whose Buddhist character is not very marked.

Several scholars, moreover (and no mean ones), regard the origin of the devotion to the Buddhas as a real 'puzzle' (Max Müller), and believe that it is to be found in the influence of the 'barbarians,' notably the Mazdeans—an influence which was exercised especially in Northern India, the Panjāb, and Kashmir, where religious statuary reached such high development. The pre-historic mythology of the Great Vehicle is veiled in obscurity, and future researches may perhaps confirm this hypothesis; but the comparisons to which attention has been called up to the present have little value and do not prove that Amitābha is an Ahura Mazda or an Apollo disguised. In any case it is useless to explain the worship of the Buddhas by the influence of Greek sculptors who, it is believed, were the first to make images of Buddhas. The whole 'theology' of the

¹ See the tr. of Max Müller and Takakusu in SBE xlix. (1894).

² See A. Foucher, *L'Art gréco-bouddhique*, II, who treats of the difficult identification of the icons of Gandhāra and their date.

³ *Bull. de l'École franç. d'Extrême-Orient*, xi. 442.

⁴ See Poussin, *Bouddhisme, Opinions sur la dogmatique*, p. 286.

religion of Amitābha is Indian; the belief in the providence of Amitābha and of Avalokita, the belief in their saving grace, has very little in common with ancient Buddhism, but is excellent Kṛpāism. The paradise of the west (Sukhāvātī), and the name of Amitābha, 'infinite light,' which probably are in reality 'solar,' have not up to the present been sufficiently studied and explained. The idea of multiple universes, however, each ruled by a Buddha, is very authentic Buddhism (see, e.g., the *Mahāvastu*).

III. HISTORY OF THE SCRIPTURES OF THE MAHAYĀNA.—I. Controversy on the authenticity of the books and legends concerning them.—We know that the books of the Hinayāna appeared surrounded with a very definite ecclesiastical history. Whatever may be the value to modern scholars of the tradition referring to the Councils (e.g., R. O. Franke, *Dighanikāya*, Göttingen, 1913, p. xlii), the Buddhists of the Mahāyāna and of the Hinayāna admitted the authenticity, in the strict sense, of the ancient canon. But the adherents of the Hinayāna did not recognize the books of the Mahāyāna for the simple reason that these books were unknown in ecclesiastical history:

'This is the word of the Buddha which is found in the Sūtra, which appears in the Vinaya, which is in harmony with religion, with Truth (*dharma*).' ²

This old text of the *Dīgha* is, according to them, the condemnation of the Mahāyāna, which not only is not authentic, but is even full of heretical novelties.

The most weighty argument of the Mahāyānists is the speculative argument. The Mahāyāna, they say, is in harmony with the *dharma*; it is the only vehicle of *nirvāṇa*. The Hinayāna is indeed authentic, but the Buddha taught it only as provisional truth, taking into consideration the weakness of mind of his hearers. Besides, if the doctrine of the Mahāyāna is not found in your *sūtras*, it is found in ours; if you do not admit our *sūtras*, we admit them. But, the Hinayānists reply, our *sūtras* are authentic since you admit them; yours are not authentic, and that is why we reject them. To this the Mahāyānists answer that there are far more reasons for admitting the *sūtras* of the Mahāyāna, since they are the true path to salvation. ³

The Mahāyānists further maintain that the Mahāyāna is not new, and that the Hinayānist tradition shows that the Mahāyāna is authentic. (1) The *Saṃyuttanikāya* (ii. 17 and iii. 142) proves that even in the Hinayāna the Buddha taught the non-existence in themselves of the elements of the ego (see above, II. 2; *Madhyamakāvatāra*, p. 22). (2) The doctrine of the multiple teaching of the Master, of his 'accommodation to the ideas of the world' (*lokānuvartana*), is taught in the Canon of the Pūrvaśāilas, a sect of the Hinayāna (*Madhyamakāvatāra*, Fr. tr., *Museon*, new ser., xi. [1910] 134); which is also (3) said to have possessed the *sūtras* of the *Prajñāpāramitā* edited in Prakṛit. This sect, however, is strict in the matter of doctrine, since it orders the expulsion of those who do not understand the 'reserved questions' (see art. AGNOSTICISM [Buddhist], vol. i. p. 221^b; *Madhyamakāvatāra*, p. 251). (4) The *Mahāvastu* (a book of the Hinayāna) teaches the stages in the career of a *bodhisattva* and the perfect virtues. ⁴

¹ For a description and analysis of the literature of the Great Vehicle see Wassilief, *Buddhismus*, pp. 157-207, and Winternitz, *Gesch. der ind. Literatur*, ii. 187-250; see also Winternitz on the *Laṅkāvatāra* and the *Mahāvastu*—works which belong to both Vehicles. Among translations see 'The Lotus of the True Law,' *SBE* xxi., 'The Sukhāvātī, etc.,' *SBE* xlix.

² *Dīgha*, ii. 124; Mañjuśrīhṥasavañra, *Siddhānta*, i. 128b; *Sūtrālaṅkāra*, ed. S. Lévi, Paris, 1907, i. 20.

³ See *Bodhicaryāvatāra*, ix. 421, Fr. tr., *Introduction à la pratique des futurs Bouddhas*, p. 120; *Sūtrālaṅkāra*, i.; Poussin, *Bouddhisme, Opinions sur la dogmatique*, p. 1271.

⁴ Arguments 3 and 4 are given in the Tibetan work, the *Siddhānta* of Mañjuśrīhṥasavañra, p. 128^b, in the Uṛga ed., tr. by Wassilief in *Buddhismus*, p. 264 (291). The connexion of the Mahāyāna with the Mahāśāṅghika school, of which the Pūrvaśāilas are a branch, is beyond doubt; but the antiquity of the doctrine of this school is rather doubtful.

If the whole of the Mahāyāna was not known to the ancients, it was because the doctrines were too sublime to be understood by the compilers of the Hinayāna. But it was the Buddha who taught them, and they were heard by the *bodhisattvas* Samantabhadra, Mañjuśrīhṥasavañra, Guhyeśvara, Vajrapāṇi, and Maitreya. In fact, immediately after having obtained illumination, the Buddha preached to the gods (in the heaven of the Thirty-three) and to the *bodhisattvas* (J. Edkins, *Chinese Buddhism*, London, 1880, p. 18; A. Foucher, *Iconographie bouddhique*, p. 86).

The *bodhisattvas*, throughout the course of the ages, have revealed the Mahāyāna to men; Mañjuśrī took the form of a *bhikṣu* and, it is said, made known the *Prajñāpāramitā* in 80,000 articles (*Tāranātha*, tr. A. Schiefner, Petrograd, 1869, p. 58). It was Maitreya, the future Buddha, who explained the *Prajñāpāramitā* to Asaṅga, and who is the author of the treatises of the Vijñānavādin school (*Museon*, vi. [1905] 145, xv. [1914] 42). According to a Japanese tradition, interesting as an example although without historical value, Mañjuśrī and Maitreya had published the Mahāyāna in the year 116 of Nirvāṇa: 'If these books had not existed before, whence would they have been obtained?'—a very childish argument. ¹ This Mahāyāna is said to have been completed in 200 of Nirvāṇa, notably by the publication of the *Avatamsaka* (= *Garbhavajra*). All these revelations took place before Nāgārjuna (R. Fujishima, *Le Bouddhisme japonais*, Paris, 1888, p. 54).

Nevertheless, it is to Nāgārjuna that our most trustworthy documents give the honour of the revelation of the Mahāyāna. The *Laṅkāvatāra* and a *Mahāmeghasūtra* ² put into the mouth of the Buddha words like the following:

'Four centuries after my *nirvāṇa* this Ananda will be the *bhikṣu* called Nāga; he will teach the Great Vehicle.'

It is said that Nāgārjuna obtained the *Prajñāpāramitā* or the *Avatamsaka* from the Nāgas (Wassilief, *Buddhismus*, p. 118 f.). We cannot give an account of all the legends referring to the revelation of the books of the Mahāyāna (see *Tāranātha*, p. 61 f.); what has already been said will give a sufficient idea of the beliefs that arose in the Buddhist world concerning the origin of these books. Apart from a few ardent partisans of the Hinayāna, all Buddhists readily believed all that appeared as the 'word of Buddha.'

2. Criticism of the legends and conjectures.—The library of the Mahāyāna consists of two parts, which the Tibetans have carefully distinguished: first, the *sūtras*, divine works, uttered by Bhagavat himself, which are arranged in the *Kanjūr* (= *bka hgyur*, 'word of the Master'); and, secondly, the commentaries on the *sūtras* and the treatises (*śāstras*) properly so called, human works, the greater number of which were written by the scholars to whom tradition ascribes them; all this literature forms part of the *Tanjūr* (*bsan hgyur*, 'instruction, scholasticism'). This distinction has not always a historical value. Many *sūtras* are frankly scholastic works, and it is probable that some of them are later than the signed treatises whose doctrine they contain and authorize. ³

We know that Asaṅga wrote five treatises which he gave as a revelation of Maitreya. Although revealed, these treatises are included as part of the *Tanjūr*, because in form they are not *sūtras*, but mere treatises (*kārikās*, mnemonic verses, with a

¹ Maitreya-Asaṅga believes (*Sūtrālaṅkāra*, i. 7) that the two Vehicles are contemporaneous.

² See *Madhyamakāvatāra*, p. 78; Fujishima, pp. 32, 55; for the prophecies of Laṅkā, which are wanting in the first Chinese version, see Max Müller, *India, What can it teach us?*, London, 1883, p. 298 f.

³ We must confine ourselves to a few remarks here. This subject will depend for a long time yet upon monographs.

prose commentary). Presented with the formula, 'Thus have I heard. Bhagavat was on the Mount of Vultures, surrounded by thousands of Bodhisattvas . . .', they might have made good *sūtras*. There is therefore some truth in the legends which we were discussing above: the scholars of the Mahāyāna forged the *sūtras* in order to publish their philosophic doctrines, to glorify their chosen saints, to authorize their beliefs in the saviour Amitābha, and so on. In the same way, whether at the same time, earlier, or later, the thaumaturges and the magicians first made collections of magical formulae and then compiled the *Tantras*, attributed to demi-gods or semi-demons, whom they were believed to evoke. The work of editing and compiling the *Sādhana*s (magic rituals) and the *Tantras* took a very long time—Tāranātha abounds in really historic stories on this subject—and the Mahāyāna probably developed by similar processes.

The scholastic character of the *Laṅkāvatāra* is very definite. This *sūtra* implies the existence of a strong Vijñānavādin doctrine; it is full of controversy. The *Daśabhūmika*, which, augmented by *śūtras* in verse, became transformed into the *Daśabhūmīśvara*, sets forth a theory of the ten stages of the future Buddha which is quite in the manner of a 'treatise.' One of these *sūtras*, invoked by Chandrakīrti to confirm a Mādhyamika formula, seems to have been written according to the same formula (see *Mādhyamakavṛtti*, p. 249). Careful study will probably prove the close connexion between the *sūtras* and the treatises.

What exactly was the rôle of Nāgārjuna in the elaboration of this literature? It is thus defined by Kern:

'Nāgārjuna may have been one of the most talented and influential leaders of the movement rather than its originator. . . . An influential person, the first eminent leader of a school imbued with Hinduism and the methods of Indian scholastic philosophy.' He then became 'a comprehensive name of the activity of Mahāyānism in the first phase of its onward course' (*Manual*, pp. 6, 123).

Nāgārjuna's importance lies in having discovered the doctrine of the 'void,' which showed the inferiority of the ancient Vehicle. His name is inseparable from the *Prajñāpāramitā*. It may well be that Nāgārjuna, being the author of the treatises which are the scholastic working-out of the principles of the *Prajñāpāramitā*, is of some account in the redaction of the *Prajñāpāramitā*s, the revelation of which tradition attributes to him.

There are many ancient materials in the *sūtras* of the Mahāyāna.

'Not a few elements of the Mahāyānist scriptures are taken bodily from the Tripitaka, with such omissions and additions as deemed necessary' (Kern, *loc. cit.*).

Whole passages, e.g., of the *Lalitavistara*, recur almost word for word in the Pāli scriptures. The work that H. Oldenberg has done for the *Divyāvadāna* and E. Windisch for the *Mahāvastu*¹—in comparing these two works of the Sanskrit Hinayāna with the Pāli canon—might be done with advantage for several *sūtras* of the Mahāyāna. The comparison would also be very fruitful between the Mahāyāna and the Sanskrit Hinayāna. The *Abhidharma* of the Sarvāstivādins (Hinayāna) is accepted by the Mādhyamikas (Mahāyāna); the Sautrāntikas (Hinayāna) have opened the door to the Vijñānavādins (Mahāyāna); the *Daśabhūmika* (Mahāyāna), we may believe, depends on the *Mahāvastu* (Hinayāna); the scholars of the Mahāyāna know and quote the Hinayāna.² When they

L. DE LA VALLÉE POUSSIN.

MAHDĪ.—The title Mahdī was first associated with 'Alī's son Muhammad b. al-Ḥanafīyyah, and, apparently, given him by the adventurer Mukhtār b. Abī 'Ubaid, who, after the death of Ḥusain at Kerbela, ostensibly championed the claims of this personage to the khālifate. The word is ordinarily interpreted 'the divinely guided,' from a verb which frequently occurs in the Qur'ān in the corresponding sense, though this particular derivative is not found there; yet this explanation did not give universal satisfaction, and several others were current (see Yāqūt, *Geographical Dictionary*, ed. F. Wüstenfeld, Leipzig, 1866-73, IV. 693. 4). Mukhtār clearly used it as analogous to a title attached to the name of 'Alī, calling him 'the Mahdī, son of the Waṣī' (Tabarī, *Chronicle*, ed. Leyden, 1879-1901, II. 534), where the latter title means 'the legate,' i.e. he to whom the Prophet had bequeathed the sovereignty; it is, however, often interpreted as 'the trustee.' It is doubtful whether this Muhammad used it himself, as a letter purporting to be from him, in which it is prefixed to his name, was condemned as spurious by one of his correspondents on that account (Tabarī, II. 611 [66 A.H.]). After the death of 'Alī's two sons by Fāṭima, the Prophet's daughter, it would seem that some Muslims were ready to recognize the claim of this Muhammad, 'Alī's son by another wife, to the sovereignty, but he himself acted with extreme caution in the matter of asserting it; he was, however, imprisoned for a time by the partisans of 'Abdallāh b. Zubair, who endeavoured to wrest the throne from the Umayyads; but, when their supremacy was restored, he accepted a governorship, and appears to have ended peacefully. Some uncertainty existed with regard to both the time and place of his death, and a sect arose called the Kaisāniyyah, who declared that he remained alive in his supposed tomb in Mt. Raḍwa, whence he would one day emerge; and the poet of this sect, the Sayyid Himyari, fully expected this occurrence, though the Mahdī had disappeared for sixty years (*Aghāni*, Cairo, 1285, VIII. 32). The poet Kuthayyir asserts that his reappearance had been foretold by Ka'b al-Aḥbār († 34 A.H.), whose name is often mentioned in connexion with matter drawn from the Jewish Scriptures. This prophecy may well owe its origin to that of the return of Elijah; but how the Mahdī came to be substituted for that prophet is not clear; if the reference to Ka'b be genuine, we should gather that the word had been used before Mukhtār's time with a religious import. The poet further asserts that this Mahdī's book was studied by the Kaisānis in Mecca; but such a work must assuredly have been a forgery.

With this personage the idea of an awaited deliverer is first connected in Islām, and this notion is expressed by the name Mahdī, to which the participle 'expected' (*muntazar*) is sometimes attached. The various pretenders from the house

of Ali received the title—e.g., Zaid (after whom the Zaidis are called); he was defeated and killed in the year 122 A.H., and his body was afterwards crucified. An Umayyad satirist said that he had never before seen a Mahdi hanging on a tree (Mas'ūdi, ed. and tr. C. Barbier de Meynard and Pavet de Courteille, *Les Prairies d'or*, Paris, 1861-77, v. 471). When the pretender Muhammad b. 'Abdallāh first made his appearance, the people of Medina cried out: 'The Mahdi has come forth' (Tabari, iii. 159 [A.H. 144]). It was to be expected that prophecies of the appearance of such a personage should be attributed to the Prophet Muhammad, and such were current, though of questioned authenticity, the best, according to Muṭahhar b. Tāhir, who wrote about 325 A.H. (*Le Livre de la création et de l'histoire*, ed. C. Huart, Paris, 1899-1903, ii. 161), being

'The world shall not pass away until my nation be governed by one of my house whose name agrees with mine.' This tradition is also found in the collection of Tirmidhi (†279; ed. Cairo, 1292, ii. 36), where it is followed by another in which the Mahdi is mentioned:

'We were afraid of some trouble occurring after the Prophet's death, so we asked him, and he said: In my nation there is the Mahdi who shall come forth; he shall live five (or seven or nine) years; a man shall come unto him and say, "O Mahdi, give me!"; and the Mahdi shall pile into his lap as much as he can carry.'

The author of this fiction appears to have interpreted the word as 'the giver,' which should rather be Muḥdi. Somewhat more information is to be found in the contemporary collection by Ibn Mājah (†273; Cairo, 1313, ii. 269): the tradition just given is repeated with some variations, indicating that under the Mahdi men would enjoy greater blessings than they had ever experienced; to it is prefixed one to the effect that certain persons with black standards (i.e. the 'Abbāsids) would come from the East,

'who shall ask for good and not be given it, and shall fight and be victorious and be offered what they asked and not accept it until they hand it [the sovereignty] to one of my house who shall fill it with justice as they filled it with injustice.'

Another tradition states that the Mahdi is to be a descendant of Fātima; another gives as the list of lords of paradise the following members of the family: the Prophet, his uncle Hamzah, his cousins 'Ali and Ja'far, and his grandsons Ḥasan and Ḥusain and the Mahdi. The last is:

'Men shall come forth from the East, and shall prepare the way for the Mahdi.'

It seems clear that the authors of these fictions had somehow heard of an expected Mahdi, and made up traditions calculated either to encourage the munificence of princes or to win adherents for some political party. Muṭahhar adds another, that the only Mahdi to be awaited was 'Isā b. Maryam, i.e. the Christian Saviour; and, since orthodox Islām looks forward to His returning to judge the world—according to the law of Muhammad—it is not quite easy to find room for another Deliverer. One of the etymologies suggested for the name, viz. the man of the *mahd*, 'cradle,' favours this view, the reference being to Qur'ān, xix. 30 ff., where Christ speaks 'in the cradle.'

There is little reason for supposing that the Prophet Muhammad contemplated the appearance of a Mahdi, however interpreted; but the outbreak of the civil wars within a generation after his death, and the perturbed condition of Islām which followed, led to the adoption of the idea from Jews or Christians, who look forward respectively to the appearance and reappearance of the Messiah; why the title Mahdi should have been adopted for the expected Deliverer is, as has been seen, an unsolved puzzle. To the etymologies suggested we should be inclined to add one more, viz. from *haddā* in the sense 'to give,' making the

word mean 'He to whom has been given,' as in Mt 28¹⁸ the Risen Saviour says, ἐδόθη μοι πᾶσα ἐξουσία ἐν οὐρανῷ καὶ ἐπὶ γῆς, and a similar interpretation was current for the name Shiloh in Gn 49¹⁰, 'until Shiloh come,' viz. *shel-lō*, 'whose is.' Thus the Shi'ite author of the *Fakhrī* (ed. W. Ahlwardt, Gotha, 1860, p. 58), speaking of the Mahdi Zaid (executed in 122 A.H.), curses those who deprived him of his 'right.' However this may be, the function of the expected Mahdi was, in the first place, to fill the world with justice in lieu of injustice, which often meant the abolition of unauthorized practices and the enforcement of orthodox doctrine and conduct; in the second, to achieve the conversion of the world to Islām, and often this was identified with the taking of Constantinople. Some, however, were satisfied with a partial execution of this programme; and among persons who had been accepted as the Mahdi by various writers up to his time Muṭahhar (*loc. cit.*) mentions 'Ali himself, the pious Umayyad 'Omar II., and the 'Abbāsīd al-Mahdi, who reigned A.D. 775-785.

About the signs whereby the Mahdi was to be recognized when he appeared there were differences of opinion; a common theory was that he should have the name Muhammad and the patronymic Abū'l-Qāsim, and that he should belong to the Prophet's house; yet not all demanded the fulfilment of these (not very difficult) conditions. To all—save the few who suppose that the Mahdi has come already—he is ὁ ἐρχόμενος, 'he that shall come'; and, on the whole, the Sunni view is that his appearance will be that of an ordinary man whose career is that of a reformer and conqueror, while the Shi'ite view is that he is in hiding somewhere, and has been concealing himself for an unlimited period. In our times there were in the Sūdān two Mahdis simultaneously, representing these different opinions. The line between the two is not quite easy to draw, except where some definitely historical personage is expected to reappear; for it has been found possible to adopt the theory that the Mahdi is some one in hiding, without any suggestion of supernatural concealment. In more than one case of a successful revolution the victory has been won by a commander in the name of an obscure individual, who has been brought forward only when success has been assured. Thus the author of the *Fakhrī* (p. 171), describing the rise of the 'Abbāsids, remarks that, while the Khurāsānites under the brilliant leadership of Abū Muslim were fighting for the *imām* Ibrāhīm (representative of the 'Abbāsids), he was himself in retirement somewhere in Syria or Arabia, attending to his devotions and the affairs of his family, the greater number of his adherents being unable 'to distinguish between his name and his person,' i.e. knowing nothing at all about him.

The rise of Mahdis from time to time, then, was due to the disordered state of Islām in normal circumstances, but also to the wide-spread sentiment that the sovereign should be a descendant of either the Prophet or 'Ali, for with some communities the latter was regarded as the more important personage, and indeed the master whom the former betrayed (see Yāqūt, *Dictionary of Learned Men*, ed. D. S. Margoliouth, London, 1913 ff., i. 302). The pretenders of the house of 'Ali were repeatedly supposed by their adherents to have escaped death, notwithstanding their ostensible execution, and the Shi'a sects were to a certain extent divided by their loyalty to different pretenders whose return they expected. Such pretenders were Muhammad b. 'Abdallāh, executed 145 A.H., whose return was awaited by some of the Jarūdīyah sect; Yahyā b. 'Umar, executed

250 A.H., expected to return by others of the same sect; Muhammad b. al-Qāsim, who revolted in the year 219, was captured, but escaped and disappeared; and Mūsā b. Ja'far, who died of poison in Baghdad in 186 A.H. Several others are mentioned with these by Ibn Hazm (*Kitāb al-Fiṣal*, Cairo, 1321, iv. 179 f.). The sect called Qat'iyyah got their name from making sure of the death of this Mūsā b. Ja'far, without having ascertained it (Mas'ūdi, *Tanbih*, ed. M. J. de Goeje, Leyden, 1894, p. 232). Believers in the continued existence of Muhammad b. al-Qāsim were to be found in the time of Mas'ūdi (332 A.H.; *Prairies d'or*, vii. 117) in the district of Kūfah, in the mountains of Tabaristān and the Dailam, and the districts of Khurāsān. The person ordinarily acknowledged to be the 'expected Mahdī' is Muhammad b. Ḥasan al-'Askari, whose father died 260 A.H. There was, however, great doubt as to the age of this Muhammad at the time of his father's death, some denying that he ever came into existence, and all agreeing that he could have been only a few years old at the time. Shahrastāni locates him in Sāmarrā (ed. W. Cureton, London, 1842-48, p. 128); but at some time in the 7th or 8th cent. A.H. he appears to have taken up his abode at Hillah. The traveller Ibn Baṭṭūṭa († 780 A.H.; ed. and tr. C. Defrémery and R. B. Sanquineti, Paris, 1853-58, ii. 98) gives a weird account of the ceremonies which he found there, and which seem to be relics of some pagan cult.

'There is a mosque with its door covered by a silken curtain, called the sanctuary of "the Lord of the Age." Each afternoon a hundred of the inhabitants come out of their houses armed with drawn swords; going to the governor, they obtain from him a horse with saddle and bridle, or else a mule; beating drums and playing musical instruments, they then proceed, fifty of them in front of the charger and fifty behind. Others arrange themselves on either side. Coming to the mosque that has been named, they halt before its door, and say: "Bismillah, O Lord of the Age, come forth. Mischief is rampant, and wrong abundant; this is the time for thee to come forth, that God may distinguish by thee between the true and the false." This they continue till the prayer of sunset, playing their musical instruments the whole time.'

Ibn Khaldūn, a contemporary of Ibn Baṭṭūṭa, who has no high opinion of his veracity, tells the same story, with some variation. According to him, the people of Hillah hold that their Mahdī entered a cellar in their habitation, and every night they appear with a mount before the entrance to this cellar, and keep calling him to come out, from the prayer of sunset until the stars are all shining (*Prolegomena*, Beirut, 1900, p. 199). It is surprising that in the *Ta'rikh-i-Guzidah* (compiled 730 A.H., ed. E. G. Browne, London, 1910, p. 208) the connexion of this Mahdī with Hillah appears to be unknown.

'In his ninth year he disappeared in Sāmarrā, and was never seen since; the people of the Shī'ah, however, believe that he is the Mahdī of the end of the world, is still alive, and will come forth when the time arrives.'

Probably even the revised version of Ibn Baṭṭūṭa's story requires further redaction.

The majority of the Mahdis have thus played a larger rôle in the imagination than in reality; there have, however, been cases wherein the character has been assumed with very considerable and even permanent success. The first capital of the Fātimids in Africa was called Mahdiyyah after the Mahdī who founded the dynasty (297 A.H. = A.D. 909). The conquests which prepared the way for his sovereignty were all achieved by an agent, who had ultimately to produce the person to whom he had preached allegiance; and, according to the statements of his enemies, the person produced was an impostor, suddenly called to play the part, the real Mahdī having perished on his way to Africa. According to an author of weight (Nizām al-Mulk, † 485; see C. Schefer, *Chrestomathie persane*, Paris, 1893-85, i. 165), the propaganda of this sect began at least a century

before, and proselytes to whom the mysteries had been communicated were forbidden to divulge them until the Mahdī appeared. Probably with this community (in theory at least) the Mahdī, called also, as has been seen, 'the Lord of the Age,' was the legitimate occupant of the Fātimid throne; when the sovereign al-Ḥākim disappeared, doubtless through assassination, his continued existence and future reappearance became the dogmas of a sect.

Another Mahdī whose efforts resulted in the foundation of a dynasty was Ibn Tūmart (*q.v.*; † 524 = A.D. 1130), who started the empire of the Almohads. Of this personage there is an unusually full and interesting biography by Ibn Khallikān (tr. W. M. de Slane, Paris, 1843-71, iii. 205 ff.), which is doubtless somewhat coloured by prejudice. He appears to have started genuinely as a religious and moral reformer, and to have taken the title Mahdī when opposition and danger induced him to draw the sword; he is likely then to have been influenced by the prophecy of the appearance of such a reformer, which, as we have seen, had already found its way into an authoritative collection of traditions. The pedigree which brought him into connexion with 'Alī may well be an invention later than his time, and as such his biographer appears to regard it. Some stories told by Ibn Khallikān are characteristic of such adventurers, though not perhaps true in this case; he got access to the *Book of Ja'far*, in which 'Alī had prophesied all that was to occur till the end of time (see art. DIVINATION [Muslim]), whence he obtained the letters which formed the name of the person destined to be his chief helper and successor, with a description of his appearance. In order to be armed with a miracle, he persuaded a learned associate to feign illiteracy and ignorance of correct Arabic; one day this person claimed to have learned the Qur'ān by heart in a dream, and this miracle convinced the most stubborn; the confederate then proclaimed Ibn Tūmart the Mahdī, whereas he had previously been called *imām*. According to Ibn Khaldūn (*History*, Cairo, 1284, vi. 229), the only heresy of which he could be convicted was his agreeing with the Imāmiyyah sect that the sovereign was infallible. In his treatment of opponents he appears to have been as ruthless and intolerant as any religious leader; but a singular feature of his career as a Muhammadan saint was that, besides asceticism in diet, he observed strict chastity. His creed, which has been published (*Majmū'at al-rasā'il*, Cairo, 1328, p. 44 ff.), does not appear to differ from the orthodox *kalām*.

The prophecy of a Mahdī assumed special importance at the commencement of the century preceding the first millennium of Islām, especially in India. According to the details collected by H. Blochmann (*Āin-i-Akbari*, i. [Calcutta, 1873] p. iv ff.), the Mahdist movement started in Badakhshān, where one Sayyid Muhammad Nūrbakhsh gained numerous adherents, defied the Afghān government, was defeated, and fled to Irāq, where he maintained himself till the end of his life. In India it assumed a definite form through the action of Mīr Sayyid Muhammad of Jaunpur, who found an adherent in Gujarāt in Sultan Mahmūd I. Apparently this personage was, like Ibn Tūmart in his early days, a preacher and reformer, whose doctrines gave offence, and who was forced to leave one place after another. Ultimately he decided that the burden of Mahdī-ship was too heavy for him to bear, and that, if he returned home, he would recant; he died in 911 (= 1505) at Farah in Baluchistān, where his tomb became a place of pilgrimage. An interesting account of another Indian Mahdī of this century is given by † historian Badā'uni in his *Muntakhab al-Tawārīq*.

(tr. G. Ranking, Calcutta, 1898, p. 507 ff.). This person was named Shaikh 'Alā'i, and was born in Baiāna in Hindustan. To the same place there came one Miyān 'Abdallāh, who had come under the influence of Muhammad of Jaunpur.

'He adopted the manners of a Mahdī [which would seem to have been settled by Ibn Tūmart, for they consisted in extreme asceticism]; making his dwelling in the corner of a grove far from the haunts of men, on the borders of a tank, he used to cast water on his head; and when the times of prayer came round, he used to gather together certain of the labourers who had to pass that way, and compel them to form an assembly for prayer, with such a degree of asceticism that, if he met any man disinclined for the meeting, he would give him a few coins and encourage him.'

Shaikh 'Alā'i was much impressed by this example.

He too, 'trampling under foot his self-esteem and conceit, devoted himself to the poor of his neighbourhood, and, entering the valley of self-renunciation and abnegation, he bestowed all his worldly possessions, even to his books, upon the poor.'

He became a disciple of Miyān 'Abdallāh; the two formed a community of ascetic socialists or communists, consisting of three hundred householders, who, abandoning all other source of gain and traffic, agriculture, and skilled labour, spent their time with them. In spite of their asceticism, they were in the habit of keeping arms and implements of war always with them as a protection against their enemies, but also in order to interfere with any proceeding in the city or the market of which they disapproved.

'They would go and call the offenders to account by main force, admitting no investigation by the governor, and on most occasions they got the best of it.'

After a time the place came to be too hot for Shaikh 'Alā'i, who, along with his followers, whose numbers had now reached six or seven hundred heads of families, migrated to Khawāspur, near Jodhpur; but here, too, he interfered seriously with the government of the place, and he was compelled to go back to Baiāna, accompanied by his disciples. Islam-Shāh had by this time obtained possession of Agra, and he summoned Shaikh 'Alā'i to his court, whither the Mahdī proceeded with a party of select companions fully armed; according to the chronicler, the Shaikh nearly effected Islam-Shāh's conversion to his views, but he was presently expelled and sent to the Deccan. Meanwhile, his former teacher and associate had started a sect of his own, which with some difficulty was suppressed by the authorities; and the Shaikh 'Alā'i was himself ere long summoned again to Agra, and requested to abandon his claims to the Mahdī-ship; refusing to do this, he was tortured to death. His followers, however, were numerous, and increased, and were known as the Mahdawīs; they were persecuted, but not exterminated, in the reign of Akbar.

Blochmann observes that these Indian Mahdīs were men of considerable eloquence, who by their preaching obtained great influence over the populace, and that they regularly came into conflict with the authorized expounders of the law at the Muhammadan courts. Badā'ūni takes evident pleasure in narrating how Shaikh 'Alā'i triumphed over the official theologians who were employed to argue with him. They endeavoured to bring the practice of their co-religionists into harmony with the strict principles enjoined by the Sunni codes, and especially to banish practices which had been borrowed from their pagan neighbours.

The Mahdī who acquired the greatest fame in Europe was the personage whose enterprise led to the Anglo-Egyptian conquest of the Sūdān. The best account of the early stages of the movement is given by F. R. Wingate in *Mahdism and the Egyptian Sudan* (London, 1891). After the strong hands of Zubair Pasha, Samuel Baker, and General Gordon had been withdrawn from the Sūdān, that country was subject to violent oppression, and the 'broad basis of the Mahdī's appeal was the injustice

and cruelty of every sort which sprang up the moment Gordon's wholesome discipline was withdrawn' (p. 12). Muhammad Ahmad, who took this title, was born at Dongola in 1848 of a family of boat-builders; at the age of 22 he was already a shaikh with a great reputation for sanctity, and became a powerful preacher; he denounced the iniquities of the Egyptians, and laid stress on the promised appearance of a Mahdī, with whom he presently identified himself, and, indeed, in the Shī'ite sense; he claimed to be the twelfth *imām*, the son of Ḥaṣan 'Askari. His claims were first recognized in 1881 at Abba Island, 150 miles south of Khartum, when a band of men declared him their appointed leader, and he communicated to them the secret that he was the Mahdī. News of his 'issuing forth' having come to Khartum, the governor sent to have him arrested; but he declined to obey, and, when troops were sent to enforce the order, he succeeded in annihilating them. He evidently possessed some skill both as an organizer and as a military leader, for he soon enrolled among his followers tribe after tribe of Sūdānese, and proceeded from victory to victory until, at his death on June 22, 1885, shortly after the historic fall of Khartum, his empire extended from lat. 5 to 21 S., and from long. 23 to 38 E. of Greenwich. Wingate suggests as an epitome of Mahdism the sentence 'Your money or your life'; in practice it was an enforced communism, maintained by plunder, divided arbitrarily by the Mahdī. Success also appears to have made of the Mahdī a coarse voluptuary. Like some of his predecessors, he seems to have aimed at reproducing what were supposed to be the conditions of early Islām, and to have insisted on a sort of asceticism; his followers were advised to go on foot, or at any rate to ride asses and not horses, except in war. Further, they were told to reduce expenditure on weddings. These ascetic tendencies were indicated by the name which his followers assumed, Darwish ('poor'), for which at a later period the Mahdī substituted the appellation Anṣār ('helpers'), which had been given by the Prophet Muhammad to his entertainers in Medina. The Mahdī himself clearly aimed at reproducing the career of the Prophet, since he had a *hijrah*, or 'migration,' viz. from Abba, where he first came forward, to Massat in the Nuba mountains; and he assigned four chairs to persons representing the eminent associates of the Prophet who became the first successors. The chair of Abū Bakr, the first khalīf, was filled by 'Abdallāh al-Ta'aishī, who afterwards became famous as the Mahdī's successor, or *khalīf*, and is said to have suggested the rôle of Mahdī first to Zubair Pasha and then to Muhammad Ahmad (*Muqtatīf*, xxiv. [1900] 5).

The asceticism of the Mahdī, like that of the Wahhābīs, included the tabu of tobacco, the smoking of which it regarded as a greater offence than the drinking of wine; in his early days he showed leanings towards Sūfism, and would gladly have obtained recognition from the head of the Sanūsīs; this being refused, he abolished all 'orders' except his own.

After the fall of Khartum the Sūdān was gradually evacuated by the Anglo-Egyptian government, and the *khalīf* extended the Mahdī's empire by fire and sword till it reached the bounds of Egypt; in 1896 the reconquest of the country began, and this was achieved at the battle of Omdurman (Sept. 22, 1898). The new State had achieved nothing but devastation and destruction.

The success of the Sūdānese Mahdī encouraged many others to play the part. It seems that the title 'al-Mahdī' in the case of the head of the Sanūsī community was originally a proper name; its holder, however, gave it the familiar applica-

tion, and even claimed to have on his body the 'seal of prophecy,' i.e. the nexus between the shoulders which had indicated the office to which Muhammad was born (the Sūdānese Mahdī also bore a mark, but it was a mole on his right cheek). In the oracle which foretold his appearance the beginning of the 13th Islamic cent. (1301 = 1883) was specified as the date. His theories will be found in the art. SANŪSIS. He was rarely seen by strangers himself, having a 'double,' Sī Ahmad b. Biskrī, who resembled him very closely, to play the part before them. In 1884 he enjoined the Muslims to pay no attention to the Sūdānese pretender, who was merely 'an impostor and a liar.' In 1888, when an appeal was made to the Sultan of Borgo to assist in the suppression of Mahdism by revolutionaries in the Sūdān, the Sanūsī Mahdī, to whom the matter was referred, advised the Sultan to abstain from interference with Sūdānese affairs and fight with the *khalīf* only if himself attacked.

The measures taken by the Protectorate of Nigeria in recent years to regulate taxation, emancipate slaves, and introduce other reforms led to the rise of numerous Mahdis; between the years 1900 and 1905 there were a dozen in Sokoto, and as many in the other provinces. In 1905 Mahdis arose simultaneously in Saturn, Bauchi, and Kontagara. Most of these were caught, tried, and executed, the government regarding such severity as necessary for the preservation of order. In 1907 there was one Mahdī at Bima in Bauchi, 'but the situation was in general satisfactory' (*Revue du monde musulman*, iv. [1908] 144).

While the tradition, which, as we have seen, has been admitted into some authoritative works, is likely to produce aspirants to the Mahdī-ship from time to time, it is probable that the general introduction of good and stable government will render their appearance constantly rarer and their adherents fewer. To the question whether there were any relics of Mahdism in the Sūdān, the Cairene journal *Muqtatīf* as early as 1902 (xxvii. 1126) replied that the introduction of security and justice in place of the long reign of terror which that system had produced had effectually destroyed its traces.

LITERATURE.—The authorities have been cited throughout the article.
D. S. MARGOLIOUTH.

MAIMONIDES.—i. Life.—Maimonides (Moses ben Maimon), Talmudist, philosopher, and physician, born at Cordova, 30th March 1135, died at Cairo, 13th Dec. 1204, is known in Jewish literature as 'Rambam' (the letters r, m, b, m being the initials of Rabbi Moses ben Maimon) and in Arabic literature as Abū 'Imrān Mūsā ben Maimūn ibn 'Abd Allāh. His native city falling into the hands of the Almohads, Maimonides, when yet a lad of thirteen, was compelled either to leave or to embrace Islām. He, together with his father, chose the former course, and settled at Fez. Here they led for a time the dual life of Muslim and Jew. But, the Muslim authorities growing suspicious of their *bona fides*, father and son determined to leave Fez. Accordingly, in April 1165, they boarded a vessel bound for Palestine. Acre was reached after a month's stormy voyage, and after a short stay there they went on to Jerusalem; but, as Palestine had just been the scene of the Second Crusade, and the Jews there were few in number and poor in goods as well as in culture, Maimonides fixed upon Egypt as a more congenial centre. A home was made in Fostat, a suburb of Cairo. Soon after their arrival here, both the father and the brother of Maimonides died, and, becoming financially reduced in consequence, Maimonides took up the practice of medicine as a means of livelihood.

After several years of obscure practice he became court physician to Saladin, pursuing his Rabbinical and philosophical studies undaunted while following out the exacting duties of his profession. The eminent position which he has ever held in Jewish estimation is expressed in the popular Jewish saying, 'From Moses to Moses¹ there was none like Moses.'

2. Works.—Maimonides' works can be classified under the following heads.

i. PHILOSOPHY AND THEOLOGY.—(a) *Dalālat-al-Hairin* ('Guide of the Perplexed'), known in Heb. as *Mōrēh Nebhūkhīm*. The Heb. tr. was effected in 1204 by Samuel ibn Tibbōn, and another and less popular Heb. tr. was made by the celebrated Hebrew poet Al-Harizi in the 13th century. The Lat. tr. by the younger Duxtorf (Basel, 1629) is based on the Heb. of Ibn Tibbōn. Salomon Munk published a Fr. tr. of the Arabic original entitled *Guide des égarés* (3 vols., Paris, 1866-68), and there are two Ital. trr. of the whole work and several Germ. trr. of parts. An Eng. rendering of pt. iii. was brought out by J. Townley (London, 1827) under the title of *The Reasons of the Laws of Moses*. The standard Eng. ed. with commentary and introduction is that of M. Friedländer.

(b) A work on the terms used in logic entitled *Makālāh fi-Sina'at al-Manṭiq*, popularly known in its Heb. tr. (by Moses ibn Tibbōn) as *Millōth Higgayōn*. Sebastian Münster published a Lat. tr. (Basel, 1527). There are two Germ. renderings, and the most noteworthy Heb. commentary is that of Moses Mendelssohn.

(c) *Makālāh fi al-Taḥkīd*, on the unity of God, known in Heb. as *Ma'amar hay-Yithūd*.

ii. COMMENTARIES ON TALMUD AND MISHNAH.—(a) Commentary on the Mishnah known in Arabic as *Sirāj* ('Light'). The component parts of the work were translated into Heb. by various mediaeval scholars. W. Surenhusius rendered the Heb. into Lat., and E. Pococke published parts with a Lat. tr. (Oxford, 1654). The section known as 'The Eight Chapters' (*Shemoneh Perakim*) was edited with an excellent Germ. tr. and valuable annotations by M. Wolf (Leipzig, 1883). A new ed. with a very good Eng. tr. and notes is that of Gorfinkle (Columbia University Press, 1912). Various edd. of small sections have been brought out by other scholars; and there is much that still awaits the light.

(b) *Kitāb al-Farā'id*, rendered into Heb. under the title of *Sēfer Ham-Miswōth* by Ibn Tibbōn. Moses Bloch brought out a complete ed. with a Fr. tr. (Paris, 1888), entitled *Le Livre des préceptes*. [The book might also appropriately be classified under iii.]

iii. HALAKHĀ OR CODIFICATION OF RABBINIC LAWS.—*Mishneh Tōrah* ('Repetition of the Law'), known also as 'The Strong Hand' (*Yād hā-hazakāh*). It is divided into fourteen component books, and was written by the author in Hebrew. Extracts were translated into English by H. Bernard and E. Soloweyczik in 1868. The work is of gigantic proportions, and was meant to be an easily intelligible compendium of Jewish ritual law.

iv. LETTERS AND OCCASIONAL ESSAYS.—(a) *Iggereth hash-Sh'mādāh* ('Letter on Conversion'), written in Arab. and translated anonymously into Hebrew. It deals with the subject of forced conversions. Maimonides maintains that a Jew who outwardly through compulsion professes to embrace Islām does not thereby forfeit his claim to be considered a righteous Jew. But the authenticity of the 'Letter' has been doubted by scholars.

(b) *Iggereth Tēman* ('Letter to Tēman,' i.e. Yemen), written in Arab. and translated into Heb. by Ibn Tibbōn and others. The Jews of Yemen are given advice as to how to conduct themselves in times of religious persecution.

(c) *Mā'amar Tēhiyyōth ham-Mētim* ('Essays on the Resurrection of the Dead'), written in Arab., translated into Heb. by Ibn Tibbōn and also by Al-Harizi (see Steinschneider, *Hebräische Uebersetzungen*, p. 431). He maintains a spiritual view of resurrection as opposed to the largely prevalent material view of the resurrection of a united body and soul.

(d) 'Letter to the men of Marseilles,' written in Arab. and translated into Heb. by Ibn Tibbōn, a discussion on astronomy and astrology, in which Maimonides upholds the truth of the former, but rejects belief in the potency of the stars.

(e) 'Letter to Rabbi Jonathan of Lunel,' in which Maimonides, while replying to certain queries on ritual topics, discloses much of his private and personal life. A similar note is struck in a letter to Ibn Tibbōn (translated into Eng. from the Heb. by H. Adler, in the *Miscellany of Hebrew Literature*, i. 1872).

v. MEDICINE AND ASTRONOMY.—(a) An essay on the Jewish calendar, called *Sēfer Hiddūr* (written at the age of twenty-three), composed in Arab. and translated into Heb. by an anonymous writer, to be found in the collection *Kōbbēš Teshūbhōth hā-Rambam* (Leipzig, 1859).

(b) Various minor works on detailed points in medicine. These were all written in Arab., and were translated into Heb. by Jews of the Middle Ages. There are also Lat., Fr., Germ., and Span. trr. of several.

vi. RESPONSES.—Maimonides' correspondence embraced nearly all the Jewish communities of the Middle Ages. They were translated at an early date into Heb., and comprise the collection known as *Kōbbēš Teshūbhōth hā-Rambam*.

3. Place in philosophy.—Maimonides holds a

¹ i.e. Moses Mendelssohn (q.v.).

significant place both in Jewish and in general philosophy, his importance in these respects resting mainly on his three larger works—the 'Guide of the Perplexed,' the *Sirāj*, or Commentary on the Mishnah, and the *Mishneh Tōrah*. The most essentially 'Jewish' of the three is the *Mishneh Tōrah*. It is an elaborate text-book of 'law' as understood by Jewish orthodox tradition, its sources being the Bible, the Talmud, and the whole Rabbinical literature previous to Maimonides. What prompted the author to write it was the fact that the Talmud and the Rabbinical literature generally are a large, unwieldy, unsystematized mass of opinions and rules, laws, counsels, prescriptions, permissions, and prohibitions, with no vestige of any attempts at logical classification and arrangement; so that, unless a Jew possesses a complete mastery of those intricacies, he is puzzled to know what is, and what is not, Judaism as laid down by the Rabbis and sanctioned by orthodox tradition. Maimonides felt the necessity of aiding Jews in this cardinal respect. Judaism appeared to him to be in danger of losing itself in mazes of its own invention; he therefore planned a work in which both the letter and the spirit of the Talmud should reappear in a simple, orderly, and systematic guise. All the controversies, disputations, and doubtful points in the original are omitted. The faithful Jew who wishes to know the settled Rabbinical view on any subject of ritual or belief need no longer wade for the information through oceans of unnecessary details. It is given him in definite, clear-cut, and brief language. As can be understood, this good service rendered to Judaism was not without an admixture of evil. Talmudic law, once flexible, became rigid. Maimonides, by aiming at laying down opinions which were to be the norm of all future religious practice and belief, was felt to have exercised a too arbitrary dogmatism. He made development impossible and chained Judaism to the letter, instead of leaving it free to the eternally unfolding life of the spirit. The numerous attacks—very often virulent and abusive—which were hurled against him both in life and after death on account of this dogmatism, and on kindred grounds, constitute a substantial chapter in Jewish mediæval history. On the other hand, the book was well received in many Jewish communities, though the hope of the author that it would one day become the authoritative code for all Israel was never realized.

In the making of 'codes' or 'compendia' of Jewish law, Maimonides had both predecessors and successors. But his work stands out from all these in two commanding respects: (a) a greater variety of subject, a broader interpretation of the scope of Judaism as a system both of 'law' and of 'theology'; (b) the metaphysical [Aristotelian] colouring pervading his treatment of religion and ethics, as well as the addition of dissertations on such subjects as the calendar, idolatry, and free will. He was no mere codifier in the sense that others were. His was the genius of the literary artist working out his own original conception of divine truth as understood by the Jew. Hence, whereas to-day resort is had to other codes only when enlightenment is sought on points of strict 'legalism' or strictly orthodox ritual—what is forbidden and what is not forbidden by the 613 precepts of the *Tōrah*—the code of Maimonides is a source of edification to the theological student generally, quite irrespective of its relation to the Jewish life. The first of the fourteen books comprising the *Mishneh Tōrah* is entitled 'Maddā' ('Knowledge'). Maimonides feels that, before a man can be ordered to worship God, he should first be informed of what God really is; so he sets out

with proofs of the existence of God, of the impossibility of a plurality of gods, of the impossibility of a world without God, of the various grades of animate and inanimate existence—angels, 'spheres,' men, plants, minerals (introducing, of course, the 'four elements,' viz. earth, air, fire, water). He shows how all these have their places in the cosmos, and how all reveal God in their several ways and degrees. In the framework of such a treatment he discusses the Rabbinic views of prayer, divine worship, Sabbath, feasts and fasts, repentance, and the whole host of ethical and civil prescriptions which the Talmudic Rabbis had deduced from Scripture and had laid down for observance by the Jewish commonwealth. It is all done in a way which shows that, while Maimonides defended what he considered the eternal sanctity of 'ceremonial,' he was too spiritual, too mystical a thinker to omit giving due prominence to the ethical and spiritual aspects of Judaism—the aspects which justify and transfigure the rest.

The *Sirāj*, or Commentary on the Mishnah, has not as yet had full justice done to it by scholars and students. It has been in many senses overshadowed by the more popular commentary of Obadiah Bertinoro, an Italian Rabbi of the 15th century. But there can be no doubt that, with the growing modern recognition of the necessity of studying the Rabbinical literature on strictly scientific lines, the *Sirāj* will yet come into its own.

The object of Maimonides was to enable the layman to understand the Mishnah—its technical phraseology as well as its general drift—without the necessity of working through the involved disquisitions of the Talmud. The Talmud is *par excellence* the commentary on the Mishnah, but its elaborations and criticisms of the Mishnah, instead of throwing light on the latter, often render the darkness all the greater. Further, Maimonides was of opinion—and critical study shows that he was right—that the Talmudic masters did not always understand the Mishnah, because their extraneous knowledge was faulty. He therefore planned a work in which the student would be able to see the Mishnah as it essentially is and irrespective of the Talmudic glosses. Not that Maimonides ignores these glosses. He incorporates them—and largely too—in the commentary. But he sometimes adopts an independent view; and this is just one of the facts that make his work serve as a really valuable introduction to the study of the Talmud. It is also very valuable for the many long dissertations which it contains on points in theology, philosophy, history, and exegesis. Thus, commenting on Mishnah xi. in the Treatise *Sanhedrin* on the words 'All Israelites have a portion in the world to come,' he is led to write a treatise on the Jewish creed, in which he draws up the famous 'Thirteen Principles of Faith' (for which see *ERE* iv. 246^a), being the first 'Rabbanite' (i.e. as opposed to 'Karaites') Jew to ask the Synagogue to accept a set, formulated creed of Judaism. For this he was severely criticized by a famous 15th cent. Jewish philosopher, Hisdai Crescas, in his *Or Adhōnai* ('Light of the Lord'). But, as subsequent history proves, there was no necessity for attaching any really serious importance to these 'Thirteen Principles of Faith,' seeing that the Synagogue at no time did, and even at the present time does not, attach any canonical validity to them. In all probability Maimonides promulgated them with no dogmatic intent. They are useful as a literary monument of the often-forgotten fact that Judaism emphasizes inward belief as well as outward conduct.

Another remarkable excursus is that known as

'The Eight Chapters.' Just as Philo attempted to expound the OT on the basis of Plato, so Maimonides here attempts to present Judaism in the dress of Aristotle. Rabbinical ethics are viewed through Greek spectacles, and Aristotle's doctrine of 'the mean' (*μεσότης*) is shown to underlie the sacred moral truths of Judaism.

'This perfect Law does not teach us to subject the body to useless and uncalled-for tortures. On the contrary, its aim and intention is that man according to the dictates of nature should pursue the path of moderation, eat and drink moderately and according to his means' (opening words of ch. iv.).

Adopting this standpoint and with the aid of the Aristotelian psychology, Maimonides shows how the Jew's path to ethical perfection lies only through the adoption of the mean. With all its Greek colouring, the spirit and teaching of the book are thoroughly Hebraic. OT and Talmud contain the highest wisdom and are man's surest guide to God.

Maimonides' greatest contribution to metaphysics, however, is his 'Guide of the Perplexed.' It is designed, as he himself says, 'for thinkers whose studies have brought them into collision with religion,' for men who 'have studied philosophy and have acquired sound knowledge, and who, while firm in religious matters, are perplexed and bewildered on account of the ambiguous and figurative expressions employed in the holy writings.' Thus the book is not meant to convince the unbeliever, but, rather, to correct the believer. His introductory motto is, 'Ye who have gone astray in the field of the holy Law, come hither and follow the path which I have prepared. The unclean and the fool shall not pass over it.'

The object of the book is to provide a working harmony between reason and faith. But whose conception of reason does Maimonides take as the standard? No one but Aristotle's. What is faith to Maimonides? Belief in the Torah, which is for all time the one true embodiment of the divine word. There is no contradiction between divine revelation as entrusted to the Jews and the metaphysical truths given to the world by the brains of the philosophers. For not only is it a fact that both in the last resort emanate from God, but it has also to be borne in mind (so argued Maimonides) that the prophets of the OT received a twofold divine message. Besides the message which is manifest to us in their written prophecies, they received oral revelations of a philosophical kind. The written prophecies are really instinct with these oral philosophies; and Scripture enshrines, in ways and degrees which can be detected only by the student of philosophy, a body of metaphysical truth. As the average Jew, through the dulling effect of the repeated persecution of his race, fails to grasp this metaphysical truth, Maimonides conceived it his duty to devote the major portion of the first book of the 'Guide' to an exhaustive examination of the anthropomorphic expressions occurring in the Scriptures in order that the reader should thereby learn the first and fundamental tenet of all metaphysic, viz. that God is incorporeal, and that all the Scriptural passages which talk of 'the eye' or 'the hand' or 'the foot' of God, or which describe divine movements such as 'passing,' 'dwelling,' 'coming,' 'standing,' etc., must be understood allegorically, seeing that they express transcendental metaphysical truths about the deity. But there is another leading consideration. What about the Scriptural 'attributes' of God? Is not the misunderstanding of these liable to lead to an infringement of both the incorporeality and the unity of God? Maimonides saw real danger here, and, therefore, after a severe examination of the meanings and inter-relations of the different attributes of God, he proves the inapplicability of them all to God. All that can be predicated of God is

that He exists. God is indefinable. Even to assert, as Scripture repeatedly does, His unity, power, wisdom, eternity, will, is inadmissible. But how, then, can we justify Scripture? By assuming, he says, that, owing to the poverty of language, these terms must be understood as describing not a positive quality but a negative of its opposite. Hence to say that 'God is one' is merely tantamount to saying that God is not a plurality. Hence the deity can be described only by negative attributes; and, since the number of these is infinite, the positive essence of the deity must for ever lie outside human comprehension. But, despite all this, the deity is unquestionably active in the universe; He is the creator of the cosmos, and the traces of divine design are everywhere obvious. How are these divine relations with the universe to be understood? Before grappling seriously with this subject, Maimonides enters into an acute criticism of the views of the Mutakallimūn, or philosophers of the *kalam* (q.v.). As against Aristotle, who maintained the eternity of the universe, these Arabian philosophers defended the *creatio ex nihilo*. Maimonides, while as a Jew differing on this fundamental point from his teacher Aristotle, agreed with the Mutakallimūn, but differed from the latter again on several other fundamental propositions of theirs. Maimonides' originality of mind as well as his fearless liberality of spirit in the investigation of religious truth can be clearly gauged in this connexion. He rejects, as has just been said, the propositions of the Mutakallimūn—but only as propositions, i.e. theories or methods of proof. For he accepts their results. He believed, just as much as they believed, not only in the *creatio ex nihilo*, but also in the existence, incorporeality, and unity of God. On the other hand, while opposing Aristotle on the question of the *creatio ex nihilo*, he practically employs the whole paraphernalia of the Aristotelian cosmology in order to prove the *creatio ex nihilo*. The latter came about through the work of a Primal Cause, who is identical with the Creator alluded to in the Scriptures. From this Primal Cause there emanate the intellects of the spheres (these 'intellects' are identified with the angels of Holy Writ). All changes on earth are due to the revolutions of the spheres, which have souls and are endowed with intellect. God created the universe by producing first the intellects of the spheres, which give to the spheres the faculties of existence and motion and are thus the *fons et origo* of the entire universe. It is of deepest interest to both the theologian and the mystic to note in this connexion the quaint Maimonidean exegesis of Gn 1 (*Ma'aseh Bereshith*) and Ezk 1 (*Ma'aseh Merkabhah*). His whole theory of emanation (*hashpa'ah*) is a wonderful combination of what are usually regarded as two diametrically opposite frames of mind, viz. rationalism and mysticism.

Aristotle believed in the eternity of matter. Maimonides argues against this at great length in pt. ii. of the 'Guide,' in favour of the *creatio ex nihilo*—not that he believed that the latter thesis was really provable from Scripture, but because he felt it a necessary peg on which to hang the essentially Jewish doctrines of miracles, revelation, and prophecy. On the latter subject his views are strikingly original but highly debatable. There is a strong element of passive ecstasy in prophecy. The prophet is wholly the passive instrument in the divine hand. Imagination is an essential element in all prophecy. Prophecy is an impulse descending from the Active Intellect to man's intellect and imagination. Can any man become a prophet? No, because, while it is in the power of many a man to bring himself to the high pitch

of moral and intellectual perfection which prophecy necessitates, another factor is still required. This factor consists in a special vouchsafing of the divine will, i.e. divine inspiration. A man may be intellectually and morally perfect, but may be unable to prophesy, because prophecy arises, in the last resort, only at the call of a divine fiat; and the fiat is arbitrary.

Maimonides' subsequent discussions on the nature and origin of evil, on belief in divine providence and man's free will (in which he strikingly discusses the central problem in the book of Job), on the purpose of the Biblical precepts, on the meanings of the Biblical narratives, on the stages by which man comes to hold real communion with the divine—all these are treated with a fullness of knowledge which makes them a contribution to general as well as to Jewish theology. A vein of unvarying optimism permeates his teachings on sin and evil. Evil has no positive existence, but is merely the absence of good, just in the same sense as sickness denotes the absence of the possession of health, or poverty the absence of sufficiency, or folly the absence of normal wisdom. In support of the argument he quotes Gn 1st, 'And God saw every thing that he had made, and, behold, it was very good,' the Midrashic comment upon which is, 'No evil thing descends from above' (*Be'reshith Rabbā*, xviii. 9). Divine providence extends to individual human beings, but not to animals, plants, or minerals. Here Maimonides differs from Aristotle, who held that Providence took no account of particulars, because His knowledge was limited to universals. Scriptural passages are quoted in refutation of Aristotle's views. Can free will be reconciled with the fact of divine omniscience, seeing that the latter must imply predestination? Numerous passages from Scripture are quoted in illustration of the difficulty of the problem. Maimonides bases his answer on the words of Is 55th, 'My thoughts are not your thoughts, neither are your ways my ways.' God's knowledge is unique; and the great mistake that men always make is that they persist in thinking and speaking of God's knowledge in the same senses as they think and speak of man's. It is identical with His essence, and is independent of existence or of time—past, present, and future are all the same to God.

The object of the divine precepts is 'to give man true knowledge or to remove wrong knowledge, or to give a correct ordering of life or to remove oppression, or to give a training in good morals or to exhort against bad morals.' Man's final consummation of 'knowing' God can come about only after man has perfected himself, not only inwardly, but in all his external relations to society, to the State, to the world. Maimonides discusses every precept of the Torah with the object of showing how their rightful understanding and practice lead to this goal. By an ingenious adaptation of Scripture he shows that the reason why God 'led the people about, by the way of the wilderness by the Red sea' (Ex 13th), instead of leading them straight to the Promised Land, was in order to give them the necessary preliminary training in the endurance of hardship, in the cultivation of courage in face of danger, and in all the social and martial qualities which a self-governing nation needs. Even so, says he, is it with man. Before he can live on the high level of knowing God, he must live on the lower level of an obedience to all the divine precepts which are the training-ground for his more exalted rôle. 'Knowing' God and 'loving' God are identical.

Maimonides influenced all succeeding generations of Jewish thought by his introduction of what we nowadays call 'the scientific spirit' into

the study of Judaism. Henceforward an anthropomorphic conception of God became impossible. God is spirit, and the worship of Him—based as this is on the carrying out of the 'laws' of the O'l as interpreted by the Rabbis—is not a series of mechanical performances, but a movement of the human spirit towards its divine source. Man's intellect is his greatest asset. Hence Judaism, rightly understood, can never really become fossilized, seeing that the application of the intellect to it cannot but result in a continuous chain of development in consonance with the changing phases of human thought as time goes on. Although much of the substance of the 'Guide' is now obsolete, its encouragement to a freedom of spirit in the handling of religious problems will always, unlike the dogmatism of the *Mishneh Tôrah*, make its appeal to the thinker and the moralist. Maimonides the liberal philosopher will live on long after Maimonides the dogmatic ritualist is forgotten.

The influence of Maimonides on general European thought has not yet been adequately appraised. The Latin translations of the 'Guide' in the 13th cent. affected the great Franciscan, Alexander of Hales, as well as his contemporary, William of Auvergne. The great Christian scholastics, Albertus Magnus and Duns Scotus, drew inspiration from its pages. Thomas Aquinas's whole theological system is permeated with the theological view-points of Maimonides. What debt, if any, Spinoza's philosophy owes to him is a moot point, but that the reading of the 'Guide' influenced Spinoza's mode of life is certain.

LITERATURE.—The *editio princeps* of the *Mishneh Tôrah* is undated, and the place of publication is unknown. Numerous subsequent edd. are those of Soncino, 1490; Constantinople, 1590; Amsterdam, 1702; Heb. and Eng., H. H. Bernard, Cambridge, 1832; Heb. and Germ., Vienna, 1839; Eng., J. W. Peppercorne, London, 1838, 1863. The *editio princeps* of the 'Guide of the Perplexed' appeared first without place or date; then in Heb., Venice, 1551; Berlin, 1791; in Lat., Paris, 1720; Basel, 1629; in Germ., Krotoschin, 1839; in Arab. and Fr., S. Munk, 3 vols., Paris, 1856-68; Ital., Leghorn, 1879-81; Eng., 3 vols., M. Friedländer, London, 1885, 2nd ed. in 1 vol., do. 1904. The commentary on the Mishnah was first published at Naples, 1492, and is accessible in the Lat. tr. of W. Surenhusius, in his *Mishna*, Amsterdam, 1698-1708.

On the life and works of Maimonides, the following should be consulted: Peter Beer, *Leben und Wirken des Maimonides*, Prague, 1834; A. Geiger, *Moses ben Maimon*, Breslau, 1850; I. M. Jost, *Israelitische Annalen*, Frankfurt, 1889, p. 303, ed. 1840, p. 32, *Ally. Gesch.*, Berlin, 1832, iv. 116, and *Gesch. des Judenthums*, Leipzig, 1857-59, ii. 430; S. MAJHWAR, MĀNJHĪ.—A non-Aryan tribe numbering, Majhwār 14,210, Mānjhī 4933, according to the Census of 1911, and found in the United Provinces of Agra and Oudh, Bengal, Central Provinces, Berār, and Assam. The name is usually derived from Skr. *madhya*, in the sense of 'headman,' and ethnologically they are closely connected with the Gonds and Kharwars (*q.v.*).

In the United Provinces the Majhwār possess a well-marked system of totemistic exogamous divisions, some being named from trees, animals, or birds, each of which is held sacred and not injured or eaten by the members of the division who take their name from it. The tribal legend describes the rescue of their forefathers by a tortoise; they therefore worship the tortoise, and will not injure or kill it. Their death rites recognize the survival of the soul after death, and they take measures to prevent the return of the malignant spirits of the dead, particularly those who have died by accident or in some tragic way. But some of the ancestral spirits are supposed to be re-incarnated in their descendants, or in a calf which is taken care of and not used in ploughing. At marriages a fowl and spirituous liquor are offered to ancestors, and in their honour the *patārī*, or tribal priest, offers a fire sacrifice (*homa*). Among the special tribal deities of the Majhwār may be mentioned Dulhā Deo, the spirit of a bridegroom who in the olden days perished in a specially tragic way. As is the case with the cognate tribes, there is, in their beliefs, a clear distinction between those who live more or less within the range of Hindu influence and those who are less exposed to it. The former worship, under the title of Mahādeva, 'the great god'—a name of Śiva—a deity who seems to be identical with Barā Deo, 'the great god' of the Gonds, both of whom are believed to use the ox as a 'vehicle' (*vāhana*). This cult has a basis of phallicism, which is more clearly seen in the worship of Lingo or Lingal (Skr. *linga*, the phallic symbol). The *patārī*, at his periodical visits to his parishioners, worships Mahādeva by rattling a number of iron rings fixed on a staff. The collective village-gods are impersonated by a male deity Dih (Pers. *dih*, 'the village'), whose name at least is of modern origin, while his female counterpart is known as the Deohārīn (Hindi *deuhārā*, Skr. *devagrha*, 'house of the gods'), so named because she occupies the village-shrine, a mass of rude stones piled under a sacred tree, usually the *sāl* (*Shorea robusta*). More advanced members of the tribe identify her with the Hindu Devī. The shrine contains a water vessel, over which a red flag is hung, and the seat of the deity is a little mud platform on which offerings are laid and a fire sacrifice is performed. The officiant at these rites is the *baigā* (*q.v.*), the village medicine-man, who holds a goat or fowl facing the east and sacrifices it by cutting off the head and allowing a little blood to drop on the platform. The worshipper, his friends, and the priest then and there cook and eat the flesh. No blood sacrifice is offered to ancestors, but flesh cooked by the wife of the eldest son (perhaps a survival of mother-right) is offered in the family kitchen, where the honoured dead are supposed to live. When they eat they throw a little food on the ground for the earth-goddess. Women may be present at the worship of the higher gods, but not at that of the village-deities. They also propitiate a number of demons or evil spirits, such as Turkin, the ghost of a Turk or

Muhammadan woman, and her consort Barwaṭ, who rule all the mountain-spirits of the neighbourhood. Other spirits inhabit streams and water-pools, and with these are joined the snake-gods—the Nāg and his consort, the Nāgin. A special tribal rite is the worship of the sacred *karama* tree (*Nauclea parvifolia*), which is ceremonially cut down and brought into the village, where the people dance round it to the beating of drums. The rite is probably, like similar rites in other parts of the world described by J. G. Frazer (*GB*³, pt. i., *The Magic Art*, London, 1911, i. 247 ff.), a form of symbolical or imitative magic to promote the fall of rain and the fertility of the people, their crops, and cattle (W. Crooke, *PR*² ii. 94 ff.). Only the more Hinduized members of the tribe employ Brāhmans, the real priests being the *patārī* and *baigā*, who are usually drawn from the more primitive allied tribes, which are believed to preserve unimpaired the knowledge of the local cults. Fetishism, so called, appears in the reverence for the sacred chain (*gurda*) hung in the village shrine, with which hysterical girls are beaten in order to drive out the evil spirit supposed to cause such attacks. The belief in witchcraft, the evil eye, and omens is wide-spread.

LITERATURE.—W. Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, Calcutta, 1896, iii. 413 ff. W. CROOKE.

MĀL, MĀLĒ, MĀL PAHĀRIĀ.—A non-Aryan tribe, containing various groups, numbering, Māl 2,135,329, Māl Pahāriā 54,069, at the Census of 1911, and found in the greatest numbers in Madras, Haidarābād, and Bengal.

The inter-relations of the North and South groups have not been clearly ascertained, but they seem to be, to a large extent, pure Dravidians, and those in the Rājmahāl Hills in Bengal are closely allied to the Orāons (*q.v.*). The Māl, a cultivating caste in W. and Central Bengal, are mainly Hindus, and few vestiges of primitive beliefs can be traced among them. The snake-goddess, Manasā, is their special guardian, and they also worship the local village-deities. The earliest account of their religion in the Rājmahāl Hills is that by Shaw, which has been supplemented by Risley and Dalton.

'At the head of their system stands the Sun called Dharmer Gossain, and represented by a roughly-hewn post set up in front of each house. He is worshipped with offerings of fowls, goats, sindur [red lead], and oil at the commencement of the harvest season, and at other times when any misfortune befalls the family. When people are gathered together for this purpose, the village headman, who acts as priest, goes round the congregation with an egg in his hand, and recites the names of certain spirits. He then throws away the egg, apparently as a propitiatory offering, and enjoins the spirits to hold aloof and abstain from troubling the sacrifice' (Risley, *TC*, ii. 57).

Shaw describes various gods inferior in rank to the sun-god. Whenever a tiger, smallpox, or any other plague attacks the village, Ruksey or Raksi is supposed to desire that a shrine should be raised for him. Accordingly the *demāno*, or tribal priest, is directed to search for the god. He gets a branch of the *sidi* tree, and gum benjamin is burned, which he smells. He is thus enabled to point out a place where he directs the people to dig, and the god, in the shape of a sacred black stone, is discovered. The *mānjhī*, or headman, then sets out in search of a large tree, under the shade of which he places the stone, and encloses it with a stone fence and hedge. A fowl and a goat are sacrificed, and the headman or some other worthy person does worship to the god and then retires (*Asiatic Res.* iv. 46 f.). This god at the present day is the tutelary deity of strong drink, who is worshipped by the headman before he begins to distil liquor from the fresh crop of *mahuā* (*Bassia latifolia*) (Risley, ii. 57). Chal, or Chalnad, presides over a group of villages, but he is not worshipped until some

plague attacks the people, when the *demāno* dreams that a shrine should be raised, and the god, when found in the shape of a stone, is placed under a *mukmum* tree near the village, the stone undergoing no change in form from the chisel (*Asiatic Res.* iv. 48 f.). Goats and pigs are usually offered to him, but the triennial sacrifice of a cow, mentioned by Shaw, seems now to have fallen into disuse (Risley, ii. 58).

The first worship performed by young men is offered to Pāu Gosāin, god of the road, but it is not undertaken till some accident has induced the worshipper to consult an exorcist, who decides whether a sacrifice will be acceptable.

On the day of thanksgiving at harvest he proceeds to a high road, and clears a space under the shade of a young *bel* tree (*Agile narmelos*), in the centre of which he plants a branch of the *mukmum* tree. Round it he makes marks with red paint, and, laying some rice and an egg decorated with three streaks of vermilion near the sacred branch, he invokes the god of the highway to protect him on his journeys. A cock is sacrificed, some of the blood being dropped on the branch, and the offering is cooked and eaten by the worshipper and his friends. The rite concludes with the breaking of the egg, and is never repeated unless the person concerned should meet with an accident in travelling (*Asiatic Res.* iv. 51 f.).

At present the offering prescribed for the god is a white goat, and the sacrifice is very expensive, owing to the large amount of rice-beer which must be offered to the god and then drunk by the assembled worshippers (Risley, i. 58).

The tutelary deity of the village, spoken of by Lieutenant Shaw under the name of Dwāra Gosāin [god of the doorway], is now called Bāra-Dwāri, because he is supposed to live in a temple with twelve doors. The whole village worship him in the month of Māgh [Jan.-Feb.]. Colonel Dalton suggests that this god may perhaps be the same as the Oraon Dārā. Kul Gosāin, "the Ceres of the mountaineers," and Autga, the god of hunting, appear not to be known at the present day. Gūmo Gosāin, or the god of the pillar, is represented in every household by the wooden post (*gūmo*) which supports the main rafters of the roof. On this the blood of a slain goat is sprinkled to propitiate the spirits of ancestors. The fact that this god is common to the Māls and Māl Pahārīās, and is worshipped by both in the same way, seems to tell strongly in favour of the common origin of the two tribes. As in Lieutenant Shaw's time Chāmā Gosāin still ranks high among the tribe, and demands offerings on a larger scale than any other god (Risley, ii. 58).

At the present day the priests of the tribe are said to be the *demānos*, who were originally diviners; but it is declared that generally the *demāno* does not officiate as priest, but merely directs the village headman, head of the household, or other influential person chosen for the occasion (*ib.*).

The religion of the Māl Pahārīās is of much the same type. Their chief god is the sun, who is addressed as Gosāin, 'Lord,' and to whom an offering of rice is presented and then given to a goat, which is decapitated by a blow from behind. The meat is cooked, and served up at a feast, of which the neighbours partake. The head alone, which is regarded as sacred food (*prasād*), is carefully reserved for the members of the family. Next in honour to the sun are Dharti Mātā, Mother Earth; her servant or, as some say, her sister, Garāmi; and Singhbāhini, 'she who rides on a tiger,' who rules tigers, snakes, scorpions, and all manner of noisome beasts. The tribe also performs the *karama* rite, dancing round the sacred tree (see MAJHWAR). Chordānū, 'the thief demon,' is a malevolent spirit, who must be propitiated by sacrifice and the offering of the firstfruits of the crop, which, as usual, are under tabu (J. G. Frazer, *GB*³, pt. v., *Spirits of the Corn and of the Wild*, London, 1912, ii. 48 f.). To Mahādānā eggs are the appropriate offering. Gūmo Gosāin, the house pillar, represents the *lares* of the household, and every village has its own tutelary deity, which lives in a *sāl* tree (*Shorea robusta*). This is periodically daubed with red lead, and may on no account be cut down.

LITERATURE.—T. Shaw, 'On the Inhabitants of the Hills near Rājmahall,' in *Asiatic Researches*, iv. (London, 1793) 31 ff.; H. H. Risley, *Tribes and Castes of Bengal*, Calcutta, 1891, ii.

45 ff., 51 ff., 66 ff.; E. T. Dalton, *Descriptive Ethnology of Bengal*, do. 1872, pp. 188 ff., 238 ff.; a popular account of the Pahārīās, mainly based on the above authorities, will be found in F. B. Bradley-Birt, *The Story of an Indian Upland*, London, 1905, pp. 7 ff., 287 ff. W. CROOKE.

MALABAR JEWS.—See JEWS IN COCHIN (MALABAR).

MALAY ARCHIPELAGO.—The religious beliefs and customs of the natives of the numerous isles of the Malay Archipelago, all of them belonging to the great Malayo-Polynesian family,¹ were certainly in the main identical, but, owing to historical facts and foreign influences, by far the greater part of the population have forsaken their ancestral creed. The native population, with insignificant exceptions, of Java and Sumatra, except most Battak, profess Muhammadanism, as do the Macassars, Buginese, Mandarese, Bimanese, and some other tribes of the West and North coast of Celebes, and of Borneo; the small islands of Ternate and Tidore are also peopled by Muhammadans. The Balinese in Bali and Lombok are Saivites, with a sprinkling of Buddhists, whereas the Sassaks of Lombok are followers of Islām. Christianity is the prevailing religion in Amboina, the Minahassa, the Sangir, and Talaut Islands, and has an increasing number of adherents among the Battak, Torajas, Sawunese, and Rottinese; Roman Catholic natives are chiefly found in the Eastern part of Flores. Some small communities of converts to Christianity are also found in Java.

1. Animism.—The religion of the pagan tribes of the Archipelago is what is generally denoted as animism. In speaking of the beliefs prevailing in the Malay Peninsula Skeat rightly says:

'The root-idea seems to be an all-pervading Animism, involving a certain common vital principle (*sémangat*) in Man and Nature, which, for want of a more suitable word, has been here called the Soul. The application of this general theory of the universe to the requirements of the individual man constitutes the Magic Art, which, as conceived by the Malays, may be said to consist of the methods by which this Soul, whether in gods, men, animals, vegetables, minerals, or what not, may be influenced, captured, subdued, or in some way made subject to the will of the magician.'²

All this applies to the pagan Indonesians, and, in many respects, also to the natives who have adopted another religion and, in their own opinion, are sincerely attached to it.

Sumangat, with dialectic variations, is the general word with the Malays also in Indonesia for 'soul,' 'vital force,' penetrating the whole body, but distinct from the latter, so that it can leave the body temporarily, e.g., in dreams, and finally at death. The Macassars and Buginese use the same word, *sumanga*, *sumangé* with the same meaning. The Battak use the term *tēndi*, *tondi* for exactly the same idea; and the Dayaks have *humberuun*, *amirue*, *amiroi*, *blua*, and other dialectic variations of the same word. With the Torajas in Central Celebes the usual term is *tanoana*, properly 'homunculus'; another expression is *wayo*, or *limbayo*, i.e. 'shadow' (Jav. *wayang*, Mal. *bayang*). When the soul temporarily leaves the body, it assumes the form of a homunculus or an animal. A man whose soul thus goes forth in order to feed upon the souls of others appears in the shape of a deer, pig, crocodile, monkey, buffalo, or cat. Like many other Indonesians, the Torajas believe that there are witches who can separate their head and entrails from their body in order to suck the blood of sleeping persons. Such beings may be compared with the Mal. *penanggalans*, 'vampires.'

¹ With the doubtful exception of the people of Ternate Tidore, Halmahera (Gilolo).

² *Malay Magic*, London, 1900, p. 579 f.

The word for 'soul' in Nias is *noso*, which, like Skr. *prāna* and Gr. *πνεύμα*, is properly the 'breath of life,' and then 'life,' 'vitality.' The same may be said of *hawa* (Jav., Mal. etc.). There are several other Indonesian words for 'soul'—e.g., Tontembuan *imukur*, *nimukur*, Sangir *himukudē*, Benteenan *himukur*, Ponosakan *dimukur*.

The common belief is that not only men, but also animals, vegetables, and minerals have a soul. The Ngaju Dayaks make a distinction between *hambaruan* and *gana*, the former belonging to men, animals, rice, and money, the latter to slaves, some trees, and things. The *gana*, like the *hambaruan*, can leave its abode and appear in the shape of a human being to men in dreams.

The soul leaves the body at death, and returns to its origin, the creator, or passes, directly or indirectly, into another human body, an animal, or a plant. The residuum of the individual, however, continues a shadowy existence as spirit. Such a spirit of the dead is called *liau* among the Ngaju Dayaks, and *diau*, *andiau*, among the Olo Dusun. It is commonly believed that the *liau* goes forthwith to Lewu liau, the spirit land, which it often leaves to roam in the woods or haunt its burial-place. During that time it is often harmful to the survivors, particularly by causing disease.

The common word for 'spirit' in Battak is *begu*, Nias *beghu*, which not only denotes the spirit of the departed, in which case we may translate it by 'ghost,' 'spectre,' but is applied also to superhuman beings, demons, and gods. The Torajas use the term *anga* for the spirit of the dead, and, in particular, *anitu* for the spirits of chieftains and heroes. This word *anitu*, or *nitu*, so wide-spread throughout the whole area of the Malayo-Polynesians, in Formosa, the Philippines, and the isles of the Pacific, is the common term for the ghosts of ancestors in the Moluccas, Timor, and Rotti. The Rottinese use it also for demons, whereas the Hill Torajas apply it to their gods, who, in fact, are deified ancestors. In general it is difficult to distinguish the ghosts of the departed from the spirits of higher beings or gods, but among some Torajas, who use the term *lamo*, we find that a distinction is made between higher and lower *lamous*.

According to R. H. Codrington (*The Melanesians*, Oxford, 1891, p. 124 f.), 'it must not be supposed that every ghost becomes an object of worship. A man in danger may call upon his father, his grandfather, or his uncle; his nearness of kin is sufficient ground for it. The ghost who is to be worshipped is the spirit of a man who in his lifetime had *mana* in him.'

The same may be said with reference to the people in the Malay Archipelago, and not the heathen exclusively. The ghosts of different kinds are not equal in power. The Karo Battak hold the ghosts of stillborn children in particular awe, making little houses for them, and honouring them with offerings. The inhabitants of the Luang Sernata Isles believe that the ghosts of those who have died a violent death are most powerful and zealous to help their kinsfolk. In Halmahera the ghosts of persons killed in war or by accident are called *diliké* in Galelinese, *dilikini* in Tobelorese. They are more powerful than other ghosts, protecting the living, especially in battle,¹ and are worshipped in the village temple. The Torajas also honour the ghosts of those who have fallen in battle.

To another category of ghosts belongs the protecting genius of places, regarded as the founder of a village or the common ancestor of the population. In Java every village honours the ghost of its founder, the *tyakal desa*, with

¹ For further particulars see M. J. van Baarda, *Woordenlijst van het Galelinese-hollandsch*, p. 98; A. Huetling, *Tobeloreesch-hollandsch Woordenboek*, The Hague, 1908, p. 61.

frequent offerings. The tutelary deity of a place is called *danghyang*, i.e. 'the god'; as the name implies, he is not a ghost, but a supernatural being. The worship of the reputed founder of a settlement is very common in the Moluccas. The Galelinese call the genius of a village and the forefather of its people *wongé*.

The Indonesians in general live in constant dread of innumerable ghosts, who are mostly malignant, and therefore must be propitiated by offerings or warded off by other means. Most feared is the *pontianak*, a word which with slight variations recurs in the whole archipelago, the Malay Peninsula, and the Philippines. The *pontianak* is the reputed ghost of a woman who has died in childbirth and, out of jealousy, penetrates the bodies of pregnant women to kill the unborn children. Usually she is thought to have the shape of a bird,¹ but to be invisible when she approaches her victim. In the archipelago the customary prophylactic against her insidious attempt is to suspend the thorny branches of a certain lemon-tree, the fruits of which are also employed as a means of repelling ghosts (for other means see Kruijt, *Het Animisme*, pp. 245-251).

All sorts of diseases are ascribed to the baleful influence both of ghosts and of other spirits. Especially in Nias we find several names of *beghus* who are held responsible for the appearance of different diseases and evils. It is no wonder that the people employ every means in their power to cure sickness or to prevent threatening attacks. In apprehension of the danger which may accrue from the dead, the Malays take care that the dead body is so treated that the ghost may not return. With many tribes one of the symbolical means of doing this is to scatter ashes, as if to blind the ghost.² The relatives of a deceased person have to undergo a longer or shorter period of mourning, during which they must wear the conventional mourning dress, observe certain restrictions in the use of food and drink, and refrain from amusements. At the end of this period it is customary for some tribes to offer human sacrifices, the ruling idea responsible for this custom apparently being that the ghost ought to be given a companion by way of propitiation.

It is commonly believed that the ghosts of the dead remain for some time in the neighbourhood of their former dwelling, whence the custom of erecting a hut in which to place the necessary offerings. With some Indonesians it is usual to prepare a bed of state for the ghost during the first days after the death. Even the Christians of Amboina and the Sangir Isles believe that the dead man pays a visit to his former home on the third day.

The ghosts continue to wander and meet with all sorts of difficulties before finally reaching the realm of the dead, which is situated somewhere in the West. When they are supposed to have arrived there, a great commemorative feast is arranged, such as the *tiwah*³ of the Ngaju Dayaks and the *tengke* and the *mompemate* of the Western Bare'e Torajas.⁴ For the ceremonies of the feast among the Dayaks of Sarawak see Ling Roth, *The Natives of Sarawak*, i. 208-210.

In the primitive belief of the less civilized Indonesians there is a bond of connexion between a dead man and his body, chiefly his bones. It is usually the skull that is used as a medium for

¹ But cf. Skeat, p. 325 f.

² See, for other peculiar action, Kruijt, pp. 251-268, and cf. Skeat, p. 325.

³ Described in Hardeiland, *Dajaksch-deutsches Wörterbuch*, p. 608 ff.

⁴ Described in Adriani-Kruijt, *De Bare'e-sprekende Toradjas*, p. 117.

communication. It is preserved with great piety, honoured with offerings, and worshipped. Not seldom a magic power is ascribed to parts of the body, which thus come to be in reality miracle-working relics. Another medium of communication is found in idols representing the deified ancestors; these are held to be inspired after due initiation. Such images are very numerous in Nias, where they are called *adu*, and occur also in Ceram and in some parts of Borneo. The Battak have no idols of particular ancestors, but keep two puppets in their houses, one male, the other female, called Silaon ('the primeval ones'), or Debata idup ('deities of life'). They seem to represent the primordial couple from whom mankind is sprung. Among the Ngaju Dayaks puppets called *hampatong* represent the ghost (*gana*) of the slaves of the deceased at the *tivah*, but the term has also the more general meaning of 'puppet.' The Toraja tribes, on the other hand, except the To Lage and To Onda'e, have no images, but wooden masks (*pemia*). Stones are also objects of worship, as well as certain earthen pots or urns, which are regarded as sacred and inspired.

2. Shamanism.—The belief that persons, during madness, epilepsy, and sometimes abnormal states of mind, are possessed by spirits has led to attempts to reproduce the same phenomenal conditions in order to get into contact with spirits to learn from them what medicines to apply or how to act in matters of importance. The medium through whom the spirits manifest themselves is the shaman, who is brought into a state of mental abnormality by artificial means, the rites employed for this purpose being multifarious among the peoples of Indonesia, but, in general, similar to what we find elsewhere—e.g., among the Buriats (*q.v.*).

The Battak distinguish the shaman (*sibaso*) from the priest (*datu*). Though their functions are not seldom analogous, there is this difference between them: the former acts unconsciously, under inspiration, whereas the latter gives his decision, based upon his knowledge of the books of his craft, in full consciousness. With the Dayak tribes it is a priest or priestess who acts as medium. The *dayang* of the Kayans is a priestess who sends her own soul to bring back the soul (*blua*) of a sick person, or to conjure up the ghost of the dead. The *manang*, a word properly meaning 'one who exercises power,' is with the Sea Dayaks the man who is able to meet and converse with spirits. The same character belongs to the *walian*, *belian*, *basir*, or *dayang* of other Dayaks. Such persons are more properly medicine-men than priests or shamans. Yet it is true that in doing their work they occasionally show signs of ecstasy caused by their being inspired. A peculiar kind of shamanism, which, however, is of foreign origin, is found in Halmahera.¹

3. Fetishism.—Various substances are supposed to conceal a powerful soul within themselves. They are therefore held sacred and worshipped in one way or another in the hope that by their power some desired object may be attained. All over the archipelago we find the use of so-called thunder-stones, chiefly as a means of gaining invulnerability in battle or as a preservative against lightning. Not less common is the belief in the wonderful effects attending the possession of the bezoar.² A high sacredness is attached to stones of a certain uncommon shape, especially in the eastern isles of the archipelago. In Timor the finder of such a stone, considered to be the abode of a spirit, puts it on a sacred place (*voho*) and

brings sacrifices to it. It looks as if such a sacred stone is a rude form of idol, for idols also are inhabited by the deity. Various other fetishes are used as amulets, and a prophylactic fetish called *matukan* is in common use. It consists of a collection of leaves and sticks, which are hung in fruit trees to repel thieves. With the Torajas and Dayaks the suspended materials are mostly of a sympathetic character.

4. Mythology.—In general it may be said that the pagan Indonesians recognize the existence of real gods, and that the supreme god is the creator, more or less directly, of the world and the preserver of it, and punishes the transgressors of his laws. In the Moluccas and the South-Eastern Isles the supreme deity is generally known under the name of Upu Lero (with dialectic variations). The word means 'Lord Sun'—a sufficient proof of his origin. Upu Lero may be identified with Upu Langi, i.e. 'Lord Heaven.' The earth is a female deity, and represents the female principle, who, in the West monsoon, is impregnated and fructified by the male principle, Lord Sun-Heaven. Similarly, the Torajas recognize two supreme powers: Ilai, 'the Man,' and Indara, 'the Maiden'; these formed men, but not animals or plants. In the Minahassa Muntumuntu is the sun and lawgiver. In the confused mythological lore of Nias we find Lowa Langi represented as the creator of men, though he himself is not primordial, but came forth from the bud of a tree. His counterpart is Lature, the chief of the evil spirits, who, curiously enough, is said to have his seat in the sun; he is the master of all that is perishable. The highest god of the Toba Battak is Ompu mula jadi na bolan, 'the Great Lord Origin of the Creation'; and his subordinates are the three gods Debata na tolu: Batara guru, Soripada, and Mangala bulan. The use of the somewhat corrupt Sanskrit words is sufficient proof of foreign influence, but the name of the highest god is original. Bhatara Guru is a title of Siva among the Saivites in ancient Java. Among the Karo Battak he is the highest god; and likewise among the Macassars and Buginese in former times. The Sanskrit word *bhātāra*, in some more or less changed form, is found in many Indonesian languages in the sense of 'god' or 'divine being.' So the Ngaju Dayaks call the creator Mahatara, but also Hatalla or Mahatalla, borrowed from Arabic *Allāh ta'ālā*; and the same name is used by the Manyan Dayaks. With the Sea Dayaks *pētara* or *bētara* is a name for higher beings. Thoroughly original is the word for the supreme being in Halmahera, viz. Galelारेse *Giki-moi*, Tobelorese *Gikiri-moi*, the 'First Being.' The moon plays a considerable part in the myths, but not in the cult; but there are traces that formerly it was otherwise. In the belief of the people of Babar Rarawolai, the war-god, has his seat in the moon, with nine female ministers.

The host of minor deities or demi-gods is so great that only a few classes can be mentioned here. The *sangiangs* of the Ngaju Dayaks are benevolent demi-gods related to men. The most powerful of them is Tempon telon; his principal function is to conduct the ghosts to the land of spirits. The *djatas* (from Skr. *devatā*) are water-gods, whose ministers are the crocodiles. The water-spirits are called *taghazangarefa* in Nias. The *hantus* and *hantusens* of the Ngaju Dayaks are malignant spirits, or demons, whereas the *antu* is considered by the Sarawak Dayaks to be a helpful spirit. The belief that demons make their appearance in the shape of snakes, dogs, pigs, crocodiles, tortoises, and men is very general. The Kayans have a great number of gods—e.g., a god of war, three gods of life, a god of storms and thunder, of fire,

¹ See van Baarda, s.v. 'Djini.'

² For the ideas of the Malays in the Peninsula see Skeat, pp. 186-197, 275; see also following article.

of harvest, of the waters, and of insanity, and the gods who conduct ghosts to the subterranean world. Above all these gods or demons stands Laki Tenangan, whose wife is Doh Tenangan, the patroness of women. Laki Tenangan is identical with Pa Silong of the Klemantans, and Bali Ponylong of the Kenyahs.

5. *Nature-worship.*—Nature-worship in its widest sense finds its expression in the sacred character of mountains, volcanoes, seas, and rivers, all of them being inhabited and ruled by superhuman powers.

LITERATURE.—The following is only a selection from the writings relative to the subject. N. Adriani and A. C. Kruijt, *De Bar'se-sprekende Torailjas van Midden-Celebes*, Batavia, 1912; M. J. van Baarda, *Woordenlijst van het Galearesch-hollandsch*, The Hague, 1895; J. von Brenner, *Besuch bei den Kannibalen Sumatras*, Würzburg, 1894; C. Brooke, *Ten Years in Sarawak*, London, 1896; L. H. KERN.

MALAY PENINSULA.—1. *Geography.*—The Malay Peninsula, a long scimitar-shaped piece of land, stretches from Burma and Siam to Singapore. Its length from the northernmost extremity to the southern confines of Johor, immediately to the north of the island of Singapore, is rather under 1000 miles; its breadth varies from 35 miles to less than 200 miles at the broadest part. The result is that the peninsula, though distinctly a part of the mainland, is insular in

character rather than continental. At a comparatively late geological period its southern half was indeed actually insular, being at this time joined to the island of Sumatra, and entirely separated from the northern portion. The line of division ran, somewhat roughly, from Singora on the one side to Perlis on the other, and it may be observed that at the very point where this line traverses the peninsula a marked change in the flora and distinct ethnographical differences occur. The lower and more properly Malayan portion of the peninsula is separated from that to the north by a low divide. The backbone of the peninsula is formed by ranges, mainly of granite formation, the source of numerous rivers and streams which drain the country. The ranges are steep and precipitous, rising to 7000 or 8000 ft. and containing stanniferous and sporadic auriferous deposits. The wild aborigines make their homes chiefly on the foot-hills, but they are also found on the main mountain complex to a height of upwards of 3000 feet. The upland valleys are narrow and covered with dense jungle. They offer little attraction to any but the scattered aboriginal population who still find shelter in their fastnesses and, in some districts, to the Chinese miners. Further towards the coast the valleys become larger and more fertile, and their loamy soils have long been cultivated by the Malays, and in recent years by numerous European planters. As the rivers reach the sea on either side, the soil tends to become more and more a clayey or sandy alluvium. Often the rivers are tidal for a great many miles inland. On the east coast, for some four months of every year, the steady beat of the China monsoon seals all the river-mouths with a sandy bar, and during the height of this monsoon all trade is effectually prevented. On the west coast the land is sheltered, as if by a colossal breakwater, by the neighbouring island of Sumatra. Here muddy mangrove flats are found, but with magnificent expanses of sandy beach at intervals. The light breezes that prevail have led to the evolution of quite different types of boats and canoes from those on the China Sea. The peninsula is rich in tin ore. It produces an amount estimated, roughly, at three-quarters of the entire world's supply. The revenue derived from this industry has been ably applied by the governments of the native States to their development. Out of this income a railway has been built from Penang to Singapore, another is under construction round the main mountain mass on the east coast, and will be continued to meet the Siamese railways from Bangkok, while the railway from Penang is also to be extended to meet the same railway system. Together with a most excellent road system, second to none in the East, these modern means of transport have changed entirely the old conditions of life, and have brought this part of British Malaya, in one generation, into vital contact with our own economic world. Besides the mining industry there are now large agricultural industries dealing with rubber and coco-nuts. In the main these industries are worked by a non-indigenous population from China and the south of India, for whose sustenance large supplies of rice are imported annually. The British possessions consist of the islands of Penang and Singapore, and of three small strips of land: Province Wellesley opposite Penang, and the Dindings and Malacca between Penang and Singapore. The Federated Malay States of Perak, Selangor, and Nègri Sembilan on the Straits of Malacca, and Pahang, on the China Sea, form a compact core dominating the centre of this part of the peninsula. To the north of the Federated Malay States are the States of Perlis and Kedah on the west coast, and of Kelantan and

Trengganu on the east coast, all of which have recently been taken under British protection, and also the State of Patani, which is under Siamese suzerainty. To the south of the Federated Malay States lies the State of Johor, also now under British protection. It is common to speak of the units of the British sphere as British Malaya, a term which formerly included our far greater possessions in Sumatra and the densely populous island of Java. Occasionally the term is more accurately extended to include the island of Labuan, British N. Borneo, a British possession, and the protectorates of Brunei and Sarawak also represent British interests in Malaya, though the conditions there differ materially from those in the peninsula and ought to be considered with the archipelago.

2. Ethnological affinities and history.—The ethnological affinities of the area of which the Malay Peninsula forms a part, as well as of the adjacent areas, are still obscure in many respects. In so far as they have yet been elucidated by ethnological investigations and an examination of historical records, they bear out conclusions deducible from the geographical data. The Malay Peninsula itself would appear from very early times to have served as a causeway for migrations from the Asiatic continent, while the protected character of the waterway on the west side, and the richness of this part of the peninsula in minerals and other products, have favoured its economic development, and made it not only attractive to higher civilizations, as the study of its entire history shows, but also a rendezvous of merchants and workers from many far-separated countries. At the present day not the least important element in the population consists of a congeries of alien races, Chinese from the southern provinces of China, Canton, Fu-kien, and the island of Hainan, Tamils from S. India and Ceylon, and, in a lesser degree, Sikhs, Panjabis, and Pathans from N. India, and Javanese and Malays from all parts of the Eastern archipelago. In the north of the peninsula isolated outposts of Siamese have pushed for a considerable distance over the Kraw Divide, overstepping the ancient ethnological boundary of the peninsula. Old forts can be traced in the Patani valley and for some way down the Perak valley, the defences of which were strengthened with a hedge of thorny bamboo, which is not indigenous in this region. On the Upper Perak valley and in a few places further south there are distinct traces of Siamese influence in comparatively recent times.

(a) *Malays*.—The peculiar importance of the native religions of the region here discussed is due to the fact that they exhibit a clearly-defined series of superimposed ceremonial strata, native (i.e. aboriginal of at least two different types, and Malayan) Indian and Islāmic. The most recent ethnological investigations confirm the view that the native population consists of the descendants of immigrants of a comparatively recent date, superimposed upon a more ancient stratum consisting, to a great extent, if not entirely, of aboriginal races. The Malays proper belong to the modified Southern Mongoloid group of peoples found in Formosa, Sumatra, Java, and throughout a great part of the Malay Archipelago. When the Palēmbang emigrants first began to arrive from Sumatra, about 900 to 1000 years ago, introducing a Hinduized civilization into the peninsula, it is probable that they found some Indo-Chinese race of superior culture already in possession. This is suggested by certain features of the aboriginal dialects, and by other considerations.

It is of great importance to note that some of the Sumatran settlers, who followed, after some cen-

turies, the earlier Palēmbang colonists, are still in the matriarchal stage as distinct from other Sumatran settlers, by whom customs of a patriarchal type are followed. In the Malayan phrase, the people of the Nēgri Sembilan 'follow the *adat pērpateh*,' which may be described as '*Pērpateh* custom,' whereas the other Malays of the peninsula 'follow the *adat Tēmenggong*' ('custom of the *Tēmenggong*'), these two contrasted bodies of custom being based on mother-right and father-right respectively.

These Sumatran settlers, who were agriculturists, amalgamated with the aborigines, at any rate in some districts—e.g., in the State called Nēgri Sembilan—but the conversion of the Malays from tolerant Hinduism to Muhammadanism from the late 14th to the 16th cent. began to drive the aborigines into the jungles and hill fastnesses of the interior. Since that time Sunni Muhammadanism of the Shāfi'ite school has remained (as in Java) the official religion of the peninsula, although among the less educated of the Malays it is the merest veneer covering a vast body of practices and beliefs which can be traced either to the influences of Hinduism or to primitive shamanistic beliefs, such as are still held by the aborigines. Malay Islāmism is nevertheless still fervent.

It may be remarked that the Malay Peninsula belongs, geographically and ethnographically, to Indo-China, a name which well expresses the fact that, with hardly any exception, the congeries of races inhabiting the peninsula from time immemorial represent strata of races belonging to one or other of the two chief families of nations in various parts of Asia, viz. a Mongoloid and a non-Mongoloid, both terms being used broadly. Belonging to the latter family we have (1) Indonesians (defined by A. H. Keane¹ as the pre-Malay 'Caucasic' element, of which the Veddas and Korumbas, and one at least of the Australian aboriginal races, are typical), often called 'Dravidian' (though, like 'Malayo-Polynesian,' this term should strictly be confined to linguistic affinities); on the other hand, we find, as representatives of the same great family, (2) a more highly developed or specialized type, possibly the tall brown-skinned Polynesian. These two main Indonesian types are said to be represented in the peninsula, the pre-Malay 'Caucasic' element of the Korumba-Vedda type, by the aboriginal Sakai, centred in S.E. Perak and N.W. Pahang (cf. one of the basic elements in the Malay language),² while to the pre-Malay Oceanic 'Caucasians' (of the Polynesian or Maori type) belong the taller east coast 'Malays' of Kelantan and part of Patani. The latter may be described as very tall, somewhat fleshy, large-limbed men, with light brown or cinnamon-coloured skins, straight or wavy black, sometimes nearly curly, hair, and regular, sometimes almost European, features.

Again, the great Mongolian family of nations is represented both by the Siamese (or Thai) in the northern portion of the peninsula and by the Malays themselves in the southern part, the Malays proper being perhaps best regarded as a highly specialized offshoot of the southern or 'Oceanic' Mongoloid race, immediately immigrant from central and southern Sumatra. They have long, lank, bluish-black, straight hair, of circular section, and are almost beardless, with skin of a dark yellow-brown or olive hue (or the 'colour of newly-fallen leaves'); they are round-headed (brachycephalic), and often have more or less wide

¹ *Man Past and Present*, Cambridge, 1899, p. 281.

² R. O. Winstedt, *Malay Grammar*, Oxford, 1913, p. 12. This connexion was first definitely asserted by Prof. Schmidt of Miedling, Austria, and is now generally accepted; it establishes an ultimate prehistoric relationship between Malay and the languages of the aborigines in the Peninsula (ib.).

and flattened noses, and somewhat thick ears, and on the average are about 1.61 m. in height. The women are usually much shorter than the men. Both sexes have rather short, often almost stumpy, feet, with toes that are to some extent prehensile; they will walk up a thin sloping pole leading to a raised platform or house-floor by gripping it with the hands and at the same time holding it between the great toe and remaining toes of each foot. Their joints are remarkably fine and small; the dagger-ring of a well-developed old-style rebel chief, which was worn on his forefinger, was too small for an average-sized little finger of a European. A jungle Malay can commonly perform certain feats with his limbs that are impossible to a European unless he has been specially trained as an acrobat.

In Sumatra the race was moulded by Indian influences into a comparatively civilized condition before they crossed to the peninsula. When they arrived, they found the country occupied by the three pagan races (see below, (b)), whom they drove before them into the fastnesses of the mountainous and jungle-clad interior. It is thought that they also found some branch of the Môn-Khmer or Môn¹ races holding the coast-line and other points of vantage, and thus occupying almost the same relation towards the aboriginal races as the Malays do at the present day, and that they then partly absorbed the Môn, by thinning them of their women, and partly drove them into the jungle. This episode is, however, a lost chapter in the history of the peninsula, although some such theory seems evidently necessary in order to account for all the actually extant conditions.

The Malays proper are but partially civilized, a graft upon a savage stock, allied not only to the Central and Southern Sumatrans and Indonesians, but also perhaps ultimately to the Chams of Champa.² See CAMBODIA, CHAMS.

The hereditary savagery of the Malay nature, for many years after the introduction of the British Residential system (introduced to curb the turbulent Malay Rajas, who were fostering piracy), continually broke out, the commonest form in which it showed itself being perhaps the *amok*, the national Malay method of committing suicide, until the gradual strengthening of the right arm of British law made it too risky to indulge in, when by degrees it became unfashionable. Other striking evidence of the high-strung excitability of the Malay temperament is still to be seen in the form of the mysterious disease called *latah* (corresponding to what has been called 'arctic hysteria'), which also has not yet been thoroughly investigated.

(b) *Aborigines*.—Various theories have been put forward as to the ethnological character of the several wild races which form the substratum of the population. It was held by the older ethnologists that they belonged to a homogeneous group—a Negrito race modified by admixture with the Malay population. This is what has been termed the 'Pan-Negrito' theory of A. de Quatrefages, N. von Miklucho-Maclay, and others. This hypothesis, however, has proved untenable, and the result of later researches has established the

fact that at least three¹ types are to be found among these primitive tribes. Of these tribes two, at least (the Semang and Sakai), can be found in a relatively pure state, though only in very limited areas, and the third (the Jakun) is probably nowhere really pure. Admixture between the three has taken place in varying degrees throughout the peninsula, and the only satisfactory procedure anthropologically is to compare each tribe with the pure, unmixed standard or standards to which it is most closely related. By no other method can any really useful conclusions be reached, or, indeed, the drawing of the most fallacious inferences avoided.

(1) *Semang*.—The Semang are a nomad Negrito race—comparable with the Negrito (Pygmy) peoples of Central Africa, and probably most closely connected with the Andamanese, whose group of islands lies off the Burmese coast at its southward end—belonging to a primitive group of peoples found to a greater or less extent as a relic of the aboriginal population as far as New Guinea and the Philippines, although it is remarkable that no traces of any such race have yet been quite proved in Borneo midway between these two Negrito centres. The physical characters of these people are short stature (1.491 mm. male, 1.408 female), brachycephaly, skin varying from dark copper or chocolate to shiny black, hair woolly, nose broad, lips everted, beard scanty. They extend from Patani to Kedah, and from Kedah to Mid-Perak and N. Pahang.

In view of the fact that the Semang (or, as they are called on the east coast of the peninsula, Pagan) are so frequently described as being of Negro character—'like African negroes seen through the reverse end of a field-glass'²—it cannot be too strongly stated that this is a mistake. At the utmost, it may be conjectured, with W. H. Flower, that they represent, with the true Pygmies, an original undeveloped stock from which the Papuans, like the Negroes, may have branched off. But even for this theory there are many difficulties, and it cannot be said to have been in any way established. Hence the Negrito and the Negro must be regarded as totally different races—the former having short or round heads and the latter being long-headed.

(2) *Sakai*.—The Sakai were at one time regarded as Semang admixed with Malay, but are now clearly differentiated as a separate and independent type³ most nearly akin to the Dravidian group of peoples. They are taller than the Semang (average height 1.504 mm. male, 1.437 female), dolichocephalic, skin very variable, light to dark brown, hair wavy, nose fine and small, cheek-bones broad, mouth small, lower lip full and projecting, beard as a rule non-existent. The habitat of the purest Sakai is S.E. Perak and N.W. Pahang.

(3) *Jakun*.—The Jakun are a mixed group inhabiting especially the south of the peninsula, probably everywhere blended, to a varying extent, with Semang and Sakai. This fact is the more remarkable since a relatively important element running throughout all the aboriginal dialects in

¹ Pronounced 'Mown.' The Môn, or Talaing, are remnants of an old pre-Malay ('Caucasic') race which once covered the whole of lower Burma. The Talaing language is the oldest literary vernacular of Indo-China, and is fast dying out, though it is the original tongue upon which the Burmese alphabet and religion were modelled, and in which were composed the Môn inscriptions, which go back to about the 11th cent. of our era.

² The Cham dialect has in recent years been shown to contain Malay elements (E. Aymonier and A. Cabaton, *Dictionnaire Cham-Français*, Paris, 1906). One of the most peculiar customs (though in this case non-Malay) attributed to the Chams is that the women ask the men in marriage.

¹ Wilkinson has recently suggested that five aboriginal race types should be recognized. When, therefore, the new elements, such as would be required in order to form the two proposed new types, have been differentiated, and these elements are all shown not to be referable to either one or the other of the three types already identified, the problem will have reached a further stage of development. Certainly, as there are still some unexplained points, it is probable that some further racial element may eventually be isolated (see F.M.S. Govt. *Papers on Malay Subjects: Aboriginal Tribes*, 1910).

² Hugh Clifford, *In Court and Kampong*, London, 1897, p. 172. But this is a microscopic slip for an author who has done as much as any other ten men to familiarize the English public with the peoples of Malaya.

³ This all-important differentiation was first clearly established by R. Martin; see his *magnus opus*, *Inlandstämme der malayischen Halbinsel*, Leipzig, 1905.

varying degrees consists of some Malayo-Polynesian tongue, the vocabulary of which shows affinities with the Malayan languages of the Far Eastern Archipelago, unlike modern (peninsular) or standard Malay. The reason for this is not apparent, unless we may conjecture that at some remote period a race whose national speech was of this Malayo-Polynesian type prevailed in the peninsula. The Jakun may be classified as consisting of at least three related groups, blended as above. In so far as they are of Malayan type, they should be to that extent regarded as aboriginal Malays. In physical character they are a little taller than the Sakai, the head is brachycephalic, the skin dark coppery, hair long, straight, and smooth, nose thick, flat, and short; the eyes show little tendency to obliquity, and the mouth is large and broad, with well-formed lips. The Jakun proper are divided by the Malays into Hill Tribes (Orang or Jakun Bukit) and Sea Jakun (Orang Laut).

The surest test in regard to these tribes is the hair-character; hence we may distinguish the three main racial groups as *ulotrichi* ('woolly-haired'), *cymotrichi* ('wavy-haired'), and *lisotrichi* ('smooth-haired').

There has undoubtedly been a considerable admixture between all the wild tribes, but, owing in particular to their being still pagans, it is improbable that they have been materially affected by intermingling with the Malays, since nothing could be rarer than that a Malay woman should demean herself by marrying a heathen husband. The case is rather the other way about, since a Malay marrying a woman of the wild tribes would see that his children were brought up as Muhammadans, while in many districts, especially in Kedah, the adoption of the Muhammadan religion by a large portion of the aboriginal Semang element has caused them to be reckoned as part of the recognized Malay population.

3. Culture.—(a) *Malays*.—Apart from such tendencies as have already been mentioned, the Malay character may be regarded as a softened and more civilized form of the Mongol, since under ordinary circumstances he may be relied upon to show himself a peaceable, quiet, civil, and loyal subject, though he still retains much of his old proud sensitiveness, and in inland districts he is still reserved in his ways of life, and to some extent suspicious of strangers. In countries where he is less trammelled by civilization, the Malay is frequently of a bold and even savage character and makes an excellent soldier; there should, therefore, be no doubt that with training he would soon develop first-rate soldierly qualities. His alleged laziness is due in part to his natural reserve, which allows more pushing races to outstrip him, and in part to the simplicity of his life, and to the absence of any spur to industry in a land where the climate supplies out of its own superabundance the greater part of his few simple wants—a land which to him is a veritable 'island of fruits,' of 'bowery hollows crowned with summer sea.' It must be remembered, too, that before the advent of the British the employment by his rulers of the *krah* or *corvée* system, as well as the wide prevalence of debt-slavery, made it difficult for the average Malay to reap the reward of his labour.

Among the institutions of the Malay race which it shares more or less with other races in the same region are the use of sea-canoes (*prahus*,¹ once associated with piracy), the building of houses on piles (inland as well as on the border of tidal

¹ These *prahus*, being roomy boats paddled by large numbers of men, and of extremely shallow draught, could habitually elude pursuit by men-of-war's boats by slipping over the innumerable river-bars of the peninsula, and escaping into the network of salt-water creeks. It was not till the second half of the 19th cent. that the *prahu* was vanquished by the paddle-wheel.

rivers), the use of the blowpipe with poison-tipped darts (now practically confined to the aborigines), and the *kris*, the *sarong* (the national Malay plaid skirt-like garment, closely corresponding to the kilt of our own Highlanders, though worn somewhat longer on the western seaboard of the peninsula), the filing, gold-plating, and blackening of the teeth (now all but completely obsolete customs), the use of the *balei*, or council-hall (now confined to Rajas), and a strong belief in animism. In spite of being animists at heart, however, the Malays are not infrequently more or less bigoted Muhammadans, being in this respect at the very antipodes to the Battak of Sumatra, who have a literature of their own, and who are still to some extent inclined to be cannibals.

The Malay traditions and romances contain distinct references to human sacrifices, which would appear to have lasted until the advent of the British. The men show mechanical skill of a high order, and would probably respond readily to a more advanced training especially in engineering. Many are still adept in manual arts, notably in those belonging to the jungle and the sea.

The material culture of the Malay is of the insular Malayan (chiefly Sumatran) character. It has never been influenced by Hinduism to such an extent as, for instance, the culture of Java (as exemplified in the architecture of Borobudur and other famous temples of ancient date in that island). The Malays are skilled and artistic craftsmen in certain arts, though in others they are somewhat conspicuously backward. Their textile work reaches a high standard, and they display considerable ingenuity in their weaving processes and in combining their dyed threads to produce elaborate and often intricate patterns, among which a variety of check patterns predominate. In metal-work, especially in the working of silver, their taste is, under favourable circumstances, less florid than the Indian and less coarse than the Chinese. In ornamenting metal and damascening, in inlaying, and especially in niello-work, their work, both in design and in technique, is excellent of its kind. Distinction in such branches of metallurgy as the manufacture of blades for their krisses, and other weapons, is rare, though not non-existent; a high degree of skill in the adornment of the hilts of weapons and the sheaths in which they are kept is appreciably common. They pay special attention to the manufacture of waved kris-blades, and their damascene-work is a technical process of considerable elaboration, the more so because the proportions and even, in some cases, the ornamentation of the blade are determined by an elaborate set of rules governing the dimensions and intended properties of the various portions. These rules are not entirely technical, though compliance with them requires some degree of technical skill, but are in part magical, and designed to secure excellence in the blade and success in its employment. Similar rules are sometimes applied in a lesser degree to the *parang* (woodman's knife). Metal casting by the *cire perdue* process is known and employed not only for copper but also for white metal or *tutenague* (sometimes popularly called 'tooth and egg' metal). Coins (round cash) were formerly cast on the east coast in the form of 'cash-trees,' from which the cash were snipped off, and before the British entered the country the superfluous tin was run into ingots shaped like elephants, crocodiles, cocks, etc., which were used as currency.¹ Time was reckoned by water-clock (as in India and Ceylon and also, it may be mentioned, in ancient Britain). Thus for the mains at cock-fights in Kedah it was kept by means of a

¹ R. O. Temple, *The Obsolete Tin Currency and Money of the Federated Malay States*, Naggaon, 1914 (reprinted from *LD*).

perforated half coco-nut shell set afloat in a water-bucket, and timed to sink in a definite period. Pottery is made both with and without the wheel, and also by moulding in a split trunk, but in a few places only, and is often crude; on the west, in some cases, Indian influence is traceable, the types being both graceful and artistic. In some cases hæmatite, which turns black on firing, is used as a varnish. The wide-spread use of bamboo and the palm-spathe bucket as a receptacle is, no doubt, responsible for the lack of a more extended development of fictile ware, in spite of the great abundance of clays suitable for porcelain. On the east coast generally, and less commonly on the west, mat-making is a fine art; at Malacca highly artistic baskets are made of twisted strips of pandanus. The woodwork of the Malays, as shown in the ornamentation of household utensils, as well as on the structural side of house and boat manufacture and furniture, is excellent, though as regards mere ornament it is decidedly scanty—the heart-breaking effect of the superficial Muhammadan veneer which has been imposed on the Malays from without. The further from such influences, the commoner such ornament becomes, and the better its quality. The Malays are especially ingenious in adapting means to ends and in conforming to the conditions of their surroundings; their houses are well adapted to the conditions of life of a jungle-dwelling race, whilst the seaworthy qualities of the Malay *prahu*, or sailing-boat, bear witness to the reputation of the Malay as a sailor.¹

(b) *Aborigines*.—The culture of the wild tribes presents generally many features of similarity. The inland tribes are still nomads to some extent, existing largely by hunting, fishing, and the produce of their search for fruits and roots of the jungle. But most of them practise a primitive agriculture, sowing in a rude way small patches of rice or millet; their method of cultivating their half-wild orchard-trees, which grow as well in the jungle as elsewhere, is limited to throwing away in certain patches of the jungle the seeds or stones of the fruit they have eaten. The Sea Jakun are especially skilled in all devices for securing a livelihood along the foreshore, while the jungle tribes give evidence of a high degree of ingenuity in slaying and snaring their game by hunting and trapping.

The Semang are the most nomadic of the pagan tribes, though they are now taking to agriculture. Their typical clothing consists of a girdle of leaves or barkcloth, or, on festal occasions, a belt of shining black strings, made of the rhizomorph of a toadstool. Their typical habitations are of a primitive character, consisting of mere lairs, or rock-shelters, or of simple round or rectangular leaf-shelters planted on the ground or in trees. Those of a more developed type are large enough to shelter a whole tribe, each individual having a separate fire and bamboo sleeping-place. Frequently the head is more or less shaved and the teeth are filed to form a concave surface, possibly in accordance with a once usual Malay custom. They do not circumcise or (as a rule) chew betel, nor do they tatu or scarify the body. They have no boats, but use bamboo rafts on the river-reaches. Their most distinctive weapon is the bow with poisoned arrows; in fact, among the pagan tribes, the bow is, in the present writer's opinion, good *prima facie* evidence of Semang admixture; the northern Sakai, who also possess it, have most likely borrowed it from the Semang. Almost all, however, now also employ the bamboo blowpipe, of a different type from that of the Sakai, the idea

of which has been copied, in all probability, from their Sakai neighbours.

The Semang have no organized body of chiefs, but each tribe has a single head-man. The tribes are organized in villages, each under a chief, to whom disputes are referred. Quarrels between villages were settled by meetings of these chiefs. Complete equality exists as between individuals, and all property is held in common. Crime is rare, and punishable generally by fines.

The Sakai, a mountain race, are still largely nomadic. Their habitations consist of tree huts and temporary shelters; their clothing is a loin-cloth of tree-bark, though they also decorate themselves on occasion with a girdle of leaves. They tatu the face and practise scarification and body-painting, and sometimes wear a porcupine quill or a metal ring through the nasal septum. Their distinctive weapon is the bamboo blowpipe. Agriculture is of a very primitive type, the principal implement being a digging-stick. They use neither boats nor rafts. The ornamentation of their implements, more especially the blowpipe and quiver, is considerably more artistic than that of the other aboriginal races.

Their social order, like that of the Semang, is of a primitive type; the only functionary is the *pēnghulu* (Mal. 'head-man'),¹ who has every right over his tribe. Except when enforcing his position, however, he is only the equal of his fellow tribesmen. The office is hereditary, but, failing a direct heir, the *pēnghulu* may appoint his successor during his lifetime. In their laws the penalty of death is reserved for murder, the relatives of the victim being the executioners. Cases of this kind are rare. For theft, also rare, the punishment is exclusion from the tribe. For other crimes the delinquent makes compensation, or pays a fine. Individual property does not exist, its place being taken by family property. The family as a unit cultivates the land, and the produce is shared between the members. The limits of the family property are designated by the *pēnghulu*, and abandoned land may not be taken up without his consent.

A more highly developed social order exists among the Jakun, or aboriginal Malaysians, as represented, e.g., by the Southern Sakai, who show strong Malayan influences.

The Jakun are still to some extent a community of hunters, although among the Land Jakun agriculture is practised, more especially rice-planting. Their clothing resembles that of the Malays, but is scantier. They sometimes file their teeth to a point. Their typical weapon is a blowpipe of bamboo, or, as in Kuantan, uniquely made of two half cylinders of wood fitted together for the purpose—corresponding exactly to a form of blowpipe used in Peru. They have no bows. They use spears and outlasses; in some cases they also carry sword and kris like the Malays. They live in huts built on piles and use 'dug-out' boats of hollowed tree-trunks, but on the river only, not on the sea. They still use face- and body-paint, but do not tatu or scarify the face. Their marriage customs include, like those of the Malays, 'bride-purchase,' the ceremony of eating together, and, in addition, the bride-chase, which takes place round a large bell-shaped mound, constructed for the occasion, or an ant-hill or tree, if the tribe is a land one, or in a dug-out canoe—the form which it took among the sea-gypsies (Orang Laut). Their social organization is of a distinctly higher type than that of either Semang or Sakai. The chief of their tribe, the *batin*, is the head of a group of villages, and has certain subordinate officers

¹ See H. Warington Smyth, 'Boats and Boat-building in the Malay Peninsula,' in *Journal of the Soc. of Arts*, 1902 (reprinted in *J.A.* xxxv. [1906] 97 ff.).

¹ *Pēnghulu* = Mal. 'head-man' (from obs. Mal. *hulu* or *ulu*, 'head'). On the other hand, *pellina* or *pēnglima* = Mal. 'hand-man' (from obs. Mal. *lima*, 'hand'), i.e. executive officer.

who represent or act for him upon occasion. Thus, among the Besisi of Langat, the *batin* is the arbiter of all disputes referred to him by the sub-chiefs, besides being the priest at marriages, the magician in cases of illness or disaster, and the judge whose duty it is to punish wrong-doing. His substitute is the *jinang*. Their subordinate, known as the *péngkulu balai*, has charge of the tribal feasts and councils, whilst the *jukrah* (probably = Mal. *juru-krah*, or 'corvée officer') is the summoner of the tribe; the *pénglima* is the *batin's* executive officer. Among the Benua each *batin* has authority within his own jurisdiction, but difficult or unusual cases are referred to a council composed of all the *batins*. In this division of the Jakun, as indeed among all, crime against personal property is rare, and is expiated by payment of fines in the form of coarse Chinese plates or saucers. One half of the fine goes to the *batin* and one half to the injured person. The office of *batin* descends, as a rule, from father to son, except among the Johor Jakun, where the eldest son has to be accepted by the tribe, and, if his brothers as well as himself are rejected, a stranger to the family is elected. If suitable, the sons of minor officials would be appointed by the *batin* to succeed their father. The inheritance of property was generally from father to children, but varied from tribe to tribe in the proportion assigned to sons and daughters or to wife and other relatives. Property held by a man before marriage among the Mantra was assigned on his death to his parents, brothers, and sisters.

4. Languages.—(a) Malay.—The Malay language belongs to the Malayo-Polynesian family, related forms of which occur sporadically over an amazingly vast insular area, extending from Formosa in the North to New Zealand in the South, and from Madagascar in the West to Easter Island in the Eastern Pacific.¹ Malay itself has, moreover, very considerable importance as a *lingua franca* over a great part of the same region. In recent years a connexion has been sought between the Malayo-Polynesian family of languages and a family of 'Austro-Asiatic' languages, including S.E. Asia, Munḍa (Central India), Khāsi (Assam), Môn, or Talaing, and Khmer, or Cambodian (Indo-China), Nicobarese, and the aboriginal dialects of the Malay Peninsula; 'this connexion is now generally accepted.'² This fact would actually link up the Malayan language in pre-historic times with the corresponding element in the Sakai and Semang dialects of the peninsula. This theory is entirely the work of Schmidt; but C. O. Blagden's work³ in tabulating the various elements in these aboriginal dialects first made this identification possible.

The Malay tongue, by which the standard speech of the peninsula and E.C. Sumatra is meant, is of an agglutinative character, the roots being, as a rule, unchanged, and new words being formed by means of affixes, infixes, and reduplication. The roots are mostly disyllabic, and the derived words frequently very numerous, while any harsh juxtaposition of consonants is avoided, by means of either assimilation or dissimilation, following certain recognized euphonic rules.

From a phonetic point of view, Malay shows a remarkably small, almost a minute, number of changes during the last four centuries. At an earlier period it had, however, become morphologically simplified, analysis showing the development of the modern affix system out of an earlier and more restricted substratum of similar particles common to Malay itself and to the islands of the archipelago.⁴

The oldest foreign loan-words in Malay are Sanskrit, and include words for religious, moral, and intellectual ideas, with some astronomical, mathematical, and botanical terms, a court vocabulary, and a large number of everyday words.⁵

The plural is theoretically formed by reduplication, though, as a rule, in the vernacular speech no difference is made between plural and singular. Reduplication is, however, also employed to express a metaphorical meaning. Thus we have *orang*, 'person' or 'man' (whence *orang-utan*, 'man of the woods' or 'wild man'), but *orang-orang*, 'pupil of the eye' (corresponding to what are called, in Elizabethan literature, 'children' or 'babies of the eye'); *kuching*, 'cat', but *kuching-kuching*, 'biceps muscle' (from the play of the muscle; the Romans, by a curious antithetical metaphor, compared it to a little mouse—*musculus*). Similar metaphorical reduplications give us *kuda*, 'horse', but *kuda-kuda*, 'wooden horse' or support (as in our own towel-horse); and *tupai*, 'squirrel',

but *tupai-tupai*, 'belaying pin' (on a mast, which is compared to a squirrel running up a tree).

With regard to the difficult question of the penultimate accent, Winstedt¹ (with H. van der Wall and Gerth van Wijk) has recently (1918) come to the conclusion that the stress falls, even in standard Malay, upon the penultimate syllable, both in the case of simple words and in words that are mere derivatives. In this he is probably correct, although it is far from being in accordance with the usually received opinion.

The Malay parts of speech frequently fail to coincide with our own: a root-word or radical, e.g., may often be used either as a substantive or as an adjective, with complete indifference, and the same remark holds true of substantive and verb. Words which logically would have priority take precedence of those which should not do so. Thus the actual subject or thing talked about, having prior importance logically, precedes any word which is merely qualificatory; also the normal sentence-order is subject, verb, object. There is no inflexion for gender, number, or case, and the syntax is as simple as that of 'pidgin English.' Thus it has been accurately remarked that the lines,

'Little boy, box of paints,

Licked his toy, joined the Saints,'

would be verbose to a Malay, who would express it as follows:

'Little boy, box paint[s],

Lick[ed] toy, join[ed] Saint[s].'²

Similarly an up-country European traveller who happened to inquire whether there would be time for him to reach a neighbouring village before nightfall might be puzzled to receive by way of reply the mysterious monosyllabic 'Can' or 'Dark' (as the case might be), the meaning in the first case being that he could safely reckon on doing so, and in the second that night would fall before he reached his destination.

Malay may, therefore, be thought of—if such an expression may be allowed—as a kind of 'shorthand speech'—a fact which is the more remarkable because in the written literary language it often reaches the opposite extreme of exuberant verbosity.

The dialects of Malay are many and varied, but the three that are of most importance to the present subject are: (a) the dialect of Kelantan and Patani, (b) the dialect spoken in Nēgri Sembilan (i.e. especially in Nanning and Rembau), and (c) the Riau-Johor dialect (spoken in Selangor, Perak, Pahang, etc.). Of these the first is that which especially shows survivals from the Malayo-Polynesian tongue, to which reference was made above. This correspondence, moreover, is fairly close, as can be seen from the Maori *rua* = Malay *dua* ('two'); Maori *ika* = Malay *ikan* ('fish'); cf. even the Easter Island *mate* = Malay *mati* ('dead'); Malagasy *vulana* = Malay *bulan* ('moon'); Formosan *pidlak* = Malay *perak* ('silver').³ Even New Guinea dialects (usually supposed to be free from Malay) contain some words of evident Malay origin. In view of other evidence, it seems permissible to believe that this particular Malay dialect of the east coast of the peninsula forms a much-needed link between standard Malay and the nearest Malayo-Polynesian languages, and, further, that it was from this precise district on the continental seaboard of south-eastern Asia that this Malayan dialect spread throughout the Polynesian islands. The corresponding social links are (a) their very similar kin-systems and (b) the general use of tabu.

(b) Aboriginal dialects.—The languages of the wild tribes are split up into a number of dialects, each confined to a relatively small area. They are rapidly disappearing, especially in the southern districts of the peninsula, their place being taken by Malay as the wild tribes become more nearly assimilated with Malays in status and culture under modern conditions. Setting aside purely local and unimportant differences, the linguistic material, scanty as it is in most cases, has been classified into three main groups, which may be referred to three principal types or standards: (i.) typical Semang dialects, best represented by the speech of the aborigines in central Kedah and the adjoining State of Raman; (ii.) typical Sakai dialects, the best specimens coming from south-eastern Perak and the adjoining district of Pahang; and (iii.) in the southern part of the peninsula, the Jakun dialects, which may be classed together as Jakun or Malayan in spite of the fact that they contain a large number of Sakai words, because the great bulk of their words are Malayan and not Sakai, although they do not afford material so favourable for clear type-differentiation as is found among the Sakai and Semang. Both in phonology and in vocabulary the Sakai and Semang show considerable divergence, but between the strongly contrasted type-dialects are intermediate variations, the linguistic evidence thus supporting the ethnological data in pointing to contact and admixture.

Roughly speaking, the dialects fall into groups which correspond, though not accurately, with the anthropological varieties of the aboriginal races, at least in the case of Sakai and Semang.

Of the affinities of the aboriginal languages and the elements which have entered into their composition something has already been said. It is clear that all the dialects as now spoken contain a considerable number of purely Malay words, more or less modified in pronunciation by the borrowers. In addition to these loan-words, however, which are easily identifiable, there is a considerable element remaining which is not traceable to standard Malay. The latter element, of which we have already spoken, was not developed within the peninsula, and this and the Malayo-Polynesian factor in the aboriginal dialects which is akin to the insular Malay spoken in the Malay Archipelago together make up what is perhaps the largest component in the languages of the aborigines. A third and still

¹ For illustration of this astonishingly wide range see below, p. 358b.

² See above, p. 345, n. 2.

³ W. W. Skeat and C. O. Blagden, *Pagan Races of the Malay Peninsula*, London, 1906, vol. II, ch. IV, 'Language.'

⁴ Winstedt, p. 12.

⁵ W. Maxwell, *Malay Grammar*, London, 1888, Introd.

more interesting element has been proved to show a very close affinity with the Môn-Khmer or Môn dialects of western Indo-China. The identifications, though certain and numerous and even striking, are rather disappointing, if considered as a vocabulary percentage. Sidney Ray himself once remarked to the present writer: 'What is the use of our assuming [as certain scholars had done] that the Sakai dialects are identifiable with Môn, when all that has been identified is about 20 per cent of the entire vocabulary? The question is, what is the remaining 80 per cent?'

To reply, we must study attentively both the Semang and Sakai syntax structure and a considerable percentage of the vocabulary, and especially, as regards Sakai, the phonology; the modern Jakun dialects are of no less importance. In each group there remains an unidentified element. Semang embodies a number of words which are confined to the Negritos and which are completely *sui generis*. It is clear that the Semang dialects did not originally belong to the Môn-Annam group. These words relate to matters of everyday life, and presumably they represent the old original dialects of the Negritos. Relationship with Andamanese has been suggested, but remains completely hypothetical; for hardly a single word of Semang is recognizable in the Andaman dialects, and this fact is one of the many and great puzzles of the Semang problem. For the unidentified element in Sakai no suggestion as to origin has been made, though it is possible that many of the uncertain words may yet be traced not to a Malayan but to a Môn-Annam origin. In the case of the Jakun it is pointed out that some of the words of unknown origin occur in Semang, but not in Sakai, but they are hardly of sufficient number to support the view that Jakun dialects were originally allied to Semang; on the contrary, a large number of Jakun words are certainly allied to Sakai, and Wilkinson, treating as Jakun certain southern Sakai dialects, seeks to eliminate Blagden's linguistic Jakun, but leaves unexplained both Kénaboi and the common element in which Mantri, Beduanda, and Jakun differ from every other known language.

5. Religion: greater gods.—(a) Malay.—The official Malay religion, as has already been stated, is Muhammadanism, but the popular beliefs and ritual afford abundant proof, which is supported by the historical evidence, that this religion has been superimposed upon some form of Hinduism, which itself, when introduced into the country, superseded an earlier and more primitive type of belief, of shamanistic character. Folklore, charm-books, and romances go to show that the greater gods of the Malay pantheon—so far as their names go—are borrowed Hindu divinities, while the lesser gods and spirits are native to the Malay religious system, incorporated in and modified by the higher religions, but not entirely forgotten.

Taking first the Hindu divinities, we find Viṣṇu, the preserver, Brahmā, the creator, Batāra Guru¹ (Siva), Kala,² and Seri³ simultaneously invoked by the magician. Of the greater divinities Batāra Guru is, in the minds of the Malays, unquestionably the most important; in other words, the Malays were of the Śaivite sect of Brāhmanism. In the *Hikayat Sang Samba*, the Malay version of the *Bhāgavatā*, Batāra Guru appears as the supreme god Siva, with Brahmā and Viṣṇu as subordinate deities. He alone has the Water of Life which resuscitates slaughtered heroes. The Malay magician will, on occasion, boldly declare that he was the all-powerful spirit who held the place of Allāh before the advent of Muhammadanism, a spirit so powerful that he 'could restore the dead to life'; and that to him all prayers were addressed at that period. It may be noted that most of the theological terms in use among the Malays are of Sanskrit origin, and that the titles Sang-yang ('the deity') and Batāra are used mostly of the older Hindu divinities. The Malays, however, in adopting the Sanskrit title of Guru, seem to have transferred it to a hunting-god, whom they identify in certain localities with the 'Spectre,' or 'Demon Huntsman,' though pure Hinduism would certainly not have recognized hunting (one of the deadly sins of that religion) as a pursuit fit for one of their deities. Further, the Malays distinguish between a good and a bad side of Batāra Guru's character, which may point back to the combina-

¹ Guru=spiritual guide. Batāra is Skr. *bhāṭāra*, 'highly honourable'; in Jav. (Manjapahit) and Sej. Mal. it='king.'

² Skr. *kāla*, 'black,' an epithet of Siva.

³ Skr. *Sri*, goddess of good fortune and wife of Viṣṇu.

tion into one of what were originally two distinct personalities, Batāra Guru and Kala. Thus the Malay Kala holds as his only definite sphere of influence the foreshore, a strip intermediate between the land-sphere of Batāra Guru and the dominion of a third deity called 'Grand-Sire Long-Claws' (Toh Panjang Kuku). This attempt to divide the spheres of land and sea must again be attributed solely to the Malays, as Hindu mythology knows nothing of the sea. It is clear, therefore, that in the greater deities of the Malayan pantheon we may, after all, recognize Malayan deities simply re-named after the gods of the Hindus. The Batāra Guru of the sea is identified by some magicians with Si Raya, and occasionally with the god of mid-currents (Mambang Tali Harus). Sickness is sometimes ascribed to him, but it is not usually so fatal as illness induced by the malice of the Demon Huntsman, and fishermen and seafarers, on the other hand, obtain from him many benefits. The only other deities of importance are the White Divinity, who dwells in the sun, the Black Divinity, who dwells in the moon, and the Yellow Divinity, who dwells in the sunset; the last is considered most dangerous to children, and Malayan parents always endeavour to keep their children within doors at sunset and during the twilight in order to avoid his malignant influence.

(b) Pagan races.—In view of the still inadequate evidence of the beliefs of the pagan tribes in relation to a supreme deity, it is necessary to exercise some caution in making any statement as to their ideas upon the subject. On the other hand, it is at least safe to remark that any one who, as the result of mere worrying by questions, commits himself to the statement that any of these pagan races have no such beliefs whatever proves merely that his own methods of investigation are at fault in these matters.

It appears, moreover, clear that the Semang and Jakun, and possibly also the Sakai, are at present in the stage of development, common to most primitive peoples, in which the supreme deity belongs to the realm of mythology rather than of religion proper. Since he stands more or less aloof from the affairs of this world and the next, and possesses no cult, his claims to recognition are set aside in favour of spirits more closely in touch with mundane affairs, whose powers for good and evil are constantly capable of exercise and who at every turn must be propitiated. Among the Semang there is clear evidence for a belief in the existence of such a being, combined with a crude dualism based upon natural phenomena.

According to one account, Tā' Pōnn ('Grandfather Pōnn') is a powerful but benevolent being described as the maker of the world. He was, in fact, described to the present writer by the Semang of Kedah as being 'like a Malay Raja; there was nobody above him.' He is the moon's husband and lives with Ag-Ag, the crow who is the sun's husband, in the eastern heavens. Tā' Pōnn has four children, two male and two female. His mother Yāk is the old Earth-mother, and lives underground in the middle of the earth. He has a great enemy, Kakuh, who lives in the west. He is dangerous and very black. That is why the east is bright and the west dark. The heavens are in three tiers, the highest of which is called Kakuh, and which are defended against unauthorized intrusion by a giant coco-nut monkey, who drives away any one found trying to enter the heavens.

The naturalistic dualism of this account is obvious; from his place of abode, and from his having the moon as his consort, we may perhaps conclude that Tā' Pōnn is a spirit of the rising sun. In addition it has been maintained that the Semang recognize two other superior deities, Kari, a thunder-god, the supreme creator, ruler, and judge, and Ple, a related but subordinate divinity, who, under Kari, created earth and man. The evidence, however, is too slender for dogmatic statement, and the point still awaits the collection of further material.

The religion of the Sakai is more shamanistic in character than that of the Semang, and, if any corresponding belief exists among them, as has been maintained, it is overshadowed by the cults of demons, ghosts, and spirits. The Jakun afford more certain evidence of a belief in a supreme deity, although their conceptions at the best are vague and shadowy. The Mantri say that Tuhan Di-Bawah, lord of the under world, created the earth and dwells beneath it, supporting everything above him by his power. The Benua believe in one god, Pirmān,¹ who dwells above the sky and is invisible. He made the world and everything that is visible. The greater part of the Jakun of Johor know and acknowledge a supreme being whom they call by the Malayo-Arabic name of Tuhan Allāh; the grotesquely slight influence, however, that is really exercised by Muhammadanism on the wild races of the Malayan jungles is best evidenced by the statement of those tribes who believe that Muhammad, the prophet of God, is the wife of the supreme deity.

6. Lesser gods, spirits, and ghosts.—(a) Malay. —Subordinate to the great gods are lesser gods or spirits whose place in Malay mythology is due to Muhammadan influences; their inferiority may in part be due to the law that the gods of the autochthones are usually considered by an invader more powerful than his own deities. These lesser gods and spirits are the *jin*, or genii. The Malays, to a certain extent, show a tendency to identify them with the spirits of the older Hindu religion, but only the Black King of the Genii (Sang Gales Raja) appears to rise on occasion to the level of the great divinities, when he is regarded as a manifestation of Batāra Guru in his destructive aspect as Siva, or Kala, though later he came to be considered a separate personality. This would also explain the difficult problems of how the Black and White Genii come to be regarded as brothers, the latter being identified with Mahārāja Deva, 'great king of the gods.' The genii are also subdivided into good and faithful (*jin islām*) and bad (*jin kāfir*), this nomenclature being obviously a Muslim accretion. In addition to these subdivisions they are also regarded as attached to special objects—e.g., the powerful *jin* of the royal musical instruments. The genii are able to do infinite harm to mortals, and choose as their dwelling-places hollows in the hills, solitary places in the forests, dead epiphytes on trees, etc. They are sometimes said to derive from the dissolution of various parts of the anatomy of the world-snake Sakatimuna, the first great failure at man's creation.

The Malays have also adopted into their popular religion the Muhammadan belief in angels (Azrael, Michael, and Gabriel), prophets (Solomon, David, and Joseph), and chiefs, four in number penned in the four corners of the earth.

Ghosts and spirits are known by the generic name of *hantu*. Of these there are many varieties. *Hantu kubur* are grave-demons who, with the spirits of murdered men, prey upon the living whenever they see an opportunity; *hantu ribut* is the storm-fiend; *hantu ayer* and *hantu laut* are water- and sea-spirits; *hantu rimba*, deep forest demons; *hantu bērok*, the baboon-demon; *hantu bēlian*, the tiger-demon; and *hantu songket*, the 'loosening' demon, who interferes with rope-snares and traps for wild animals. In addition there are giants and 'tall' demons (*bota*, *gasi-gasi*, and *hantu tinggi*) as well as 'good people' (*bidadari* or *pēri*), who are of foreign origin; echo² spirits (*orang bunyian*), spirits of whom little is known except that they are good

fairies and very easily cheated; blood-sucking demons of various kinds, mostly birth-spirits (these last being certainly among the ghastliest conceptions of humanity); and others such as the *hantu kopek*, which is the equivalent of our own nightmare.

(b) Pagan races.—Except in one or two cases, little has been recorded concerning the beliefs of the pagan tribes relating to the spirits or demons. Those which most afflict the Sakai of Ulu-Bertani are the 'tiger-spirit,' the 'jungle-spirit,' and the 'river- or water-spirit.' Against these charms and simples can prevail. Against the tree-spirit, however, who slays his victims before any one can help, there is no protection. The Sakai of Selangor had a ceremony at which they sat and blew bamboo pipes and sang to the demons.

The spirits in which the Bēsi believe include the wind-demon (*jin angin*), who lives on a white rock near Tanjong Tuan (Cape Rachado); the demonic legion (*jin sa-ribu*), who dwell in the earth and, when possible, feed upon human beings; and the garrotting demon (*jin sa-rapat*), who lives in the uplands. Certain trees are the embodiment of spirits, notably the gutta, eagle wood, and camphor trees, and this idea is extended to inert objects—e.g., canoes, treasure-jars, and stone implements. Chipping a jar kills its spirit.

The Demon Huntsman (*hantu si buru*) is ten ft. high, and his face is very hairy. From nightfall onwards during the full of the moon he hunts the wild boar and the *sambhar*-deer. Although he is highly dangerous to mankind, many have made friends with him, and, when they have invoked him, he has cured them of their illness. Other spirits are the river-spirit, the demon of fatal birth-sickness, and the tomb-demon, which, in one of its manifestations, plunders graves in the form of wild beasts, such as deer and tigers.

7. The soul.—(a) Malay.—In Malay beliefs the *sēmangat* ('human soul') is a thin, unsubstantial mannikin, temporarily absent from the body in sleep, trance, or disease, and permanently departed after death. It is about the size of the thumb and invisible, but is supposed to correspond in shape, proportion, and complexion to its embodiment; it can fly quickly from place to place, and it is often, perhaps metaphorically, addressed as a bird. In mental attributes it is quasi-human and may possess, independently of its corporeal owner, personal consciousness and volition. It has been alleged that the *sēmangat* cannot be the 'soul' because it is believed to quit the body and wander about during sleep, and that it must therefore be a spirit of vitality. But this very same reasoning would show that it cannot be a spirit of vitality. What is actually meant here by 'soul,' however, is the native (and our own mediæval) idea of the soul, which is something very different from the soul of our modern idealistic Christianity. The latter might indeed almost be described, in comparison with its mediæval prototype, as a 'super-soul,' and it is only the more primitive idea of the soul in which we are here interested.

In charms it is addressed as having a house, usually, though not necessarily, identified with its embodiment (the body of its owner). As the *sēmangat* is separable from the body, it follows that, if called in the right way, it may be made to follow—a powerful weapon in the hands of an enemy or lover who possesses the requisite magical powers. When abducted, it may be imprisoned in a lump of earth, a cloth, or a wax mannikin. The lump of earth should have been in contact with the victim's body—e.g., with the sole of the naked foot. An escaping or swooning *sēmangat* may be recalled to the owner's body; hence the form of certain kinds of medical treatment. In the older charms

¹ But this name (=Pirmān, 'Word of God') is clearly borrowed, like Allāh, from Muslim sources.

² Possibly Skr. *śankara*, 'beneficent,' an epithet of Śiva.

³ Or 'hidden.'

the *sēmangat* is distinctly referred to as being sevenfold, and, as a similar multiple division is found elsewhere among savages (*PC*¹ i. 391 f.),¹ this may be taken as original, although seven is a somewhat favourite number in Malay magic.

The belief in the existence of *sēmangats* does not confine them to human beings. Animal, vegetable, and mineral *sēmangats* are clearly recognized. While in the case of animals the *sēmangat* is a counterpart, on a reduced scale, of its embodiment, in the vegetable and mineral kingdoms the tree *sēmangat* or the ore *sēmangat* is usually an animal, whereas the rice *sēmangat* is treated as resembling a human infant. The *sēmangat* of the eaglewood tree, e.g., takes the form of a bird, the tin-ore *sēmangat* that of a buffalo, the gold-ore *sēmangat* that of a deer, and so forth. A box or a treasure-jar may also have a *sēmangat* until clipped or broken, when the *sēmangat* escapes from it. An interesting variation has been said to occur on the east coast of the peninsula, where the *sēmangat* of a particular kind of boat is called by a special name, *mayor*, as opposed to the usual soul-name, *sēmangat*.² But there is no trace of this form on the west coast or apparently in other parts of the peninsula.

This creed is no empty belief inoperative in daily life. It forms the basis of the Malay's mental attitude and practice in all dealings with the animal, vegetable, and mineral kingdoms.

Although Malay animism is consistent and complete in extending the belief in the *sēmangat* to all nature, animate and inanimate, side by side with the purely animistic belief there is abundant evidence of a special Circe-like theory attributing animals, birds, fishes, reptiles, and trees to an (accursed) human origin. The elephant, tiger, bear, deer, crocodile, solid-crested hornbill, and stick-insect are examples. Evidence of such anthropomorphic ideas is to be found not only in the folklore but in many magical ceremonies and charms of Malaya (on the *sēmangat* see, further, *INDONESIANS*).

(b) *Pagan races*.—Of the conception of the *sēmangat* held by the pagan tribes very little is known, and, lacking definite statement, their beliefs must be inferred from their methods of burial and treatment of the dead and their views of the life after death.

According to the eastern Semang (Pangan) of Kelantan, each man has a *sēmangat* shaped exactly like himself, but 'red like blood' and 'no bigger than a grain of maize.' It was passed on by the mother to her child. After death the *sēmangats* of the wise proceed to a paradise in the west in which grow fruit-trees. To reach it they cross a bridge consisting of the trunk of a colossal tree. At the end of the bridge sits a hideous demon, and such of the Semang as are scared by him fall into a vast boiling lake beneath, in which they swim for three years until the Lord of the Paradise of Fruit-Trees lets down his great toe for them to clutch, and in this contemptuous fashion pulls them out. The old and wise men for this reason were buried in trees, so that they could fly over the demon's head. The western Semang believed that only the medicine-men went to the Land of Fruit; the lay members of the tribe crossed the sea to a land of screw-pines and thatch-palms, wherein was the hole into which the sun fell at night. If they had committed any bad action, they started by the same road, but turned north to a land which had two months of day and one month of night. Among the Sakai it has been

¹ See also W. W. Skeat, *Malay Magic*, London, 1900, pp. 50, 411, etc. It is surprising to find among Malays this sevenfold division of Plato himself.

² N. Annandale, 'The Theory of Souls among the Malays of the Malay Peninsula,' *JRAS*, Straits Branch, v. 3 [1909].

said that *sēmangats* proceed to a Hades (*Nērāka*) where they are washed clean by one 'Granny Long-Breasts,' and made to walk across a boiling cauldron on the sharp edge of a chopper. Bad *sēmangats* fall in, good ones escape to an Island of Fruit, where they wait until a friend comes to show them the way to the 'Husks of the Clouds.'

The Mantri possess peculiarly positive faith in the continued existence of the *sēmangat* after death. It leaves the body and is carried by Bayang Lasa either to Ngangnari or to Fruit Island (*Pulari Buah*), far away in the region of the setting sun, where all *sēmangats* dwell in harmony, marry, and have children. Those who die a violent death go to Red Land (*Tanah Merah*), a desert place and barren, repairing thence to Fruit Island to get their nourishment. The Benua, on the other hand, believe that after death the *sēmangat* dissolves into nothingness again, having been fashioned from air by Pirman. Notwithstanding this, they hold that the *sēmangats* of medicine-men, while their animate bodies remain behind, are conveyed or carried to heaven in music.

8. *Animism*.—Although it would in any case be justifiable to regard the attitude of the Malays towards the *kērāmat*, or holy place, as a survival from an earlier stage of religious belief on the analogy of similar ideas among more primitive peoples, there is, in addition, abundant evidence to support the view that not only Muhammadanism, but also the popular ideas traceable to a modified Hinduism, are superimposed upon a form of religion in which animism was the predominant factor. A belief in spirits pervades the whole of the everyday life of the bulk of the people. The position and importance of the medicine-man or magician (*pawang* and *bomor*), the language of the innumerable charms recited on any and every conceivable occasion, and the ceremonies which accompany any and every action or undertaking—even in some cases the most trivial—would in themselves point to this particular conclusion, even if we lacked the evidence supplied by the statements of the Malays themselves with regard to their object and meaning. Important proof of this connexion is furnished by the relations of the Malays with animals, with trees, and with the crops, and especially by their remarkable beliefs with regard to mining.

(a) *Animals*.—To nearly all animals, but especially to the larger, the Malays attribute anthropomorphic traits and, in some cases, superhuman powers. The elephant and tiger, e.g., are believed to possess cities or districts in which they assume human form and live in houses. According to a legend which comes from Labu in Selangor, a man tracked an elephant to her home and married her in human form. She resumed her animal form when, on returning to his country against her express directions, he gave her food which included certain young tree-shoots. The tiger, which is an object of especial fear, is believed to be a demon in the form of a beast; in the legendary 'Tiger Village' the roofs of the houses are thatched with human hair, men's bones are the rafters, and men's skins the hut-walls. The original tiger was a boy found in the forest who changed into a tiger when beaten with many stripes by his schoolmaster. The latter placed a ban upon him to compel him to 'ask for' his prey. The tiger therefore uses divination by leaves (of certain forest trees) to ascertain whether his petition for a victim has been granted. It may be added that he is also believed to doctor his wounds with leaf-poultices. The belief in wer-tigers is one of the most deeply ingrained of Malay superstitions, but the power to become such a being is believed to belong especially

¹ Skr. *naraka*, 'hell.'

to one tribe of Sumatrans, the Korinchi Malays, of whom there are a number living in the peninsula. In one case a dead wer-tiger was identified by his possessing a gold tooth derived from his human original (see LYCANTHROPY). Both ghost-elephants and ghost-tigers are strongly believed in. They are distinguished by having one shrunken foot, are harmless, and are the tutelary spirits of certain regions of sacred localities. The most famous ghost-tigers of the peninsula dwelt on Mount Ophir (4000 ft.), near Malacca; in Selangor they were the guardians of a shrine on the summit of the Jugra Hill. The latter were formerly reputed to be the pets of the princess of Malacca; thus the two stories were connected. The princess is said by local report to have established herself on Mount Ophir at the time of the Portuguese invasion, and still visits the hill in Selangor, accompanied by a handsome tiger, though herself invisible. When a tiger was killed, a public reception was accorded to him in the nearest village, at which he was treated as a powerful war-chief or champion, and was entertained by an exhibition of dancing and fencing. Both claws and whiskers of the tiger are greatly valued as charms; the latter are sometimes twisted up with a man's moustache, to strike terror into his enemies, and the former are imitated in the tiger's claw knives worn on their fingers by the men who pretend to be wer-tigers.

Equally significant are the stories and beliefs connected with the mouse-deer or chevrotain. This animal occupies the place of Brer Rabbit in Malay folklore;¹ it figures in numberless proverbial sayings and romances, and is honoured by the title of Mentri Bêlukar, 'the Vizier of the (secondary) Forest-growth.' In the fire-getting ceremony it is said to ask for fire wherewith to 'sing its mother-in-law's feathers' (a bird).

Hunting dogs are continually addressed as if they were human beings. It is, however, believed that it is unlucky to see them in the jungle, unless the person meeting them barks after the manner of a wild dog before they have time to do so. Cats, in addition to possessing supernatural powers (e.g., in the rain-making ceremony), are lucky because they wish for the prosperity of their owners. On the other hand, cat-killers, when in purgatory, will be required to cut and carry coco-nut logs to the number of hairs on the cat's body, wherefore cats are not 'killed,' but only set adrift on rafts to perish of hunger.²

The flesh of swine is now regarded as unclean by the modern (Muhammadan) Malay, but there are indications that this was not always the case; thus a wild pig's paunch is required in a Malay recipe for turning brass into gold; the wild pig, moreover, is hunted and eaten with avidity by the wild jungle tribes, as is still the case in N. Borneo and other parts of the Malayan region. It may also be noted that the flesh of the buffalo is preferred to that of the ox, and the former is used, and not the latter, for sacrificial feasts—a fact which suggests an obscure survival of Hindu belief. The earth itself is supported on the horn of a gigantic wild buffalo.

The attitude of the Malays towards wild animals and their belief in their magical powers are further indicated by the fact that in hunting and trapping no skill can avail unless it is itself supported by magic, by special charms supplied by the medicine-man, and by formulae to be repeated in setting the traps and snares or when actually engaged in hunting operations, either to ensure success or to serve as a protection. Like the Siamese elephant-wizard, the Malay deer-wizard himself must first

enter the toils before a hunt begins, in order to influence the deer magically to enter the deer-snares. If this were omitted, the ropes would fail to hold the deer, nor would the deer enter. The marks on the legs of the *sambhar* deer (*rusa*) are due to ulcers on the legs of its human original.

Fish and other inhabitants of the water, like land animals, are regarded as having human or super-human qualities, and, when catching them, the Malays have to perform ceremonies to overcome their spiritual nature and magical powers. The crocodile, e.g., is, according to one account, a boy who fell from his mother's arms into the water. The various species of fish also have their special origin; one kind is said to be originally a cat, another a monkey, another a human being drowned in the river, and so forth. The Norse myth of the rivers sprung from the teats of the cow Auðhumla is recalled by a Perak story of a large specimen of the mudfish called *aruan*. Many magical or semi-magical beliefs cling round the crocodile. In many of the rivers certain crocodiles are regarded as the sacred embodiment of dead chiefs, and are free from molestation. When hunting these reptiles, the Malays repeat charms and take precautions to secure capture by symbolic actions such as striking the water with the canoe-paddle in imitation of the crocodile's tail; or, when eating curry, by gulping down three lumps of rice successively in the way in which it is hoped the reptile will take the bait; or (by avoidance) by not taking the bones of curries for fear that the wooden cross-piece buried in the bait will fail to hold the crocodile.

An elaborate ceremony precedes and accompanies a fishing expedition. It includes notification by three loud cries to the land-spirits that offerings, consisting of rice, betel, parts of a goat sacrificed for the purpose, cigarettes, etc., hung up on a tree in a sacrificial tray, await their acceptance, and the offering of two similar trays, one in shallow water and one, containing the goat's head, at the seaward end of the fishing stakes. Miscellaneous offerings from a basket are scattered while the boat is rowed out to the stakes, and, when they are reached, saffron-coloured and parched rice is scattered on the water, while the 'neutralizing rice-paste' ceremony is performed on the stakes and the boats. A number of tabus, such as seven days' refraining from sexual indulgence, the avoidance of bathing without a bathing-cloth, or of taking an umbrella into the fishing-boats, or of climbing the fishing-stakes with boots on, are strictly enforced. The use of a tabu language by the fishermen is also *de rigueur*.

Among the wild tribes similar beliefs are entertained, but in particular they look upon animals as the embodiment of their illustrious dead. The elephant, the largest and most important of the animals, is the one into which the *sémangats* of Semang chiefs are supposed to migrate. In consequence, it has euphemistic and propitiatory names. The same applies to the tiger. Monkeys, snakes, and birds play an important part in Semang mythology, while among insects the stick-insect is the most important. The list of animals to which the *sémangats* of chiefs are supposed by the Bésai to migrate is extended beyond beasts of prey, including deer and pigs as well as tigers and crocodiles. Among the Mantri the tigers are the slaves of the wizard, or *poyang*, and are supposed to be immortal, while the Jakun believe that, if a tiger meets them in their path, it is a man who has sold himself to the evil spirit in order that in such a form he may wreak vengeance on his enemy or give play to his malignity. The amount of unnatural history associated with animals is, indeed, quite remarkable for a race whose jungle knowledge is so complete as it is among real up-country Malays. The case of the large caterpillar which is believed to metamorphose into a squirrel is typical.

(b) *Birds*.—Ideas of various kinds, mostly animistic or anthropomorphic in character, are very generally associated with birds by the Malays. As a rule, nocturnal birds are ill-omened. If one species of owl alights near a house and hoots, it is said that

¹ W. W. Skeat, *Fables and Folktales from an Eastern Forest*, Cambridge, 1901, Introd. p. xiii.

² Clifford, p. 47.

there will soon be a 'tearing of cloth' for a shroud. If the *bāberak*, a nocturnal bird which flies in flocks (a goat-sucker or night-jar), is heard, the peasant brings out a wooden platter, beats it with a knife, and calls out, 'Great-grandfather, bring us their hearts,' in the hope of deluding the spirits into the belief that he forms one of the train of the Spectre Huntsman (*hantu pēmburu*) which these birds accompany, and must therefore not be attacked by them.

The argus pheasant (*kuang*) is said in Perak to have been metamorphosed from a woman; the female, moreover, is believed to reproduce its kind by swallowing the male bird alive. In Selangor it is believed that a hornbill was transformed from the murderer of an old man, another variety (*rhinoplaa*) to have been a man who slew his own mother-in-law. The *toh kutampi* (a variety of horned owl) is believed to enter the fowl-house and there live on the intestines of fowls, which it extracts during life by means of a charm. The luck-bird—a small white bird about the size of a canary—if caught and placed in a rice-bin, ensures a good harvest to its owner; a ground-dove, kept in a house, is a prophylactic against fire. If any one is fortunate enough to secure the nest of a kind of heron, or *ruwak-ruwak*, it confers upon him the power of invisibility. But the list of birds to which it has been recorded that the Malays attach peculiar ideas and significance may be said to be limited only by the varieties indigenous to the peninsula.

In fowling, as in hunting, sympathetic magic plays a prominent part, while every operation has its appropriate charm for repetition. In catching wild pigeons, constant reference is made to their *sēmanyats*, and the aid of the *pawang* is required to perform the 'neutralizing rice-paste' ceremony in the space in front of the conical snarer's hut, enclosed for the purpose, which is known as King Solomon's Court-yard, or to recite a charm over the long bamboo decoy-tube or pigeon-call. During the operation great care is taken that no part of the snarer's paraphernalia is called by its proper name (which might be understood by the pigeon); everything is called by some euphemism—e.g., 'the Magic Prince' (for the name of the hut) and 'Prince Distraction' (instead of the word 'pigeon-call').

(c) *Vegetation*.—The Malayan beliefs in relation to trees and other forms of vegetation follow to a great degree, if not entirely, their concepts in relation to animals. It is not clear that they hold that all trees have a *sēmangat*, but it is certain that some trees, such as the durian, the coco-nut-palm, the trees producing eagle-wood, camphor, and gutta-percha, and others are supposed to possess *sēmangats*. This belief extends even to dead and seasoned wood, as is shown by the invocation addressed to the timbers used in the ceremony of launching a boat—a ceremony which is frequently represented in Malay romances as taking place (as formerly in Fiji) over human rollers. In earlier days the men used to try to frighten the durian groves into bearing by threats addressed to them verbally. The medicine-man struck the trunk of an unfruitful tree seven times with a hatchet and threatened to fell it if it did not bear. The toddy collector said to the coco-nut-palm: 'Thus I bend your neck and roll up your hair; and here is my ivory toddy-knife to help the washing of your face.'¹ The malacca cane is regarded from the same animistic point of view, and it is believed that a cane with a long joint will protect the owner from harm by snakes and animals, as well as bring him good luck in everything. In Selangor the stick-insect is supposed to be the embodiment of the malacca cane-spirit. In felling a *tualang* tree

(apparently not a specific tree, but a generic term for all trees containing a bees' nest)—a matter in which great reluctance is shown—it is necessary to obtain the services of a *pawang* to drive away demons by charms and incantations. In the course of the incantation the heads of two white fowls are cut off and the blood is sprinkled upon the tree-trunks. The lime is another tree of which the spirit is the object of a special cult; it is revered and looked upon as their chief patron by the theatrical players of Penang. In searching for the diseased and perfumed wood known as *gharu*, or eagle-wood, the services of a *pawang* are required to burn incense and repeat the appropriate charms. According to one account, the *pawang* uses a shelter near the selected tree (which is indicated by a low whispering or singing in the tree), and then repeats a charm which induces the *gharu*-spirit to appear to him, generally in a dream, and to inform him of the kind of sacrifice required. When the tree has been felled, any one passing between the trunk and the stump will die immediately. The *pawang* uses and carries with him a piece of eagle-wood, the *gharu mērupa* (or shaped eagle-wood), which possesses a natural resemblance to some animal or bird. This is believed to contain the *sēmangat* of the eagle-wood and to assist in the search for that product. Similar beliefs are entertained, and similar ritual is followed, in the collection of camphor and gutta-percha. It is interesting to note that in the collection of camphor a special language must be used, *pantang kapur*, which, so far as known, is Malay in part only. A portion of any food eaten during the search for camphor must be thrown into the jungle for the *bisan*, or camphor-spirit.

Many rules followed in planting the crops are based upon sympathetic magic and animism. In the first place, the propitious season for each operation must be indicated by the *pawang*. Sugar-cane must be planted at noon; this makes it sweeter by drying up the juice and leaving the saccharine matter. Maize should be planted with a full stomach, a thick stick, and thick dibble; this will swell the maize ear. Plantains should be planted after the evening meal, as they fill out better; sweet potatoes, to ensure their having plenty of 'eyes' when they begin to sprout, should be set when the night is starry.

Of all agricultural pursuits, however, the cultivation of rice exhibits most completely the animistic ideas which underlie the relation of the Malays to nature. At every stage of the procedure precautions are taken to ensure the well-being and prosperity of the rice-soul, upon which the success of the cultivation depends.

The time of the sowing is determined by the *pawang*; prayers are read over a portion of the seed at the mosque (replacing an earlier ceremony at the holy place, or *kērāmat*); in sowing, the mother-seed is placed in a specially-prepared bed in one corner of the nursery-plot before the rest of the seed is scattered. When the rice is ready, it is transplanted with proper propitiatory ceremonies, and occasionally, say once in three or four years, these were accompanied by a ceremony—a sort of mock combat (*singketā*)—to drive off evil spirits. When the rice is ready for reaping, in order to begin the harvest, the reapers must first obtain the *pawang's* permission. The first operation was to take the *sēmangat* out of all the plots, and before cutting the rice it was usual to sprinkle it with the neutralizing rice-paste. From the spot where the rice is finest and where there are seven joints to the stalk, seven stems are clipped ceremonially to be the *sēmangat* of the rice-crop. Another handful is tied by the *pawang* in the centre with a strip of a special variety of sugar-cane, to be the mother of the rice-crop of the year following. This mother-sheaf should be reaped last, preferably by the wife of the owner. The *sēmangat* was made into the shape of an infant dressed in swaddling clothes, placed in a basket with a Malay umbrella to shade it from the sun, and laid on a new sleeping-mat, with pillows at its head, in the house of the owner. For three days the people in the house must observe certain tabus; e.g., rice, salt, oil, money, etc., must not leave the house, perfect quiet must be observed, hair must not be cut, and so forth. These tabus were practically identical with those imposed in the case of the birth of children. For three days after the taking of the *sēmangat* the

¹ Skeat, *Malay Magic*, p. 217.

mother-sheaf was treated as a young mother; i.e., young shoots of trees were pounded and scattered over it every evening, and on the evening of the third day coco-nut pulp and goat-flowers mixed with sugar were eaten and a little ejected from the mouth on to the sheaf—an analogue of the salad administered to a mother. A woman, when entering the clearing, must kiss the stalks, saying, 'Come, come, I soul of my child,' as if embracing one of her own infants. Ultimately the rice obtained from the *sémangat* (representing the child) and from the sheaf (representing the mother) are mixed and placed in the receptacle in which rice is stored, together with a wreath of the straw of the first ceremonial pounding of the *padit*, the ears first pounded being those cut immediately after the taking of the *sémangat*. Some is mixed with next year's seed, and some is used to make the *tépong tarwar*.²

From all that has been said it will be clear that the gist of the Malayan harvest ceremony consists in the attempt to simulate, on behalf of the vegetative rice-crop, a lucky birth as of a human infant, in the hopes that this mock-ceremony may stimulate the productive powers of the rice-plant for the following harvest.

(d) *Mining*.—In the western States of the peninsula tin-mining was, and still is, the most important industry. Although mining is now carried on chiefly by Chinese, the ceremonies in use at the opening of a mine are purely Malayan. Formerly a lucrative and highly important post was that of mining wizard; some of these magicians were believed to possess the power of bringing ore to a place where it did not exist, and of turning into grains of sand, or of sterilizing, such ore as existed. The ore itself was regarded as endowed not only with vitality, but also with the power of functional increase. Sometimes it was said to resemble a buffalo, and in this shape could travel to and fro underground. The gold-spirit in one case (at Raub in Pahang) was believed to take the form of a golden roe-deer—an idea obviously based on the imaginary shape of some large nugget. Beyond tin, gold, and possibly a little silver and galena, no metals are worked in the peninsula.

The natives, however, have a great reverence for iron. The Lump of Iron in the royal regalia, when placed in water, is the most solemn and binding oath known to those who use it, and it is referred to in the most terrible denunciations of the Malay wizard; a long iron nail guards the newborn child and the rice-soul; betel-nut scissors (also of iron) or a dagger protect a corpse from evil contact, and a Malay in the jungle often plants his knife-blade edgewise to the source in a stream before he drinks, in order to drive away any chance demons. Bezoar-stones and stone implements alike are said to be endowed with magical properties and powers; a unique east-coast belief regards the latter as arising out of the ground, and not, as almost everywhere else in the world, as being hurled down from the sky in the form of thunderbolts.

The objects of the charms employed by the mining wizards seem to be to clear the jungle of evil spirits, to banish evil spirits from the ground before starting excavations, to propitiate the local spirits and induce the tin-ore to show itself when the tin-bearing stratum is reached, and to persuade the spirits to partake of a banquet spread for them in a receptacle intended to represent a royal hall of audience. The spiritual 'audience chamber' is usually two or three feet square and furnished with offerings similar to those normally placed on the sacrificial tray, with certain articles, such as sugar-cane, plantains, yams, etc., supposed to be specially characteristic of the food eaten by miners. The chief tabu is the killing of any sort of living creature within the mine, except in case of sacrifice, when a white buffalo may be slain upon the brink of the mine, the head being buried

¹ Lit. 'Cluck, cluck,' the call commonly addressed to domestic fowls.

² 'Neutralizing rice-paste' (see above).

and small portions representative of each part being deposited in the 'audience chamber.' Other tabus are the wearing of a sarong, burying the skin of any beast in the mine, wearing shoes, and even carrying an umbrella; the last is particularly offensive to the spirits, since it is the insignia of Malay royalty. A special language has to be used in so far as certain words are concerned. No animal or thing not itself allowed in the mine (such as an elephant, tiger, or cat), nor even lime-fruit, may be mentioned by any but this substituted title. Nor may any one assume the attitude or dress (a black coat) worn by the wizard in building the altar for the preliminary sacrifice, in performing the magical ceremonies, or in uttering the invocations (such as the attitude of standing with both hands on the hips or behind the back), nor may even the wizard himself assume them on any ordinary occasion.

(e) *Water*.—The Malays have been a seafaring race from time immemorial, and the rivers were also of great importance to them before the making of roads. It was by the rivers that they first penetrated the country; the old Malay settlements are all on river-banks, and the streams are still the chief source of supply for irrigating the rice-fields. To both river and sea many superstitions and legends are attached. Their animistic notions include belief in water-spirits, against whom precautions are taken for the protection of their boats. It was formerly the custom to fasten a bunch of sugar-palm twigs to the top of the mast to prevent the water-spirit from settling on the mast-head. The sea-spirits are invoked to point out shoals, etc., and sometimes in rapids or other difficult places offerings are made to the spirits of the rivers. The tidal wave (bore or eage) on a river was formerly held to be caused by the passing of a fluvial monster, which ascends the river; one of these (on the bore ceasing) was described to the present writer as having been killed by being knocked on the head with a stick. Eredia (A.D. 1613) says that the Malays attribute such bores to souls of the dead who are passing the ocean in *cañilas* from one region to another, i.e. from the Golden Chersonese to the river Ganges. Ordinary river-floods (which were distinguished as male and female) were thought to be caused by similar agency.

9. *Cosmology and natural phenomena*.—(a) *Malay*.—In Malay folklore the theory of creation is that light emanating from the supreme being became the ocean, from which ascended foam and vapour. The earth and sea were then formed, each of seven tiers, the earth resting on the surface of the water from east to west, the mountains of the Caucasus being regarded as a chain put round the earth to keep it stable on the face of the waters. Beyond them is spread a vast plain, the sand and earth of which are of gold and musk, the stones rubies and emeralds, the vegetation of odoriferous flowers. Besides the Caucasus, which are known to the Malays as Bukit Kof ('Hills of Kaf'), and are of immense importance in popular lore, there is a great central mountain called Maha Meru, which is sometimes identified by Malays with a hill in Sumatra. Another version of the Creation, in part obviously due to Muslim influence, describes how God, the eldest magician, pre-existing by Himself, created the pillar of the Ka'ba¹ of which the four branches form the four corners of the earth, and the world-snake, Sakatimuna, which was killed by Gabriel and broke asunder, the head and fore part shooting up to heaven, the tail part penetrating downwards beneath the earth. The description of this serpent (whose name suggests an Indian origin)

¹ Lit. 'cube' (the cube-shaped sanctuary of the Black Stone at Mecca). For the Ka'ba see Mecca.

is remarkably anthropomorphic; in fact, it is a serpent in little more than name.

It was usually believed that the world was of oval shape and revolves on its axis four times in the year, and that the sun was a body of fire moving round the earth and producing the alternations of day and night. Some at least imagined the firmament to consist of a perforated stone or rock, the stars being caused by the light which streams through these apertures. Further, the earth is declared to be carried by a colossal buffalo on the tip of its horns—an obvious Malay parallel to the world-elephant in the *Rāmāyana* and the boar-incarnation of Viṣṇu. When one horn gets tired, the buffalo tosses up the earth and catches it on the other horn, the concussion thus produced being the cause of earthquakes. This buffalo stands on an island in the nether ocean, or on a giant tortoise (according to some versions), or on the monstrous fish called Nun (Arab. 'fish'). The universe is girt round by a huge serpent which feeds upon its own tail. Peculiarly Malay, on the other hand, is the idea of the tides, which, it is said, are caused by the movements of a colossal crab that twice a day leaves and re-enters its cave at the foot of the world-tree Pauh Janggi (the sea-coco-nut-palm), which grows on a sunken rock or quicksand in the 'Navel' or Central Whirlpool of the Ocean (*pusat tasek*). The sun's name in Malay is Mata-hari, which means 'eye of day,' but on the east coast it is held to be a horse which is conducted in procession through the heavens by angels during the day, and led back again at night-time to the point whence it started.

Eclipses of the sun and moon are considered to be due to the devouring of these bodies by a gigantic dragon (Rāhu), or, according to some, a god. Malays, like the Chinese and other more primitive races, endeavour to save the sun and moon by making a vigorous noise to drive away the destroyer. The spots on the moon represent an inverted banyan tree, under which sits an old hunchback, plaiting strands of tree-bark, or, as some say, spinning cotton. As soon as his task is finished, he will angle for everything on the earth's surface. The line has not yet been completed because a rat gnaws through it despite the vigilance of the old man's cat, which is always watching. It should be added that the Malay phrase, *bulan bunting pēlan-dok* ('the moon is great with the mouse-deer'), is doubtless explainable by the fact that in Sanskrit mythology the spots on the moon are thought to be a hare or antelope, which, being hard pressed by a hunter, appealed to the moon for protection and was taken up by her into her arms; the phrase is often used when she is three-quarters full.

Landslips in the hills during the rains, being often accompanied by floods, are said to be due to dragons breaking forth from the hills, where they have been doing penance, on their way to the sea. Rocks and waterfalls of unusual appearance are believed to owe their origin to demons. A rainbow, if only a small portion of the end is visible, betokens the death of a Raja, if it appears in the west. The treasure which lies where the foot of the rainbow touches the earth has never yet been found, as 'no one can ever arrive at the place' where it touches. The rainbow itself is often taken to be a snake and is sometimes said to be seen drinking (*ular minum*). On the east coast it is sometimes said to be the head and entrails of a horse or a bullock which comes down to earth to drink. There is a house on the east coast of the peninsula in which a water-jar (*tēmpayan*) had been drained dry by a rainbow.

Sunset is a time of danger, since then all evil spirits have power, while the name applied to the yellow glow of the last rays of the sun (*mambang*

kuning, 'the yellow deity') is a term associated with terror. In Perak children are called in at sunset to save them from this danger, and women often chew and spit out at seven points, as they walk round the house at sunset, *kunyet tērus*, an evil-smelling root much disliked by evil demons. Pulau Tioman, an island south-east of Pahang, is believed to be actually the body of a dragon, or *nāga*. The Malay who told this to the present writer said that a long while ago an English Government vessel was passing this island, when her crew, catching sight of the then existing three points of the dragon's crest on the summit of the island, fired, breaking them off, and that the vessel itself sank afterwards. There are now said to be a number of people living on it, none of whom is allowed to make the least use of vinegar; if any vinegar is spilt, an earthquake follows, because the island is in reality the monstrous body of an enormous dragon.

(b) *Pagan races*.—The Semang endow both sun and moon with human form, both being female. Like the Japanese, who have been credited by some authors with Malayan affinities, they associate the sun with a crow (Ag-Ag), whom they assert to be the husband of that luminary, whereas the husband of the moon is Tā' Pōnn (see above, p. 354). When the sun sets, it falls into a cavern, which some Semang identify with a species of Hades. Eclipses are caused by a huge dragon, or serpent, which tries to swallow the luminary; in the case of the moon, the Semang assert that the serpent is the moon's mother-in-law, who has assumed this form and is trying to embrace it—an act which is clearly regarded by the Semang with loathing and abhorrence. The rainbow is a huge python, or serpent, and the spots where it touches the earth are feverish and bad to live near. During a storm of thunder and lightning the Semang draw a few drops of blood in a bamboo internode and throw it skywards. As the ghosts of wicked tribesmen fly up to the heavens, this is intended to propitiate them and persuade them to return. Sometimes, however, it is believed that the spirits go downwards and become water-spirits. In this case part of the blood is thrown towards the sky and part groundwards (Pangan).

Thunderbolts are supposed to be hurled as the result of undue familiarity towards a mother-in-law. An unusual explanation of thunder and lightning from Kedah is that the latter phenomenon is the flashing of the top-cords of dead medicine-men. The thunder is the hum of the tops themselves when revolving.

The Kedah Semang hold that heaven consists of three tiers or layers: the highest is filled with fruit-trees which bear luxuriantly all the year round, and is inhabited by the greater personages of Semang mythology; the second also contains fruit-trees, but is defended against unauthorized pillagers by a gigantic baboon who pelts any such would-be assailants with 'false durian-fruit' (the produce of a wild fruit-tree);¹ the third has nothing but the low brooding clouds which bring sickness to humanity.

Of Sakai beliefs little that is typical has been recorded, such information as is available witnessing to a close resemblance to Semang beliefs. Rā-hū (obviously the Indo-Malay Rāhu), a being resembling a dragon, tries to swallow the sun and moon, but is driven away by the beating of drums and bamboo clappers. Kelang Bēlok, a world-eagle, at one time destroyed all human beings except a boy and a girl. With a magic knife the boy slew the

¹ This fruit is sometimes called by Malays the 'Ha-ha' fruit, from the belief that demons, on flying up to inspect it, see that it is not the real durian-fruit, and indulge in loud peals of sardonic laughter.

eagle, and from this pair all mankind are descended. The Sakai are said to indulge in ceremonial exorcism of the spirits of thunder, and it is believed that the forces of nature assist the souls of certain evil spirits or demons, which cause them to harm people, though the forces themselves are not demons. The earth is a thin crust resting on the nether ocean, and the heavens possess several layers, or tiers; the inhabitants of the uppermost are said to include a female deity who has to wash the sin-blackened souls in hot water.

The Blandas of Selangor say that the earth was originally the shape of a flat long betel-box (*sōdok-sōdok*), the nether ocean had the form of a globular tobacco-box (*lōpak-lōpak*), and the heavens were round and over-arching like an umbrella. The Blandas' account of paradise resembles that of the Bésisi. The latter hold that the souls of the good (or wise) pass away to the Island of Fruit-Trees, which they identify apparently with the moon, an eclipse being the work of a spirit that wishes to annihilate their spirit ancestors, the moon's inhabitants. This Island of Fruit-Trees is reached by crossing a fallen tree-trunk which serves as a bridge, and from which the wicked fall into a lake or boiling cauldron. This happens only to those who allow themselves to be frightened by a big dog which sits at the parting of the ways by which the souls must go. The magicians of the tribe are reputed to be able to visit paradise and bring back fruit with them. Gaffer Engkoh dwells in the moon, which he reached by a ladder now broken, and protects from wild animals dead souls who visit the Island of Fruit-Trees.

The Mantri have not, to any extent, acquired Malay traditions as regards the form, character, and motion of the sun, moon, stars, etc. The dark spots in the moon they believe, however, to be a tree beneath which sits the moon-man Moyang Bertang, an enemy of mankind, who is constantly making nooses with which to catch them—a task which he is prevented from accomplishing by mice, who continually gnaw through the strings. Eclipses are not attributed to a snake or a dragon, but to a devouring evil spirit. The sky is a great [? inverted] copper pot, suspended over the earth by a string, and around its edge the earth is constantly sending up sprouts which would join the stars if an old man did not cut and eat them. In addition the Mantri have a version of the sun-rope belief, i.e. an idea that the sun is a woman tied by a ring which her lord is always pulling, while the stars are the moon's children. The sun once had many children as the moon, but, having been tricked by the latter into eating them, now pursues the moon, and, when he succeeds in biting her, causes an eclipse to happen. This explains why the moon hides her children by day.

In the beliefs of the Benua Jakun the world is globular in shape and enclosed in the sky. Farthest north and south are the extremities of a great beam, the north being twenty days' journey from Boko, where there was a great hill from which the north winds issued. The sun and moon move round the earth, producing darkness and light alternately.

10. Origin of man.—(a) Malay.—What is now the most usual account of the creation of man, from the four elements of earth, air, fire, and water, appears to be a Malayized version of the Muhammadan story. Adam was formed from the heart of the earth by the angel Azrael, not without strenuous opposition and protests from the earth itself. A common feature of Malayan romances and legends, which also appears in Japanese folklore, and is probably to be attributed to an Indian origin, describes the supernatural origin of human beings in the interior of some vegetable product, as, e.g., in the story of a giant bamboo, which con-

tinually sent forth fresh shoots as it was cut down, and in which King Dasaratha, according to the story in *Sri Rama* (the Malay version of the *Rāmāyana*), found the princess, or, again, in the tradition of the discovery of Teh Purba in the river-foam.

(b) Pagan races.—The Semang story of the origin of the human race is that the first woman, seeing that all other animals had children, was desirous of having offspring of her own, but did not know how to obtain them. She and her husband took to carrying a brace of fire-logs under their arm-pits by way of make-believe. But one day the coco-nut monkey (B'ro), on noticing what they were doing, gave them advice, as a result of which they had four children, two boys and two girls. These married and had children of their own, but the ring-dove (*tékukor*) warned the children of the first generation that they had united within the forbidden degrees, and advised them to separate and 'marry other people,' in which case their children might intermarry without impropriety.

Among the Mantri the story of their origin forms an incident in a group of myths connected with Měrtang, the first medicine-man, and his younger brother, Blō, who came from a place called 'Rising Land' (Tanah Bangun) in the sky and returned there after a sojourn on earth. They were the children of two people called 'Drop of Water' (Ayer Sā-Titik) and 'Handful of Earth' (Tanah Sā-Képal), the latter being their mother. Měrtang took his youngest sister to wife, and from them the Mantri are descended. Blō married the other sister, but had no offspring. When men increased in numbers to an alarming extent, To' Entah (or 'Lord-knows-who'), the first *batin*, a son of Měrtang, drew his father's attention to the circumstance. Měrtang wished things to remain as they were, but Blō suggested that 'men ought rather to die, after the fashion of the banana, which itself expires, although its young scions survive.' Thus it was decided, and so the old now die, although they leave their children behind them. According to another version, the Mantri are descended from two white apes (*ungka putih*) who sent their young ones down into the plains, whereupon they developed so rapidly that they and their descendants became men. Yet another version says that men came down from heaven in a ship built by God, which floated upon the waters of the earth. The story of the princess found in the bamboo also occurs among the Mantri. She married the son of the first Raja, and she and her husband both live invisible to this very day.

Benua tradition says that a man and woman were created by Pirman when he formed the world. When the Lulumut mountains, the oldest land, rose out of the water, a ship of *pulai* wood, completely enclosed, in which the man and woman were contained, was left floating on the surface of the water. After the ship ceased to move, they nibbled their way out, and from this pair men are descended. As the male child was born from the right leg and the female from the left, children of the same womb cannot marry. The Jakun say that God created a man and woman in heaven who came down to earth in the State of Johor.

11. Personality; the body and personal possessions.—Malays, in common with all peoples of a primitive civilization, have implicit faith in the magical possibilities of personality and of intimate personal possessions. This is very clearly shown in the beliefs relating to the spiritual or magical powers of the Rajas, the theory of the king as the divine man being strongly held and consistently adhered to. It is alleged that the Malay king originally had the right to slay any one at pleasure,

1. *Astoria scholaris*, which furnishes the Malay substitute for cork.

without being guilty of a crime and without any inconvenient questions being asked him. Not only is his body sacred, but that sanctity extends to the royal regalia, which no one may touch, or even make models of, without incurring the risk of a grave illness, possibly even death itself. Any one who infringes the royal tabus, offends the royal person, or wrongfully makes use of the royal insignia or privileges will be struck down by the divine (quasi-electric) discharge of the royal sanctity (*daulat*). In the Malay romances the kings are credited with all the attributes of inferior gods; they are usually invulnerable and gifted with miraculous powers, such as that of transforming themselves, returning to life, and resuscitating the lives of others. As a divine man the Malay king possesses a number of prerogatives which enter into almost every act of life and effectually set him apart from ordinary men. One of these is the sole use of white for the royal umbrella, and the use of yellow cloth (the white umbrella, once the royal emblem throughout Indo-China, has now been abandoned for yellow). Linguistic tabus are also employed with reference to the king, such words as *santap*, 'to eat,' *beradu*, 'to sleep,' *gering*, 'to be sick,' being substituted for the usual Malay words when reference is made to the royal person. At the Malay king's death his name is dropped and he is called *Marhum*,¹ the deceased, with the addition of a phrase descriptive of some prominent, and often uncomplimentary or grotesque, event of his lifetime. One of the most important and significant beliefs connected with the king is that which attributes to him a personal influence over the works of nature, such as the growth of the crops and the bearing of fruit-trees. This also, in a minor measure, applies to his delegates, and in modern times has even been extended to European officials employed in the government of the country.

In a lesser degree the magical property upon which the regal sanctity is based is a quality of the ordinary individual, though usually inversely in the sense that it is susceptible to evil influence, or, in the case of parts of the body, capable of conveying evil to the owner. The head is still, to some extent, regarded as sacrosanct. In cases of assault greater penalty is exacted for an injury to the head than for that to any other part of the person. Great circumspection is employed in cutting the hair; sometimes it is never shorn; more often it is not cut during a special period—e.g., after the birth of a child. Often a boy's head is shaved after birth with the exception of one lock in the centre of the head, which is allowed to grow until he begins to grow up, or even, in consequence of some parental vow, until he attains the period of puberty or marriage. These customs may be due to the sanctity of the head, or possibly to the idea that magic may be brought to bear upon the former owner of the hair by means of that which has been cut off. For this reason both hair-clippings and nail-parings are carefully disposed of, while they are invariably mentioned as part of the ingredients of the well-known wax *mannikin* still believed to be most effective in bringing about the illness or death of an enemy. To the same category belongs the practice of kneading up with the substance of a *mannikin* the eyebrows or saliva of the intended victim, or soil taken from his footprint.

12. Holy places.—Notwithstanding the existence of the mosque as the centre of religious life, there is in every small district a sacred place, or 'high place' (*kērāmat*),² at which vows are paid on special occasions. Such spots are invested with a high degree of sanctity. In theory they are the burial-places of holy men, the early apostles of the

Muhammadian faith, or the first founders of the village, and persons of local celebrity; but, as a matter of fact, in many if not in most cases, they belong to an earlier state of belief than such an origin would imply. Many of these *kērāmat* are not graves at all, but fall into the category of those holy places which the Malays themselves, when asked to interpret them, explain as being 'spirit places' (*kērāmat jin*). For instance, the *kērāmat* of Nakhoda ('shipmaster') Husain on Bukit Nyala, near the Johol frontier, consists of a group of rocks exhibiting no sign of any kind of burial. This (orthodox) *jin* presides over rain and streams and all kinds of water. Incense is burnt here to prevent floods and to get sufficient water for irrigation. It is probable that the name is a later accretion and the rite a relic of the worship of the spirit of streams of water. In another place the *kērāmat* is a tree with a protuberance on the trunk. This swelling is closely connected with the harvest; it increases in good years and in bad decreases.

In Klang there is a famous wishing-rock, called Batu Tre, to which the Mantri have resorted from time immemorial. A similar rock is situated on the top of Gunung Berembun ('Berembun Crag'), while other mountain summits also have similar wishing-places, each possessing its good spirit. The suppliant who visits these places carries with him a couple of white fowls and samples of various articles of food in a tray, which is suspended from a tree or placed on the highest peak of the summit. After his wishes have been silently addressed to the spirit of the mountain, the petitioner sets a meal prepared on the spot for the purpose.

It may be noted, however, that such sacred places were not recognized by the Semang, possibly owing to their nomadic habits. The Sakai and Jakun appear to have set apart certain sites for the purpose of burning incense and registering vows, and they had, in addition to these shrines, medicine-huts, either solitary cells in the depths of the forest, in which the medicine-man kept a selection of his charms and spells, or diminutive shelters which screened him and his patients during the ceremony of exorcism.

13. Rites: prayer and sacrifice.—In the case of both prayer and sacrifice, the Malay standpoint is entirely materialistic. The prayer is invariably a request for material advantage; its efficacy is increased by repetition. Sacrifice, as is shown by the language of the charm, is, or was originally, regarded as a simple gift. There is evidence, however, of the progression from this point of view to that of homage, and, finally, to that of self-abnegation. The spirit or deity is invited to eat or drink of the offerings placed before him. An intermediate stage between the gift and the idea of homage is marked by the use of substitutes and a sacrifice of parts for the whole. For instance, in the instruction of the magician, 'if the deity demands a human sacrifice, a cock may be substituted'¹—a statement which points, moreover, to the former prevalence of human sacrifices. In one case a more explicit declaration was made to the present writer, who was told that for a man a buffalo could be substituted, for a buffalo a goat, for a goat a cock, for a cock an egg—a statement which explains the frequent use of an egg in Malay sacrifices. The idea of abnegation among the Malays appears to be confined to votal ceremonies or vows in which the votary's offering is not regulated by custom, but there is often a tacit understanding that he will sacrifice something of value to himself.

The chief rites performed on various occasions, to which reference is made below in connexion with special beliefs, are: (a) rites performed at

¹ Arab. *marhum*, 'one who has found [divine] mercy.'

² From Arab. *karimah*, 'respect,' 'veneration,' 'miracle.'

¹ Skeat, *Malay Magic*, p. 211; cf. p. 144, note.

shrines; (b) the rite of burning the incense; (c) the scattering of the sacrificial rice; and (d) the application of the neutralizing rice-paste.

(a) The principal elements of the rites performed at shrines are the burning of incense, the offering of *nasi kunyit* (yellow-stained rice), and the killing of goats. The worshippers partake of the flesh of the goats' meat, in some cases at least, of the yellow rice, while the white ('soul') cloth, five cubits in length, which is laid on the shrine now becomes the property of the mosque attendant (*bilal*), though formerly it doubtless went to the *pawang*.

(b) The burning of incense is the commonest form of burnt sacrifice. An invocation is sometimes addressed to the spirit of the incense, urging it 'to perfume the seven tiers of the earth and the seven tiers of heaven: fearfully, so as to ensure that the offering reaches the nostrils of the gods. Omens are drawn from the way in which the smoke rises.

(c) The scattering of the sacrificial rice is performed with four varieties of rice-grain (parched, washed, saffron-stained, and a special kind called 'glutinous rice,' or *pulut*). The parched rice is generally used for scattering on the sacrificial tray after banana-leaves have been spread over it. The saffron-stained and the washed rice are sprinkled on the persons to be benefited, or upon the ground or house-floor, while the glutinous rice is generally used for feasts at high places.

(d) Lustration is accomplished by fire or water. Of the former the best examples are the fumigation of infants and the roasting of the mother after child-birth. One form of lustration by water is an integral portion of a large class of ceremonies, such as those relating to building, fishing, agriculture, marriage, etc. It is called *tepung tawar*, or the 'neutralizing rice-paste' (really rice-flour water). It consists in the application, by dabbing, painting, or sprinkling, of a thin paste (made by mixing the rice-flour with water, taken up in a leaf-brush or sprinkler) on the objects which it is intended to protect or neutralize. The brush is made of bunches of five, seven, or nine leaves of certain plants bound with fibrous strings of shredded tree-bark or creeper. The materials and combinations vary, of course, with the object and occasion of the ceremony (whether, e.g., for a marriage, for blessing the fishing-stakes, or for taking the rice-soul). Short rhythmic charms were often used to accompany the rites, but were not repeated audibly.

Developments of the idea of lustration by water are to be found in the bathing of the mother and child after birth and the washing of the floor on similar occasions, the ablution of the sick, of the bride and bridegroom, and of corpses, and the annual bathing expeditions which purify the bathers and protect them from evil. Fasting in the form of religious penance is now seldom practised, but used in former days to be undertaken to secure a state of exaltation, to induce visions, or to acquire supernatural powers. The fast always took place in a solitary place, usually on the summit of a lofty hill or mountain. Such fasts did not imply complete abstinence; a small modicum of rice was allowed daily, with the result that they might be prolonged almost indefinitely.

14. Magic and the medicine-man.—(a) *Malay*.—Although the office of the medicine-man, or magician (*pawang*), is falling into abeyance in towns, it was at one time of great importance; and this is still the case to a large extent in country places. The *pawang* is the accredited intermediary between men and spirits, and, although he has no connexion with the Muhammadan religion, without him no village community would be complete. The office is often hereditary, or at least confined to the members of one family. Certain properties, such as a peculiar kind of head-dress, are, as it were, the regalia or official insignia, and are handed down from one generation to another. The functions of the medicine-man are many and diverse. Few of the operations of life can be undertaken without his intervention. In fishing, trapping, and hunting, in the gathering of jungle produce, in agricultural matters, such as sowing, reaping, irrigation, and clearing the jungle, in prospecting for minerals of all kinds, in every crisis of life—birth, adolescence, and marriage—of sickness, death, and burial, his aid is invoked to decide the propitious moment for action, to prescribe the ritual, and to carry out the rites. Not the least important of his powers in former days was that of controlling the weather—traces of which are still preserved in Malay weather charms. For his services in these matters he receives a small payment.

For the most part the *pawang's* instructions consist of prohibitions, or *pantang*; e.g., it is *pantang* in some places to work in the rice-fields on

the fourteenth and fifteenth days of the lunar months; certain instruments are proscribed: in the interior a reaping-hook may not be used for cutting the *padi*, or at least the *tuai* (a small instrument consisting of a crescent-shaped blade, set transversely in a slip of bamboo, which will cut only one or two heads of rice at a time) must be used to begin the reaping. By these prohibitions, it may be concluded, the *pawang* preserves the traditional method of an older régime—e.g., in enforcing an adherence to the custom of the fixed maximum prices for the sale of rice and other articles within the village, infraction of which entails a bad harvest.

The *pawang* is sometimes supposed to keep a familiar spirit which is hereditary in the family, enabling him to deal summarily with wild spirits of a noxious character, and also to bewitch and thus to punish people who are bold enough to dispute his authority. Such punishment is usually inflicted by a 'sending,' or 'pointing,' one form of which consisted in pointing a kris in the direction of the intended victim, the point of the dagger beginning to drip blood as soon as the charm began to work. Another form consists in burning the point of the cordiform top of a newly opened bunch of bananas growing on the tree; this causes excruciating agony; then the *pawang* cuts off the top and the victim dies vomiting blood, his heart having fallen out of its proper position. The Malay witch also commonly keeps a familiar, which may have as its embodiment a night-owl, a badger, etc.

In certain respects, it is important to note, the magician stands on the same footing as the divine man or king; e.g., he possesses a regalia which is called by the same name (*katésaran*) as the insignia of royalty, he may (at least in some cases) use the royal colour, and he may, like the king himself, enforce the ceremonial use and disuse of certain words and phrases. Probably both offices are held to be dangerous. Other powers and attributes of the medicine-man which may be mentioned are his ability to act as a spirit-medium and to give oracles in trances, and his practice of austerities and observation of chastity for the time being. His use of mesmerism is not yet recorded, but motor automatism certainly occurs.¹

Although the office of magician is hereditary, the power may be acquired by certain recognized methods. One of these is to raise and meet face to face the ghost of a recently murdered man or of an infant, by means of incantations and fumigations performed at the grave-side.

The Malays themselves make some distinctions between the *pawang* and the *bomor*, the latter being the medicine-man who is concerned especially with the curing of diseases. The two terms are, however, sometimes used as if they were interchangeable. The basic principles of the medical man's art are identical with those of the *pawang*; they depend upon a belief in spirits, and the aim of his treatment is either to propitiate or to overcome their influence.

The *bomor's* procedure in dealing with disease falls under two clearly distinguished headings. First comes the ceremonial inspection or diagnosis, when the character of the therapeutic treatment is determined by divination, by means of omens from the smoke of burning incense, by the position of coins thrown into a water-jar, or by the aspect of parched rice floating on the water's surface.

The therapeutic rites are various in character:

(1) *Propitiatory ceremonies*, the most popular of which is the use of the sacrificial tray called *anchak*, a small frame of bamboo or wood decorated with a fringe of plaited coco-nut-leaf, on which offerings of food are laid for the spirits to eat when it has been hung in a suitable spot outside the house.

¹ Skeat, *Malay Magic*, p. 75.

² Skeat, *Malay Magic*, pp. 486-488.

As an alternative method models of certain objects are placed upon the tray, the evil spirits are invited to enter them, and the tray is then got rid of by being hung up in the jungle or set adrift on the sea or nearest river.

(2) *Neutralizing ceremonies*—the use of counter-charms to neutralize the active principle of poisons, extended by the medicine-men to cure all cases where any evil principle (even a familiar spirit) is believed to have entered a sick person's body. The ceremony of applying such charms usually consists in mixing powder from a grated bezoar-stone or celt with water and drinking it after reciting the incantation.

(3) *Expulsory ceremonies*—rites intended to expel from the patient's body all kinds of evil influences or principles, such as may have entered him on his touching a dead animal or bird, or from meeting the 'Wild Huntsman.' The evil principle known as *badi* attaches to everything that has life, including inert objects such as trees, and even stones and minerals, which, in the Malay view, are animate. Of these evil principles or 'mischiefs' there are one hundred and ninety, or, according to some, one hundred and ninety-three. To 'cast out the mischief,' the patient is stroked down with a brush (made of certain prescribed leaves and plant-sprays) which has been dipped in water in which woods have been grated or pieces of scrap-iron allowed to soak, or else he is rubbed with limes, appropriate charms being recited in either case. In another form of the ceremony the 'mischief' is driven from the body along a red thread, which the patient holds in his hand, until it reaches certain dough images of birds, beasts, and fishes, placed upon the *anchak*. A 'disease-boat,' sometimes a mere raft, is also used as a vehicle for the spirits and set afloat on sea or river. The evil may also be expelled by a long and elaborate ceremony in which a protective spirit, such as the tiger- or elephant-spirit, may be summoned. In such cases the spirit, seizing upon the medicine-man, who, while in a state of possession, simulates the movements of the animal-spirit summoned, expels the evil by its superior spiritual powers.

(4) *Revivificatory ceremonies*—ceremonies to recall the sick person's *sémangat*. In one such rite dough is rolled into a human figure, which is laid upon five cubits of white cloth. Rice is scattered, incense burned, and a charm recited to induce the *sémangat* to enter the dough image and be transferred thence to the soul-cloth, and thence to the patient. Similar ceremonies are used to prevent the *sémangat* of a swooning person from escaping.

(b) *Pagan races*.—The *bélian* (shaman, or medicine-man) is the most important member of the tribe among the Semang. In normal circumstances the chiefs or head-men are always *bélians* of more or less reputation. They obey certain prohibitions which do not affect ordinary members of the tribe: they may not eat the flesh of domestic animals, like the goat or buffalo, and that of domestic fowls but rarely. They receive a special form of burial, traditionally regarded as specially honourable, consisting of a rude shelter built in a tree, in which are placed a modicum of food and water, a jungle-knife, etc. It is believed that they are able to proceed to paradise in trances and to drive out devils. They alone know the love-charms that never fail, and can slay men by 'sendings' at a distance of several days' journey. They alone have the power to change themselves into wer-tigers, and at their death their *sémangat* passes into the body of an elephant, tiger, or rhinoceros. When the latter dies, they proceed to paradise.

Not merely are diseases caused by demons, but they are demons, and have to be exorcized as such. They are abstracted sympathetically from the body by pulling up sapling stumps at or near the place where the disease is believed to have entered the patient. The affected part is rubbed with earth taken from the hole in which the root grew; chewed betel is ejected on the body (in imitation of the Malay medicine-man), and the hurling of dead saplings into the wood, so that the evil spirits may be cast out likewise, ends the ceremony.

'Sendings' or 'pointings' are achieved by a minute dart or splinter of bamboo about two inches long, which is laid on the right palm and is ordered to go forth and slay the victim. This dart or sliver flies through the air and, reaching the victim, pierces his heart and kills him. Sometimes a taper formed of wax from a deserted bees' comb is burned at the same time. Such 'sendings' were said by the Semang to be effective at 'a distance of probably two days' journey.'

The Mantri believe that all diseases are caused either by the spells of bad men or by spirits.

Among the latter are the smallpox demon, which the Mantri avoid even mentioning by name; the dropsical demon (*hantu kembang*), which haunts the abodes of men and afflicts them with pains in the stomach and head; the Demon Huntsman (the *hantu si buru* of Malayan origin), who dwells in lakes or pools, is black, and has three dogs which he will cause to chase a man in the forest; if they catch him, they will drink his blood. In every stream, in the ground, in trees, and in caves and crevices of rocks dwell malignant demons who cause disease or mischief to men in various ways, as by sucking their blood and thus causing their death. When a person is wounded, the *hantu pari* fastens on the lesion and causes the blood to flow by sucking. The Berembun tribes believe that diseases are inflicted by the spirits of the rivers (*hantu sungai*), which are evil and feed on the human *sémangat*.

The Mantri magician's most noted form of 'sending' is the *tiju*, or pointing ceremony, which is achieved by the use of wax from an abandoned bees' nest.

When a wind blows in the direction of the victim, the magician takes a vessel of water and a lighted candle or two, and mutters an incantation while 'gazing' into the water. When he discerns the image of his intended victim in the water, he throws the wax into the air, and the wind instantaneously carries it to his victim. The latter feels as if struck by some unseen assailant, and is immediately seized by sickness, which may result in death, should the strength of the spell be great enough.

This attack may be averted if the victim has surrounded himself by counter-spells or charms of a prophylactic character. These may not only ward off the blow, but may even prevent the magician from seeing the image of the victim in the water. Amulets are much used as prophylactics against those diseases which are most frequently attributed to 'sendings,' but which may also be due to unsatisfied cravings (*sakit pūnan*).

Among the Benua Jakun the magicians are an order combining the offices of priest, physician, and sorcerer. They and the Bésisi medicine-men are much dreaded by the Malays, who believe them (as autochthones) to be more powerful than their own magicians, especially, e.g., in matters in which the performance of the Bésisi *bérsawa* ceremony is likely to be effective. Not only can the medicine-men cure, but they can inflict disease and death-sickness. This is usually effected by the 'pointing,' or *tiju*, ceremony. Even tigers are subject to these medicine-men, and every magician of repute is believed to have one in constant attendance. In curing disease, incantations are accompanied by the music of the *gélondang*, a long bamboo struck by sticks, which are always made of wood of the *mérawan* tree. Conjurations are addressed to Jiwa-jiwa (=Mal.-Skr. *deva deva*), who resides in heaven and alone can approach Pirman. The incantations last all night for one two, three, or four nights, until the medicine-man announces that he has received the medicine or that the deity is inexorable. The Berembun tribes like the Malays, attribute the magician's power to his command over spirits. Every shaman has disciples, who accompany him when he visits the sick. These pupils alone enter the small hut or leaves erected near the house in which the medicine-man performs his incantations, these being continued until the wizard is possessed by the spirit. The latter then answers the medicine man's questions respecting the mode of treating the diseased person. The Jakun of Madek (Johor) believed that the great magicians (*pyang bésar* of the tribe could reach heaven itself, and that they could disappear without dying, or else, or sickening for death, by arranging to have incense burned over them for two days after their apparent decease, they could return to life again.

A ceremony of exorcism known as *sēoi*, or, more commonly, as *sawai*, is employed by the Bēsi in case of illness or when an answer is required to a question concerning the welfare of an individual.

The ceremony takes place in a hut in complete darkness. After incantations accompanied by the rhythmic drumming of bamboo 'stampers' on the central beam of the floor, the spirit descends upon one member of the company, who answers any questions put to him while he is in a state of trance or possession. In the case of illness the magician erects a small leaf-chamber or cell (*balai bumbun*) near the walls of the hut, in which he conceals himself while the ceremony progresses.

The Blandas employ spells and exorcisms to cast out disease and evil spirits. Spirits of tigers, elephants, and monkeys are summoned to enter the magician's body, and the sick man is then brushed with leaves seven times downwards from head to foot while a charm is repeated. In the blood-throwing charm water is used, and a charm against the Wild Huntsman is also recited.

15. Birth ceremonies and beliefs.—(a) Malay.—There are four spirits, or, rather, demons, which are especially feared by the Malays in relation to child-birth. The *bajang*, a demon which appears in the form of a civet-cat, is evoked by incantation over the grave of a still-born child. It may, however, be inherited, and its possessor can send illness, usually in the form of convulsions or delirium, to an enemy. It is especially inimical to children, who are sometimes made to wear a black silk string armlet as a protection against its attacks. The *langsuir*, a woman who has died in child-birth, becomes a flying demon, or banshee, who, through a hole in the back of her neck, sucks the blood of children. It is believed that these demons have on occasion become wives and mothers, but, when allowed to dance at village merry-makings, they will assume their original form and fly off again into the forest. The *pontianak* is the still-born daughter of a *langsuir*. As a precaution intended to prevent the dead mother or still-born child from originating these mischiefs, the *langsuir* and *pontianak* are buried with glass beads in the mouth (to prevent them from shrieking), an egg under each armpit (to prevent them from waving their arms in flight), and needles in the palm of each hand (to prevent them from opening and shutting their hands in flying). The *pontianak* appears under the form of a species of night-owl. The *pénanggalan*, a colossal flying head with hair matted by clots of blood, a species of monstrous vampire or banshee that sucks the blood of children, sits on the roof-tree, or endeavours to force its way through the floor, whenever a child is born, to attack the infant. In addition to these four spirits specifically connected with child-birth, there are the familiar two, called *polong* and *pélèsit*, which also give rise to anxiety at this time, though they do not confine their activities to new-born children. The *polong* originates from the blood of a murdered man which has been placed in a bottle and over which certain incantations have been recited. It is described as a diminutive female figure about as large as the top joint of the little finger, and is usually preceded by the *pélèsit*, its pet or favourite, which, in the form of a cricket, searches for a victim and enters his body, when found, tail foremost. The *pélèsit* is obtained by exhuming the body of a first-born child, a first-born mother's offspring, which has been dead for less than forty days, and burying the child's tongue, with incantations, in a spot where three cross-roads meet. It has been noticed that these demons belong to the category of familiar spirits who are sent to attack their victims by an owner, and, as such, are sharply distinguished from the more primitive animistic ideas relating to disease, etc., which are held by the Bomer.

In regard to the observances at and after child-birth, it is usual to engage the midwife (*bidan*) in the seventh month by sending her a copper vessel containing four or five areca-nuts, three or four packets of betel-leaf, tobacco, and so forth, all of which the *bidan* charms and then empties upon the floor for the purpose of taking the omens. She then chews some of the betel-leaf and ascertains the child's horoscope. At the appointed time she chooses the luckiest place in the house for the child to be born, by dropping an adze-blade, point downwards, first in one place and then in another, until it sticks upright in the ground (under the usual Malay pile-dwelling). Beneath this spot, under the raised floor of the house, are fastened a bunch of prickly screw-pine leaves, the 'acid' egg-plant, or *brinjal*, and a *lekur jantan* (rattan stand for a cooking-pot) as a snare for and protection against any evil spirit (who will, it is believed, prick himself with the former and catch his head in the latter as in a noose). Demons so caught have been pecked to death by the fowls. A tray covered with husked uncooked rice and two mats with several thicknesses of sarong between are prepared for the child's reception. As soon as the new-born infant is laid upon this, it is formally adopted by the father, who (nowadays) breathes into its ear a Muhammadan formula. Mother and child are purified by bathing in warm water containing various kinds of leaves, with areca palm-blossoms. The child is then swaddled. Mother and child are next marked, especially the latter, as a precaution against convulsions and staining, and also, in the case of both, by way of protection against evil spirits. For this ceremony chips of wood from the thin end of the threshold, from the house-ladder, or from the house furniture, in combination with a coat of garlic, a coat of an onion, assafetida, a rattan pot-stand, and flure taken from the monkey-face of an unfertile coco-nut, are collected and burned, and the ashes are mixed with a little betel-water. The proper charm is repeated, and, the forefinger having been dipped in the mixture, the centre of the child's forehead is marked—if a boy, with an arrow-shaped mark; if a girl, with a cross, and also with daubs on nose, cheeks, chin, and shoulders. The mother is marked with a line from breast to breast and on the end of the nose also. The evil one will then, it is thought, take woman and child to be his own (who are supposed to be similarly marked) and refrain from harming them. In addition, if the child is a girl, the eyebrows are shaved, and a curve is drawn in their place, extending from the root of the nose to the ear. If the head is considered to be 'too long' (the Malays being on the whole a round-headed race), a jam-leaf cap is made to compress it.

Other ceremonies affecting the child are the administering of the 'mouth-opener,' the rite of giving the first drink from half a green coco-nut, followed by the laying of a gold and a silver and an amalgam ring on its lips, and by fumigating it before it is laid for the first time in the swing-cot, which takes the place of the Malayan cradle. The cot is protected by a funnel-shaped bunch of leaves of the *brinjal* and other materials, including the casing of the charred torch used at the severing of the umbilical cord, a spice-block, and a trap against blood-sucking demons, made of a *param*-blade, a coco-nut scraper, and a rattan pot-stand. This trap hangs under the bunch of leaves. The spice-block is explained as being a substitute for the child itself; it is laid in the cot during the first part of the fumigation ceremony, and for the first seven days, whenever the child is taken from the cot, the block must replace it. The naming ceremony takes place usually within the first week, and the first head-shaving and nail-cutting a few days later. Of the naming ceremonies the most characteristic is represented by the east-coast practice of writing seven different names on as many separate banana-fruits, and then allowing the infant to choose between them.

The most characteristically Malayan custom connected with child-birth is that which requires the mother to 'ascend the roasting-place' (*naik saleian*) daily. A rough couch is prepared for her on a small platform, beneath which a large fire is lighted, and upon this bed she has to recline two or three times a day, and that, moreover, for an hour or two together. Sometimes heated hearth-stones wrapped in rags are applied to her stomach. This is said to continue for the whole period of the forty-four days of convalescence. In some cases the 'roasting' was carried out with such rigour as to cause aberration of mind or even the death of the unfortunate patient. At the end of the forty-fourth day a purificatory ceremony takes place, wherein the floor is smeared with rice cosmetic

and scratched over by the claws of a fowl held tightly in the grasp of the cleanser. At about the same period, of the fortieth day, the child (in Perak) is presented to the river-spirits, being made to stand with one foot on a couple of coco-nuts and the other on a fowl (both of which have been deposited in the water). A boy then, if the infant is a boy, is sent up-stream to catch a fish with a casting-net; if a girl, a girl acts as the fisher. In Upper Perak the baby himself, with a number of other young children, is caught in the net; he will then never want for fish to feed on.¹

During the forty-four days' period there are many food prohibitions—e.g., any foods which, from the Malay point of view, are lowering, such as certain vegetable foods, things which irritate the skin or cause faintness, sugar (except coco-nut sugar), coco-nuts themselves, and chillies are prohibited.

Both before and after child-birth many prohibitions are laid not only on the wife, but also on her husband. The latter may not shave his head or not sit in or obstruct the doorway. Any untoward act may cause deformity: a child was born with only a thumb, forefinger, and little finger on the left hand owing to the father having, just previously to the child's birth, killed a crab with a cutlass. In fact, it was at one time prohibited for him to cut the throat of a buffalo or a fowl preparatory to cooking it, or even to take any life whatever. In Perak any log marked by, or distorted in growth by, a parasite, if used in building the house, would cause deformity, protract delivery, and endanger the life of both mother and infant.

(b) *Pagan races*.—Superstitions and practices connected with birth, so far as known among the pagan tribes, or, rather, among those pagan tribes for whom Malayan origin and affinities are here claimed, strongly confirm the view that the beliefs of the more highly civilized natives of the peninsula are essentially primitive in character. The practice of roasting the mother, e.g., of course Bésisi, and Mantri, while among the Jakun, charms used at birth are directed against the demons, the *langhui* (Malay *langsuir*), *polong*, and of the Malays. Another incantation is repeated at the moment of removing the caul as a charm against the caul-demon, which licks up the blood of the sufferer. The Sakai bury the blood and placenta under human habitations so that the rain may not beat upon them and turn them into birth-demons.

It must be stated, however, that our knowledge of the birth customs of the pagan tribes is by no means adequate, and the whole subject awaits further investigation. In one account of the Semang, for instance, it was alleged that their birth customs were based upon a belief in a bird-a bamboo receptacle; but, although the mother in of the *semangat* as a bird is certainly familiar to the Malays, this statement still awaits confirmation among the wild tribesmen. Both Sakai and Jakun make use of the services of a *sage-femme*, and who, among the former, has a special hut used by the women of the tribe for purposes of confinement.

The Bésisi decorate the mother's mosquito-curtains with the leaf-hangings used on all important ceremonial occasions, while among the Mantri a cup of water is charmed during labour and administered to the mother. The sap of certain leaves is given to the child, and a charm is repeated. A name, which is retained until marriage, is given to the child at the moment

¹ E. J. Wilkinson, in *Papers on Malay Subjects* [printed for the F.M.S. Government], 1903, 'Life and Customs,' pt. I, p. 5.

when the umbilical cord is severed. The Benua Jakun fastened round the neck of the child at birth a string to which pieces of turmeric, and so forth, were attached. The Jakun also observed a number of food prohibitions: while the children were unable to walk, the parents abstained from certain fish and animal foods, the latter including fowls and eggs, deer of all kinds, tortoises, and lizards.

16. *Adolescence and maturity customs*.—(a) *Malay*.—Of the purely Malay ceremonies at adolescence the most important are the filing of the teeth and the cutting of the first locks of hair—the latter, of course, only when, owing to some vow of the parents, the 'first head-shaving' operation has been postponed until marriage.

Tooth-filing is done by a professional tooth-wizard (*parang gigi*). Neutralizing rice-paste, charms, and the scattering of the several kinds of sacrificial rice and rings of precious metal are employed by the *parang* in order to avert the 'mischief' (*badi*) from his instrument, as well as from the teeth of the patient. The medicine-man's eyes are considered to be especially endangered by the *badi* emanating from the teeth, while an unskilled performer may cause much pain to the patient if he does not know thoroughly how to 'neutralize' the evil.

The rings of precious metal which are pressed against the patient's teeth as part of the rite of extracting the *badi* are also used in the hair-cutting ceremony. The bride's hair is arranged in seven long tresses hanging down her back below the veil which, on this occasion, shrouds her head; to each of these is attached a ring of precious metal, and then each tress of hair, on being cut, is allowed to fall with the attached ring into a coco-nut vessel (ornamented for the purpose with a chevron edge), which is half full of fresh coco-nut milk. For this ceremony also the proceedings are opened by the aspersion of the bride with the neutralizing rice-water, some of it being also sprinkled on the palm of her left hand, by those who take part in the ceremony.

The ear-boring ceremony appears to have fallen into abeyance, though in some of the Malay States a special kind of large, round, ornamental ear-ring, or ear-stud, is still the mark of virginity. Significantly, the ear-studs of a virgin bride are tied on to the ear-lobes of a widow who remarries, the latter being regarded, so to speak, as a sort of 'merry widow,' and being, in fact, actually called jeeringly 'the widow adorned' (*janda bér-hias*). Ear-boring is now usually performed when the child is quite an infant.

Circumcision is practised, the instrument being traditionally a knife of bamboo, but in all the mere accessories of the practice it seems to be entirely a non-Muhammadan rite. Especially in the Northern States it is accompanied by such a wealth of irrelevant detail as to suggest that it has been grafted upon an ancient festival (probably the tonsure ceremony) belonging to an older faith than that of Islām.¹

It is accompanied by the usual purificatory rites, and the ceremony is made the occasion for a banquet, at which the boy is dressed like a pilgrim and stained with henna like a bridegroom, after which the customary gifts are offered. In Perak he is then taken aside and robed in rich raiment, his mouth filled with the sacrificial saffron-stained rice, and his body sprinkled with the purifying rice-dust. After this, two coco-nuts and two small packets of rice are slowly rolled over him from head to foot. A hen is then placed 'on his chest to pick up grains of the yellow rice from his mouth. This is done to drive away ill-luck.'² The boy's teeth are next tapped with a stone by the operator, and, after feasting, a procession to the river follows, the object of which is to propitiate the water-spirit. The boy then has his top-knot shorn off and returns to the house for the actual circumcision, during which he takes his seat either on a sack of rice or on the stem of a banana. In the procession the youths are sometimes carried on men's shoulders, sometimes (east coast) in a litter shaped like some strange bird or mythical animal.

The girls' ceremony is much simpler, much more private; it was formerly accompanied by ear-boring and tooth-filing, and by staining the teeth 'black as a borer-bee's wing.' Large round ear-studs were also formerly assumed by girls at this period, as emblems of maidenhood; but, though these are still sometimes worn on the east coast, they are now assumed, on the west coast, only at the wedding ceremony in preparation for the rite of discarding them a few days later.³

In the same part of the peninsula (east coast) the ceremony is not called, as on the west coast, 'entering into Islām,' but, most significantly, *masuk jawi*,

¹ Cf. Wilkinson, p. 68.

² *Ib.* p. 17 f.

³ *Ib.* p. 19.

which means literally 'admission into the body of the Malay people'—the most usual meaning of *jawi* being the vernacular, or 'Malay,' language. Yet another term for the ceremony in these parts was 'purification' (*chuchi tuboh*, literally 'cleansing of the person')—a phrase which is also applied in the same parts of the country to marriage.

(b) *Pagan races*.—Of the various operations with which it is usual among primitive peoples to mark the attainment of maturity, neither incision nor circumcision is practised by the wild tribes except, in the case of the former, among the Sembrong and Jakun of the Batu Pahat in Johor, and the Benua, and, in the case of the latter, as elsewhere, only where Muhammadan influence has penetrated. It may, in fact, be said that the rite is virtually synonymous with conversion to Islam, and that it may be taken as the broad dividing-line between Muhammadanism and mere pagandom. Nor, with the exception of a single record from the Perak Sakai, is there any tatuing in the strict sense of the expression. Scarification, however, is found among both Semang and Sakai, but not among the Jakun, and, judging both from distribution and from frequency, there is good reason to believe that the custom originated among the Sakai, and was introduced, though only to a limited degree, among the Semang. The scarification consists of divergent lines on the cheek from the nose towards the ear, produced by the scratches of a thorn or edge of a sugar-cane leaf, charcoal being rubbed into these scratches by way of pigment. Body-painting is of wider distribution, and is to be seen among Semang, Sakai, and Jakun, but more especially among the Sakai. The colours used are black, white, red, and occasionally yellow. The designs are decorative and magical rather than tribal. Perforation of the nasal septum with the wearing of a nose-bar or porcupine's quill also appears to be more especially a Sakai practice. Boring the ears, however, is, as a ceremony, practically universal, whilst the ceremonial filing and blackening of the teeth may belong rather to the Malayan order of ideas. It occurs among the Semang of Kedah and Kelantan, but is there undoubtedly borrowed from the Malays of the neighbouring country.

The shaving of the head, with the exception of a top-knot, which is temporarily removed at puberty, is found among the Semang, but, though also found with differences among the Malays, is most likely a native custom of the wild Negritos, as it is also found among their Andamanese kindred.

17. *Betrothal and marriage*.—(a) *Malay*.—Negotiations for marriage and the ceremony of betrothal are carried out by representatives of the families implicated. The betrothal is a simple affair, consisting chiefly of the offering of betel-leaf by the representatives of the prospective bridegroom and its acceptance by the bride's parents, the two parties meeting in a 'family circle,' at which the offer used originally to be made, and the reply given, in rhyming stanzas. The term of the engagement is then settled. The amount of the marriage settlement is fixed by custom at two *bharas* of dollars (\$22, about £2, 6s.) in Selangor, or \$31.25 (about £3, 5s.) in Perak, etc. The sum is not usually mentioned unless a modification of this arrangement is to be made. A breach on the part of the bride's parents involves forfeiture of double the marriage portion. The affianced pair avoid one another, but there is a regular system of exchange of presents, those given by the girl being deposited in exquisitely woven baskets made in the shape of birds or fishes. It should be added that the Malay name of the ceremony in the peninsula, *berpinang*, is an interesting parallel to the splitting of the betel-nut (*pinang*), which is the

symbolical act of betrothal to this day among the Dayaks of Borneo.

The actual marriage ceremonies cover a period of four days, beginning with the work of decorating both houses, which includes the erection of a dais, with two standard candlesticks, often 6 ft. high, before the door of the bride's chamber. The arrangement of the dais (*pelamin*) is of extreme importance, since the number of big white (or in case of a Raja, yellow) pillows used indicates, according to a rigid code of etiquette, the rank of the contracting parties. The whole of the dais is covered with a mosquito-curtain, and the walls of the chamber are adorned with striped or 'rain-bow' hangings (*kain pelangi*), while the ceiling is decked with an awning or 'heaven' (*langit-langit*).

The basic forms of the rite, which were those of a royal wedding, include the so-called 'bride-price,' the food-sharing ceremony, and the approximation of the dress of the bride (who on this occasion wears trousers) to that of her husband (who wears a skirt). It is this fact that, as A. E. Crawley¹ has explained, helps to account for the apparent resemblance to royal ceremonies that may be noticed in so many Malay customs. The idea seems partly to disguise the subjects of the ceremony in order to avert the possible danger attaching to what is certainly regarded as a critical occasion, and partly to promote a more perfect union between the pair by means of (1) a pledge passing between them (*i.e.* the 'bride-price') as well as by (2) the sharing of a meal together, and (3) the obliteration (so far as may be practicable) of the distinctions of sex. The pretence of kingship by which the bridegroom is made to wear the bracelets, chain, neck-ornament (and, if we may go by the analogy of Malay funeral custom, even the kris) is simply, therefore, an attempt to secure a really effective disguise for the party in danger. The shaving of the bride's forehead may be similarly explained, since the bridegroom is also shaved. Although these are all likewise usages of royalty, it is wrong to regard them merely as a species of social self-advertisement; they are really the paraphernalia worn by all persons of the Malayan race on certain critical occasions,² in order to banish the spirits of evil and thus to avert mischief and danger. Till recent years the ceremonies over the greater part of the peninsula were almost entirely non-Muhammadan, and often took place in country districts without the intervention of any mosque official whatever. Lustrations followed, and on the east coast processions in monstrous or bird-shaped litters.

In certain details the wedding ceremonial has now become Muhammadanized in character; among these is to be included, most probably, the staining of the fingers of the bride and bridegroom with henna. The henna-staining at first is done in seclusion ('by stealth'), the initial public appearance of the married couple at their respective dwellings occurring on the second night, when ceremonial rice-water is sprinkled, offerings of rice made to each of the parties, and the 'henna dance' (*tari hini*) performed; on the fourth day the procession of the bridegroom to the house of the bride's parents takes place. Here, on his arrival, his progress was in former days occasionally opposed by a mimic conflict (*mélaua*), which terminated only on his payment of a small fine or ransom to these (for the nonce) self-constituted 'authorities.' This part of the ceremony, which used to be explained as an example of the so-called 'marriage by capture,' is now taken to be merely an expression of the antagonism between the sexes. In some cases a rope or piece of red cloth barred the way, and a stout resistance was offered until the bridegroom had paid the fine demanded. Even then admission to the house had to be made against the resistance of women of the bride's party. The simple marriage service—a mere bald statement of the fact and of its acceptance by the groom—is now performed by the *imam* (Muhammadan priest) in the presence of the bridegroom only. It is said that, according to the old custom, the ceremony took place on the day before the procession. The groom

¹ *The Mystic Rose*, London, 1902, p. 336, quoting the Malay ceremony.

² Not specially in connexion with kingship.

is then taken to the bride, and both are seated ceremonially side by side (*bērsanding*)¹ on the dais and partake of rice, each feeding the other from a specially-prepared receptacle (*nasi estakōna*=Skrt. *aṣṭakoṇa*, 'octangle')—an octagonal erection of three tiers which holds the 'rice of the presence' (*nasi adap-adap*), coloured eggs (*tēlor joran*), etc., and stands before the *pēlamin*. The eggs, which have coloured streamers, and represent a fruit, with flower and leaf, are given to the guests as wedding favours. On the third day of the lustrations which follow the marriage the ceremony of bathing for good fortune takes place in the evening. Later, at night, a bonfire was formerly lit outside the house and the groom 'stolen,' i.e. carried off to his parents. He was escorted back to his house next day, and a water-fight with syringes (called 'water-bows') took place (sometimes in a specially-erected pavilion) between the friends of the two parties. After this the bride and bridegroom each pulled one of the ends of a slip-knot made of a young coconut frond, and the bridegroom broke through threads wound seven times round himself and the bride; in some cases (Patani) the threads were severed by burning. Seven days after the concluding feast-day the rite of the 'discarding of the ear-rings'—the emblems of the bride's maidenhood—takes place. For two years the bridegroom may be expected to remain under the roof of his mother-in-law. It has been remarked that in the 'bridal rice' (*nasi bēr-astakōna*), in the 'bridal thread' (*bēnang pancharōna*), and in the 'bathing pavilion' (*balai pancha-pērsada*) we have not only Indian customs, but Indian names.²

In addition to this regular form of marriage with the consent of the girls' parents, the Malays recognized another form of marriage when the parents were notoriously unwilling, the essential feature being that the would-be bridegroom, fully armed, must force his way to the women's apartment and secure the person of his bride, or prevent her from escaping. If the parents should then give their consent, the customary payments were doubled. This procedure was known as the *panjat angkara*.

In a second and more peaceful form, the *panjat adat* (once frequently employed by Malayan Rajas), the groom did not break into the house himself, but sent his kris, accompanied by a message that he was ready with the dower, doubled in accordance with custom. If the kris was returned (e.g., on an unfavourable answer), the parents must send back with it a double dower.

W. E. Maxwell gave both these forms of marriage as being recognized by Malay custom.³ Wilkinson, however, assenting to the second, regards the first as a mere *crime passionnel*.⁴

The marriage ceremony is called in most parts of the peninsula by terms which are obviously of Arabic or Persian origin; on the east coast, however, where Muslim influence is less strong, it is often termed, significantly, by a Malay word denoting 'purification.' Like their Polynesian colleagues, certain Malays (e.g., Nēgri Sembilan) forbid the marriage of two brothers' (or sisters') son and daughter, but not that of a brother's son and a sister's daughter.

(b) *Pagan races*.—Among the pagan tribes the essential feature in the marriage ceremony is a ritual purchase and a repast shared between bride and bridegroom. Among the Semang the price consisted of the blade of a chopper (*parang*), presented by the bridegroom to the bride's parents, and a coiled girdle of great length, said to be manufactured from the rootlets of the sugar-palm, given to the bride. This act of purchase, so long as it was performed before witnesses, was in itself binding. The Semang, as a rule, were monogamists, and conjugal infidelity was strongly discountenanced, the immemorial penalty being death, which would now be commuted for a heavy fine. Among the Perak Sakai the nuptial present was, as among the Semang, a knife or yam-tubers.

According to one account, the bride and bridegroom attended

at the house of the chief, who, after an inquiry as to their prospects, declared the man and wife united. Another account states that the relatives of both parties assembled at the bride's house, and that the two betrothed persons ate rice out of the same dish together. The little finger of the man's right hand was joined to the little finger of the left hand of the woman, and they were pronounced husband and wife by the elders of the settlement.

The Sakai occasionally, but rarely, took more than one wife. Death or a fine was the penalty for infidelity.

The Jakun ceremony embodied several features of peculiar interest and importance.

In addition to the nuptial presents for the bride and her parents—beads, white cloth, etc.—the husband was expected to provide a hut, cooking-pots and pans, and other household requirements. Either party or both were questioned as to their ability to carry out the duties of their future state, the requirements in the case of the man being proficiency in the use of the blowpipe, ability to fell trees or to climb after fruit in the jungle, and even ability to smoke a native cigarette. The *batin* (head-man of the tribe), as a rule, was present and pronounced the parties husband and wife at the end of the ceremonies. Among the Bēsis of Selangor the head-man then gave the bride and bridegroom a new name. According to one account, among the Selangor Sakai, the smoking of a native cigarette was substituted for the common meal. The Mantri bride and bridegroom presented a love-token of betel-leaf to one another before the feast, at which they ate together from the same plate. The most distinctive feature, however, in the Jakun marriage was the use made of a conical or, rather, bell-shaped mound of earth (sometimes an actual ant-heap) decorated with natural and artificial 'flowers,' the latter being representations of the solar disk with rays, etc., and other ornaments; around this mound the bride was pursued by the bridegroom, in some cases three, in others seven, times; if he succeeded in catching her, they were declared to be married. Among the Bēsis of Kuala Langat (Selangor) the bridegroom was conducted before the present writer seven times round this mound at a walking pace, and the bride once, before they partook of a common repast, consisting of a dish of rice and drink from a bowl of water which had both been placed on top of the mound (*būsur*). This was, of course, a survival of the mound-race ceremony. In one form of this rite among the Mantri there was no mound, but the pursuit took place round a circle of varying size; in the case of the Benua of Pahang, a fire was substituted. In the case of some Jakun tribes of Johor, in the middle of a dance the bride ran into the forest, and was followed by the bridegroom. The counterpart of this ceremony among the Land-Tribes (Orang Darat) was, it is important to note, among the Sea-Tribes (Orang Laut) of Johor a ceremony in which the bride had to be pursued by the bridegroom for a given distance on the river, in canoes.

Monogamy was generally, though not invariably, the rule. Although marriage was recognized as strictly binding by the Bēsis and other Jakun, yet at their drinking carnival (*main jo'oh*), which took place at the end of the rice-harvest, they were allowed to exchange their wives promiscuously.

18. Burial customs and mourning.—(a) *Malay*.

—The Malays are not among those races who fear, but rather among those who pay respect to, the ghost of the departed.

After death the body is shrouded in sarongs and laid on the back, with hands crossed on the breast, on a mattress which, in turn, rests on a new mat of pandanus. A pair of scissors used in the preparation of betel-leaf is placed on the chest, the explanation being that, should a cat by any accident come in contact with, or brush against, the body, the touch of iron will prevent the corpse from returning to life, as once happened. Cats are always expelled from the house while it contains a dead body, and the corpse is watched day and night in case evil should come near it. The preparation of the body for the grave includes ceremonial washings, which should be performed while it rests on the outstretched legs of four people (members of the family) sitting on the floor. Failing volunteers for this office, banana-stems are used as rollers. A final washing of 'nine waters' is performed by the *imām* (if accessible), 'three scoops' of water being scattered to the right, three to the left, and three over the body from head to foot. The orifices, including the ears, eyes, and nose, are plugged with cotton, and the corpse is wrapped in a white cotton shroud, the selvage of which is torn off and used to bind up the body at the breast, hips, knees, head, and feet, the shroud having been fastened with the 'five knots.' The corpse is then placed on the mattress in the position which it is to occupy in the grave, lying, that is, on the right side with the head to the north, and face looking towards Mecca (westward). When the relatives give the last kiss before the shroud is fastened, they must be careful that no tears fall on the face, as these might disturb the deceased's spirit. The position of the body in the grave depends upon the kind of coffin used. If it is a single-plank bier (*papan sa'keping*), the body is placed in a recess at the left side of the grave, and the plank is fixed in a sloping position with pickets closing the aperture, so that the plank itself may neither touch the body nor allow the earth to fall upon it. Another kind of receptacle

¹ Wherever the old Palembang (Sumatra) tradition exists—in Pahang, Johor, Riau, Malacca, Selangor, and Perak—the entronement or *bērsanding* varies very little. But if we leave the Palembang area and cross into Patani, the ceremony is different, the regalia are different. We see before us the ghost of the ancient Northern Courts and of the old and high civilizations that have been crushed out of existence by the Siamese (Wilkinson, p. 70).

² Wilkinson, p. 64.

³ *Ap. Skeat, Malay Magic*, p. 394.

⁴ P. 28.

(the *kedanda*), a plain oblong box, is placed in the middle of the grave-pit. The *long*—made either of two planks united along one edge in the form of a gable with bulging sides or of three planks fastened together like the sides of a box without bottom—is placed over a trench in the middle of the grave which contains the body. While the grave is being filled in by the bystanders, the diggers, who must not leave the grave until the operation is completed, fend off the earth from the body with small hurdles. A relative fashions two small (temporary) grave-posts of wood, one of which is placed over the head and one over the waist, to both of which strips of white cloth (as signs of recent death) are fastened. The *imam*, after pouring libations on the grave, and scattering shredded blossoms of scented flowers, reads the *talkin* ('exhortation') amid profound silence. The reason given for this silence is that the dead man is supposed to open his shroud, the fastenings of which have been loosened for the purpose, and, feeling that its border has no selvedge, thus first becomes cognizant of the fact that he has died, beyond any possibility of doubt. He then sits up to listen to the preacher, supporting himself on his elbow until, at the end of the reading, he falls back really lifeless. The mourners, led by the *imam*, then recite the *tahsil*, the Muslim profession of faith, one hundred times, beginning very slowly and increasing their speed at regular periods (finally at an extremely rapid rate), after which they return to share in a feast given by the head of the household; before they leave, however, the contributions collected in the alms-bowl which stands near have been divided among all present. Feasts follow on the third, seventh, and fourteenth days, and, in the case of the wealthy, on the fortieth and hundredth days, and on the anniversary. Then the grave is made up, and a framework of planks is placed round it to keep the earth of the grave-mound banked up properly. In the case of a chief, a small hut or shelter is often erected over the grave, and this the writer has sometimes seen furnished actually with a mosquito-curtain.

No special sign of mourning is worn, but the sarongs in which the corpse is wrapped and the pall must be as costly as possible, consistently with the rank and wealth of the deceased person.

In the formerly Malayan district of Singgora, north of Patani, various forms of exposure of the dead frequently took place until recently, when the Siamese Government prohibited the custom with great strictness. One of these consisted in suspending the corpse in a cigar-shaped receptacle or wrapper between a couple of trees in the jungle, at a height of about 8 ft. from the ground. Another consisted in depositing the body of the deceased person (placed at an angle) in a large rectangular box, supported on lofty posts—a method which is of exceptional interest, since it may be linked up with the custom of burial in a chest on high posts, still practised in Borneo. The remarkable point about these forms of tree-burial, or corpse-exposure, is that they were in both cases explained by the people who employed them as being reserved for any one who had died a 'bad' death, the idea being apparently that ordinary interment or cremation would not suffice in such an instance to bring peace to the *sémangat*. The Patani Malays also had once a similar custom—casting out to be eaten by dogs and vultures the bodies of those who had died a bad death. Yet from the statements of mediæval Chinese writers (e.g., Ying Yai Sheng Lan, A.D. 1416), though quoted by Wilkinson,¹ it is clear that such exposure, from the analogy of ancient Java, was in no way limited to bad deaths, but was an honourable and pious form of burial offered even by the children of a family to their parents, so that it falls into line, in this regard, with the funeral customs of modern Tibet, where dead relatives are dismembered and given to the dogs and vultures. It would, on the other hand, perhaps readily come about that such methods should be regarded as barbarous and even 'wicked,' when the country was settled by a people to whom such forms of burial were alien.

A third remarkable method was practised by the so-called 'white Prāms' of the Malayo-Siamese region, who had a small cemetery in Patalung, wherein their dead were deposited in a sitting position.

(b) *Pagan races*.—Among the pagan tribes the

burial customs exhibit considerable variation, but they are especially significant as revealing the attitude of the various groups towards death, and particularly towards the spirits of the departed. The Semang appear to have no special fear of the dead, although they do exhort their deceased friends to think of the spirits of their departed ancestors and not to trouble the living. The Sakai, on the other hand, appear to have great terror of the spirits of the dead, and it is usual for them not merely to desert the house in which any one has died, but to abandon the whole clearing, even if the crops are standing. The Jakun are distinguished from both the Semang and the Sakai by the tender care which they show for their dead relatives.

The Semang method of interment is simple.

Among the Kedah Semang the grave is usually surrounded by a low fence of palm-leaves, and the two bamboos upon which the body was carried to the grave are laid upon it. The corpse is placed on its side, with the head and knees to the right, on a mat or rough platform of twigs, and a screen of sticks, driven diagonally into the side of the grave and roofed with palm-leaves, prevents any earth from falling on it. The legs are drawn up, probably, as the grave is only 5 ft. long, for the sake of mere convenience. Three coco-nut shells containing rice are placed in the grave-pit at the head and sides, and a coco-nut shell at the foot holding water.

It is probable that at one time the Negritos (Semang) practised tree-burial. The bodies of their medicine-men may still occasionally be exposed in trees in the forest—this being a more honourable form of burial. Among the Malays a tradition is current that the Semang used once upon a time to devour their dead. It is unnecessary to place any credence in this statement; its importance lies in the fact that it probably alludes to the existence at one time of a custom analogous to that of the Andaman Islanders, who disinter and dismember their dead after a certain interval.

Of Sakai methods of burial little is known with certainty, the reason being apparently the fact that they threw the bodies of their dead into the jungle, or simply left them to rot away in their primitive hut-shelters. It is certain that they have always shown the utmost abhorrence and terror of the dead, abandoning their huts—and even clearings with growing crops—when a death had happened in their encampment. A modified form or survival of platform-burial is found among the so-called Sakai of Selangor (Ulu Langat), by whom the body was exposed on a platform in front of the house for twenty-four hours.

Jakun (or Malayan) ritual and practice are more elaborate than those of the Semang, and in the solicitude shown for the welfare of the departed imply an entirely different mental attitude towards death from that of the Sakai and the Semang. In many respects there is close affinity with Malay customs.

The body is carefully washed and prepared for the grave. It is covered with white cloth, and laid on a mat, which, in turn, is placed upon a tree-bark wrapper. This tree-bark is then lashed round the body and used for carrying it to the grave-side. Frequently the blade of a chopper (*parang*) is laid on the breast of the departed. The Orang Bukit cut a hole in one of the cloths in order that the corpse may 'breathe' more fully. It is customary also for them to make crosses on the palms of hand and soles of the feet with a yellowish root which, on being bruised, leaves a stain behind it. By these marks the deceased person recognizes, on waking in the other world, that he or she is really lifeless. At the grave the tree-bark wrapper is removed, and the body is laid on its back, or sometimes facing east if an adult, west if a child (Mantri). A gable-like covering, in accordance with the Malay custom, is formed from pickets covered with tree-bark or a sloping plank (this being also a Malay usage) to keep the earth from striking the body. The Orang Bukit (Hill Men) place a dish of boiled rice at the feet for the spirits, and one at the middle for the departed. It is commonly the custom to lay in the grave some or all of the property of the deceased, usually articles most distinctive of the daily duties of the sexes. An extremely interesting practice among the Bësis consists in their erecting, a yard or two away from the foot of the grave, a small triangular hut thatched with a big fan palm-leaf made to lean against it, fitted with a stick-ladder by which the ghost may climb up. In the hut are

placed models of domestic and other utensils and implements, again distinctive of sex, betel-shoots, seed-rice, and fish, and fruits, water, and sugar. When the grave has been filled in, the seed-rice is scattered on the mound and about the grave in order to provide the ghost, when the grain has grown up and ripened, with suitable nourishment. Among these people it was also the custom for two men to stand one on each side of the grave and simultaneously to let fall two choppers, horizontally crossed, upon the mound at about the spot where the breast would be, this being done in order to 'fix the ghost in the grave' and to 'prevent it from harassing the living.' The Mantri broke a blowpipe (no doubt that of the deceased) and scattered the fragments on the grave-mound. At each end of the mound the Jakun commonly placed wooden tomb-posts bound with white cloth similar to those used by the Malays, and, again like the Malays, they enclosed the grave, when made up, with a framework of wooden planking.

The feeling for the welfare of the dead which is expressed among the Bésisi by the seed-rice sown over the grave is also responsible for the depositing of a number of offerings at or near the place of interment. The Bésisi themselves plant yams, sweet potatoes, etc., near by, while on the grave of a *jukrah* ('tribal chief') described by D. F. A. Hervey (*JRAS*, Straits Branch, no. 8 [1892], p. 119), were sticks to serve as ladders for the soul to climb up, coco-nut shells, a torch in a stand, and a cooking-pan, as well as the basket in which firewood is usually carried. This grave was also provided with a trench in which the dead man could paddle his canoe—apparently a link with boat-burial. Among the Berembun a bamboo was placed upright near the face of a child, with one end projecting from the ground—undoubtedly a survival of an earlier custom of feeding the corpse through the bamboo, as is still done by the Dayaks of Borneo. It was not uncommon for a fire to be lighted near the grave for three days, while the Sabimba visited the grave on the third and seventh days and one month after interment. The Jakun sometimes, though not usually, abandoned the house and clearing after a death; usually, however, this took place after a month's interval.

19. Omens, divination, and ordeals. — Astrological calculations based upon the supposed values of times and seasons or the properties of numbers are largely employed in divinatory ritual. Exhaustive tables of unlucky and lucky times and seasons have been compiled by the Malays, but are proved to have been largely translated from Indian or Arabic sources. The oldest and best known of the 'magic squares' founded upon these systems is that known as the 'five times' (*kātika lima*), in which the day is divided into five parts, while five days form a cycle, the name of a Hindu divinity being assigned to each division. Mystic values are also attached to certain colours in connexion with these divisions. Another scheme is based upon the seven heavenly bodies, the divisions being, correspondingly, seven in number. Malayan astrological knowledge and the signs of the zodiac upon which the various systems are founded appear to be largely Arabic in character, though there can be little doubt that the original home of this lore was Babylonia (or Chaldaea), and some part of it may have come in through Indo-Persian channels. The division of the month into *rējangs*, thirty in number, each with a separate symbol, is based upon the twenty-eight *nakṣatras*, or lunar mansions, of the Hindus, rather than upon the *anwāṭ* of the Arabs. The Malays are especially partial to the magic square, which generally takes the form of the magic square once used in Europe, but sometimes works conversely—the latter being, no doubt, the older native form proper to the Malays of the peninsula. As has been remarked, the Malays introduce both coloured squares and the names of five of the greater Hindu deities. Besides these squares, many other magic figures—pentacles, compass-figures, and the like—are much used by Malay diviners.

In interpreting omens from dreams the method usually employed is that the initial letter of the thing dreamed of determines the character of the omen. *T* is very unlucky, *N* indicates sorrow, *H* a visitor from a distance, and so on. In another system an almost entirely arbitrary interpretation is put upon the subject-matter of the dream, or, at most, it is interpreted by analogy. In a third method, however, the nature of the thing dreamed does actually suggest its interpretation, with the

proviso that so-called 'direct' dreams come only on the eve of a Friday, whereas on other days the dream works backwards.

It may be added that the doctrine of luck plays a most important part in what may be called Malay 'natural religion.' By certain signs and indications not only human beings but also birds and animals are either credited with the possession of luck or believed to be invested with the power of bringing it to others; in a fine passage the Malay deer-wizard chants as follows:

'From the seven Hills and the seven Valleys
Comes the intense barking of my Hounds.
My Hounds are *Hounds of Luck*,
Not Luck that is adventitious,
But Luck incarnate with their bodies.'¹

Even inert objects, such as krisses and other weapons, may be brimful of luck, or otherwise.

(a) *Malay*.—Omens and divinations play a part of paramount importance in every department of life's activities in Malaya. Equal significance is attached to signs deduced from the acts of men and those taken from the events of nature.

Among the acts of men may be mentioned sneezing, which is held to be fortunate, since it tends to drive away the demons of disease. Yawning, on the other hand, when audible, is a bad sign; but, if the yawning is silent and happens when the stomach is craving for food, it implies that the craving will soon be satisfied. It is unlucky for a child to lie on its face or kick its feet together in the air; this is a sign of the approaching death of one or other of its parents.

The evil eye is much feared, and praise of children is conveyed in a roundabout way to avoid ill-fortune.

Among omens drawn from natural events, the following may be mentioned.

A star in apparent proximity to the moon portends an approaching wedding. The entrance of an animal which does not usually frequent the house denotes ill-fortune; to be barked at by a wild jungle-dog is a fatal portent; a wild bird entering the house should be caught carefully and smeared with oil and then released in the open air, a formula being recited which bids it fly away with all the ill-luck or misfortune of the household. Omens are taken from the flight and cries of certain birds, such as the night-owl, night-jar, or *caprimulgus*, the crow, and certain kinds of wild dove, as well as from a bird called the 'rice's husband.'

Such prognostics are drawn from entirely fortuitous events, but they may also be the natural reply to actions initiated by the inquirer. In such cases we have the rite of divination properly so-called (*tilek*=Skr. *tilaka*, 'mark').

One form of divination is effected by means of a lemon which, after offerings have been made and certain ceremonies performed, is suspended with incantations over a brazier by seven strands of coloured silk thread, the fruit being itself thrust through by a needle. The motions of the suspended lemon answer questions in the negative or affirmative, and will discover a thief by indicating which of a number of names written on paper is that of the guilty man. The mirrored surface of water held in the palm of the hand, or saliva, or a bowl filled with water and covered with a cloth upon which the names of suspected persons are successively placed is employed to discover those who may have been guilty of stealing. In the last-named case, two men each place a finger in the bowl, which begins to turn when the name of the culprit is placed upon the cloth above it. Another method is the use by the medicine-man of a divining-rod composed of one, three, or more rattan-stems, inscribed with magical devices, and connected at the base or butt-end, which vibrate when the thief approaches; these rods may also be used for treasure- or water-finding, as by our own 'dowsers,' and also even for exorcizing demons.

It is noteworthy that the Malays attribute the arts of the diviner to animals as well as to men; thus the tiger is said to employ divination when it wishes to secure a human victim, just as tigers are believed to poultice themselves with *ūbat tāsak* (the medicament applied to the newly circumcised) when wounded.

An important and solemn ordeal was that by diving. This required the consent of the Sultan, and could be conducted only in the presence of the four great (west coast) chieftains.

In the case of a dispute, each of the adversaries in defence of his own case writes a solemn statement. After certain formal preliminaries, this document is enclosed in a bamboo sheath or covering. One of these bamboo receptacles is given to each of the two

¹ Skeat, *Malay Magic*, p. 182.

adversaries, who are escorted to the river and placed up to their necks in the water. A bamboo pole is then made to rest upon their heads and, at a given signal, they are both pressed downwards. Each remains under the water as long as he can, but, as soon as one of the two gives in and appears above the surface, his tube is snatched from him. The winner isled back, his bamboo opened, and the result declared to the bystanders.

(b) *Pagan races*.—The savage Malays of Malacca also paid much attention to omens when a new clearing was to be made, and charms were used to expel the jungle spirits. The Mantri, in choosing a new locality for a clearing, paid strict attention to the attitude of the spirits toward his undertaking as signified by the dreams of the party. To dream of being chased by a dog or an enemy, entering water, or being flooded out was an evil omen; to dream of felling or climbing trees, of ascending trees, or of growing plants was of good import.

Divination among the Sakai, so far as records go, is practically non-existent. Among the Jakun it is employed as a part of their medical diagnosis, but, whether used as a part of a tribal or group ceremony or by the medicine-man alone, it falls more properly under the category of exorcism.

20. Charms, amulets, and talismans. — (a) *Malay*.—Not only does the Malay attempt to foresee the coming of evil, but he endeavours to ward it off by charms and talismans. Charms in the shape of invocations are extremely numerous, and are addressed to every conceivable form of spirit on every conceivable occasion. But, in addition, free use is made of charms of a more material character. Examples of this class include a length of the *sāmambu* (Malacca cane) with a joint equal to the height of the owner, which protects him from snakes and animals; so, too, the 'coco-nut pearl' (apparently a form of 'tabasheer'), the 'eyeless coco-nut' (which confers invulnerability by 'sympathy'), the 'dragon's blood' rattan or cane, the tiger's whiskers and claws, and many others are all, for various reasons, much sought after by warriors. Some of these are directly effective, others work only by influencing the volition of another mind, as in the case of love-charms, charms for securing conjugal fidelity, and so forth. In most cases the charm consists of a short Arabic or Malay and Arabic prayer or a few magical letters or figures inscribed on paper or cloth and worn on the person. One important use of a charm is to enable the devotee of this magic to abduct the *sēmangat* of a person from his (or her) body, for the purpose either of benefiting the operator or of harming the intended victim. There is a variety of methods of attaining these objects. In some the charm works without contact; in others contact is necessary. Although there is considerable variety, the principle in all cases is the same, and is based upon the Malay theory of the *sēmangat*. Thus, e.g., soil is taken from the intended victim's footprint and treated ceremonially by wrapping in red, black, and yellow cloth; and this, when suspended from the centre of the magician's mosquito-curtain, becomes the embodiment of his victim's *sēmangat*. As such it is switched with seven strokes three times a day for three days and then buried in the middle of a path where the victim is bound to pass; on doing so, he becomes distracted. Wood scraped from the floor where he has been sitting, parings of his nails, and clippings of his hair are utilized in various ways; sometimes they are kneaded into a wax figure, which is either transfixed with a thorn in the member that the enchanter desires to injure or burned to ensure the victim's complete destruction.

Of the various methods of abducting the *sēmangat* without contact, the simplest is to go out when the sun clears or when the newly-risen moon glows red, and, standing with the big toe of the right foot resting on the big toe of the left, make a

trumpet of the right hand, and recite the appropriate charm thrice over. At the end of each recital, blow through the hollowed fist, using it as a trumpet. The words of the charm, 'I loose my shaft,' suggest a 'sending,' analogous to that of the medicine-man. Other methods are to beat one's own shadow, to hang a seven-fruited lime-branch from the top of one's mosquito-net on three successive nights, to wave the end of one's head-cloth in the direction of the moon seven times for three successive nights, and so forth, the appropriate charm in each instance being, of course, recited.

With their customary logical thoroughness, the Malays attribute the use of charms and amulets in some cases to wild animals, and even to reptiles. The wild boar, e.g., is believed to possess a talisman of extraordinary power called *rantei babi*, 'the wild boar's chain,' which is hung up on a neighbouring bush by the animal whilst he is occupied in wallowing, and which can therefore sometimes be stolen by a lucky native. Another talisman carried by the boar for defensive purposes is the *kulum babi*, 'boar's sucking stone'; the two together made a wild boar invulnerable. A similar 'lucky stone' was sometimes worn by serpents. Any magically potent object is called *ber-tuah*.

(b) *Pagan races*.—Amulets and talismans are common among the wild tribes. Coins are strung on necklaces to serve as 'medicine,' and necklaces of tufts of squirrels' tails, teeth of apes, wild pigs, and monkeys, and bones of birds and animals, as well as the bristles, teeth, and claws of tigers, were first worn, as among the Malays, quite as much for magical purposes as for ornament. The Mantri strung pieces of turmeric on strings of *artocarpus* bark, and these were worn round the neck, wrists, or waist as prophylactics against demons, bad winds, and, generally, all kinds of evils. They also placed great reliance on the efficacy of spells to render them invulnerable. Semang women wear armlets of *pālas* (*Licuala peltata*) leaf, and men wear similar ornaments of the 'rock vein' (*urat batu*) fungus. It appears that among these tribes, as elsewhere, much of their personal adornment was intended to protect them against evil from the spirits by which they were on all sides surrounded. The elaborate patterns of the combs of the Semang and half-breed Sakai-Semang women were similarly designed to ward off accidents and disease, and the copper bracelets, rings, and other objects worn by the Sakai were in effect talismans which preserved the wearer from ill-health and misfortune. The Semang, when wearing the Malay sarong, frequently still retain underneath it the primitive string girdle of 'rock-vein' fungus, possibly from habit, but more probably for magical reasons.

The most important class of charms or talismans employed by the wild tribes is undoubtedly the ornamental geometrical patterns with which they adorn various objects of common use. These designs are intricate and have as yet been adequately studied and elucidated only to a small extent. So much, however, is clear: the pattern, as a rule, is symbolical of the use to which the object on which it appears is to be put, and its aim is to secure the successful attainment of that object. Exception to this rule may be made in the case of the women's combs and other articles, the patterns on which are intended to ward off disease, the attacks of reptiles, animals, and noxious insects, and other accidents. The difficulty of comprehending and interpreting these designs is increased by the fact that, in the usual fashion of primitive artists, the wild tribes make a part stand for the whole. The slots of deer on a bamboo quiver, e.g., represent the whole animals, which, it is hoped, will be induced, by being represented as approaching towards certain wild jungle-fruits beloved of the deer, to visit a particular feeding-ground, when they can be the more easily marked down and captured. The articles decorated in this manner

with magical intent include, in addition to the Semang combs, large bamboo tubes used as quivers for darts and arrows, the last being covered with patterns intended to secure success in hunting. Other articles similarly adorned are 'stampers' (i.e. bamboos struck on the ground during magical ceremonies, amulets against disease, insect pests, drought, etc.). Besides these they decorate bamboo rice-dibbers, poison receptacles, tobacco receptacles, blowpipes, arrows, nose-sticks, etc., mats and wallets (Sakai and Jakun, not Semang), bark-cloth (with painting only), and the human body, the last not only with painting, but also with tatuing and scarification (likewise especially among the Sakai).

LITERATURE.—This is cited throughout the article. Especial use has been made of W. W. Skeat, *Malay Magic*, London, 1900; and Skeat and C. O. Blagden, *Pagan Races of the Malay Peninsula*, do. 1906 (with full bibliography).

MALE PRINCIPLE.—See PHALLISM, SEX.

MALIK IBN ANAS.—Malik ibn Anas, the founder of the Mālikite school, was born in the month of Rabi' al-Awwal A.H. 95 (A.D. Nov. 713). He was of pure Arabic stock, being descended from Dhū Aṣḥab al-Hārith, who belonged to one of the tribes of Yaman. When still a youth, he had already acquired a full knowledge of the Qur'ān, the *ḥadīth* (tradition), and other Muslim sciences, and soon he was held in reverence as a great authority in these matters.

During his long career Mālik ibn Anas resided in his birthplace Medina as a *mufti* and teacher of Muslim law. Like many men who have spent their lives in study, he has not left much for his biographers to record. His chief work was the so-called *Muwatta'* (lit. 'The Beaten Path'), the basis of the whole Mālikite system of Muslim law. This book is not a mere collection of traditions. It deals not only with the sayings of the Prophet but also with the opinions of several famous *faqīhs* in Medina and with Mālik's personal views on various matters of canon law. It is often alleged that Mālik rejected every kind of reasoning by means of argument and kept exclusively to the literal sense of the sacred texts. But the contents of the *Muwatta'* prove the contrary. According to his later biographers, Mālik repented of this in his old age. It is told that, when he sat down in his last illness and wept, he was asked: 'What makes thee weep?' He answered: 'Who has more reason to weep than I? By Allah, I should wish I had been flogged and reflogged for every question of law on which I pronounced an opinion founded on my own fallible judgment!'

The text of the *Muwatta'* is handed on by Mālik's disciples in different versions. The best known is the text of Yahyā al-Maṣmūdī, which was printed with the commentary of Muhammad al-Zarqānī in 4 vols. at Cairo (1863). Another version is that of Muhammad al-Shaibānī, the famous disciple of Abū Ḥanīfa, who studied three years in Medina (printed at Lucknow, 1879).

It seems that the opinions of Mālik ibn Anas were not always in agreement with the views of the government. In the year A.H. 145 (A.D. 762), as some persons had accused him of declaring that he did not consider the oath of allegiance to the Abbāsid khalīfs as binding, he was even flogged and treated in a most scandalous manner. After this cruel punishment, however, he rose still higher in public estimation in Medina, where he died on the 10th of the month Rabi' al-Awwal, A.H. 179 (A.D. 3rd June 795).

Mālik ibn Anas enjoys the reputation throughout the whole Muslim world of being one of the greatest *faqīhs* and traditionalists of Islām. At the present day his school is still dominant in the

west of the Muslim territory, in the French and Italian possessions (Morocco, Algiers, Tunis, Tripoli), and in many other parts of Africa.

MALTHUSIANISM.—Some economic and social investigations seem to be haunted by an evil fate. The subject with which they are concerned seizes popular attention for a time, and the results of the inquiry come to be represented in a form which is little more than a travesty of the original meaning and intentions. One of the most remarkable instances of this tendency is to be found in the reception accorded to the work of Thomas Robert Malthus (1766-1834) on *Population*. Popular interest in his work grew much more rapidly than the time or the capacity for assimilating it, and he was criticized by many who had not read his books. He was accused in his own day of being an enemy of the human species, and of being guilty not merely of heterodoxy but also of atheism. It was said that 'the insults the theory of Malthus levels at God, and the injuries it meditates inflicting upon man, will be endured by neither' (M. T. Sadler, *Law of Population*, i. 15). Further, the principles of population enunciated by Malthus have been expanded and developed in several directions by subsequent writers; and all these views are described roughly by the vague and comprehensive term 'Malthusianism,' which means little more than the consideration of the relation between increase of population and the available food supply. Malthusianism, in fact, has no more definite meaning than 'Smithianism' in Germany.

It would be a mistake to consider that Malthus was the first economist who treated of population. The Mercantilists had explicitly advocated 'populousness' as an important condition of national wealth, and their views had influenced social legislation and poor-law administration in England during the 18th century. In 1776 Adam Smith had mentioned that 'every species of animals naturally multiplies in proportion to the means of their subsistence, and no species can ever multiply beyond it' (*Wealth of Nations*, bk. i. ch. viii. [ed. J. E. T. Rogers, Oxford, 1869, i. 84]), but it was not till almost the end of the century that Malthus selected the subject of population for separate treatment. It is true that more than a century earlier William Petty had published several essays relating to the numbers of the people, but his point of view was entirely statistical, whereas that of Malthus was directly related to the conditions of progress. In a sense the work of Malthus was begun to oppose the theories of William Godwin, who had published his book on *Political Justice* in 1793 and his *Enquirer* in 1797. Godwin had been influenced by Condorcet and other writers of the era of the French Revolution, and he advocated human perfectibility by means of a gradual equalizing of wealth, under which condition there would be a sufficiency for the reasonable wants of all. In time the peaceful influence of truth would render force and even government unnecessary, so that a state of human perfection was possible on earth. Godwin's views formed a common topic of discussion among those who were interested in political science. One such

conversation was destined to have important results. It took place between Malthus and his father. The latter, Daniel Malthus—a friend of Voltaire and the literary executor of Rousseau—was favourably disposed towards Godwin's views, while the son had doubts, which he afterwards placed in writing. The treatise which resulted was his *Essay on Population*, published anonymously in 1798.

Malthus believed that a fatal objection to the thesis of Godwin and other writers who maintained the same view was to be found in the relation of population to the means of subsistence. Population, when unchecked, doubles itself every twenty-five years; the means of subsistence, under circumstances the most favourable to human industry, could not possibly be made to increase faster than in an arithmetical ratio; i.e., the progression for population, if unchecked, would be 1, 2, 4, 8, 16, 32, 64, 128, 256, while that of subsistence could not exceed 1, 2, 3, 4, 5, 6, 7, 8, 9. Population had not increased in a geometrical ratio, owing to the checks imposed upon it by misery and vice, the former being certain and the latter probable. Society as a whole makes 'a constant effort towards an increase of population,' with the result that there is a constant tendency towards distress among the lower classes (*Essay*, 1798, p. 29). As against Godwin, Malthus pointed to the grim spectres of famine, war, pestilence, and evil-living as the necessary limitations to the natural increase of mankind—either positively by reducing a redundant population, or negatively by the dread of these evils. The first edition of the *Essay* can be understood only by remembering the controversial purpose out of which it arose. In opposition to the optimism of Godwin and his sympathizers it overestimates the darkness of the situation. An attempt was made to correct this in the second edition (1803), which is practically a new book. The treatise of 1798 was in the main the critique of a Utopia from the point of view of the support of a growing population; that of 1803 was a scientific examination of the principle of population, as far as possible in isolation from other phenomena. There was, however, a greater change than that of external form; the two progressions remain, but the exposition of the checks to increase of numbers is worded differently. Misery and vice become subordinate to what Malthus terms 'moral restraint.' This new characteristic anticipates, and so prevents, a pressure on the means of subsistence; and, where it is observed, actual misery, as a result of population, need not arise. Moral restraint is, strictly speaking, 'moral' only in so far as it is exclusive of 'irregular gratifications'; its main characteristic is rather that of rational prudence, based on man's 'reasoning faculties which enable him to calculate distant consequences' (*Essay*, 1803, pp. 9, 11), such as his capacity to support a large family without lowering a suitable standard of life. Hence moral restraint operates in the direction of postponing early marriages as well as irregular connexions. It means, in fact, as J. Bonar puts it, simply continence (*Malthus and his Work*, p. 53).

Much of the popularity of the principles of Malthus may have been due to his summing up the foundations of his theory in a formula which is capable of being apprehended easily and remembered, especially as the geometrical and arithmetical ratios seem to provide the certainty of a mathematical demonstration. But the formula suffers from a false simplicity; the first important objection is that Malthus founds his argument upon two alleged necessities which he claims as co-ordinate, but it is clear that a supply of food

is much the more urgent need. The celibate must be fed if he is to live. It follows that the tendency towards increase of population is a conditional one, and hence any ratio which is established at a given time is susceptible of alteration, irrespective of changes in the quantity of food. Malthus often speaks as if population must increase up to the limits of the means of subsistence; but since his day there have been cases of countries where increased resources have been followed, not by an increase in population, but by an improvement in the general standard of living. The arithmetical ratio, as the maximum possible increase in the production of food, was never formally and fully proved by Malthus; indeed, his sections on the state of population in America (*Essay*, 1798, p. 20) partially contradict his view of the ratio. Moreover, not only the production of food but its consumption must also be taken into account. Economies in consumption without loss of efficiency would enable a larger population to be maintained by the same supply. The whole statement of Malthus regarding agriculture in his earlier editions is embarrassed by his ignorance of the Principle of Diminishing Returns; some of his expressions almost suggest it, but he makes no real use of this law. This theorem, which was stated clearly by West in 1815, soon changed the manner in which the population question was formulated. Torrens, James Mill, and McCulloch understood Diminishing Returns not so much as a theoretical tendency, but as a condition of the working of the extractive industries in practice. Accordingly, in spite of improved methods of production, they thought that the increase of population drove agriculturists to cultivate more and more inferior soils, so that a larger and larger proportion of the world's labour would be required for providing the necessities of life. J. S. Mill stated this point of view concisely when he wrote: 'It is in vain to say, that all mouths which the increase of mankind calls into existence, bring with them hands. The new mouths require as much food as the old ones, and the hands do not produce as much' (*Principles*, bk. i. ch. xiii. § 2). Mill, like the rest of the Classical School, regarded Diminishing Returns as a 'law' which could be suspended only temporarily by the disturbing influence of improvements. The present disposition of economists is to consider Diminishing Returns as a tendency which is subject to frequent counter-action. The amercement of outlook removes some of the gloom which settled on the population question during the 'dismal' era of economics in the first half of the 19th century. The real influence of Malthus survives in a much modified form, on the one side in the responsibilities of parents in being able to provide for their offspring, on the other in a ceaseless effort to effect improvements in the productive arts, particularly in those connected with the provision of the world's food supply.

It is scarcely necessary to add that the doctrines and practices of 'Neo-Malthusianism,' or the voluntary restriction of the birth-rate, form no part of Malthus's own teachings and would doubtless have been indignantly repudiated by him.

W. R. SCOTT.

MALUK DĀSIS.—The Maluk Dāsīs form a small Vaiṣṇava sect of northern India. It is an offshoot of the Rāmānandīs (see *ERE* ii. 546), and is named after its founder, Maluk Dās, a trader by occupation, who lived in the reign of the Emperor Aurangzib (latter half of the 17th cent. A.D.). He is said to have been born at Karā, in the present District of Allāhābād, where there is a shrine in his honour and a monastery of his followers. The neighbouring village of Sirāthū is said to have been granted to him by the emperor.

The main point that differentiates Maluk Dāsīs from other Rāmānandīs is the fact that their teachers, like their founder, are laymen. Wilson adds that there is also a shorter streak of red in the sectarian mark on their foreheads.¹ Like other Rāmānandīs, they worship the Rāma incarnation of Viṣṇu. Wilson mentions six other monasteries of the sect in the Ganges valley, and also one of great repute at Jagannāth, in Orissa, where Maluk Dās is said to have died.

So far as the present writer is aware, none of Maluk Dās's works have been published. He is said to have written a poem called the *Dāsa Ratna*, or 'Ten Jewels.' Two lately discovered works of his are the *Bhaktā-vatsala*, dealing with Kṛṣṇa's regard for devotees, and the *Ratna-khāna*, a dissertation on the soul and God,² and he is also the reputed author of many well-known detached verses and apothegms. One of his verses is probably the stanza that is best known and most often quoted in the north of India, and offers a striking resemblance to the leading thought of Mt 6³⁸. According to Hindu belief, the *ajagara*, or python, is unable to hunt for its food. It can only lie with its mouth open to wait for what will walk into it. The verse runs as follows:

Ajagara korai na chākari *Pañchhi karai na kama,*
Dāsa Malūka kahī gae *Sabha-kā dātā Rāma,*
'The python doth no service, nor hath the fowl of the air a
duty to perform (to earn its living);
Quoth Maluk Dās, for all doth Rāma provide their daily
bread.'

G. A. GRIERSON.

MAMMON.—The word occurs three times in Lk 16 among the somewhat disconnected Logia that follow the parable of the Unjust Steward (16¹⁻¹³), the last of which, 'Ye cannot serve God and mammon,' is found also in Mt 6²⁴. It is a

transliteration of the Gr. *μαμωνᾶς*, a form which, with *μῦ*, appears in TR, with Latin Vulgate, six Old Latin, and a few Greek minuscules. The correct Greek, however, is *μαμωνᾶς*, which is found in RV, with all Greek uncials, and most minuscules, as well as in the Complutensian and the first two editions of Erasmus; but the influence of the Vulgate led to the appearance of *mm* in the later editions of Erasmus and in AV (for further details as to spelling see E. Nestle, in *EBD*).

The word is not Greek, nor is it found in the Hebrew Bible. It is a hellenized form of the Aram. *מָכָר*, which means 'money,' 'riches,' 'worldly goods.' Wyclif and Purvey translated the word by 'riches' ('richessis'), but Tindal followed the Vulgate in transliterating the word, and so did all later English versions, except Geneva.

1. Derivation.—The Aramaic form *מָכָר* (*stat. emph.* *מָכָרָא*) follows a well recognized form of nominal inf. *מָכָרָא*, but scholars are divided as to what is the verbal root.

(1) J. Drusius (quoted in J. Buxtorf, *Lexicon Chaldaicum*, Basel, 1640, s.v.) and Dalman (in *PRE³* xii. 153) derive the word from *מָכַר*, i.e. *מָכָרָא* = *מָכָרָא*, which would mean 'that on which man trusts,' or, as Dalman prefers, 'that which brings man into safety.' (2) Jastrow (*Talmud Dictionary*, p. 794^b) derives it from *מָכַר*, and thus *מָכָרָא* = 'that which one accumulates.' (3) Levy (*Neuhebräisches und chaldäisches Wörterbuch*, iii. 138) considers *מָכַר* = *מָכַר*, 'to distribute,' to be the root, and thus our word means 'that which is distributed.' (4) W. Gesenius (*Thesaurus linguae Hebraeae et Chaldaeae*, Leipzig, 1829, ii. 552), as if *μαμωνᾶς* were the true form, derives it from *מָכַר*, 'hide,' whence *מָכָרָא* = *מָכָרָא*, 'that which one hides or treasures' (Gn 43²⁸, Job 32¹, Pr 24¹, Is 45³, Jer 41⁸). However much the learned may now differ as to the derivation, it seems certain to the present writer that the Syriac versions all derived the word from *מָכַר*, and that they assumed a paronomasia to exist between our word *מָכָרָא* and *מָכָרָא* (pass. part. of *מָכַר*), which means 'faithful' or 'trustworthy,' thus: 'He that is trustworthy in little is trustworthy also in much; and he that is not trustworthy in little is not trustworthy in much. If ye have not been trustworthy (*מָכָרָא*) in the unrighteous mammon (*מָכָרָא*), who will entrust (*מָכָרָא*) to you the true?' But, since the verb *מָכַר* is as common in Galilean Aramaic as in Syriac, may we not go further, and say that the paronomasia was probably intended by our Lord in the original Aramaic?

2. Usage.—The trade of the world, before the time of Alexander, had long been in the hands of Phoenicians and Arameans; and we have evidence that in both languages *mamon* was the word for 'money.' As to the former, it occurs on Phoenician inscriptions on tombstones; and Augustine, in two passages (*de Serm. in Monte*, ii. xiv. 47, and *Quest. Evang.* ii. 34), states that the Punic word for *lucrum* ('wealth') is *mammona*. Its Aramaic usage is also abundantly attested. Jerome (*Ep. cxxi. 6*) affirms:

'Non Hebraeorum sed Syrorum lingua, mammona divitiis nuncupantur.'

Irenaeus (III. viii. 1) attests its use

'secundum Iudaicam loquelam, qua et Samaritae utuntur.'

The Aramaic Targums often contain the word: e.g., Pr 3⁹, 'Honour the Lord with thy *māmōn*'; Is 55¹, 'O ye that wish to learn . . . come and learn without price and without *māmōn*'; Jg 5¹⁹, 'They accepted no *māmōn* of silver'; in Ex 18²¹ the ideal judges are those 'who hate the receiving of *māmōn*.' In the Aramaic sections of the Palestine Talmud the same story is told twice (*Nazir*, v. 3; *B'rakhōth*, vii. 2) of 300 poor Nazirites who came for purification. R. Simeon asked King Jannæus to give half the cost, but it turned out that the king paid all

the money (*māmōn*) and the Rabbi's half was his knowledge of Tōrah. *Berākḥ. 61b* says:

'There are men whose money (*māmōn*) is dearer to them than their own body.'

There is also a classification in lawsuits between those which concern money (מָמוֹן) and those which concern the person (נֶפֶשׁ). This is found often in the Talmud and also in *Jerus. Targ. to Dt 1⁸*. The pre-Christian usage of our word even in Hebrew is shown from Sir 31⁸, 'Blessed is he . . . that has not yet gone after *māmōn*.' The translators of LXX show themselves acquainted with the word, for in Ps 36 (EV 37³) they misread מָמוֹן as נֶפֶשׁ, 'Thou shalt dwell in the land and be fed on its wealth'; and in *Pirgē Aḥōth* (ii. 16) we have a 'saying' of R. Jose: 'Let the property (מָמוֹן) of thy friend be as precious to thee as thy own.'

The very phrase 'mammon of unrighteousness' is quite common in Jewish literature; in the pre-Christian *Book of Enoch* the wicked say:

'Our soul is satiated with unrighteous mammon, but this does not prevent our descending into the flame of the pains of Sheol' (83¹⁰).

The phrase מָמוֹן is a well recognized phrase in the Targums for 'money earned through deceit or fraud.' The crime of Samuel's sons was that 'they turned after mammon of fraud' (1 S 8³; cf. also Pr 15²⁷, Is 33¹³, Ezk 22²⁷, Hos 5¹¹).

3. Exegesis.—(1) In Lk 16⁹, 'Make to yourselves friends by means of the mammon of unrighteousness,' the difficulty is: to whom was Christ speaking? Lightfoot (*Horæ Hebraicæ*, iii. 159 ff.), A. B. Bruce (*Expositors' Greek Testament*, i. [1897] 586 f.), and Merx (*Die Evangelien Marcus und Lucas*, p. 328 f.) hold that He was speaking to the Pharisees and publicans to whom ch. 15 was spoken (15³), and who were still in the crowd (16⁴). It was certainly more suitable for them than for the Twelve, who had not much 'mammon' of any kind; and, if so, the phrase has the same meaning here as in Jewish literature—'money ill gotten,' 'money gained by fraud.' Thus the advice which Jesus gives to the Pharisees is that they should make restitution to God by deeds of benevolence. Christ's advice is, says Merx (p. 328), 'Ye who have acquired money unrighteously and cannot refund it, use this wealth in making friends for yourselves,' as Zacchæus, when converted, volunteered to give half his goods to the poor.

'The counsel is to use wealth in doing kindness to the poor, . . . only care must be taken not to *continue* to get money by unrighteousness in order to have wherewith to do charitable deeds' (Bruce, *loc. cit.*).

The alternative view, that the words are said to the Twelve, and that μαμωνᾶ τῆς δόκτας is the evil stamp placed on all wealth, 'because great wealth is seldom gained or employed without injustice,' is forcefully presented by Moffatt, in *DCG* ii. 106 f.

(2) In Lk 16¹¹ we have a contrast between τὸ δόκτον μαμωνᾶς and τὸ ἀληθινὸν μαμωνᾶς, which seems to turn on a second meaning of μαμωνᾶς. In the original Aramaic, מָמוֹן means (α) 'deceit,' 'fraud,' and (β) 'nothingness,' 'illusion,' 'vanity.' We believe that ἀληθινός, here as elsewhere in NT, means 'real,' 'permanent,' 'belonging to the spiritual world,' in contrast with the present life of illusion and vanity, where 'the things that are seen are ephemeral' (2 Co 4¹⁸). We surmise, then, that מָמוֹן מָמוֹן would, in the original Aramaic, appear in both v. ⁹ and v. ¹¹, but in v. ⁹ מָמוֹן means 'deceit,' 'fraud,' while in v. ¹¹ it means 'illusion,' 'vanity,' and thus presents a contrast to the 'true,' the 'real,' 'spiritual' riches. Our Greek translation, of course, obliterates or ignores the distinction between the two meanings of מָמוֹן.

(3) In Lk 16¹³, 'Ye cannot serve God and mammon,' the emphasis is on 'serve' (δοῦλεύειν). No man can at the same time be the δούλος of God and of worldly wealth. The ordinate pursuit of wealth is not

condemned. It is the undivided concentration of mind—the surrender of body and soul to money-getting—that is censured, as being incompatible with whole-hearted devotion to God and to His service. Mammon is personified as the object of undivided attention and service, as in Ro 16¹⁸ Paul speaks of those who 'serve' their own sensual nature (δοῦλεύουσιν . . . τῇ σαρκὶ καὶ ὁρέῃ), and as in Col 3⁵ he utters a warning against 'covetousness, inasmuch as it is idolatry,' i.e., wealth so easily erects itself into an idol, which woos men's affections from God and makes men averse to giving cheerfully what they acquire. Here and in Lk 16¹³ there is, no doubt, a personification of wealth, as also in Tertullian (*adv. Marc.* iv. 33).¹ When Milton, therefore, speaks of Mammon as one of the fallen angels in hell, 'the least erected Spirit that fell from heaven,' who even in heaven was

'admiring more
The riches of Heav'n's pavement, trodd'n gold,
Than aught, divine or holy, else enjoyed
In vision beatific'

(*Par. Lost*, i. 678 ff.; cf. also ii. 228),

we have, perhaps, not so much the flight of the poet's imagination as an indication of his familiarity with apocryphal lore. The phrase 'mammon-worship' has been made familiar by Carlyle (*Past and Present*, bk. iii. 2, bk. iv. 4, 8, etc.), and is, no doubt, useful in emphasizing strenuously the warning of Jesus, 'Ye cannot serve God and mammon.'

MAN.—See ANTHROPOLOGY, ETHNOLOGY, EVOLUTION, PSYCHOLOGY, SOCIOLOGY, etc.

MAN, ISLE OF.—See CELTS.

MANA.—*Mana* is a native term belonging to the Pacific region, but, for the purposes of the science of comparative religion, serves likewise as a category of world-wide application. The local sense will be found to stand in close relation to the scientific, despite the fact that the latter represents but the generalized content of various concepts prevailing in different ethnic areas and presumably of more or less independent origin.

1. Local meaning of *mana*.—'The word,' says R. H. Codrington (*The Melanesians*, p. 119 n.), 'is common I believe to the whole Pacific, and people have tried very hard to describe what it is in different regions. I think I know what our people mean by it, and that meaning seems to me to cover all that I hear about it elsewhere.' For the twofold reason that Codrington's account has in no respect been impugned by later observations, and that it is the classical source from which the scientific use of the term *mana* is derived, it will mainly be followed here, though one must bear in mind that it deals primarily with the Melanesian usage, whereas there is reason to suppose that the actual word is an importation from Polynesia. It will be convenient to consider the *mana* of the Pacific region under two aspects: (α) theoretical, comprising the native view of what it is, how it is

¹ W. Taylor Smith calls the attention of the present writer to a passage in the 'Passio Sancti Bartholomæi Apostoli,' in *Acta Apostolorum Apocrypha*, ed. R. A. Lipsius and M. Bonnet, Leipzig, 1891-1903, pt. ii. vol. 1, p. 156: 'Vidit (Satanas) se exclusum, et alterum sub angelum apostolicum, qui Mammona dicitur, sociavit, et protulit immensa pondus auri argenti gemmarum et omnem gloriam que est in hoc seculo et dixit ei: Hec omnia tibi dabo si adoraveris me.'

manifested, where it resides, and whence it comes; and (b) practical, involving the methods by which it is sought to turn the supposed fact of its existence to human advantage.

(a) *Theoretical aspect.*—*Mana* is defined by Codrington thus:

'It is a power or influence, not physical, and in a way supernatural; but it shews itself in physical force, or in any kind of power or excellence which a man possesses. This *mana* is not fixed in anything, and can be conveyed in almost anything; but spirits, whether disembodied souls or supernatural beings, have it and can impart it; and it essentially belongs to personal beings to originate it, though it may act through the medium of water, or a stone, or a bone' (p. 119 n.). Or, again, he describes it as 'a force altogether distinct from physical power, which acts in all kinds of ways for good and evil, and which it is of the greatest advantage to possess or control' (p. 118 n.).

In this account three points are specially to be noted: (1) that the power or excellence for which *mana* stands is 'in a way supernatural,' namely, in so far as it is 'what works to effect everything which is beyond the ordinary power of men, outside the common processes of nature' (p. 118); (2) that, even if it be in itself impersonal, resembling a contagion, or such a force as electricity, in that it can have a material object for its vehicle, 'it essentially belongs to personal beings to originate it'; (3) that it 'acts in all kinds of ways for good and evil,' or, in other words, may be used 'to benefit or to afflict friends and enemies' (p. 200); and is thus indiscriminately at the service of religion or of the black art. So much for the nature attributed to *mana*—which, be it noted, is noun, adjective, or verb, since it is equally a property, quality, or state. It may next be shown how such an attribution is a result of experience and sometimes even of experiment.

'If a man has been successful in fighting, it has not been his natural strength of arm, quickness of eye, or readiness of resource that has won success; he has certainly got the *mana* of a spirit or of some deceased warrior to empower him, conveyed in an amulet of a stone round his neck, or a tuft of leaves in his belt, in a tooth hung upon a finger of his bow hand, or in the form of words with which he brings supernatural assistance to his side. If a man's pigs multiply, and his gardens are productive, it is not because he is industrious and looks after his property, but because of the stones full of *mana* for pigs and yams that he possesses. Of course a yam naturally grows when planted, that is well known, but it will not be very large unless *mana* comes into play; a canoe will not be swift unless *mana* be brought to bear upon it, a net will not catch many fish, nor an arrow inflict a mortal wound' (p. 120).

Moreover, in this matter the native mind proceeds logically enough by the method of hypothesis and verification.

'A man comes by chance upon a stone which takes his fancy; its shape is singular, it is like something, it is certainly not a common stone, there must be *mana* in it. So he argues with himself and he puts it to the proof; he lays it at the root of a tree to the fruit of which it has a certain resemblance, or he buries it in the ground when he plants his garden; an abundant crop on the tree or in the garden shews that he is right, the stone is *mana*, has that power in it' (p. 118).

Hypothesis and verification even lurk behind the forms of prayer.

Thus at Florida, one of the Solomon Islands, a fisherman addresses Daula, a *tindalo*, or ghost, connected with the frigate-bird, in these words: 'If thou art powerful, *mana*, O Daula, put a fish or two into this net and let them die there.' If he makes a good catch, he thereupon exclaims, 'Powerful, *mana*, is the *tindalo* of the net' (p. 146).

Again, the heir of a famous chief must live up to the reputation of his predecessor, or society decides that the *mana* has departed (p. 52).

For instance, a man claimed to have received from the ghost of a late chief, a very great man, a stone for producing pigs together with the *mana* chant for working the stone; the people were ready enough to believe this, but the stone proved unproductive of pigs, and so the departed chief had no spiritual successor (p. 57).

To pass on to the question who or what may act as a host or vehicle of *mana*, it is plain from the foregoing examples that it may reside (though always conditionally and, as it were, by favour) either in a man or in a thing. For a man to have *mana* and to be great are convertible terms.

'To rise from step to step [in the *Suge*, i.e. secret society or club] money is wanted, and food and pigs; no one can get these unless he has *mana* for it; therefore as *mana* gets a man on in the *Suge*, so every one high in the *Suge* is certainly a man with *mana*, and a man of authority, a great man, one who may be called a chief' (p. 103; cf. p. 115). In the after-life, too, 'the ghost who is to be worshipped is the spirit of a man who in his lifetime had *mana* in him; the souls of common men are the common herd of ghosts, nobodies alike before and after death. The supernatural power abiding in the powerful living man abides in his ghost after death, with increased vigour and more ease of movement' (p. 125).

As for the *mana* associated with inanimate things, the following example will show how it may come to be attributed.

'If a man came upon a large stone with a number of small ones beneath it, lying like a sow among her litter, he was sure that to offer money upon it would bring pigs, and such a stone would be thought to have *mana* (pp. 181, 183).

Moreover, the *mana* (herein, as has been said, resembling a contagion, or such a force as electricity) may be transmitted by one thing to another.

Thus, to make sunshine, certain leaves are held over a fire, and a song is sung to give *mana* to the fire, which gives *mana* to the leaves, so that, when the latter are hung high upon a tree, the wind may blow abroad the *mana* derived from the fire, and sunshine may result (p. 200 f.).

In other cases, the *mana* is seen to lend itself not only to transmission, but likewise to a sort of accumulation.

To make rain, leaves that are *mana* for this purpose are caused to ferment so that a steam charged with *mana* may rise up to make clouds, and at the same time a stone that is *mana* for rain is placed among them to assist the process (p. 201).

It remains to notice the native theory of the ultimate source of *mana*. It has already been noted that, according to Codrington, 'it essentially belongs to personal beings to originate it' (p. 119 n.)—namely, to a dead man's ghost, a spirit (which was incorporeal from the first), or a living man (p. 151). The claim of the living man to originate *mana* is, however, somewhat doubtful, inasmuch as, if a man has *mana*, it resides in his 'spiritual part,' which after death becomes a ghost, while, for the rest, it is permissible only to say that a man has *mana*, not that he is *mana*, as can be said of a ghost or spirit (p. 191). In short, the native theorist would seem to have arrived at the view that *mana*, being something supernatural (to use Codrington's own term), must ultimately come from pre-eminently supernatural personalities such as ghosts or spirits. The existence of such a view, however, need not blind us to the fact that it is the man who does great things in his lifetime that is after death supposed to be a ghost with *mana*, a fighting man's ghost, for instance, being known specifically as a *keramo*, or ghost of killing, and hence much prized as a spiritual ally who can give *mana* (p. 133). Similarly, it is because the stone with little stones round it is like a sow among her litter that it is credited with *mana*; and the doctrine that it belongs to spirits (p. 183) is, clearly, but an explanatory after-thought. Thus neither animism (in Tylor's sense of 'the belief in spiritual beings') nor even animatism (the attribution of life and personality) would seem to be essentially involved in the naive experience of the wonder-working thing, whatever be the last word of native theory on the subject.

It must be allowed, however, that, if *mana* does not necessarily imply personality in the case of the thing with *mana*, it is none the less perfectly capable of co-existing with it, as in the case of the living man with *mana*; and, being itself something indwelling, comes to be intimately associated with the indwelling 'spiritual part.' In this way *mana* and its derivatives have come in various Polynesian dialects to supply all that is needed in the way of a psychological vocabulary, standing not merely for 'heart' and 'belly,' but for the 'interior man' and all therein comprised, namely, 'desire,' 'love,' 'wish,' and 'feelings' generally, as also 'thought' and 'belief,' and even in some sense 'conscience.'

and 'soul' (see E. Tregear, *Maori-Polynesian Comparative Dictionary*, s.v. 'Mana'). Even if, however, *mana* thus in certain contexts almost amounts to what we term 'personality,' it must be remembered that, according to the native view, such personality is transmissible (just as we are liable to think of a man's—say, an artist's—personality as attaching to his work), so that the *mana* as the realized personality of a powerful individual may be operative through the medium of what he makes or owns or leaves behind him at death.

(b) *Practical aspect.*—Codrington roundly declares that 'all Melanesian religion' consists in getting *mana* for oneself or getting it used for one's benefit—all religion, that is, so far as religious practices go (p. 119 n.). As he shows by numerous examples, to obtain *mana* is the object to which all prayers and sacrifices are directed. Or, again, as can be gathered from Tregear's *Dictionary*, *mana* may be used to express the performance of miracles, the exertion of a gift of healing, the interpretation of omens, an act of prophecy, in short, all the manifestations of a wonder-working beneficence which a religious man may aspire to set in motion. On the other hand, *mana* is a two-edged sword which may just as readily be employed in the service of maleficence. Those who have the *mana* to produce wind or calm, sunshine or rain, are wont 'to turn it either way as it is made worth their while to turn it' (Codrington, p. 200). Healing medicine and poison are alike *mana* (*ib.* pp. 198, 308). As Tregear's citation of phrases shows, accident and misfortune, cursing and intimidation, involve the exercise of *mana* no less than does any and every form of blessing. In short, all traffickings with the unseen and occult, whether licit or illicit, involve *mana*; and, just as electrical energy may be exploited alike in the public service and with criminal intent, so *mana* lends itself to the manipulation of the expert, be his motive moral or the reverse. Further, whatever is *mana* is likewise, in a complementary aspect, 'not to be lightly approached,' or, as we find it convenient for comparative purposes to say, 'tabu,' though, in Melanesia at all events, the word *tambu* (= *tabu*, *tapu*) has a rather different sense, implying human sanction and prohibition, the sacredness involving a supernatural sanction being rendered rather by *rongo*, or, where it is held to be especially severe, by *buto* (*ib.* p. 215; cf. pp. 190, 31). Whatever has magico-religious value in any degree is treated with more or less of awe, not to say fear, because in a corresponding degree it has supernatural power which it is liable to exercise on the unwary with such effects as usually attend the careless handling of something extremely potent. In sheer self-protection, then, the profane, that is to say, ordinary folk in their ordinary manner of life, observe a number of tabus towards the person or thing that is *mana*. Meanwhile, conversely, such tabu may be looked upon as helping to keep the holy person or thing inviolate, or guarding the *mana* from desecrating influences that will somehow spoil its efficacy.

2. *Scientific meaning of mana.*—It remains to determine what *mana* may appropriately mean when used as a class-name of world-wide application. Just as *tabu* has been turned into a general category standing for any prohibition resting on a magico-religious sanction, despite the fact that in Melanesia another shade of meaning apparently attaches to the term, so *mana* has of late obtained a wide currency as a general name for the power attributed to sacred persons and things, and is so used without reference to the particular associations which may have gathered round the word in this or that part of the Pacific region. Thus, even if it be true, as Codrington's somewhat guarded

account leads one to suspect, that in Melanesia *mana* has been more or less successfully incorporated in an animistic system, so that its ultimate source is usually supposed to be a ghost or spirit, that is no reason why, for the general purposes of comparative science, *mana* should not be taken to cover all cases of magico-religious efficacy, whether the efficacy be conceived as automatic or derived, i.e., as proceeding immediately from the nature of the sacred person or thing, or mediately because a ghost or spirit has put it into the person or thing in question. Meanwhile, the simplest way of ascertaining what modifications, if any, need to be imported into the local meaning of *mana* in order that the term may be employed generically, so as to cover analogous ideas hailing from a variety of other cultural areas, will be to review sundry examples of such kindred notions.

(1) *Orenda.*—This word is Iroquoian, belonging more especially to the Huron dialect, and apparently has the literal sense of 'chant' or 'song,' whence it comes to stand for the mystic power put forth by means of a magic song or in any other magico-religious way. Thus we are near the original meaning when we find 'one who exerts his *orenda*' as the regular expression for a soothsayer, or hear of the *orenda* of the cicada, which is known as the 'maize-ripeners' because, if it sings in the early morning, a hot day follows. Not only the soothsayer, however, but the mighty hunter likewise, or he who succeeds in a game of skill or of chance, is credited with great *orenda*, though, if the hunter fails, or the gambler is worsted, then his *orenda* has been thwarted by the greater *orenda* of the game or of the rival player (J. N. B. Hewitt, *American Anthropologist*, new ser., iv. [1902] 38 f.). Indeed, everybody and everything would seem to have *orenda* in some degree, the world being regarded as a sort of battle-ground where unequal forces are matched against each other, and the strongest obtains his desire ('he is arrayed in his *orenda*' is the regular way of expressing 'he hopes' [*ib.* p. 39]), while the weaker must submit ('he lays down his *orenda*' is equivalent to 'he prays' [*ib.* p. 40]). Whether it implies personality may be doubted; for, whereas at one end of the scale it is associated with personal activities such as singing, charming, praying, hoping, and so forth, and sometimes almost amounts to 'intelligence,' as when it is said of a shy animal that 'its *orenda* is acute' (*ib.* p. 39), at the other end of the scale we find it attributed freely to trees, plants, stones, meteors, water, a cloud, a storm, or again to medicine, to a ceremony, and so forth (*ib.* pp. 33, 41, etc.). Sometimes *orenda* seems to come near to what we should term will-power, and doubtless such will-power is freely attributed to what we consider to be inanimate objects, as when 'it is making its *orenda*' is said indifferently of an animal in a rage or of a storm brewing. But sometimes the *orenda* would seem to act automatically and independently of the wills of those who seek to bring it into action, as when the condolence ceremony, whereby a sort of figurative resurrection is accorded to a dead chief, has to be performed in winter lest its association with death should exert an evil *orenda* on the crops (*ib.* p. 34). For the rest, *orenda* may work either for good or for evil, though a separate word *atgon* may be used to denote the specifically bad kind of *orenda*, and is actually displacing the more general term, as if the malign aspect of its manifestations made the more lasting impression on the tribal mind (*ib.* p. 37 n.). See, further, art. *ORENDA*.

(2) *Wakan.*—This Siouan word is strictly parallel to *orenda*, and stands for all 'power which makes or brings to pass.' It may come near to the idea of will-power, as in the Omaha act of

wa-shin-dhe-dhe, the 'sending of power' by singing to an absent friend engaged in war, or in the chase, or in a game of skill. On the other hand, menstrual blood is *wakan* (whence the nudity charm described by H. R. Schoolcraft, *Indian Tribes*, Philadelphia, 1853-57, v. 70 [see A. C. Fletcher, *Proc. Amer. Assoc. for Adv. of Science*, 1897, p. 326]). In short, the term may be applied indifferently to a shaman, to sun, moon, thunder, to animals and trees, to fetishes and ceremonial objects of all sorts, and, in fact, to anything that exhibits wonder-working power (cf. W. J. McGee, *15 REEW* [1897] 182).

(3) *Manitu*.—Here once more we have an Algonquian word that is generically identical in meaning with *orenda* or *wakan*. It is primarily an impersonal substantive; for in the Algonquian dialect a rigid distinction of gender is made between things with life and things without life; and, when *manitu* stands for a virtue or property, the form expressive of inanimate gender is used, though, 'when the property becomes identified with objects in nature, the gender becomes obscure and confused' (W. Jones, *AJFL* xviii. [1905] 183 f.). The following account by an Indian of the Fox tribe of the beneficent effects of the sweat-lodge brings out very clearly the non-personal nature of the force set in motion by a man for his personal betterment; he might almost as well be describing an electric bath.

'Often one will cut oneself over the arms and legs . . . it is done to open up many passages for the *manitu* to pass into the body. The *manitu* comes from its place of abode in the stone. It becomes aroused by the heat of the fire, . . . proceeds out of the stone when the water is sprinkled upon it, . . . and in the steam it enters the body, . . . and imparts some of its nature to the body. That is why one feels so well after having been in the sweat-lodge' (ib. p. 183 f.).

See, further, art. MANITU.

(4) *Hasina*.—This word is used in Madagascar to express the power or virtue which makes a thing unusually good and effective, such as the efficacy of a remedy, the power of a prophecy to come true, the virtue residing in an amulet or in a spell, the sanctity of holy persons and things, and so on. *Hasina* belongs in a high degree to the king, seeing that he is born in a family which has it, and is strengthened by the ceremonies of people having it, such as sorcerers and his own relatives. Hence his *hasina*, being highly contagious, is apt to cause his subjects to fall ill and die, if they but touch him. He dare not even speak to them, save through an intermediary. Meanwhile it is his duty to guard his *hasina* intact for the public good, so that A. van Gennep is probably right in regarding such a tabu as that which prohibits the subject from entering the court of the palace with his hat on his head as a *fady* (= tabu) *de conservation* (*Tabou et totémisme à Madagascar*, p. 17). Indeed, the native theory of kingship turns entirely on this notion of *hasina*. Thus, at the king's enthronement, the monarch-elect stands on a sacred stone charged with *hasina* and cries aloud to the people, 'Have I, have I, have I the power?', to which they reply, 'The power is thine' (ib. p. 82). Taxes paid to the king are called *hasina*, being derived from firstfruits and hence inherently sacred, in fact, a tithe. Even when the king is dead, his body transmits its *hasina* to the place of the grave, which is henceforward sacred (ib. p. 104). It may even be, as van Gennep suggests, that the royal practice of strict endogamy, which was carried as far as sister-marriage, was due to the desire to keep the *hasina* in the family (ib. p. 162). *Hasina* is, however, by no means the exclusive property of the king. Nobles have it too, but in less degree. Even common men have some, and the very animals, trees, and stones have their share likewise. *Hasina*, in short, is relative. If

I plant something in my field, I put into it some of my *hasina*. Another man will therefore respect it, unless he feel his *hasina* to be greater, in which case he can receive no harm (ib. p. 18). Meanwhile I shall do well to fortify myself by protecting my property with amulets full of *hasina*, these often amounting to veritable boundary-stones (ib. p. 186). For the rest, whatever is sacred has *hasina* and for this reason is likewise *fady*, or tabu, so that, for instance, the stranger who has *hasina*, and is therefore *fady*, must be received with rites of admission the object of which is *détabouer*, 'to remove the tabu' (ib. pp. 40, 46).

(5) *Baraka*.—This is the term used in Morocco to describe the holiness attributed to 'saints,' male or female, as well as to places and natural objects, which are, however, thought of as deriving their holiness from the saint. The name *sayyid* (i.e. *sayyid*), 'saint,' is meanwhile bestowed impartially on person or place, implying a certain 'confusion of categories' (E. Westermarck, in *Anthrop. Essays presented to Tylor*, London, 1907, p. 368). To secure that the power shall be exercised in his favour, the Arab puts a conditional curse (*ār*) upon the saint by throwing a stone on the cairn marking his tomb, or by tying a rag near by. The most efficient conductor of such a curse is, however, the blood shed in a sacrifice, for the blood contains *baraka*, supernatural energy, in itself, and hence lends potency on its own account to the curse with which it is loaded (ib. p. 365). *Baraka* is, however, by no means necessarily noxious (as it is when it provides the sting of a curse); for it stands equally for the blessing, *l-baraka del 'id*, 'the benign virtue of the feast,' which flows from the sacrificial meal, and is further distributed among the worshippers by a man clothed in the victim's skin (Westermarck, *MI* i. 445). Or, to take another example, the *baraka* inherent in the Moorish bride 'implies not only beneficial energy, but also a seed of evil or an element of danger,' so that people partake of her dried fruit to rid themselves of evil on account of her *baraka*, even while they regard a gift from her as bringing a blessing, and likewise suppose her *baraka* to give efficacy to the ceremonies practised with a view to producing rain for the good of the crops (Westermarck, *Marriage Ceremonies in Morocco*, London, 1914, p. 360 ff.).

(6) *Manngur*.—This word among the Kabi tribe of Queensland is used to express the 'vitality' with which the doctor is full and whereby he effects his miracles. He is also known as *muru muru*, 'the man full of life' (*murubarmen*, 'to live'). The force that pervades him is conceived, hylomorphically, as a number of those magic crystals which are so much in evidence when he engages in his acts of healing. As a native witness put it, 'always pebbles in his inside are. In the hand bones, calves, head, nails' (J. Mathew, *Eaglehawk and Crow*, London, 1899, p. 191). These pebbles enter the patient, so that he in turn becomes *manngur bathin*, 'full of vitality.' Or, conversely, the *muru muru*, the man full of life, sucks out the pebbles which some other ill-disposed person has put into the victim, so that the latter recovers, the potency resident in the pebbles being thus equally capable of killing or curing according to the intention of the powerful man who has control of them (ib. p. 191 f.). Or the medicine-man may relieve his patient by drawing out the evil by means of a rope, and such a rope he obtains from Dhakkan, the rainbow, who is himself *manngurugur* (superlative of *manngur*), superlatively potent (ib. p. 192).

These examples, which might be multiplied indefinitely, will suffice to show that there is a widespread tendency on the part of the peoples of the lower culture to isolate in thought and invest with

a more or less independent being of its own the power whereby a holy person or thing proves his or its holiness by means of action supremely efficacious, whether for good or for evil. Modern anthropology lays great stress on this notion of the savage (whether it be conceived and expressed by him with full explicitness or not), because it appears to stand for something which lies at the very centre of what he feels, thinks, and does in regard to the supernatural and unseen. Whether it is more or less central and fundamental than the notion of spirit is a question that need not be raised here. In any case it would be quite beside the mark to seek to assign exact relations of logical priority and posteriority to these two ideas, seeing that savage doctrine is tolerant of confusion, not to say downright contradiction, and uses the one or the other conception alternatively or in manifold conjunction as a particular situation may seem to suggest.

Here, then, it will be more profitable to indicate shortly what general purposes of theory are served by reference to the group of ideas for which *mana* may by convention be allowed to stand when used in its scientific as distinguished from its purely local sense. In the first place, *mana* usefully calls attention to the element which magic and religion have in common. Among savages my religion corresponds roughly to whatever system of rites is resorted to by the community in general for self-preservation in the face of all the dangers, real or imaginary, that beset them. If you are a member of another tribe in perpetual strife with mine, I am not disinterested enough to attribute to you any religion worth speaking of, even if your rites bear the closest family resemblance to mine; but rather incline to pay you the compliment of supposing you to wield a most malignant magic, in proportion as I feel respect for your power of getting the better of me. It is a case of me and my gods against you and your devils. Gods or devils, however, they have power alike, and to the stronger power, whichever it be, the victory goes. Similarly, within the tribe a particular individual may have recourse to mystic rites to help a public cause or to help himself in a way of which the public approves, or contrariwise in order to wreak his private spite on his neighbour. In the former case he is behaving piously, in the latter he shows himself a wizard and deserves to die the death; but in either case indifferently a wonder-working power is set in motion. *Mana*, then, as representing what may be broadly described as the element of the miraculous, enables theory to treat the magico-religious as a unity in difference, the unity consisting in wonder-working power and the difference in the social or anti-social use to which it is put by the rival systems. In the second place, *mana*, taken together with *tabu*, provides a minimum definition of the magico-religious, such a delimitation coinciding accurately with the distinction which the savage both in theory and in practice draws between the world of the supernatural and the world of the workaday and ordinary. Whatever else it may be as well, and however diverse the characters it may otherwise wear, the magico-religious in all its manifestations is always hedged round with respect because of the potency inherent in it. *Tabu* and *mana* always imply each other, so that either can stand by itself for the whole two-sided notion. Thus *tapu* (= *tabu*) was 'a general name for the system of religion' in Hawaii (Tregear, s.v. 'Tapu'). Conversely, *wakan*, a word of the *mana* type, is translated by McGee 'mystery,' because the notions of 'power,' 'sacred,' 'ancient,' 'grandeur,' 'animate,' 'immortal' all fall alike within the wide circle of its implications (16 *RBEW*, p. 183). *Mana*, however,

taken by itself offers the more adequate characterization of the nature of the magico-religious, since it reveals the positive ground of the negative attitude of fear and shrinking which *tabu* involves. It only remains to add that, having by means of such terms expressed the generic characters of the class of objects to which magic and religion relate, the anthropologist is merely on the threshold of his task, and must go on to distinguish by means of fresh terms of narrower connotation the specific types in which this class abounds. Thirdly, *mana* is well suited to express that aspect of the magico-religious or sacred in which it appears as a transmissible force or influence. Thus van Gennep shows the notion of *hasina*, which is of the *mana* type, to be closely bound up with that of *tokina*, contagion (*Tabou et totémisme*, p. 17). The idea of spirit, on the other hand, does not lend itself so readily to the representation of such transmissibility or infectiousness on the part of what is sacred, except where some sort of dual personality is manifested, as in the case of what is known as 'inspiration.' Meanwhile the passing on of sacredness between one person and another, one thing and another, or a person and a thing in either direction, is a constant feature of primitive belief, corresponding as it does to that play of association to which the uncritical mind is prone, more especially when rendered suggestible by emotional excitement. Thus, in the Melanesian charm for sunshine, the operator's desire, as expressed in his song, starts a train of actions—the lighting of a fire, then the placing of leaves therein to warm them, then the hanging of the leaves upon a tree to impart their warmth to the wind; and the whole process is interpreted in terms of the transmissibility of *mana*, from the song to the fire, the fire to the leaves, the leaves to the wind, the wind to the sun, in strict accordance with the associational flow of the interest (cf. Codrington, *Melanesians*, p. 201). Lastly, *mana* is the term best suited to express magico-religious value as realized in and through ritual; and ritual, as Robertson Smith has shown once for all, comes before belief in order of importance for the peoples of the lower culture. If *mana* is, regarded in itself, an impersonal and quasi-mechanical force operating on its own account, even though personal beings may have set it in motion, this is largely because a more or less automatic efficacy is imputed to ritual as such. Whereas the reason and conscious design that are immanent in the ritual are at most but dimly apprehended, the rite itself, on the other hand, stands out clearly as something that can be seen and enacted, and thus acquires independent value. Whatever it may exactly mean, at all events it works. Thus the ideas of *mana* and of ritualistic control go very closely together, the former being little else than a projection of the latter into the world of objects, which are thought of as so many foci in a system of partly co-operating and partly conflicting controls. And so it is also with the civilized man's notion of luck, which is a genuine, though degraded, member of the *mana* group of conceptions. Those who still hold to a belief in luck are precisely those who likewise believe in the possibility of controlling it.

LITERATURE.—For the local use of the word *mana* the locus classicus is R. H. Codrington, *The Melanesians*, Oxford, 1891. Cf. also E. Tregear, *Maori-Polynesian Comparative Dictionary*, Wellington, N.Z., 1891, s.v. 'Mana.' For the kindred words, *orenda*, *wakan*, etc., see the references given above. A. van Gennep, *Tabou et totémisme à Madagascar*, Paris, 1904, deals with *hasina* in strict relation to the local context, yet in a broad way that suggests interesting applications to general theory. On the scientific use of the term see various essays, the earliest going back to 1899, by R. R. Marett, reprinted in *The Threshold of Religion*, London, 1914. In 1904 Marett, in 'From Spell to Prayer,' etc., and H. Hubert and M. Mauss,

in *A.Soc.* vii., independently made *mana* the basis of a theory of magic. See also I. King, *The Development of Religion*, New York, 1910, and J. H. Leuba, *A Psychological Study of Religion*, do. 1912. Important papers dealing with the subject from various points of view are E. S. Hartland, *Address to Section H, British Association*, York, 1906, and *Address to Section I, 3rd Internat. Congress for the Hist. of Religions*, Oxford, 1908; A. Lovejoy, *The Monist*, xvi. [1909] no. 3; V. Gronbeck, 'Soul or Mana,' *4th Internat. Congress for the Hist. of Religions*, Leyden, 1912; P. Saintyves, *La Force magique*, Paris, 1914. Important books illustrating the theoretical applications of the idea of *mana* are L. Lévy-Bruhl, *Les Fonctions mentales dans les sociétés inférieures*, Paris, 1909; E. Durkheim, *Les Formes élémentaires de la vie religieuse*, do. 1912; J. E. Harrison, *Themis*, Cambridge, 1912.

R. R. MARETT.

MANCHURIA.—See SHAMANISM.

MANDÆANS.—1. Introduction.¹—The Mandæans claim our interest not only as being a separate surviving branch of the Semitic stock, but also on account of their religion, their language, and their sacred literature. Besides the records of their religious teaching and their religious poetry, that literature includes fragmentary remains and revisions of ancient Gnostic speculation and myth. Adherents of the Mandæan faith, either as larger communities or as distinct family groups, were to be found some forty years ago—and may perhaps still be found—in cities and smaller market-towns on the lower Euphrates, the lower Tigris, and the rivers which water the eastern 'Iraq al-arabi and the adjacent Persian province of Khūzistān (Arabistān). It is, indeed, necessary for them to live in the neighbourhood of rivers, since immersion in flowing water is an essential, and certainly the most characteristic, feature of their religious practice.

As far back as our records carry us, we find them subsisting in very humble conditions, earning their living as tradesmen—carpenters, smiths, locksmiths, goldsmiths—or as shopkeepers. Upon their priests rested the duty of preparing and directing the public religious ceremonies, which were few and by no means sumptuous, as well as that of performing certain rites on behalf of individual members of the community. At these functions it was their regular task to recite a number of extracts from the sacred books. In the Mandæan religion, as in others, such recitations take the place of the incantations that are no longer permitted, and in conjunction with the religious rites they serve to effect or to ensure the salvation of the soul.

From the time when the Mandæans began the serious collection of their religious texts—their mythological and legendary documents may also be regarded as revelations—the transcribing of their sacred books, and even a monetary contribution to the expense of such labour, ranked among them as a work which could purge from sin; hence not merely priests, but also a considerable number of laymen, possessed copies. Some of these were obtained by Christian missionaries from their converts, and others were bought, with the result that since the middle of the 17th cent. not a few Mandæan MSS have found their way into European libraries. The books are composed in a distinct Semitic idiom, and written in a special script.

2. **Mandæan writings.**—The most valuable, from the historical point of view, and—at least in the main—the most ancient portions of Mandæan literature are collected in the voluminous *Sidrā rabbā* ('Great Book') or *Genzā* ('Thesaurus'), which is divided into a right and a left part.² This consists largely of theological, mythological, ethical, and

historical treatises, which are interspersed with revelations, prayers, and hymns. All these components, so varied in their matter, may be called 'tractates,' though only by way of having a uniform term by which they may be enumerated and cited. From the introductory 'blessings,' which occur some twenty times, and from postscripts, we may infer that the sixty-four pieces, with three collections of hymns, were gradually incorporated in the 'Thesaurus,' now singly, now in groups. Originally each tractate was independent, though in the very first three or four separate writings have been brought together. The last tractate of the Right is the 'King's book,' which contains a survey of cosmic events as they appeared to a Mandæan who expected the end of the world to take place one hundred and fifty years after the foundation of the Arabic sovereignty, and assigned to that sovereignty a duration of only seventy-one years; hence the tractate must have been composed in the early years of the 8th cent. A.D. The short tractate, xix. R., speaks of Mahamat the Arab (Muhammad) as one who had lived at least from two to three generations in the past. To the much more important i. and ii. R., however, notices referring to Muhammad have been attached only at the end, the redactors of these tractates evidently thinking that they must fill out the historical sketch; no other tractate exhibits any knowledge of Muhammad or any trace of his teaching. As regards the narrative tractates, we can distinguish between those of more and those of less importance, the latter having taken their materials or their themes from the former. In some we find fragments interpolated from older works not now extant, while not a few are a mere patchwork of remnants of what they originally contained. When all has been said, it cannot be doubted that these documents of the *Genzā* which speak authoritatively of Mandæan thought and sentiment were composed prior to Muhammad's day, and such later redaction—often far from competent—as they have undergone was the work of Mandæan priests who were concerned to transmit in some form to future generations the greatest possible amount of their ancestral literature. The formal nucleus or focus of the entire collection is a manifesto of the Mandæan priesthood to the community (xxvii. R.; cf. *MR*, supplement A).

Like the *Genzā*, the *Sidrā d'Yahyā* ('The Book of John'), or *Drāsē d'malkē* ('Recitations of the Kings'), more rarely designated *Drāsē d'Yahyā* ('Recitations of John'),³ is also a collection of tractates, many of which have come down in an incomplete, or at least in a corrupt, textual form. A considerable number of them relate to the experiences and the teachings of John the Baptist. The book also contains narratives (e.g., one about the 'fisher of souls'), instructions in conversational form, etc. The diction is still good, but the legend of the baptizer of the Jordan, who is mentioned only once in the *Genzā*, where he is described as a truly wise and devout prophet, is here brought down to the sphere of popular taste, and expounded with entertaining stories. The older form of his name, 'Yōhannā,' is superseded by the Arabic 'Yahyā' (cf. § 40), and from these facts we infer that the contents of this collection are of considerably later origin than those of the great 'Thesaurus.'

The *Qolastā* is a volume containing the liturgies for the annual baptismal festival and the service

in lithographic form as *Thesaurus sive liber magnus*, Leipzig, 1887. We shall cite from this ed., using the letters R and L for the right and left parts respectively, while the accompanying figures will indicate the page and line. The right-hand pages are for the living, the left-hand for the dead.

¹ ed. M. Lidzbarski, *Das Johannesbuch der Mandäer*, I., Giessen, 1905; a second vol., with tr., is promised for 1915.

¹ In this art. the abbreviations *MR* and *MS* indicate respectively the present writer's *Mandäische Religion* and *Mandäische Schriften*, cited at the end of the Literature.

² A transcription of a complete MS with a list of variants from three others, executed by H. Petermann, was published

for the dead (*masseqtâ*).¹ Its poetical sections, which are intended to be recited as hymns or prayers, are worthy to stand beside the songs in the *Genzâ*, though they are possibly not so ancient. The liturgical directions attached to them are certainly of much later origin, being the work of writers who were not familiar with the pure form of the Mandæan language. The same statement holds good of the two sections of the *Marriage Ritual*, which has not yet been printed, though there are MSS of it in Oxford.

To the liturgical rubrics of the two works just mentioned corresponds the *Divân* preserved in the Bibliothèque Nationale in Paris. The name *divân* is given by the Mandæans to a work written on one long strip of paper. The Paris example is 136 x 6 cm., and gives the procedure for the expiation of ceremonial offences (cf. T. Nöldeke, *Mandäische Grammatik*, p. xxiv). Another *Divân*, now in the Vatican Library, is 7.6 metres in length, and consists of a series of sketches representing the halting-places through which the soul of a deceased Mandæan must pass in its ascent (cf. § 28), and, at its destination, the scales and the throne of Abatâr. Its numerous figures have been drawn mainly with ruler and compass, and might be the work of a child's hand, while some parts of the text found between or at the side of the figures have been rendered illegible by stains and dilapidation of the paper. The Latin notes added by Ignatius a Jesu to explain the figures sometimes do not agree at all with the original text, and at certain points there is convincing evidence that the missionary could not read a word of the Mandæan language. It would appear that he had the work explained to him by one of his converts, but that he frequently failed to understand his informant, and made fresh errors in writing his notes.²

Another Mandæan work, one main division of which bears the title *Asfar malwâššê* ('Book of the zodiacal Constellations'), is found in the Royal Library of Berlin.

According to Nöldeke (*loc. cit.*), 'it is a compilation, containing all sorts of astrological material of very diverse date, and translated in part from Arabic and Persian; portions of it are of Jewish origin.'

Mention should also be made of the recently discovered earthenware bowls with Mandæan inscriptions intended to avert a curse or an evil spell.³ They furnish melancholy evidence of the complete decay of Mandæan theology.

3. The Mandæan language.—The idiom in which this literature is composed is recognized by Nöldeke as of importance for the study of the Semitic languages; it is the form of Aramaic which developed in lower Babylonia, and its nearest congener is the special dialect of the *Talmud Babbli* (i.e. the Aramaic of Upper Babylonia). The script (see below, § 19) has the advantage of expressing the vowel-sounds by letters, and does not require diacritical signs. A correct interpretation of the texts—at least so far as they are accurately written and in good preservation—has been made possible by the grammar which Nöldeke has drawn up from them (*Mandäische Grammatik*).

4. Translations.—Ignatius a Jesu, who, as a missionary in Basra in the 17th cent., was in close

contact with Mandæans for nearly thirty years, simply says that he had some knowledge of their language, while his successor, Angelus a S. Josepho, thought himself able to furnish the key to their writings. The material extracted by the learned Maronite, Abraham Echellensis, from three Mandæan books, and given to the public in a work printed in 1660 at Rome, that scholar had doubtless succeeded in reading with the assistance of Mandæan converts then resident in Rome (cf. *MH*, p. 5f.). From the same period come three renderings of the supposed Mandæan baptismal formula, but these show how utterly bewildered the translators were even with the first line of the Mandæan books, for it is in reality their introductory formula. Later essays in translation, the most notable of which were the arbitrarily conjectural version by M. Norberg and the more careful but still very erroneous studies of G. W. Lersbach, are considered in some detail in *MS*, pp. xiv-xix. In the latter half of the 19th cent. it also transpired that there was no such traditional interpretation as scholars had expected to find in the hands of the Mandæan priests (cf. *MR*, pp. 7-20). The specimens of translation offered by H. Petermann simply repeat the errors of Norberg (*ib.* pp. 99, 186, 214, 234).

Even with Nöldeke's *Grammar* at our disposal, there are still serious obstacles to a complete translation of the Mandæan writings. These contain a large number of expressions which we can interpret only conjecturally or else not at all; some appear to be Persian in origin, but there are also a number of genuine Aramaic words whose usage in other dialects does not suit their Mandæan context, while in other cases the context does not clearly show which modification of meaning has been developed from their etymological root. In some instances, again, it is obvious that words and phrases have acquired a theological or ritual sense which is not clearly determinable. All this, however, has to do with matters of detail; the course of thought and most of the constituent elements lie within the scope of literal reproduction. H. Pognon (*opp. cit.*) has taken the utmost care in establishing the renderings of the inscriptions, and has also, in connexion with them, translated numerous passages in the *Genzâ* and the *Qolastâ*—though he, too, has made mistakes. The same may be said of *MS*.

5. Interest of the Mandæan texts.—The largest and most interesting portion of the Mandæan writings is liturgical and mythological in character. The myths relate to the origin and nature of the world of the gods and that of men, and also to the religious history of mankind. They are not derived from conceptions of nature, nor did they originate in the popular mind, but were constructed in accordance with theological views. The scientific gains which this vein of liturgy and myth seems to promise—and it is the prospect of such gains that draws us to the study of the Mandæan texts—are in the main as follows: (a) enlightenment regarding the meaning of the Mandæan rites; (b) a tenable view of the origin and early history of the Mandæan religion; and (c) an advancement of our knowledge regarding the character of Oriental Gnosis and its religious bearings.

6. General contents of the *Sidrâ rabbâ*, or *Genzâ*.—In seeking to solve the riddle presented by the Mandæans and their writings, we must begin with a critical examination of the oldest portions of their literature. We shall, therefore, first direct our attention to the matter found in the *Genzâ*. There we find a teeming world fabricated by religious and theological fantasy. Gods and demons, or beings of like nature, come before us with actions and utterances which, almost without exception, relate to the creation of the world, the

¹ A copy, beautifully transcribed and ed., with variant readings, by J. Euting, was published as *Qolastâ oder Gesänge und Lehren von der Taufe und dem Ausgange* (erroneously, the original having, not נקד'עמד, 'exit,' but נקד'עמד, 'ascent') der Seele, Stuttgart, 1867.

² A photographic facsimile of this *Divân*, ed. J. Euting, was published at Strassburg, 1904.

³ H. Pognon, *Une Incantation contre les génies malfaisants en Mandéen*, Paris, 1893, and *Inscriptions mandéennes des coupes de Khoubir*, G. 1897-98; cf. M. Lidzbarski, 'Mandäische Zaubertexte,' in *EpheMERIS für semitische Epigraphik*, i. [1902] 89-106. A few Mandæan texts are to be found in J. A. Montgomery, *Aramaic Incantation Texts from Nippur*, Philadelphia, 1912.

founding of religions, and the destiny of the human soul. Not infrequently it seems as if one and the same being stood before us under different names, while in other texts the bearers of these names are found in company with one another; sometimes, again, a particular action is ascribed to beings of altogether diverse character, or, as the action of one and the same being, it is described and characterized with much variation in different texts. It would be impossible here to set forth or unravel all this, and we shall seek only to give a concise survey of the most important trains of thought and imagination to which the vast variety of the materials may be reduced.

7. Ancient Gnostic elements in the Genzā.—The tractates that first claim our interest, as being probably the oldest, are those which exhibit polytheistic beliefs, or are at least ultimately based upon polytheistic views. Some of these open with speculations regarding the origin of all things, including the world of the gods, and to this group belong the sections in which emanational doctrines are set forth (cf. *MR*, p. 24 ff.). Here 'the Great Fruit,' from which innumerable other fruits have sprung,¹ and—as a personal divine being—'the Great Mānā of Glory,' from whom, in like manner, other 'Great Mānās' have arisen, are spoken of as primal entities. Beside the Great Mānā we frequently find 'his counterpart,' 'the radiant ether' (*ayar zhrā*), or 'the great ether of life' (*ayar rabbā d'hayyā*), who appears sometimes as a primitive being, sometimes as one of the first emanations; and the same holds good of 'the First Life,' also called 'the Great Life,' and of 'the Great Hidden First Nitūtā' (i.e. 'drop,' perhaps thought of as a sperm-drop). In all the sections of this type we read also of 'the great Jordan,' which is always represented as a river of white water, as 'the living water,' 'the gleaming and lustrous water.' It encircles the realm of the *ayar*, the world inhabited by the higher beings, and in its descent it is joined by innumerable other Jordans which water the *ayar*-realm; or, again, it traverses that *ayrān* 'the great artery of life.' So unorganizable system, however, that as early as the *par*ta period of the *Genzā* we find the personification of Wisdom making request for revelation, other the gradation of the higher beings according to their period and dignity (*MS*, p. 202 f.). Nor do the texts in question present us merely with diverse elaborations of a single underlying view, or with various attempts to reconstruct an imperfectly conceived system; on the contrary, they contain originally divergent conceptions of the origin of things—conceptions either fabricated or gathered from foreign sources by the Mandaean scholars themselves at a period before the transmitted texts were written. Of the authors of the *Genzā* it is only the polytheistic group that have made use of these conceptions.

Of the narratives describing the creation of the terrestrial world, some still bear a relation to the theogonies, the relation being peculiarly close in the long and important tractate vi. R, which we may call the Mandaean Genesis. In this text 'the Life' calls 'the Second Life' into existence by a 'request to itself.' Then this 'Second Life' creates for itself a second celestial world, and among the spirits of this higher realm of second rank (the *ātrās* of the Second Life) arises the idea of creating a third world, viz. our earth, with inhabitants who should know and worship only the Second Life, not the First. Then the Great Mānā of Glory, in order to frustrate this design, calls into existence the Mānā d'hayyā, who was to see that the First Life was worshipped also upon the earth.

¹ According to Hippolytus, *Ref.* (= *Philosophoumena*) v. 9, vi. 37, viii. 8 (cf. x. 16), the Naassenes, Valentinus, and the Docetists had a similar idea (cf. *MR*, p. 187 ff.).

In the Mandaean dialect *mandā* is a by-form of *maddā* or *māddā*, a noun from the root *ḡḡ* (cf. Noldeke, *Mand. Gramm.*, p. 75), and *Mandā d'hayyā* is equivalent to *γνῶσις τῆς ζωῆς*, 'the knowledge of life'—such a knowledge of life as gives one a portion in life. The term 'Mandaean' is a rendering of *mandāyā*, *γνῶστικός*.

8. The polytheistic strain in Mandaean theology.—While the Mandaean writers esteem the theological speculations of their books as mysterious and ancient revelations, in their own religious thinking they retain only the belief in 'the Great Life'—or simply 'the Life'—whom they regard as the deity of the world of light. They use the word *pīrā* for the most part as equivalent to 'fruit' in the ordinary sense, and the term *ayar* (ultimately derived from Gr. *ἀήρ*) as denoting the air of the celestial world and the north wind associated with it. The word *mānā* (usually = 'vessel,' 'instrument') is still found in a group of hymns (L 38-74) in which the soul of the Mandaean asserts its heritage in the higher world, declaring, 'I am a *mānā* of the Great Life,' while occasionally an exalted celestial being is distinguished by the epithet 'pure *mānā*.' At first the deity referred to as 'the Life' is still regarded as a plurality, being designated 'the Fathers,' and is thus conceived as a council of gods—though one that is small and always unanimous. Very soon, however, 'the Life' comes to be spoken of in the singular. In the polytheistic writers a number of other gods appear besides 'the Life'—not, indeed, as its subordinates, but inferior to it in power and prestige. These are not called 'gods'—among the Mandaean, in fact, that term was long restricted entirely to the false foreign deities (*MR*, supplement C)—but are referred to each by his proper name. The heavenly beings created for a special purpose are called *ātrās* (lit. 'wealth'), as are also the countless angels who play a more ornamental part.

Far below the realm of *ayar* lies a world of darkness—'the black water' (*mayyā syāwā*). We are nowhere told that the black water is merely a portion of the under world, or that it bounds or covers it, and yet the idea that the under world is in a liquid condition is quite irreconcilable with a large number of its features as presented in the narratives.

The creation of the earth which lies solid in the black water, and of the firmament expanded over it, is ascribed by the writers of this school to Ptahil (on whom cf. *MS*, p. 60 f., note). The characterization of this demiurge shows a remarkable degree of variation. Ptahil merely resembles the higher beings, and has arisen out of the black water; he acts only by permission, or, indeed, upon the authority, of 'the Life,' and with the means vouchsafed to him by the latter, but he oversteps his orders; or he has accepted the proffered help of the evil spirits. Again, he is in fault solely because he has not boldly resisted such an evil spirit, or, once more, he himself has committed no transgression, and it is only after he has duly performed his work that evil comes into the world.

The creation of man is wrought in part either by Ptahil or by the evil spirits, but is left incomplete, the soul and the finer organs, or at least the former, being still lacking. The soul—that which makes man live—is breathed into Adam by Mānā d'hayyā, or else brought down from the treasure-house of 'the Life' and placed in Adam's body by one of the celestial beings. By this means, and also by the fact that the first man was at once enlightened regarding his origin and the true religion, the design of the subordinate spirits (those of the Second Life) to create a world whose inhabitants should belong to them and worship them alone was foiled.

The wicked spirits, however—of the *ātrās* of the

Second Life nothing is said even in the 6th tractate—do not at once accept defeat. By magic they create all manner of noxious things—poison and corruption, predatory animals and serpents, devouring fire and earthquake, etc., as well as evil passions—and mingle them with the good creation. According to vi. R, the first to be deluded by the wicked ones was the son of the first man (*ādām bar ādām*); and Mandā d'hayyē, or his representatives (Hibil, Šitil, 'Enōš), must once more appear to fortify and maintain mankind in the true faith. These evil spirits are the Rūhā (Jud.-Aram. רוח) and her children, viz. the spirits of the seven planets and of the twelve zodiacal signs. Prior to the creation of the earth her abode was the region overlying the black water, and from her and her sons all evil things have come into the world—demons, founders of false religions, teachers of heresy, and men of violence. The Rūhā, who also bears the epithet of 'world-mother' or 'mother of the world,' bore these children to 'Ūr, the Mandæan devil, who was himself her son. He is a most villainous creature, and had to be laid under restraint before the earth and the firmament were created, the reason evidently being that the 'solidification' of the land in the black water would otherwise have been impossible. According to vi. R, it was Mandā d'hayyē himself, according to viii. R, it was his son Hibil zīwā, who cast 'Ūr to the ground, loaded him with chains, and set warders over him—or, on another view, immured him in 'Ūr's own dark realm. Detailed accounts of how these measures were carried out—mainly by magic and trickery—are found in the tractates cited; and viii. R (one of the later portions of the *Genzā*) relates further, with reminiscences of Bab. myths, how the 'fathers' of 'Ūr, the lords of three deeper regions of the under world, were rendered harmless (complete tr. in *MS*, pp. 137-181).

9. Biblical matter in the tractates of the polytheistic earlier school.—The Rūhā and her son 'Ūr, dwelling upon the surface of a watery expanse that existed before the creation of the solid land, and in some way interested in that work of creation, since their names are not Mandæan, but of Heb. origin, can be none other than the female אֵלֶּהָמָה who, according to the opening words of the Heb. Genesis, 'brooded upon the face of the waters,' and the light (אֵלֶּהָמָה),¹ which is said in the same passage to have been the first work of the creation. The Gnostic writer here adopts a theory according to which the light was born of the Rūhā (of God), as were also, subsequently, the lights of the heavens. The word קָרָא, 'call,' as used for 'call into being,' can be traced to the Biblical Genesis, as well as the names of Ādām and his wife Hawwā, and, consequently, also that of their son Šitil (i.e. שִׁטְלִי, lengthened in Mand. to שִׁטְלִיָּה) and the names of the other two genii Hibil and 'Enōš. The exaltation of Abel (אֵבֶל), slain in his innocence, as Hibil zīwā seems to the present writer to be of later origin (cf. § 14). The Heb. narrative of the Fall, in which knowledge is described as a forbidden fruit, is one that the Gnostic author could not use at all, since he must have regarded it as directly in conflict with the view that the knowledge of good and evil, of truth and error, was revealed to the first man immediately after he had received a soul from the higher worlds, and that that revelation marked the founding of the true religion.

In connexion with the account of the origin of the worlds and the true religion, the Mandæan Genesis refers to the false religions. It states that all of them, as well as the peoples who profess

¹ In the pronunciation of the word the Mandæans may quite well have made the mistake of substituting *q* for *g*, just as they said *Yūhānā* instead of *Yōhānā*. On the initial *y* cf. Nöldeke, *Mand. Gramm.* p. 7.

them, were called into existence by the planetary spirits, and that, in particular, Judaism was created by Šameš ('the sun'), 'whom all people call Adōnai.' The writer does not mention Christianity by name, but in the place of Mercury he inserts the Messiah (*Alsihā*), of whose followers he says that they 'all accuse one another of lying,' and of himself that he had distorted the teaching of the true religion. This reference to the mutually conflicting teachings of the Christian Church (R 120. 7 ff.) comes doubtless from the hand of the Mandæan redactor.

10. Possible traces of a Gnosis entirely independent of Christianity.—In the texts relating to the cosmogony (and theogony) there is nothing to remind us of Christianity except the fact that the rivers which contain the 'living' water are each called 'Jordan.' Among the Mandæans the word *yardnā* is used as an appellative; but, as it is not a native Mandæan formation, this usage is, no doubt, to be explained by the peculiar respect accorded to the chief river of Palestine by the Gnostics, whose writings had been appropriated or used by the Mandæans. There are certain facts which lend support to the opinion that the high honour paid to the river Jordan is of an older standing than the gospel narrative of John the Baptist and Jesus (cf. *MS*, p. 16 f., note; Brandt, *Elchasai*, p. 154); and upon this point depends the answer to the question whether the Mandæan documents show vestiges of a Gnosis that was not affected by Christianity, and was perhaps pre-Christian.

11. Jesus Christ as Mandā d'hayyē.—Tractates bearing unmistakable signs of dependence upon a tradition of gospel history, and emanating, at the same time, from the polytheistic school, are found in ix. and xi. R. These two tractates stand out from the rest of the *Genzā* in that they alone speak of the Mandā d'hayyē as having appeared 'in Jerusalem and Judah,' or in company with Yōhannā the Baptist at the Jordan, with a view to 'selecting' the believers in the true religion 'from amongst all peoples and families' (R 175. 10), while the proclamation of the true doctrine, which, according to the view otherwise universal among the Mandæans, was revealed in the days of Adam, is in these tractates utterly ignored. The Mandæans gave their sanction to the narratives without suspecting that they related to the Lord of Christian believers, and also without adjusting their own theological views to the contents. The appearance of the Mandā d'hayyē among the Jews, or among a human race long in existence, is never again mentioned—so far, at least, as the *Genzā* is concerned—by later Mandæan writers.

12. The monotheistic school, or doctrine, of the king of light.—With the polytheistic Gnosis described in the foregoing paragraphs Mandæan writers of, we would surmise, the 4th or 5th cent. A.D. conjoined a strictly monotheistic Gnosis, which, from its leading theme, we shall call the doctrine of the king of light. i. and xxv. R furnish a complete and almost unvitiated account of it.

'One is the lofty king of light in his kingdom'—lord of all heavenly beings, source of all good, creator of all forms, of infinite greatness and goodness, highly extolled by the 'kings' or 'angels' who stand before him and inhabit his paradise. Of distinctively Mandæan character are the features noted in 8. 11 ('he sits in the lofty north') and 6. 17 ('victims are not sacrificed before him'), and the description given in 9. 8: 'The Jordans of the worlds of light are white waters, full, whiter than milk, cool and delectable. . . . And the 'utras and kings who drink do not taste of death'; their garments and crowns are things of splendour and light. A complete contrast to all this is seen in the realms of darkness, with their black waters, and with a king who, like the Manichæan devil, has the head of a lion, the body of a serpent, and the wings of an eagle; he is hideous and of terrific proportions; 'iron seethes in the exhalations of his mouth'; the stone is burned up by his breath; when he lifts his eyes the mountains tremble; the plains quake at the whisper of his lips.' With all his demons he once projected an assault against the realm of light, but, coming to the border of his kingdom, he

found no gate, no way, no means of ascending to the celestial heights. Then the lofty king of light calmed the agitated world by proclaiming that 'All the projects of the Daywā ['demon'] come to naught, and his works have no continuance' (cf. *MR*, p. 481, *MS*, p. 231 f.).

According to the theology which finds expression here, the earth and the firmament, with all that they contain—stars, winds, fire, plants, animals, and human beings—were created by command of the king of light through the agency of an *ʾātrā* named Gabriēl the Ambassador.

In the record of the mandate given to Gabriel the Mandaean redeactor has interpolated a passage referring to the subjugation of the world of darkness (R 12. 8-12), but nothing is said of this subjugation in the account of the actual creation. The creation of man is briefly recorded as follows (13. 9): 'And the man Adam and his wife Hawwā were fashioned, and the soul fell into the body.' Then (13. 11-15) 'the fire-angels came; they made submission to Adam; they came and worshipped before him, and changed not his word. One was the evil one, by whom wickedness was formed, who departed from the word of his lord; and the lord fettered him with a fetter.'

13. The moral code.—With this theological exposition in i. R and also in the parallel ii. R is associated a code of practice, which seems to be of identical origin, and which, at all events, has been transmitted (R 13-26; cf. *MS*, pp. 24-43) as a record of the doctrine of the king of light. Here, e.g., we read:

'I say unto you, all who give heed to the name of God: In your standing and your sitting, in your going, coming, eating, drinking, resting, lying—in all your doings name and glorify the name of the lofty king of light.'

That the record in question is derived from a non-Mandaean original appears from its use of the term *alḥā*, 'God,' and also from its repeated mention of 'the Satan,' and of 'Sātans.' The laws relating to food are of special significance; they forbid the faithful to partake of the flesh of animals that have died otherwise than by slaughter, or to taste of blood, and of meats and drinks that have been prepared by heterodox hands. This portion of 'knowledge' (*maddā*, R 13. 23), however, has likewise been moulded into conformity with the Mandaean faith, and distinctively Mandaean commandments have been inserted in it—those enjoining white clothing with girdle, immersion in a river, the Mandaean *compeamān*, the *masseḡtā* for the dead, and the *washrūtā* of all foods, as well as those prohibiting laments for the dead and condemning fasting.

14. Judæo-Christian Gnosis as the doctrine of the king of light.—The monotheistic concept of the king of light, as set forth, with marked Parsi colouring, in the *Genzā*, must be originally Jewish or Judæo-Christian. The present writer is of opinion that it reveals a Judæo-Christian Gnosis. From what was said above (§ 10), the mention of the 'Jordans' of the world of light must not be regarded as decisive evidence; but in the moral code (R 25. 20, 48. 9) we find the injunction:

'Arm yourselves with the weapon that is not of iron; let your weapon be Naṣarītism (*naṣārūtā*; variant *naṣirūtā*) and the direct utterances of the place of light.'

In the *Genzā* the terms *Naṣōrāyē* and *Mandāyē* are used synonymously; according to the Mandaeans, both terms apply, or, at least, should properly apply, to themselves alone. We know, however, that down to the end of the 4th cent. the former designation was specially used of the Jews who believed in Jesus, and that it is applied in the Qur'an (ii. 59, 105, 107, 114, 129, 134, iii. 60, v. 17, 21, 56, 73, 85, ix. 30, xxii. 17) to the Christians generally. The injunction just quoted permits us to hazard the conjecture that the doctrine of the king of light was the source from which the Mandaeans adopted the name *Naṣōrāyē*.

No other unmistakable features of a specifically Christian character occur in the tractates of the school under notice. In the final sections of its two most notable documents (i. and ii. R), 'the Messiah, the prophet of the Jews,' is actually described as a leader among the wicked spirits who

make the human race abandon the true religion. These sections, however, retain only the scantiest elements of the original doctrine of the king of light. Such residual elements might with most likelihood be found in the figures of Hibil zīwā, who (like Mandā d'hayyē in the polytheistic Gnosis) instructs the first man in all that is necessary for salvation, and 'Enōš-ʾātrā, who in the course of the world's history comes forth to rehearse that instruction (R 29; cf. *MS*, p. 48).

15. 'Enōš and the cloud; Mšunē kuṣṭā.—The Mandaean 'Enōš (ܐܢܘܫ, ܐܢܫܐ) rests upon an identification or fusion (due, possibly, to the author of the Judæo-Christian doctrine of the king of light) of the OT 'Enōsh (Gn 4th) with the Son of Man (*bar ʾenāsh*) of Dn 7th. Abel, Seth, and Enoch—or, in their Mandaean form, Hibil, Sītil, and 'Enōš, three *ʾātrās*—are associated with Adam as messengers of the true religion and as his auxiliaries. 'Enōš, however, comes forth again, appearing in Jerusalem at the same time as Iṣū-māthā (Jesus Messiah), who poses as a wonder-worker, and whom he unmasks as a deceiver; he performs miracles of healing (perhaps on the basis of Mt 11th), proclaims the true religion, causes three hundred and sixty (or three hundred and sixty-five) 'disciples' to go forth from Jerusalem, and ascends to 'the Life,' by whom (his father [here sing.]) he is charged to destroy the city, and does so in the form of a white eagle—corresponding to the white falcon in *Bundahishn*, xix. 23 (*SBE* v. [1880] 71 f.; cf. *MR*, p. 155 f.). In all these acts 'Enōš has at his disposal a cloud, in which he dwells; and from its matter he fashions the body in which he appears upon the earth as a man. This cloud is in its origin doubtless the cloud of the gospel narratives (Mk 9th, Mt 17th, Ac 1st), and this, again, probably has its source in the clouds of heaven which form the vehicle of the Son of Man in Daniel (7th; cf. 2 Es 13th-4, Mt 26th etc.). In the closing period of the *Genzā* literature the Mandaeans began to depict the cloud of 'Enōš in conformity with the Parsi conception of the garden of Yima (see art. BLEST, ABODE OF THE [Persian]), and it then came to be conceived as a country floating above the earth—a realm called *mšunē kuṣṭā* from the 'righteous translated ones' who inhabit it (R 338 f.); the name recalls the Jewish traditions about the righteous ones (Enoch, Elijah, Isaiah) who were translated to heaven (cf. *MS*, p. 77, note).

16. The Christian Redeemer in the *Genzā*.—From all this we seem to be entitled to infer that the Mandaeans became acquainted, first of all, with the figure of Mandā d'hayyē in the framework of a Gnosis working with polytheistic ideas, and appropriated it, and that they afterwards adopted the figure of 'Enōš from the Judæo-Christian doctrine of the king of light, while, at a still later date, they met with the Messiah Jesus in writings of another origin. The tractates or books in which they found the name last mentioned were, as regards their contents, more closely related to the gospel narrative than were their other sources, and in them the Christian Saviour was intimately connected with the Holy Spirit. Hence, as the Mandaean savants identified the Holy Spirit (*rūhā d'quṣṣā*) with the Rūhā whom they had long known as an evil being, the mother of 'Ūr, they could not but regard Iṣū māthā likewise as belonging to the group of evil spirits. In the later sections of the *Genzā* tractates which profess to relate the religious history of man—in other tractates the Messiah does not appear at all—He is usually surnamed the 'liar' or 'impostor,' on the ground, of course, that He sought to usurp the rôles of Mandā d'hayyē and 'Enōš. Where the writers of these sections still employ the scheme of the earlier system, they assert that He is the planet Mercury, and, similarly,

that Rûhâ is Venus, and that Adônai, the god of the Jews, is Šameš, the sun (on the Mandaean names of the planets cf. *MS*, p. 45). The observance of Sunday was not as yet a Mandaean practice, though it later became obligatory (*R* 56. 12; cf. *MR*, p. 90, and below, § 32).

An account of the baptism of Jesus in the Jordan is given in the *Sidrâ d'Yahyâ*, which, however, narrates the incident in the following way: the Baptist is at first unwilling to perform the ceremony, and does so only after he has received from heaven (Abatûr) the written mandate, 'Yahyâ, baptize the liar in the Jordan.'

17. The relation of the Mandaean religion to Judaism.—Besides the OT characters already mentioned, several others are named in certain sections of the *Genzâ*, but are of no importance in Mandaean theology. Virtually all of them are enumerated below.

It is curious to note that in one passage (*L* 18 f.) the promise is made to Adam that, 'on the great Day of Resurrection' he and all his race will rise again and be transported to his own land, while in the same tractate, immediately before, the soul of Adam is said, quite in keeping with the Mandaean view, to have ascended to the 'house of the Life.' The idea of a resurrection from the dead is altogether foreign to Mandaean theology, so that the passage about the promise must have been carelessly transferred from a Jewish or Christian-Gnostic work. The Jewish materials in the *Genzâ* were drawn, not directly from the OT, but from Aramaic sources, including some of a Gnostic character. The ark of Noah (Nâ) ran ashore—as the Targums also tell—on the mountains of Qardû (Gordynea, i.e. Kurdistan); Abraham and Moses were prophets of Rûhâ; King Solomon, like King Jamšid in Iranian legend, held the demons in subjection until he ceased to give thanks to his Lord, and let himself be adored; the world-conflagration which had once annihilated the human race before the Deluge was kindled by the angel Daniel, to whom was given power over fire, at the order of 'El-rabbâ and Rûhâ (*MR*, pp. 129 f., 123).¹

The assumption that the Mandaëans were originally a Jewish or Judæo-Christian sect (Hilgenfeld, Wellhausen) seems to be at variance with the following facts. Their knowledge of the most eminent names associated with the teachings of Judaism was not obtained from oral tradition; on the contrary, they found the names in written documents—found them, moreover, as foreign words, for they read them incorrectly. Thus they render the name of Moses as Mēšâ, Miriam as Miryâi, Abraham as Abraham, Israel as 'Usriël, Jacob as Yaqif; Sabbath appears as *Saftâ*, *malâkhê*, 'angels,' as *malikê*, 'kings,' and Benjamin actually as *bnê 'Amin*, 'the sons of Amin.' The inevitable inference is that the Mandaëans had been throughout complete strangers to the religious tradition of Judaism. The same may be said of Jewish religious life. In the entire Mandaean literature there is no evidence to show that the Mandaëans ever observed the Sabbath, or practised circumcision, or turned towards Jerusalem in their prayers. Like the Essenes (*q.v.*), they rejected animal sacrifices, and believed that the soul was liberated from the body at death; but marriage—in the form of monogamy, though with a succession of wives—and the procreation of children were enjoined upon them as a religious duty; they had nothing like the organized communal life characteristic of the Essenes, while their views regarding the planets are quite inconsistent with such a practice as that of according

¹ The *Genzâ* refers also to the Iron Mountain (*L* 17. 5: *ṭarâ d'paršâ*), which, though not noticed in the OT, is mentioned in the Targum of Jonathan in connexion with the fixing of the eastern frontiers of Palestine in Nu 34¹²⁻¹¹ (also in Josephus, *BJ* vii. 2 [§ 454, ed. Niese]).

an adoring salutation to the rising sun. A further point of importance is that in their prayers the Mandaëans turned towards the north, where the exalted king of light sits upon the throne, while the common Jewish view (held also by Elkesai) is that the evil spirits and their chief Šammâel (from *š-mâl*, 'the left,' i.e. the northern one) have their abode in that very region of the heavens.

18. Conjectures regarding the origin of the Mandaean religion.—The relation between the Mandaean teachings and Manichæism (*q.v.*) cannot be fully discussed here. The parallels have been collected by the present writer in *MS*, pp. 223-228 (cf. *Elchasai*, p. 142 f.), and to that list should be added the correspondence between a passage in the Manichæan narrative regarding the awaking of the first man to life (as quoted by Pognon, *Inscr. mand.*, p. 130 f., from Theodore bar-Khônî's *Book of Scholia*), and one in *L* 46 f. In the verifiable parallels the Mandaean versions seem to be secondary, and we must infer that both sides are indebted to the same group of sources. A large proportion of the material common to both is explained by the mass of Parsi ideas in the Judæo-Christian groundwork of the doctrine of the king of light on the one hand, and in the theology of Mânî on the other. Doubtless, too, the Mandaean redactors introduced into their tractates a number of fragments from Manichæan documents unknown to us (cf. *MR*, p. 198 f.). The religious teachings of the two faiths, however, were essentially distinct in character; the fundamental dualism of the Manichæan system—a doctrine that finds a soteriological design even in the creation of the world, and involves an ascetic mode of life—is far removed from the Mandaean view. It may also be noted that, according to a passage in the *Kilâb al-Fihrist* (ed. G. Flügel, Leipzig, 1871-72, p. 328, line 5), the father of Mânî, shortly before the latter's birth, joined the Mughtasila, a sect akin to the Mandaëans; this point, however, need not be further discussed here (for fuller details cf. Brandt, *Elchasai*, p. 137).

On the other hand, we cannot place the slightest reliance upon bar-Khônî's statement (in Pognon, pp. 154 f., 224-227) that the sect of the Mandaëans was founded in the land of Maishân by a beggar named Ado, of Adiabene: 'Companions came to him, and there they played on cymbals, as beggars are accustomed to do.' Some of the names of Ado's relatives, as given in the context, are also borne by well-known figures in the Mandaean religion, while most of the others would at least be quite suitable for such. Nöldeke is doubtless right in his conjecture that Ado is simply a corruption of Adam—*oṣ* from *šoṣ*. Here, in fact, we recognize a blunder on the part of the heresiologist, due to his habit of regarding alien religions as sects, and tracing each to a distinct founder.¹

The religious teaching of the Mandaëans must, however, in the opinion of the present writer, be explained in other ways than those suggested by the theories discussed, and the view to which our critical examination of the *Genzâ* leads us will be found to do justice to all the data, and has at the same time the merit of simplicity; moreover, it derives some degree of support from what can be ascertained regarding the age of the Mandaean script.

19. Age of the Mandaean script.—Comparing the Mandaean written characters with the various alphabets collected by Julius Euting in his *Tabula scripturæ aramæicæ* (Strassburg, 1890; the work contains also the Pahlavi script), we find that, while they are somewhat like the characters employed in the Nabatean inscriptions of Sinai, dating from the 2nd-5th centuries A.D., they

¹ On bar-Khônî's designation of the Mandaëans as Dostæans see especially *PRF* xii. 157, 169 f.

approximate more closely to those found in the inscriptions of El-Hajr, written in the 1st cent. A.D. (in these comparisons we must, of course, disregard the hair-strokes due to the cursive mode of writing). In particular, the circle by which the Mandaëans represent *N* is closely matched by the corresponding characters in col. 53 of Euting's *Tabula*, and the *N* of an inscription at Başra, dated 17 B.C., is similar in form to the Greek minuscule *σ*.¹ Thus, as the Mandaean written character dates from about the beginning of the Christian era, and as there is no ground for supposing that the Mandaëans had previously used a different alphabet, the rise of the Mandaean literature cannot well be dated earlier than the 1st cent. A.D.

20. The baptistic nature-religion.—The idea that the rivers descended from the celestial world by way of the mountains in the distant north and that their waters impart fresh energies to the pious who bathe in them—a naturistic element of belief retained by the Mandaëans amid all the thoughts and fantasies subsequently acquired—was probably inherited from their ancestors. In explanation of that belief we would advance the conjecture that this Semitic people had not always lived among the lower courses of the rivers, but at an earlier period had dwelt in a locality much further north, and nearer the sources—in a district from which they could see, upon their northern horizon, huge mountains towering to the sky (cf. *MR*, pp. 69-72; *MS*, pp. 213-217). We scarcely need to explain how these facts would provide a basis for the belief in question, and we can easily understand, too, how a people, if driven from their native region and compelled to endure a miserable existence in their new abode, should seek, in conformity with the practice of their ancestors, i.e. by means of immersions, constantly repeated, to absorb the virtues which the river brought from the higher world to the low-lying plains. We do not claim, of course, that this is more than a surmise, yet we would draw attention to the fact that there are linguistic phenomena which might be adduced in its support. Thus the Syriac idiom used in Kurdistan and on Lake Urmia is found to agree with the Mandaean dialect in the formation of the infinitive and in not a few features of the pronoun—a fact which Nöldeke (p. xxvii) recognizes as 'of great importance.' If, however, we set the theory aside as over-hazardous, we must be content to suppose either that the very simple religious ceremony of ablution had prevailed from primitive times among the country people of Lower Babylonia or that by some means or another it had spread to that district from Syria (cf. Brandt, *Elchasai*, pp. 151, 154).

21. The adoption of Gnostic tractates.—The Mandaëans, then—though not yet bearing that name—practising their religious ablutions, and sharing the general Semitic belief in demons, were living in Southern Babylonia at a time when the intermingling of religions had proceeded so far in the districts in which the Aramaic and Persian languages were spoken that it had at length evolved those creations of theological fantasy commonly called Gnostic, with which, however, we must here combine the Manichæan teachings and, in great part, the substance of the Pahlavi books (*Bundahishn*, etc.). The priests of this baptistic tribe were not, intellectually, sufficiently advanced to share in the reflective activity which strives to interpret the objects of faith and the influences of religion as cosmic entities and occurrences; nor

¹ Nöldeke (*Mand. Gram.*, p. xxxiv) notes that the Mandaean script bears a fairly close relation to the earliest form of Pahlavi, especially the so-called Chaldeo-Pahlavi, but its conformity with the Nabataean inscriptions mentioned above seems to the present writer much more striking.

had they much appreciation for explanations of the world-process by pre-suppositions which purported to guarantee future salvation to all who acted in accordance with them, although this salvation itself and its mythological elements, the ideas of the gods and all their imaginative embroidery, were quite of a kind to make a powerful impression upon them. In reality it was into the hands of a class whose learning was confined to a little reading and writing that 'Gnostic' tractates fell, and these texts, written in a foreign language, and, therefore, to be read only with difficulty—documents coming from afar, dealing with things of a remote past, and unveiling the world of the gods—wrought upon them with the force of oracles, revelations from above, records of a superhuman wisdom. Accordingly, the priests adopted the tractates as their own, translating them, of course—at first orally, no doubt—into their own dialect. Conceivably, indeed, it was the desire of having these precious revelations in their own language that prompted them to draw up an alphabet of their own; and it is also possible that it was the translators themselves, and not their descendants in a later generation, who came to believe that the documents were from the first meant for them and their people, that the contents had been revealed to their forefathers, and that the 'Mandâye' addressed therein were none other than these ancestors and themselves.

22. The rise of Mandaean theology.—It seems beyond question that the earlier generations of Mandaëans who had a knowledge of writing (covering, we should estimate, a period of at least two hundred years) treated all the texts in their possession—as far as the contents comported in some measure with their own religious sentiment—as records of revealed wisdom; in their backward intellectual condition, moreover, they could not fail to be impressed with matter so unfamiliar. In the work of translation, however, as well as later in transcribing and renewing dilapidated texts, they themselves learned the art of literary composition. Thus, if they found that these strange documents made no mention of, e.g., 'the Jordan,' the bath of immersion, or anything else that they could have wished to discover in them, they added what was required, while fragments of defective MSS they either inserted into others or put into such order as they could devise. From translation they advanced to redaction, and from redaction to independent composition. Such, then, was the genesis of the Mandaean literature; it consists essentially of borrowed matter. The circumstance that very diverse cycles of conception had a place in this material stimulated the Mandaean scholars to attempt the task of combining one with another, and of mediating between the different views. This, again, explains the development of the Mandaean theology, and it also accounts for the confusion that prevails in it.

The Mandaëans never had an orthodox system of theology. Their authors busied themselves with the motley materials that had accumulated in their minds only with a view to reproducing the narrative of the creation of the world and of the human race in a fresh and improved form; and the one central thought that guides all their efforts is the necessity of explaining the harsh lot of the devout Mandaean in his earthly circumstances, and of giving him the strongest possible assurance that his soul will return again to the bright and joyful realm which is its true home.

23. The religious beliefs of the Mandaean writers.—Amid all the conceptions and the varied views with which the Mandaean writers became familiar, and notwithstanding all the reverent interest with which they received the new materials, they never

surrendered the traditional religious practice of their people, although their ideas of the benefits to be derived from the bath of immersion underwent a process of refinement in conformity with the development of their theology.

From the heterogeneous Gnostic trains of thought by which these theologians were influenced there arose, in course of time, a distinctively Mandaean religious belief, which can be traced without difficulty in most sections of the *Genza* writings. The main features of that belief are as follows. Far above, beyond the heaven of the planets, there is a world full of light and splendour, where dwell the Life (as the supreme deity) and other divine beings, or where, according to another phase of doctrine, the 'exalted king of light,' surrounded by hosts of angels, sits enthroned. From that realm the soul of man derives its origin—the soul of Adam and the souls of his descendants in the Mandaean community. Far beneath, again, is the world of darkness with its black waters. Part of it has been 'thickened,' brought into a solid state; this is the earth inhabited by mankind. The earth has now the black water upon the south; upon the north it stretches over lofty mountains to the world of light; from that world the rivers descend by way of the mountains; and thus the Mandaëans, by bathing in the 'living' water of the rivers, maintain their connexion with the higher realm. The souls of the devout dwell upon this earth as in a foreign land. Here, meanwhile, evil spirits reign, akin to the powers of darkness now immured—the deities of other peoples and other creeds—and it is they and their creatures or servants who make life a torment for the Mandaëans. Hence the believer waits with earnest longing for his salvation, *i.e.* his deliverance from this earthly existence.¹ At the hour of death a divine being descends from the world of light, and, as the 'liberator,' takes the soul from the body, and bears it upwards through the celestial spheres to the world of light and of the Great Life.

24. *The Mandaean typology.*—The soul of the Mandaean, until the hour of its deliverance, is sustained by the symbolism of the ritual elaborated by the priests. Confessors of the true faith are plants of the world of light or of Mandā d'hayyē (R 89 f., 220, 15 f., etc.), and they are summoned to their most important religious duty in the words *Pārān yardnā* (R 17. 20), 'Make the rivers sprout' or 'blossom' (*MR*, p. 99 f.; *MS*, p. 163, note). What is implied here is that the water streams from the world of eternal life and infuses life into those who bathe in it, so that they may be said to spring from the river like plants. They were also required, however, to mark their brow with the living water, and likewise drink of it (the draught is called 'gushing'), partake of a loaf (the loaf is termed *pehtā*, 'opening,' 'unlocking'), etc.; and those who take part in these ceremonies have a share in the benign fountains of the better world—in the great baptism in the heavenly Jordan, in the gushing of radiance, in that treasure of the Light which is to be opened. The liturgical recitations (*drāšē*) were meant to represent the beams (*drāšē*) of splendour which would flow from the house of the Life to meet the soul as it sped upwards from the earth (*MS*, p. 49), etc. The ultimate ground of trust, however, was always the ceremony of immersion; thus in R 18. 13 we read:

'Your token is the token of the living water, by which you ascend to the place of the Light.'

At the ceremony of immersion—originally this itself was the sign—it was the practice, as early as the period of the *Genza*, to utter names, *viz.* those of the Great First Life (R 196. 8; or of the

¹ The Christian belief in a redemption from spiritual evil, from the dominion of Satan and the power of sin, is quite foreign to Mandaean thought.

king of light, R 17 f.) and Mandā d'hayyē (*MR*, p. 104 f.).

To their own rite of immersion, whether performed, as was usually the case, by the individual himself, or, as on feast-days, with the co-operation of a priest, or administered to children, the Mandaëans applied the term *maṣbutā* (ܡܥܒܘܬܐ), presumably for ܡܥܒܘܬܐ; the odd pronunciation given by Siouffi, *masouatta* [French], could be approximately correct only for the plural form of the noun, a word which certainly comes from the Sem. verb ܡܥܒ (the sound of *y* is lost in Mand.), which the Mandaëans use exclusively in connexion with the religious practice in question (cf. § 38). For Christian baptism, on the other hand, the writers of the *Genza* persistently employ the term used in the Syrian Church, *maṣbūtā* (ܡܥܒܘܬܐ = ܡܥܒܘܬܐ) and the Afel forms of ܡܥܒܐ. They condemn and vilify the Christian ceremony because it is performed not in 'living,' but in (or with) 'cut-off' water.

25. *Kuṣṭā.*—In the ethical and religious sections of the Mandaean literature much is said about *kuṣṭā*, 'straightness,' 'rectitude,' 'veracity.' In the ritual the ceremony of immersion included a gesture called 'putting forth *kuṣṭā*,' this being identical with what is described in several texts as a stretching out of the hand 'from the bath of immersion,' or (after the performance of some other religious duty) 'before Mandā d'hayyē.' The gesture was made with the right hand, and it corresponds to the clasp of hands with which the soul would be welcomed by the Life and other great celestial beings when it reached the world of light. It was an outward manifestation of the upright mind and of loyal devotion. Further particulars regarding the religious ceremonies, which were constantly being increased and rendered more complex by the priests, will be found in § 33 below, and more fully in *MR*, pp. 96-120, 221-226.

26. *Ceremonial purity.*—In this period the idea of purity was recognized in the sense of a relation to the world of light so intimate that it carried with it exclusion from every object and condition antipathetic to it ('Hibil zīwā, pure Mānā'; I. 116. 17, 'the Jordan of the Life, from which I have taken purity'). The laws already mentioned regarding food came to the Mandaëans through the medium of the ethical code in the doctrine of the king of light, as did also the injunction that husbands and wives should 'wash themselves with water' after cohabitation, and women after menstruation. It was only later that the commandment of ablution was extended to many other occasions of life (Siouffi, cited in *MR*, p. 95 f.).

27. *Prayers.*—Among the Mandaëans prayer was known as 'compassion,' or 'petition and praise.' According to the ethical code just mentioned, believers must rise to pray thrice in the day-time, and twice during the night, but in other texts, apparently of Judæo-Christian origin, the only prayers enjoined are one in the morning, one at the seventh hour of the day, and one before sunset, while in one passage (R 300) prayer in the night-time is actually forbidden. We read also of a 'man' who (like the archangel Michael among the Jews) receives the prayers, and stores or preserves them in the treasure-house of the Life (R 221 f., 300). In the later redaction of a regulation in the ethical code the believer is commanded to ask a blessing upon flesh-food before eating (R 68; cf. *MR*, p. 94). The priests drew up short forms of prayer for these ordinances; but for protection against distress and danger they regarded prayer in the proper sense as less effective than a long series of recitations from the ancient books.

28. *The masseqtā.*—The ceremony termed *mas-*

segtā, 'mounting up,' 'ascent,' consists exclusively of such recitations, and is designed to help the souls of the departed if in their journey or flight to the better world they should be stopped by evil-disposed spirits or because of their own sins. The imagination of the Mandæans gave itself with zest to descriptions of this ascension and of the stations through which the soul must pass. Each station is pictured as a place where the adherents of a false religion, or various classes of sinful men, are kept in ward and punished, the term applied to such a place being *matrā*, or *matṭariā*, i.e. 'ward,' 'place of custody,' 'prison.' Some of the descriptions contain features taken from Parsi-Gnostic sources, as, e.g., the 'gates' of the planets situated one above the other (mentioned as Mithraic in Origen, *c. Cels.* vi. 22; cf. *MSS.* p. xii), or the guardian spirits who come to meet the soul, and—in the latest *Genzā* texts—the tree of life, the balance in which the soul is weighed, the judge of the dead, etc. (*MR.* p. 195 f.; so, in the Vatican *Divān*, beasts of prey lie in wait for the soul). The souls of the devout pass all the wards without molestation, because, according to the tractates of the *Genzā* which describe the ascension (x. R and iv. L), they give the 'name and sign' that they have 'taken from the waves of the water,' i.e. because they profess the Mandæan faith and thus show that they belong to the world of light. In place of this name and sign, however, the hymns of the *Genzā* (about 120 pieces), all of which find their themes in the destiny of the soul, its imprisonment in the body, its release, and its journey home to the world of light, insist rather upon the necessity of good works; with these was probably associated a devout spirit (cf., e.g., L 101. 3: 'I loved the Life, and Mandā d'hayyē dwelt in my heart'). It is but seldom, however, that we find in these hymns even a few words referring to the religious practice of the Mandæans or to the 'Jordan.' The explanation of this curious fact we take to be as follows. The *massegtā* for the dead is in reality a Mandæan imitation of a corresponding ceremony in the Parsi religion. According to Parsi doctrine, the soul, after leaving the body, is received by its own good thoughts, words, and works—which assume the form of a beautiful maiden—and by them is led across the narrow Chinvat bridge, or guarded against other objects of fear. Now the hymns in the *Genzā* are simply *massegtā* hymns, i.e., they were composed for use in the Mandæan ceremony. They are the work of Mandæan writers, as cannot be doubted in view of the matter incorporated in them, but in composing them the writers must have let their thoughts be guided by the example of the Parsi ceremony and the Parsi texts.

29. *Mandæan poetry.*—Although the majority of the Mandæan hymns can lay little claim to real poetic merit, they show at least that the Mandæans did not deal with their religious knowledge on purely intellectual lines, but found in it a source of true emotion, and the spirit that inspires them seems to be one of sincere and genuine emotion. As a specimen of the *massegtā* hymns we give here one of the most pleasing (L 89 f.); it should be premised that the use of the expression 'my conflict' rests upon the idea that the soul is entangled in the body and in its earthly conditions generally—an entanglement that is dissolved at death.

1. 'How I rejoice! How my heart doth rejoice! How I rejoice on the day when my conflict is dissolved, and I go to the place of the Life.'

I fly and I go. At the ward of Šameš ['the sun'] I arrived. I utter a call: "Who taketh me past the ward of Šameš?" "Thy merit and thy works and thine alms and thy well-doing take thee past the ward of Šameš."

Strophes 2, 3, 4, and 5 are all mere repetitions of the first, except that for Šameš they substitute respectively the moon, fire, the seven, and Rāhā. The hymn then proceeds:

2. 'How I rejoice! How my heart doth rejoice! How I

rejoice on the day when my conflict is dissolved, and I go to the place of the Life.'

I fly and I go. I arrived at the water-brooks. As I arrived at the water-brooks, the radiant beam (צורר נורא) came forth to meet me. He took me by my right hand and led me through the water-brooks. They [the celestial beings appeared for the purpose] brought splendour and clothed me with it; they brought their light and wrapped me round with it. Life reclined upon life, and found its own life; its own life it found.'

Here follow a few sentences composed of ancient formulae; their construction and, in part, their sense are difficult to make out.

30. *The Mandæans under Sasanian rule.*—The Mandæans never played a part in the field of politics. As long as they were allowed to go about their daily tasks without interference, their frame of mind was one of entire content. They were in no sense a warlike people, and their whole history, as well as their literature, shows that they were able to offer only a weak resistance to persecution and attacks upon their religion.

Babylonia, in the period preceding its conquest by the Arabs, belonged to the empire of the Sasanians. We cannot say whether the Mandæan hatred of the Jews was kindled by documents embodying an anti-Jewish Gnosis; it may perhaps date from the first half-century of our era, when a number of rapacious Jewish satraps, as related by Josephus (*Ant.* xviii. ix. 1 ff. [§ 310 ff., ed. Niese]), provoked the whole population to an outbreak against themselves and their compatriots.

The Sasanians persecuted the Manichæans and the Christians who adhered to Rome, but they spared the Nestorian Church, which was subject to the State, and the peaceable Mandæans. The latter, however, were sometimes ill-treated by Christian monks who went to them as missionaries. In the *Genzā* (xvi. R) we find an account of the Roman Catholic clergy and worship, and (i. and ii. R) we are told that the attempts to convert the Mandæans were not always carried out 'with sweetness'—with discourses and promises—but were also supported by force. In that satrapy, doubtless, the Nestorian Church had at one time sufficient influence to have the soldiery employed on its behalf; and, accordingly, we read (R 28. 16): 'When He [the 'Saviour Jesus'] compels you, say, "We are thine"; but in your hearts acknowledge Him not, and deny not the word of your lord, the exalted king of light; for hidden things are not manifest to the lying Messiah.'

31. *In the period of the Arabian invasion; migration.*—Then (c. A.D. 650) came the incursion of the Muslim Arabs, and the collapse of the Sasanian empire. Certain late portions of the *Genzā* make reference to the gate and the demons of the planet Mars, 'Nirig [Nergal] who is called the Arab 'Abdalā.'

'The whole earth is made subject to his throne'; to his followers all things fall a prey; 'day after day they make war and shed blood, and are ever an oppression to the tribe of the souls, and to the great family of the Life'; 'and there are also many souls of the great family of the Life who go over to them, and deny the name of the Life. . . . In their distress the devout Mandæans comforted themselves with the thought that the wicked 'Abdalā had fallen into one of the internal prisons, where his followers take him to task, asking why they now suffer torments in the realm of darkness while the servants of the alien [i.e. Mandā d'hayyē], against whom we drew the sword, mount up to the world of light' (*MR.* p. 182 f.).

It must have been about this period, in the 7th or 8th cent. A.D., that most of the Mandæans, having reached the limits of endurance, gave way before the Muslim Arabs, and migrated from Babylonia to the adjacent districts of Persia. It is possible that the minority, as found later on the Euphrates and the Tigris, had for a time ostensibly adopted Islām, or that they concealed themselves among the adjoining marshes.

32. *Restoration of the cultus.*—Tractate xxvii. R may be interpreted as a summons to a meeting of the Mandæan communities either on the banks of the rivers of Khūzistān or (after peace had been restored) in their old home; it is a manifesto in which 'we, the Tarmidās,' turn with prayer and

adjuration to the Mandæans of both sexes to urge them to fulfil their religious duties. The people are to come on Sundays to the temple (lit. 'dwelling'; down to modern times it was nothing more than a small house with gabled roof), where, in becoming order, they are to stand praying behind the Tarmidās, to take part in the communion, etc. This tractate is unmistakably one of the very latest compositions in the *Genzā*, and is a documentary witness to the rise of an ecclesiastical organization among the Mandæans. In earlier texts the term *tarmidē* (for תרמיד), like the corresponding word *μαθηταί* in the NT, means simply 'believers'; but by this time it was the name which the priests applied to themselves. The institution of Sunday, as is shown by its designation as *habsabbā* (ܠܚܒܫܒܒܐ; cf. Peshitta of Mt 28¹), was adopted by the Mandæans from Syro-Christian usage, though, of course, through the medium of documents of whose origin they were ignorant. The manifesto urges the due observance of the day (*MR*, pp. 88, 90). The religious ceremonies enjoined are those of old: immersion, performed by the individual himself or applied by parents to children, the stretching forth of the right hand, and the partaking of communion-bread. Everything is as yet quite primitive, in harmony with the fact that the *tarmidē*, 'priests,' are still hardly distinguishable from the *malfanē*, 'teachers,' reverence for whom had been enjoined in the moral code (cf. § 13).

33. Introduction of new ceremonies by the priests.—In the period that immediately followed the priests formed themselves into an organized body and gradually amplified the religious ceremonial with rites requiring the co-operation of an official celebrant, or, at least, elaborated such rites from the traditional usages, and conjoined them with the simple ceremonies of earlier times. Even towards the close of the period of the *Genzā* as attested in the latest sections of that work (cf. *MR*, p. 104), we find, besides the rite of marking the forehead with water from the river, a sign made with oil; a certain mixture was prescribed, and was to be prepared and applied by the priests. The draught of 'living' water was duplicated, being taken once from the individual's own hand and once from the priest's bowl (*qanīnā*). The priesthood ventured even to institute, in addition to the ordinary communion-bread, a host of higher order, the 'superior *pehtā*,' which was reserved for themselves and the *Salmānās* (see below). They also instituted a sacrament for the dying (cf. *MR*, p. 82), and, in addition to the *masseḡā* of the dead, one for the living. The latter was an eight days' ceremony, and conferred upon the person concerned the title of *salmānā tādā*, 'blessed perfect one,' as well as priestly rank; he was thenceforward regarded as dead to the world, and had to abstain from sexual intercourse. The ordinary immersions performed by the individual Mandæan as time and opportunity permitted—every day, morning and evening (Le-Gouz, *Voyage et observations*, p. 301), or only on Sundays and feast days, and the days preceding them (Siouffi, *La Religion des Soubbas*, p. 83)—could still be regularly performed without priestly assistance. About this time, however, an annual festival was introduced at which all the members of a community assembled upon the bank of a river. This celebration, conducted by a priest, included, in its first part, all the ceremonies requiring to be performed in the river and with river water; but here the priest, using his right hand, submerged the layman three times; thrice, too, he made the sign upon the recipient's forehead, and thrice, with his own hand, gave him water to drink (*Qolastā*, fol. 9. 32 ff.). Further, the first immersion of children now assumed the form of a

baptism administered by a priest with one or two assistants (for texts and references bearing upon these baptisms cf. *MR*, pp. 221-224).

34. Ceremonies wrongly interpreted by Europeans.—The assertion that the Mandæans worship the cross rests upon references in the *Narratio* of Ignatius a Jesu (p. 38), and is due to misapprehension. What actually takes place is that at great festivals a priest of higher rank sticks a few cane rods into the ground close together and cross-wise, and that he renders homage to this symbol. The structure is termed 'beams of splendour,' and may thus be regarded as symbolizing the world of light.

Reports dating from the 17th cent. agree in stating that it was the practice of the Mandæans in Basra to sacrifice a fowl once a year, and Jean Thévenot writes that he himself had witnessed 'la sacrifice de la ponde' on the 2nd of November 1665. Since, however, the Mandæan religion does not permit animal sacrifices, such statements refer in all likelihood to the fowl whose blood was used in preparing the special host mentioned above. According to Siouffi, the 'superior *pehtā*' was made but once a year, and was in the form of baked wheaten cakes, each of which was sprinkled on both sides with four drops of sesame oil and four drops of the blood of a newly-killed pigeon. The dead bird was afterwards buried in the temple, presumably with a view to ratifying its slaughter as a sacred act. The act was thus in no sense a sacrifice, and it is so little in keeping with the fabric of the Mandæan cult that its institution can be characterized only as a gross blunder on the part of the priests.

35. The priestly hierarchy; an order of confession in the Persian settlement.—The priestly system included the following grades: pupils, who were in training from their fifth or seventh year; assistants employed in the sacred ceremonies; priests, who had to pass an examination and be ordained; and high priests, chosen by the ordinary priests from their own number. The name applied to an assistant (and perhaps also to a pupil) was *sgandā* or *skandā* (cf. *MS*, p. 169), and to a priest, *tarmidā*, while a high priest bore the Persian title of *qanzibrdā*, 'treasurer.' Each priest had his own dishes and table, and partook of food and drink apart from the others; but his wife, by a special consecration, might sit with him at meals. There are numerous data which seem to indicate that the clericalizing of the Mandæan cult was carried furthest in the Persian settlement. Besides the title of the high priest, the names of several articles of priestly attire (*rastā*) are Persian words—*tāgā*, *kanzalā*, *pandāmā*. The priest's seal-ring (Siouffi, 'le chaumiavar') bears the device, 'Name of Yāwar zivā'; had the inscription originated in Babylonia, it would have been 'Name of Mandā d'hayyā.' Again, while the *Narratio* of Ignatius (p. 23) shows distinctly that the Mandæans of Basra knew nothing of the practice of confessing to a priest, Siouffi's informant, who appears to have studied in Persia, tells of a form of confession according to which the sinner, upon making a penitent acknowledgment of his sins, three times receives absolution for the same sin, i.e., he is assured of the remission of future penalty; but after the third time further transgression can be expiated only by certain good works. The passage of the *Genzā* to which appeal is made in support of this ordinance simply enjoins that the devout shall thrice 're-erect' apostates or transgressors before casting them out of the community.

36. Final redaction of the *Genzā* writings.—Persian loan-words are found even in the oldest Mandæan texts, but names like Yāwar ('friend,' 'helper'), Sām, and Bahrām (Verethraghna) could

seqtā, 'mounting up,' 'ascent,' consists exclusively of such recitations, and is designed to help the souls of the departed if in their journey or flight to the better world they should be stopped by evil-disposed spirits or because of their own sins. The imagination of the Mandæans gave itself with zest to descriptions of this ascension and of the stations through which the soul must pass. Each station is pictured as a place where the adherents of a false religion, or various classes of sinful men, are kept in ward and punished, the term applied to such a place being *maṭrā*, or *maṭṭartā*, i.e. 'ward,' 'place of custody,' 'prison.' Some of the descriptions contain features taken from Parsi-Gnostic sources, as, e.g., the 'gates' of the planets situated one above the other (mentioned as *Mitirnic* in Origen, c. *Col.* vi. 22; cf. *MS*, p. xii), or the guardian spirits who come to meet the soul, and—in the latest *Genzā* texts—the tree of life, the balance in which the soul is weighed, the judge of the dead, etc. (*MR*, p. 195 f.; so, in the Vatican *Divān*, beasts of prey lie in wait for the soul). The souls of the devout pass all the wards without molestation, because, according to the tractates of the *Genzā* which describe the ascension (x. R and iv. L), they give the 'name and sign' that they have 'taken from the waves of the water,' i.e. because they profess the Mandæan faith and thus show that they belong to the world of light. In place of this name and sign, however, the hymns of the *Genzā* (about 120 pieces), all of which find their themes in the destiny of the soul, its imprisonment in the body, its release, and its journey home to the world of light, insist rather upon the necessity of good works; with these was probably associated a devout spirit (cf., e.g., L 101. 3: 'I loved the Life, and Mandā d'hayyē dwelt in my heart'). It is but seldom, however, that we find in these hymns even a few words referring to the religious practice of the Mandæans or to the 'Jordan.' The explanation of this curious fact we take to be as follows. The *masseḡtā* for the dead is in reality a Mandæan imitation of a corresponding ceremony in the Parsi religion. According to Parsi doctrine, the soul, after leaving the body, is received by its own good thoughts, words, and works—which assume the form of a beautiful maiden—and by them is led across the narrow Chinvat bridge, or guarded against other objects of fear. Now the hymns in the *Genzā* are simply *masseḡtā* hymns, i.e., they were composed for use in the Mandæan ceremony. They are the work of Mandæan writers, as cannot be doubted in view of the matter incorporated in them, but in composing them the writers must have let their thoughts be guided by the example of the Parsi ceremony and the Parsi texts.

29. Mandæan poetry.—Although the majority of the Mandæan hymns can lay little claim to real poetic merit, they show at least that the Mandæans did not deal with their religious knowledge on purely intellectual lines, but found in it a source of true emotion, and the spirit that inspires them seems to be one of sincere and genuine emotion. As a specimen of the *masseḡtā* hymns we give here one of the most pleasing (L 89 f.); it should be premised that the use of the expression 'my conflict' rests upon the idea that the soul is entangled in the body and in its earthly conditions generally—an entanglement that is dissolved at death.

1. 'How I rejoice! How my heart doth rejoice! How I rejoice . . . when my conflict is dissolved, and I go to the place of the Life.'

I fly and I go. At the ward of Šameš ['the sun'] I arrived. I utter a call: "Who taketh me past the ward of Šameš?" "Thy merit and thy works and thine alms and thy well-doing take thee past the ward of Šameš."

Strophes 2, 3, 4, and 5 are all mere repetitions of the first, except that for Šameš they substitute respectively the moon, fire, the seven, and Rāhā. The hymn then proceeds:

6. 'How I rejoice! How my heart doth rejoice! How I

rejoice on the day when my conflict is dissolved, and I go to the place of the Life.'

I fly and I go. I arrived at the water-brooks. As I arrived at the water-brooks, the radiant beam (צוריר יוא) came forth to meet me. He took me by my right hand and led me through the water-brooks. They [the celestial beings appointed for the purpose] brought splendour and clothed me with it; they brought their light and wrapped me round with it. Life reclined upon life, and found its own life; its own life it found.'

Here follow a few sentences composed of ancient formulae; their construction and, in part, their sense are difficult to make out.

30. The Mandæans under Sasanian rule.—The Mandæans never played a part in the field of politics. As long as they were allowed to go about their daily tasks without interference, their frame of mind was one of entire content. They were in no sense a warlike people, and their whole history, as well as their literature, shows that they were able to offer only a weak resistance to persecution and attacks upon their religion.

Babylonia, in the period preceding its conquest by the Arabs, belonged to the empire of the Sasanians. We cannot say whether the Mandæan hatred of the Jews was kindled by documents embodying an anti-Jewish Gnosis; it may perhaps date from the first half-century of our era, when a number of rapacious Jewish satraps, as related by Josephus (*Ant.* xviii. ix. 1 ff. [§ 310 ff., ed. Niese]), provoked the whole population to an outbreak against themselves and their compatriots.

The Sasanians persecuted the Manichæans and the Christians who adhered to Rome, but they spared the Nestorian Church, which was subject to the State, and the peaceable Mandæans. The latter, however, were sometimes ill-treated by Christian monks who went to them as missionaries. In the *Genzā* (xvi. R) we find an account of the Roman Catholic clergy and worship, and (i. and ii. R) we are told that the attempts to convert the Mandæans were not always carried out 'with sweetness'—with discourses and promises—but were also supported by force. In that satrapy, doubtless, the Nestorian Church had at one time sufficient influence to have the soldiery employed on its behalf; and, accordingly, we read (R 28. 16): 'When He [the 'Saviour Jesus'] compels you, say, "We are thine"; but in your hearts acknowledge Him not, and deny not the word of your lord, the exalted king of light; for hidden things are not manifest to the lying Messiah.'

31. In the period of the Arabian invasion; migration.—Then (c. A.D. 650) came the incursion of the Muslim Arabs, and the collapse of the Sasanian empire. Certain late portions of the *Genzā* make reference to the gate and the demons of the planet Mars, 'Nirig [Nergal] who is called the Arab 'Abdalā.'

'The whole earth is made subject to his throne'; to his followers all things fall a prey; 'day after day they make war and shed blood, and are ever an oppression to the tribe of the souls, and to the great family of the Life'; 'and there are also many souls of the great family of the Life who go over to them, and deny the name of the Life. . . . In their distress the devout Mandæans comforted themselves with the thought that the wicked 'Abdalā had fallen into one of the infernal prisons, where his followers take him to task, asking why they now suffer torments in the realm of darkness while the servants of the alien [i.e. Mandā d'hayyē], against whom we drew the sword, mount up to the world of light' (*MR*, p. 182 f.).

It must have been about this period, in the 7th or 8th cent. A.D., that most of the Mandæans, having reached the limits of endurance, gave way before the Muslim Arabs, and migrated from Babylonia to the adjacent districts of Persia. It is possible that the minority, as found later on the Euphrates and the Tigris, had for a time ostensibly adopted Islām, or that they concealed themselves among the adjoining marshes.

32. Restoration of the cultus.—Tractate xxvii. R may be interpreted as a summons to a meeting of the Mandæan communities either on the banks of the rivers of Khuzistān or (after peace had been restored) in their old home; it is a manifesto in which 'we, the Tarmidās, turn with prayer and

adjunction to the Mandaëans of both sexes to urge them to fulfil their religious duties. The people are to come on Sundays to the temple (lit. 'dwelling'; down to modern times it was nothing more than a small house with gabled roof), where, in becoming order, they are to stand praying behind the Tarmidās, to take part in the communion, etc. This tractate is unmistakably one of the very latest compositions in the *Genzā*, and is a documentary witness to the rise of an ecclesiastical organization among the Mandaëans. In earlier texts the term *tarmidē* (for תרמיד), like the corresponding word *μαθηταί* in the NT, means simply 'believers'; but by this time it was the name which the priests applied to themselves. The institution of Sunday, as is shown by its designation as *habsabbā* (ܠܚܒܫܒܐ; cf. Peshitta of Mt 28¹), was adopted by the Mandaëans from Syro-Christian usage, though, of course, through the medium of documents of whose origin they were ignorant. The manifesto urges the due observance of the day (*ME*, pp. 88, 90). The religious ceremonies enjoined are those of old: immersion, performed by the individual himself or applied by parents to children, the stretching forth of the right hand, and the partaking of communion-bread. Everything is as yet quite primitive, in harmony with the fact that the *tarmidē*, 'priests,' are still hardly distinguishable from the *malʿānē*, 'teachers,' reverence for whom had been enjoined in the moral code (cf. § 13).

33. Introduction of new ceremonies by the priests.—In the period that immediately followed the priests formed themselves into an organized body and gradually amplified the religious ceremonial with rites requiring the co-operation of an official celebrant, or, at least, elaborated such rites from the traditional usages, and conjoined them with the simple ceremonies of earlier times. Even towards the close of the period of the *Genzā* as attested in the latest sections of that work (cf. *ME*, p. 104), we find, besides the rite of marking the forehead with water from the river, a sign made with oil; a certain mixture was prescribed, and was to be prepared and applied by the priests. The draught of 'living' water was duplicated, being taken once from the individual's own hand and once from the priest's bowl (*qanīnā*). The priesthood ventured even to institute, in addition to the ordinary communion-bread, a host of higher order, the 'superior *pehtā*,' which was reserved for themselves and the *Salmanās* (see below). They also instituted a sacrament for the dying (cf. *ME*, p. 82), and, in addition to the *masseḡtā* of the dead, one for the living. The latter was an eight days' ceremony, and conferred upon the person concerned the title of *salmanā tábā*, 'blessed perfect one,' as well as priestly rank; he was thenceforward regarded as dead to the world, and had to abstain from sexual intercourse. The ordinary immersions performed by the individual Mandaean as time and opportunity permitted—every day, morning and evening (Le-Gouz, *Voyage et observations*, p. 301), or only on Sundays and feast days, and the days preceding them (Siouffi, *La Religion des Soubbas*, p. 83)—could still be regularly performed without priestly assistance. About this time, however, an annual festival was introduced at which all the members of a community assembled upon the bank of a river. This celebration, conducted by a priest, included, in its first part, all the ceremonies requiring to be performed in the river and with river water; but here the priest, using his right hand, submerged the layman three times; thrice, too, he made the sign upon the recipient's forehead, and thrice, with his own hand, gave him water to drink (*Qolastā*, fol. 9. 32 ff.). Further, the first immersion of children now assumed the form of a

baptism administered by a priest with one or two assistants (for texts and references bearing upon these baptisms cf. *ME*, pp. 221-224).

34. Ceremonies wrongly interpreted by Europeans.—The assertion that the Mandaëans worship the cross rests upon references in the *Narratio* of Ignatius a Jesu (p. 38), and is due to misapprehension. What actually takes place is that at great festivals a priest of higher rank sticks a few cane rods into the ground close together and cross-wise, and that he renders homage to this symbol. The structure is termed 'beams of splendour,' and may thus be regarded as symbolizing the world of light.

Reports dating from the 17th cent. agree in stating that it was the practice of the Mandaëans in Basra to sacrifice a fowl once a year, and Jean Thévenot writes that he himself had witnessed 'la sacrifice de la poule' on the 2nd of November 1665. Since, however, the Mandaean religion does not permit animal sacrifices, such statements refer in all likelihood to the fowl whose blood was used in preparing the special host mentioned above. According to Siouffi, the 'superior *pehtā*' was made but once a year, and was in the form of baked wheat cakes, each of which was sprinkled on both sides with four drops of sesame oil and four drops of the blood of a newly-killed pigeon. The dead bird was afterwards buried in the temple, presumably with a view to ratifying its slaughter as a sacred act. The act was thus in no sense a sacrifice, and it is so little in keeping with the fabric of the Mandaean cult that its institution can be characterized only as a gross blunder on the part of the priests.

35. The priestly hierarchy; an order of confession in the Persian settlement.—The priestly system included the following grades: pupils, who were in training from their fifth or seventh year; assistants employed in the sacred ceremonies; priests, who had to pass an examination and be ordained; and high priests, chosen by the ordinary priests from their own number. The name applied to an assistant (and perhaps also to a pupil) was *sgandā* or *skandā* (cf. *MS*, p. 169), and to a priest, *tarmidā*, while a high priest bore the Persian title of *ganziabrā*, 'treasurer.' Each priest had his own dishes and table, and partook of food and drink apart from the others; but his wife, by a special consecration, might sit with him at meals. There are numerous data which seem to indicate that the clericalizing of the Mandaean cult was carried furthest in the Persian settlement. Besides the title of the high priest, the names of several articles of priestly attire (*rustā*) are Persian words—*tāgā*, *kanzalā*, *pandāmā*. The priest's seal-ring (Siouffi, 'le chaumiavar') bears the device, 'Name of Yāwar ziwā'; had the inscription originated in Babylonia, it would have been 'Name of Mandā d'hayyē.' Again, while the *Narratio* of Ignatius (p. 23) shows distinctly that the Mandaëans of Basra knew nothing of the practice of confessing to a priest, Siouffi's informant, who appears to have studied in Persia, tells of a form of confession according to which the sinner, upon making a penitent acknowledgment of his sins, three times receives absolution for the same sin, i.e., he is assured of the remission of future penalty; but after the third time further transgression can be expiated only by certain good works. The passage of the *Genzā* to which appeal is made in support of this ordinance simply enjoins that the devout shall thrice 're-erect' apostates or transgressors before casting them out of the community.

36. Final redaction of the *Genzā* writings.—Persian loan-words are found even in the oldest Mandaean texts, but names like Yāwar ('friend,' 'helper'), Sām, and Bahrām (Verethraghna) could

hardly have come into vogue among the Mandæans except on Persian soil. When, accordingly, in many tractates we find these names taking the place of the undoubtedly more ancient Mandā d'Hayyē, and when we observe that in others, in passages where the bearer of that epithet is mentioned, it is added that he is also called Sām, Yāwar, etc., it seems highly probable that most of the tractates in the *Genzā* underwent their final redaction, i.e. attained their present form, in the Persian province.

37. **Religious decadence; obsolescence of the language.**—By the time when the 'Abbāsid khalifs had established peace and order throughout their domains, the Mandæan religion had passed its zenith. The desire for knowledge and the spirit of enthusiasm were quenched; the theological activities that had been earnestly directed towards a solution of life's enigmas had spent themselves, and had given place—as in the writers of the *Drāsē d'malkē* and the *Sidrā d'Yahyā*—to placid dialectics and fable-making. The soul which knew that it had come forth from a better world and would again behold its primal abode was no longer a well-spring of sacred lyric; the Mandæan had, in fact, become familiarized with his faith, and was now anxious simply to bring his store of ancient hymns into order, to keep it intact, and to use it properly. It was in this period that the Mandæans gathered their writings into collections, and composed the liturgical directions or regulations comprised in the *Qolastā*, the *Marriage Formulary*, and the *Paris Dīwān*. Moreover, living, as they now did, in isolated groups among peoples of other faiths, they gradually lost the use of their ancestral dialect, and Arabic, which had made its way into these districts, became their vernacular, though Mandæan still maintained its place in religious worship. In the process of organizing the ritual every ceremony came to be introduced and concluded with recitations from the sacred books; in the *masseghā*, indeed, the recitations constituted the main element, and, according to Sionfi, this ceremonial, designed to succour the departed, lasted for seven days. Since, however, the teachings of the *Genzā* required all believers to engage in such recitations, the priests endeavoured, by instructing the young, to confer upon the laity the ability to read and, as far as possible, to understand the texts, although their own learning was doubtless almost wholly confined to a knowledge of the liturgy and a traditional understanding of their own language.

38. **The Šābians of the Qur'ān; Mughtasila and Mandæans.**—In the Qur'ān we find three passages (ii. 59, v. 73; cf. xxii. 17) in which the Jews, the Naṣarāans (Christians), and the Šābians are assured of religious toleration. The famous Muslim scholar al-Mas'ūdī, writing in the 10th cent., speaks of Chaldean or Babylonian Šābians 'whose remnants live to-day in villages among the swamps between Wāsiṭ and Baṣra,' states that in their prayers they turn to the pole-star and Capricorn, and describes them as 'those who wear girdles' (S. de Sacy, *Notices et extraits*, viii. i. [1810] 132 ff.). The Mandæans turned towards the north, and wore the girdle. Moreover, the *Kitāb al-Fihrist* (p. 340, l. 26) states that the Šābians of the marshes are the Mughtasila, a word meaning 'those who wash themselves,' and it also declares that they wash all their food—a practice which, so far at least as flesh-food is concerned, is also enjoined in the *Genzā*. To these Mughtasila, however, the same writer ascribes a doctrine of dualism—a thing quite unknown in the Mandæan documents; and he also states that many of them still worship the stars, while, on the other hand, the guarantee of toleration in the Qur'ān assumes that

the Šābians believe in One God (and in the Last Judgment). To account for these references to the Mughtasila there seem to be two alternative hypotheses at our disposal: we may suppose either that the Šābians of the marshes were descendants of that group of originally heathen baptists of Babylonia which did not share the religious development of the Mandæans, or that some of the Mandæans had taken refuge from the Arabs in the swamps (§ 31), and there, while adhering to their custom of bathing and washing, had adopted new and alien doctrines. For further particulars regarding the Mughtasila cf. art. ELKESAITES, vol. v. p. 268.

The passages in the Qur'ān and the name 'Šābians' would apply most approximately to the Mandæans. The Mandæans, in speaking of their practice of immersion, always employ forms of the verbal root טבא, as, e.g., in R 286. 1: טבאן זרעאן, 'who immerse their sons and their daughters'; by their Arab neighbours they were termed Šubba down even to recent times, and in European accounts dating from the 17th cent. they were called 'Sabbi,' 'Sabbei,' 'Sabi,' 'Sabai'—the termination being that of the Ital. or Lat. plural. The name may formerly have covered the Mughtasila as well, and the latter possibly also came under the references of the Qur'ān. As regards the Mandæans, we have already seen that, as an outcome of the doctrine of the king of light, they had become monotheists, and that they believed in a future retribution.

39. **Ostensible Christianity of the Mandæans.**—The toleration extended to the Šābians by no means secured for the Mandæans a condition of life satisfactory in every respect. In course of time—perhaps more than once—circumstances arose in which they thought it better to be regarded as Christians. As, however, besides the name of 'Mandāyē,' they had also adopted that by which the Christians were known, viz. 'Nāṣōrāyē'—in the *Genzā* the latter is actually used more frequently than the former—it would demand no great effort on their part to say that they were Christians. If, e.g., they no longer wished to be regarded as akin to the Šābians dwelling in the marshes, or if they hoped to evade a tax imposed specifically on the Šābians, they would probably assume the Christian name without misgiving. According to Ignatius a Jesu (*Narratio*, i., a chapter written by himself), the Mandæans of Baṣra believed that Muḥammad had granted them a document guaranteeing their safety, but that his successors had not respected it. Ignatius also states that the Mandæans were formerly united with the Chaldean Christians, but that, about one hundred and seventy years before his time, they had renounced the authority of the Babylonian patriarch and abandoned the name of 'Christians.' If we qualify this statement by saying that the Mandæan communities had at one time joined hands with the Church—though only for a while—it will be quite correct.

The Arabian writer, Ḥamza Iṣṭahānī (belonging, like the two Arabian writers already cited, to the 10th cent.), affirms that the true Šābians, i.e. those whom the Qur'ān has in view, were heretical Christians, 'living between the desert and the swamps.' This opinion may have arisen from a fusion of vague reports about the Mandæans and the Mughtasila, and it might possibly be taken as indirect evidence that as early as the 10th cent. the Mandæans desired to be regarded as Christians. On the other hand, a Muslim might quite well think of all the Šābians, by reason of their baptistic practices, as belonging to the Christian body.

40. **The Mandæans as 'Christians of St. John.'**—The Portuguese monks through whose reports the existence of the Mandæans was first made known in Europe asserted that they were descended from the disciples of John the Baptist (cf. a letter from Pietro della Valle, dated June 1622), and

from that time, in treatises and text-books of Church History, they have been referred to and regarded (on the ground of Ac 18²⁵ 19¹².) as Christians S. Ioannis, 'Christians of St. John.' It was not without some support from their own side that this designation gained currency. A number of Mandæans who had transferred their allegiance to the Roman Catholic Church visited Rome in the period between 1652 and 1660, and Abraham Echellensis, who cultivated a most friendly intercourse with them in order to gain the fullest possible information regarding their characteristics and doctrine, was told by them that their people called themselves 'Nasāræans of Yahyâ'—though in Arabic only, the qualifying phrase perhaps meaning that they did not call themselves so in their own religious language, or among themselves, but that they adopted the name only in their intercourse with people of a different faith; at all events the phrase implies that they did not speak of themselves as *kristiânê* (R 55. 14, 282. 12).

John the Baptist is mentioned in a single tractate only (cf. § 11), which long lay almost unnoticed by the Mandæans, but at length, when the final additions and a number of titles to the writings of the *Genzâ* came to be formulated (R 57. 23, 188. 26, 213. 10, 218. 23), a period opened in which the Mandæans turned to the figure of the Baptist with intense interest, and it is worthy of note that his old name Yôhannâ (which they pronounce Yûhânâ) was now expanded to Yahyâ-Yôhannâ, or was sometimes simply superseded by Yahyâ. Yahyâ is the Arabic form of the name—the form by which the Baptist is mentioned and highly extolled in the *Qur'ân* (iii. 34, vi. 85, xix. 13–15). May we not, therefore, venture to suppose that the reason why the writers of this period bring John into such prominence and make him a hero of their people was that they had already begun to refer to him, in the presence of the Muslim authorities, as the prophet of their religion? Henceforth they could claim, whenever and wherever they thought fit, to rank as 'Nâsôrâyê d'Yahyâ'—a name which, to all except themselves, could mean nothing else than 'Christians of John.'

Finally, they are said actually to have introduced the name of Yahyâ-Yûhânâ into their baptismal formula, and to have done so, in fact, by speaking of the rite itself as having been instituted by God, by Mandâ d'hayyê, and by John (cf. *MR*, p. 225, on Siouffi's authority). This innovation would seem to be best explained as a result of the lesson constantly impressed upon the Mandæans by Roman Catholic missionaries during the 17th cent., viz. that their baptism was only the baptism of John mentioned in Ac 18²⁵ 19³, and as a counter-stroke to the attempts to bring them within the Roman Catholic fold.

41. In the period of the Portuguese ascendancy in the Persian Gulf.—In the 16th cent. the Portuguese dominated the Indian Ocean, establishing themselves securely at Goa on the Indian and at Muscat on the Arabian coast, and in the harbours of Ceylon. They forced their way into the Persian Gulf, and on the coast of Persia made the island of Hormuz the base of their military forces; and with the pasha of the district of Basra they reached an agreement by which, in return for annual gifts, he permitted them to have a trading-station in Basra, and promised to protect it. The Portuguese soldiers and traders were everywhere followed by the Jesuits, who founded missions, and secured the government of such settlements as 'Christian territories' according to the regulations of the Inquisition. Thus Portuguese monks came to Basra, where they obtained a house and made one of its rooms into a church, their hope being to win

for the Roman faith more particularly the schismatic (Nestorian and Armenian) Christians living in the district. Their attention, however, would soon be attracted by the Mandæans, for the number of the latter in Basra and its neighbourhood in the 17th cent. was still estimated at 14,000–15,000, while in the city itself they are said to have formed the majority of the population (Le-Gouz). Decades may have elapsed, however, before the monks learned that the 'Sabbi' held John the Baptist in honour and baptized their children, and so came to believe that this baptistic people were already semi-Christians, and needed only a little instruction in order to become good Catholics. The *Discursus* which Ignatius issued as a supplement to the *Narratio* provides the arguments to be employed in persuading the Mandæan priests; but the latter were not to be won over by such simple means. Thereupon the missionaries, bent upon gaining their end, induced the pasha to order the Sabbi, under threat of fines or bodily penalties, to attend the Roman Catholic place of worship and observe Sunday according to the Christian practice of resting from servile work on that day. In this way the work of conversion was set on foot, supported, however, by doles of food and clothing to the children of the poorer Mandæans.

About this time the Mandæan communities suffered a considerable loss from another cause. In the early years of the 17th cent. the Portuguese found that their commercial monopoly on the Persian coast was challenged, and by way of strengthening their powers of defence they resorted to the employment of mercenaries. To the Portuguese cantonments the Mandæans are said to have flocked in vast numbers from Basra, and, no doubt, from Persia also—people who, of course, had there barely managed to live. In their new capacity they were instructed in the Christian faith and received Christian baptism (Le-Gouz, della Valle).

The fortified inshore island of Hormuz, which commanded the entrance to the Persian Gulf, was invested by British merchantmen and the military forces of the 'Duke' of Shiraz in 1622, and surrendered on the 1st of May of that year. The prestige of the Portuguese was at an end; their missionaries withdrew from Basra, and the Mandæans once more enjoyed freedom in their religious services. Of the Christian converts some embraced Islâm, while the rest reverted to their ancestral faith—'et ne s'en conserva pas quatre Chrétiens' (Le-Gouz).

42. In Basra in the time of Ignatius a Jesu.—The place of the Portuguese Jesuits was taken by an Italian mission of Discalced Carmelites under the leadership of Ignatius a Jesu. Within a few years Ignatius came to realize that great or lasting results would never be secured among the Mandæans while they lived in Persia, and he devised the plan of persuading them to emigrate to Christian territories. From the Portuguese viceroy in the Indian Ocean he obtained a guarantee that Mandæans who so desired would receive grants of land in the colonies under the viceregal authority, on condition that they would give their allegiance to the Roman Catholic Church. The offer of settlements in Ceylon was accepted by many who were eventually rejected because they insisted upon being allowed to take their priests with them and to remain loyal to their faith; but, notwithstanding this, a number of Mandæans were sent forth, such migrations having taken place, as has been ascertained by Assemani from documents of the *Congregatio de propaganda fide*, in the years 1629, 1633, 1646, and 1650. The whole affair, however, came to very little, and all that Ignatius himself says of it is that he had once sent to the

viceroys of Goa a number of men who were to act as the spokesmen of their people, and also to look for suitable residences in Ceylon, and that at length other fifty Mandæans, some of them with their wives and children, had set out for Muscat. It may be remarked that between 1638 and 1658 the Portuguese were gradually expelled from Ceylon by the Dutch.

43. Numerical strength of the Mandæan communities in the 17th century.—Information regarding the numerical strength of the Mandæans and their diffusion in the contiguous provinces of Turkey and Persia—as found, probably, in the first half of the 17th cent.—is provided by a map published in Paris by Melchisedech Thévenot in 1663. This map, which, unfortunately, bears no date, embraces the area throughout which the Mandæan communities were scattered, and gives on its lower margin a list of the townships in which they were located and the number of families in each community. We find an aggregate of 3279 families living in 31 settlements. By far the largest figure, exactly 2000, is conjoined with Huwaiza, in Persia;¹ next comes Tina with 500 families and Basra with 400, then one place with 50, two with 30, and others with numbers ranging from 2 to 20, while to four place-names a dotted line is attached, and to several others only a stroke. We shall thus hardly err in assuming a total of some 3400 families.

44. Reports of European travellers since 1650.—Ignatius a Jesu left Basra in 1650 or 1651, and the Christians no longer endeavoured to win the Mandæans for the Church. It is true that the mission-house was not abandoned, and that the banner of the Cross continued to wave from its roof, while the pasha still received his annual gift; but, when Jean Thévenot lodged there in 1665, he found that it was tenanted only by a single Italian monk, and that the church stood open for prayer not only to Europeans, but to Nestorian and Armenian Christians. Shortly afterwards, when the station had once more been brought into working order, its director, the Carmelite Archangelus a S. Theresia, was obliged to expend a considerable sum of money to procure Mandæan MSS for Robert Huntington, who lived in Aleppo from 1671 to 1681. The vendors were a couple of Mandæans, one of whom had to be assured upon oath that his co-religionists should never hear of the transaction, while the other had become a convert to Islām.

A long period then elapsed during which little or no information regarding the Mandæans reached Europe. Paragraphs devoted to them (and often referred to in encyclopedias) in J. Chardin, *Voyages*, etc. (Paris, 1686 ff.), and E. Kaempfer, *Amamitatum*, etc., fasc. v. (Lemgow, 1712), simply repeat accounts previously published. In 1765 Carsten Niebuhr visited Basra and found that only a few 'Sabians' lived there; he had their alphabet transcribed for him by a smith. Naval Lieutenant Ormsby, the friend of J. R. Wellsted, stayed at Hit for five days in 1833, and ascertained that the Mandæans had a community with a priest in that city, though neither there nor elsewhere could he learn anything about them but the most meagre details.

The first European to gain really fresh information regarding the Mandæans was the German Orientalist H. Petermann, who, in the spring of 1854, spent three months in Süq es-Siyūkh on the Euphrates, learned the Mandæan language from the local high priest Yahyā (Būlad), and in the latter's company was permitted to be present at a

number of ceremonies, including the five days' baptismal festival. At length, however, a much greater addition to our knowledge was contributed by the information with which a grandson of this Yahyā gratified the curiosity of N. Siouffi, French vice-consul at Baghdad, in 1875. The fullness and accuracy of the communications are explained by the fact that the informant, before embracing Christianity when about twenty-five, had received an education qualifying him to become a Mandæan priest, but it is necessary to state that his account of the Mandæan doctrines and legends was wholly dependent upon a late version, from which every difficulty had been expunged (cf. *ME*, pp. 17-19), and that he could describe the methods and customs of his people only in their most recent phases of development.

45. The Mandæans in the 19th century.—The books of Petermann and Siouffi contain observations from which we may learn how the Mandæans had fared in the long interval from the 17th cent., and it would seem that in this period, too, the vicissitudes of their ordinary life were due to suffering and want. About the year 1800 30 families in Shushter alone are said to have seceded to Islām, and 'many Mandæans' are reported to have done so about 1825. The great pestilence which ravaged Persia and Mesopotamia in 1831 carried off the entire priesthood with the exception of two *šgandās*, and at some unspecified date the Mandæans forsook Basra owing to its deadly climate. In the vicinity of Huwaiza only 25 families remained, all the rest having removed because the river (Kercha) had almost completely dried up. Süq es-Siyūkh (which does not appear in the list subjoined to Thévenot's map), or rather the village of Šubbūye on the other side of the river, had become one of the main domiciles of the Mandæans (the 'Šubba'), and was named after them. The district, however, was ruled by a Bedawin *šaiikh*, who so afflicted the village with chicanery and extortion that about 200 of the 260 families composing the local Mandæan community abandoned it in 1853 and removed to Ammāra on the Tigris, where the second largest community (about 100 families) had enjoyed a more favourable lot under Turkish rule. Petermann also mentions Qurna, at the confluence of the Euphrates and the Tigris, with 40 families, and Muhammara, on the Shatt al-Arab below Basra, with 4, as well as the Persian towns of Dizful with 80, and Shushter with 34. He makes an aggregate of about 560 families, with 10 priests. Siouffi mentions other 11 settlements, 6 in Turkish and 5 in Persian territory, and his estimate of the total number of Mandæans is 4000, of whom 1500 were males. These two enumerations bring us to the years 1854 and 1875 respectively. Whether any Mandæan communities still exist the present writer is not in a position to say.

MANETHO.—This historian of Egypt was born at Sebennytus, the *Theb-Neteret* of the hieroglyphic inscriptions, and lived during the reigns of Ptolemy Lagi and Ptolemy Philadelphus. His name is probably the Gr. form of *Mā-en-Tehuti*, 'Gift of Thōth'—equivalent to the Gr. Ἐρμούδωρος. The following works have been attributed to him, some of them on doubtful authority: (1) *Ἀλγυπτιακά*, (2) *Βιβλος Σάβεος*, (3) *Ἱερὰ Βιβλος*, (4) *Φυσικὴν ἐπιτομήν*, (5) *Περὶ ἑορτῶν*, (6) *Περὶ ἀρχαῖσμοι καὶ εὐσεβείας*, (7) *Περὶ κατασκευῆς κυρίων*. His reputation rests upon the *Ἀλγυπτιακά*, a history of Egypt which he compiled at the request of Ptolemy Philadelphus. The first part of his work dealt with the mythological era in the history of Egypt, and the first eleven of the thirty historical dynasties; the second began with the XIIth dynasty, and ended with the XIXth; the third comprised dynasties XX.-XXX. The work was written in Greek, and has, unfortunately, perished, with the exception of the list of kings, which has been preserved in corrupt and incomplete forms by Julius Africanus, Eusebius, and George the Syncellus.

An examination of these king lists shows that in many particulars Julius Africanus and Eusebius do not agree in their rendering—i.e. in arrangement of the dynasties, in the lengths of the reigns, and in the total number of kings assigned to the various dynasties. According to Africanus, 561 kings reigned in about 5524 years, while, according to Eusebius, only about 361 kings reigned in 4480 or 4780 years. The version of Africanus is clearly the more accurate of the two, agreeing best with the monuments. It seems fairly certain that Africanus had access to the actual work of Manetho. The version of Eusebius was based on that of Africanus, and shows carelessness in the copying of both names and figures. It will thus be seen that the work of Manetho must be received with some caution, for his king lists have become very corrupt; and it is probable that the Christian writers who transmitted his system, being anxious to reconcile it with the accepted Biblical chronology, have curtailed his lists to some extent. Nevertheless Manetho's work remains the standard authority on Egyptian chronology, and upon it all attempts to restore that chronology must be based.

The chief original authorities with which his work may be compared are: (1) the Turin Royal Papyrus—lamentably mutilated, and badly restored; (2) the Tablet of Abydos, containing a list of 75 kings, dynasties I.-XIX.; (3) the Tablet of Saqqarah—47 royal names in practically the same order as (2); and (4) the Tablet of Karnak, containing a list of 61 kings—the cartouches are not

arranged chronologically. The lists of Manetho are much more complete than any of these, and it is to him that we owe the accepted distribution into dynasties.

Opinions differ widely as to the value of his historical work. A period in which he was regarded as a mere fabricator was succeeded by one in which his authority was considered practically unimpeachable. Thus Lenormant says:

'He is now the first of all authorities for the reconstruction of the ancient history of Egypt' (*Anc. Hist. of the East*, i. 201).

More modern authorities are sharply divided. Adverse opinion may be represented by Breasted's sweeping dictum:

'A late, careless and uncritical compilation, which can be proven wrong from the contemporary monuments in the vast majority of cases where they have survived. Its dynastic totals are so absurdly high throughout that they are not worthy of a moment's credence, being often nearly or quite double the maximum drawn from contemporary monuments, and they will not stand the slightest criticism. Their accuracy is now maintained only by a small and constantly decreasing number of modern scholars' (*Hist. of Egypt*, p. 23).

This is so sweeping as to suggest bias at once; and, when it is remembered that an exactly opposite judgment is pronounced by authorities of such standing as Maspero and Flinders Petrie, its oracular tone becomes merely ridiculous. Maspero's verdict is as follows:

'The system of Manetho, in the state in which it has been handed down to us by epitomizers, has rendered, and continues to render, service to science; if it is not the actual history of Egypt, it is a sufficiently faithful substitute to warrant our not neglecting it when we wish to understand and reconstruct the sequence of events. His dynasties furnish the necessary framework for most of the events and revolutions, of which the monuments have preserved us a record' (*Dawn of Civilization*, p. 228).

Still more emphatically favourable is Petrie's judgment:

'An authority of the highest order. . . The internal evidence is also strong for the care given to his work and its precision. . . Manetho has been often accused of double reckoning, by stating two contemporary dynasties or kings separately. Every instance in which this has been supposed has broken down when examined in detail. Not a single case of overlapping periods can be proved against him. On the contrary, there are two excellent proofs of his care to avoid such errors' (*Researches in Sinai*, p. 171).

Possibly the truth may lie somewhere between the two extreme opinions, and Manetho may be neither so careless as Breasted alleges nor so immaculate as Petrie affirms. In any case, even his detractors cannot afford to do without him; for every reconstruction of the history of Egypt is based, and will continue to be based, on the dynastic framework which he has provided.

What system of dating we are to derive from his dynastic scheme and other sources is another question. Here also there is fundamental disagreement. As far back as 1580 B.C. there is practically no difference between the various schemes of dating, and Egyptian chronology may be looked upon as settled with only a few years' margin of error up to that point. Beyond that lies chaos. The Berlin school, represented by Meyer and Breasted, dates the beginning of the 1st dyn. at 3400 B.C., and that of the XIIth, fixed by astronomical data, at 2000 B.C. Wallis Budge, still clinging to Brugsch's system, gives 4400 B.C. for the 1st dyn. and 2400 B.C. for the XIIth. Petrie gives 5510 B.C. for the 1st dyn., and, using the same astronomical data as the Berlin school, 3450 B.C. for the XIIth. Here it is most unlikely that the truth lies between the two extremes, and Brugsch's *via media* seems to lead nowhere. The gigantic gap between Petrie's dates and those of Berlin is due to the fact that Petrie holds that the advocates of the shorter system have dropped a whole Sothic period of 1460 years out of their reckoning. If the astronomical foundation be sound, the truth must lie either with the shortest or with the longest system, and only further

research can clear up the problem. Meanwhile the tendency has been somewhat in the direction of the Berlin system, which, according to Petrie, 'defies all the history and the collateral facts which support it' (*Ancient Egypt*, London, 1915, pt. i. p. 37); and Manetho's credit remains in suspense.

In addition to his service to chronology, Manetho has contributed, though only at second-hand, two interesting traditions of Egyptian history. These are preserved by Josephus (*c. Apion.* i. 26 f.), and give a somewhat nebulous account of the Hyksos invasion, and the narrative of the expulsion of a race of lepers and unclean persons, which may conceivably represent the Egyptian tradition of the Hebrew Exodus.

Manetho's chronological scheme is too long to be given in detail, but will be found, in part or in whole, in most of the Egyptian Histories—e.g., completely in Budge, *Hist. of Egypt*, i. 130-140.

MANICHÆISM.—I. Sources.—Manichæism, the religion of Māni or Manes, is one of those systems which are usually classed together under the name of Gnosticism. The Manichæan religion arose in Babylonia about the middle of the 3rd cent. A.D., and during many generations exercised great influence both in the East and in the West. Of the literature of the Manichæans very little has survived. The fragments of Manichæan MSS which have lately been discovered in Central Asia present great difficulties of interpretation, so that, while they confirm much that was previously known, they do not enable us to form a connected idea of the subject.¹ The attempts which have been made in modern times to prove that some well-known books, in particular certain of the Apocryphal Gospels and Acts, are of Manichæan origin must be pronounced wholly unsuccessful. Hence our information respecting this religion is derived almost entirely from non-Manichæan authors, most of whom wrote with an avowedly hostile purpose. As our conclusions must depend largely on the relative importance which we attach to the various sources, it is necessary first to give some account of them. They fall into four main groups: (1) Oriental Christian sources, (2) Zoroastrian sources, (3) Western sources, (4) Muhammadan sources.

(1) *Oriental Christian.*—These have, in some respects, the greatest claim to consideration. The Aramaic-speaking Christians of Syria and Mesopotamia were in race, in language, and in general

¹ These fragments are written in various languages (Persian, Turkish, and Chinese). They have been published by F. W. K. Müller, 'Handschriften-Reste in Estrangelo-Schrift aus Turfan,' in *SBZ* IV, 1904, p. 348 ff., and in *J. A. W.*, 1904, 'Ein Doppelblatt aus einem manichäischen Hymnenbuch,' in *J. A. W.*, 1912 (republished separately, Berlin, 1913); A. von Le Coq, 'Ein manichäisch-urigurisches Fragment aus Idikut-Schahr,' in *SBZ* IV, 1903, p. 398 ff., 'Ein christliches und ein manichäisches Manuscript-Fragment in türkischer Sprache aus Turfan,' *ibid.*, 1909, p. 1202 ff., 'Dr. Stein's Turkish Khawastnamah from Tun-Huang, being a Confession-prayer of the Manichæan Audikores,' in *J. A. S.*, 1911, p. 277 ff.; C. Salemann, *Ein Bruchstück manichäischer Schrift im asiatischen Museum, Petrograd, 1904* (= *Mémoires de l'Académie Impériale des Sciences*, viii. vi. 6), *Manichäische Studien*, i. do. 1908 (= *Mémoires de l'Académie Impériale des Sciences*), i.-iv., do. 1907-12 (= *Bulletin de l'Académie Impériale des Sciences*); H. Charvonnat and P. Pelliot, 'Un traité manichéen retrouvé en Chine,' in *J. A.*, 1911 (republished, Paris, 1912).

culture nearly akin to the primitive Manichæans, and had every opportunity of becoming well acquainted with the new religion. Unfortunately very little of their testimony has come down to us. Aphraates, in the first half of the 4th cent., the earliest Syriac author whose works have been preserved in any considerable quantity,² briefly alludes to Manichæism as a dangerous heresy:

'The children of darkness, the doctrine of the wicked Māni, who dwell in darkness like serpents, and practise Chaldæism [i.e. astrology], the doctrine of Babel.'³

More information may be gathered from the works of a younger contemporary of Aphraates, the well-known Ephraim of Nisibis, commonly called Ephraim Syrus. References to Manichæism are found in several of his writings, especially in a series of five discourses, entitled *Lettere to Hypatios*.⁴ The treatise against Manichæism composed by Gabriel, bishop of Hormizdshēr, in the 6th cent., seems now to be lost.⁵ Later Syriac writers, such as Theodore bar-Khōnī⁶ and Barhebraeus,⁷ do not supply much that is of importance.

Among Oriental Christian authorities we must also reckon the Armenian writer Eznik of Kolb, who lived in the 5th cent.,⁸ and Sā'id ibn al-Bitrīq, generally called Eutyehus, who was Patriarch of Alexandria from A.D. 933 to 939.⁹

(2) *Zoroastrian.*—The evidence contained in Zoroastrian literature is, if anything, scantier than that which may be collected from the works of Oriental Christians; moreover, it is much more difficult to interpret, owing partly to the unsatisfactory condition of the text and partly to our imperfect acquaintance with the language. But the vehement condemnations of Manichæism which are found in Zoroastrian books bear witness at least to the dread with which the Persian priesthood regarded the rival faith.¹⁰

(3) *Western.*—Accounts by Greek and Latin authors exist in far greater quantity, but they are, from the nature of the case, much less trustworthy. Manichæism was so essentially Oriental (i.e. non-Hellenic) in its character that the Christians of the West would probably have had considerable difficulty in understanding it, even if they had been wholly impartial. That this was out of the question hardly needs to be stated. The strangeness of the system was doubtless an attraction to some minds, but those who are attracted by mere novelty are usually uncritical, while the attitude of uncon-

² On Aphraates see W. Wright, *Short History of Syriac Literature*, London, 1894, p. 32. The *Homilies* of Aphraates have been re-edited, with a Lat. tr., by I. Parisot (Paris, 1894).

³ *Hom.* iii. Why the Manichæans were accused of astrology will appear later on.

⁴ The first of these discourses and part of the second were published by J. J. Overbeck in his *Sancti Ephraemi Syri adiorumque opera selecta*, Oxford 1885, p. 21 ff. This portion of the second discourse was reprinted by K. Kessler (*Mani*, p. 283 ff.), with a very inaccurate Germ. tr. The remainder of the work, with the exception of some passages which are effaced in the MS, was first made known by G. W. Mitchell (*S. Ephraim's Prose Refutations*, i., London, 1912). In Ephraim's *Carmina Nisibena* (ed. G. Bickell, Leipzig, 1866), no. xiv., there is an interesting passage which doubtless refers to the Manichæans, though they are not expressly named: 'Fools in their perversity have forged a tale, how that the Darkness ventured to disturb the Light,' etc.

⁵ See Wright, *op. cit.* p. 120.

⁶ Theodore's account of Māni has been published and translated by H. Pognon in his *Inscriptions mandaites des coupes de Khoutabir*, Paris, 1897-99. It is borrowed in part from Epiphanius, and therefore cannot be regarded as purely Oriental. Cf. also E. Cumont, *La Cosmogonie manichéenne, d'après Theodore bar Khōnī* (= *Recherches sur le Manichéisme*, i.), Brussels, 1903.

⁷ The testimony of Barhebraeus is to be gathered partly from his *Syr. Ecclesiastical History*, partly from his *Arab. Compendium of the Dynasties*.

⁸ See V. Langlois, *Collection des historiens anciens et modernes de l'Arménie*, Paris, 1867-69, ii. 375 ff., and the tr. by J. M. Schmid, Vienna, 1900, p. 94 ff.

⁹ *Eutyehus Annales*, ed. E. Pococke, Oxford, 1658-59, which contains the original Arab. text with a Lat. tr.

¹⁰ Perhaps the most important passage on this subject is that which E. W. West has translated in his *Pahlavi Texts*, iii. 243 ff. (*SBZ* xxvi. (1885)). A Germ. tr. is given by Salemann, *Ein Bruchstück manichäischer Schrift im asiatischen Museum*.

promising hostility, which was adopted by the great majority of Christian theologians, naturally proved even less favourable to accurate comprehension.

The foreign origin of Manichæism is duly emphasized by Eusebius in the brief notice which he devotes to this 'insane heresy.'¹ Alexander of Lycopolis, the author of a short tract against Manichæism,² was probably a contemporary of Eusebius. He deserves notice as being the only Western writer who treats the subject from a purely philosophical point of view; though he speaks of Christianity with a certain respect, it is doubtful whether he ever became a Christian. Of more importance is the testimony of a somewhat later controversialist, Titus, bishop of Bostra in Syria, who died about A.D. 370. In a geographical sense, Titus must be reckoned among Oriental Christians, but his *Treatise against the Manichæans*³ proves him to have been thoroughly Western in his education and habits of thought, deeply imbued with Greek philosophy, in particular with Stoicism, and full of contempt for 'barbarians.' He distinctly states that he derived his information from a Manichæan book,⁴ but he tells us nothing definite as to its authorship. His words, however, seem to imply that the book was not composed by the founder of Manichæism himself, for in quoting it he says, 'as is stated by the author who wrote down the doctrines of that maniac';⁵ and, again, 'these are the very words used by him or else by one of his followers.'⁶ He afterwards mentions a Manichæan work entitled *The Treasure*,⁷ but whether this is identical with the book cited previously cannot be determined. In any case it is interesting to observe that, according to Titus, the Manichæans made every effort to conceal from outsiders the writings of their founder, apparently in obedience to his express orders.⁸ Another fact, no less significant, is that Titus professes to have softened down the expressions which he found in his source: 'these are not the words used by him, but this is what he meant to say, translated into more decent language.'⁹ In estimating the evidence supplied by Titus this tendency must be constantly borne in mind.

A more popular but a much less respectable authority is the *Acta Archelai*, a work which professes to record a disputation between Manes and Archelaus, bishop of Carchar¹⁰ in Mesopotamia.

¹ *HE* vii. 81.

² ed. A. Brinkmann, Leipzig, 1895.

³ Of the four books into which this work is divided only the first two and the beginning of the third have been preserved in the original Gr.; but all four are extant in a Syr. tr., which must have been made very early, as it is contained in a Brit. Mus. MS written in A.D. 412. The Gr. text was first published by J. Rasmann in 1725; the best edition is that of P. A. de Lagarde (Berlin, 1859), who also edited the Syr. version. It is to be noted that the Gr. text has a long insertion (printed as an Appendix by Lagarde, pp. 69-108) which is absent in the Syriac. In *SEAW*, 1894, p. 479 ff., August Brinkmann has endeavoured to prove that this piece is a fragment of a book against the Manichæans by Serapion of Thmuis, a friend of Athanasius.

⁴ *αὐτὴ λέγει φησὶν ἡ παρ' αὐτοῖς βιβλος* (bk. i. § 21); *φησὶ γὰρ αὐτὸ τὸ γράμμα ὅτι οὐ τὰ παρὰ τοῦ μανέντος παρεθήκαμεν* (bk. i. § 22). The punning use of *μανεῖς*, *μανία*, etc., in allusion to the name Manes, is extremely common.

⁵ *ὡς γὰρ ὁ τὰ τοῦ μανέντος συγγράφων φησὶν* (bk. i. § 21).

⁶ *φησὶ δὲ πρὸς λέγειν αὐτὴν ἐκεῖνος ἢ ἑτέρος τις τῶν αὐτῶν ἐκείνου* (bk. iii. § 4). Photius states that the source used by Titus was the work of a certain Addas: *ἔδοξε μὲν κατὰ Μανιχαίων γράφειν, ἔγραψε δὲ μᾶλλον κατὰ τῶν Ἀδδων συγγραμμάτων* (*PG* ciii. 288).

⁷ *Syr. simethā* (bk. iii. § 9). This is probably the work called *θησαυρὸς* by Epiphanius, and *θησαυρὸς ζωῆς* in the Greek *Formula of Abjuration*. Both al-Ya'qūbi and al-Bīrūnī ascribe to Māni a book known as *Kanz-al-Īyā*, 'Treasure of Life-giving,' but it is to be noted that the list of Māni's writings in the *Philist* (p. 336, line 8 ff.) does not include this title, although it mentions a *Sifr-al-Īyā*, 'Book of Life-giving.'

⁸ Bk. iii. § 9.

⁹ *εἰ γὰρ καὶ μὴ τοῖτοί γε τοῖς ῥήμασιν, ἀλλὰ γὰρ ταῦτα βούλεται λέγειν, ἀπερ' εὐχρηστοτέρων πᾶν γὰρ πρὸς ἡμῶν εἶρηται* (bk. i. § 17).

¹⁰ The name is doubtful. Possibly the author, or a later scribe, may have confused the two places Karkhā and Keshkar; the latter form agrees with that given by Epiphanius in his version of the story.

Here for the first time we meet with the remarkable theory that Manichæism originated, not with its reputed founder, but with a certain Scythianus, from whom the system was passed on to Manes. These *Acts* are extant in a Latin translation, made from a Greek text of which we possess some long fragments.¹ According to Jerome,² the book was originally composed by Archelaus himself in Syriac ('Syro sermone') and afterwards translated into Greek. But it has been clearly proved that Archelaus is not the author, and that the narrative is to a large extent, if not entirely, fictitious. Nevertheless, some modern writers have endeavoured to show that, though Jerome was mistaken in ascribing the *Acts* to Archelaus, he was right at least in believing them to have been composed in Syriac. The arguments which Kessler has advanced in support of this theory have been shown by T. Nöldeke to be worthless.³ The author of the *Acts*, whoever he was, evidently possessed no accurate information about the country in which he placed the scene of his story. For example, he represents the river Strangas as the Western boundary of the Persian Empire—a notion which is derived from the Greek *Romance of Alexander the Great* (pseudo-Callisthenes), as Nöldeke points out. A writer who was capable of falling into such mistakes can scarcely be supposed to have had any definite knowledge as to the early history of Manichæism. Nevertheless, it is not surprising that his statements were readily believed by Western Christians. With some variations, the story contained in the *Acta Archelai* reappears in Epiphanius,⁴ Socrates, Theodoret, and several later writers.

By far the most celebrated of the Western authorities on Manichæism is Augustine. At first sight it might seem that his testimony ought to outweigh all others that have been mentioned, for during nine years (from A.D. 373 to 382) he was a professed Manichæan. Among the works that he composed on the subject, after his conversion to Catholic Christianity, are the following: *Contra Epistolam Manichæi quam vocant Fundamenti*, *Contra Faustum*, *Contra Fortunatum*, *Contra Adimantum*, *Contra Secundinum*, *De Actis cum Felice Manichæo*, *De Genesi contra Manichæos*, *De Natura Boni*, *De Duabus Animabus*, *De Utilitate Credendi*, *De Moribus Ecclesiæ Catholicæ et de Moribus Manichæorum*. Many passages relating to Manichæism are to be found in his other writings, particularly in the *Confessions*. But, on the whole, the amount of positive knowledge which can be gathered from Augustine is much less than might have been expected. In the great majority of cases he confines himself to vague generalities, and, when he descends to particulars, his statements seem mostly to rest on hearsay. It may be doubted whether even his Manichæan informants were at all accurately acquainted with the history and writings of their founder. Faustus, whom Augustine represents as one of the ablest and most influential among the Manichæans, was a native of N. Africa, and it is therefore unlikely that he could read the sacred books of his religion in the original Aramaic. Nor have we any reason to believe that the other Manichæans with whom Augustine came in contact were better instructed.

One of the latest, but not the least important, of the Western sources is the Greek *Formula of Abjuration*,⁵ which repentant heretics were required to pronounce before being admitted into the com-

munion of the Byzantine Church. In its present shape this document cannot be older than the 9th century. It consists of a series of anathemas, directed partly against doctrines and partly against persons, put together without any definite plan. Some of the doctrines are undoubtedly Manichæan, but some emanate from other sects, and some appear to be gross misrepresentations. Yet, in spite of the uncritical manner in which it is compiled, the *Formula of Abjuration* contains a certain number of interesting facts.

(4) *Muhammadan*.—Evidence from Muhammadan literature does not begin before the 9th cent. of our era. Nevertheless, the Muhammadan accounts are, on the whole, the most instructive of all, much fuller than those by Oriental Christians and less misleading than those by Western writers. For this several causes may be assigned. In the first place, the Muhammadan scholars to whom we owe these descriptions wrote from a historical, rather than from a controversial, point of view. Moreover, some of them at least had access to very ancient and trustworthy sources of information; for Babylonia, the political centre of the Muhammadan Empire, was also the ecclesiastical centre of the Manichæan community, and, accordingly, in that country the text and the traditional interpretation of the Manichæan Scriptures were most likely to survive. It is true that after the Muhammadan conquest the Aramaic language gradually ceased to be spoken, but the knowledge of it never wholly died out, as we see in the case of the Christians and the Mandæans, who have retained their sacred books, in their respective Aramaic dialects, down to the present day.

Almost all Muhammadan historians who treat of pre-Muhammadan or early Muhammadan times take some notice of Manichæism, but the authors from whom we learn most on this subject are the following: (a) Ibn Wāḍih, also called al-Ya'qūbi, who in A.D. 891 composed a *History of the World*;¹ (b) Muḥammad ibn Ishāq, who probably lived about the end of the 10th cent. of our era, and is known as the author of the *Fihrist*, i.e. 'Catalogue,' a great storehouse of information respecting literary works of various kinds;² (c) al-Bīrūnī, who died A.D. 1048, one of the most learned men that the East ever produced, the author of a book on *Chronology*³ and other important treatises; (d) al-Shahrastānī, who died A.D. 1153, the author of a work on religious and philosophical sects.⁴ All these authors wrote in Arabic, although the last two were of Persian nationality.

The story of Māni in the *Shāh-nāmāh* of Firdausi, the well-known Persian epic poet, is almost entirely legendary, and the same may be said of nearly all the popular Muhammadan accounts, whether written in Persian or in Arabic.

2. The founder of Manichæism.—With regard to the history of the founder we are mainly dependent on Muhammadan writers, for the Western authorities either tell us nothing definite or else repeat, more or less faithfully, the legend contained in the *Acta Archelai*. The story there related is briefly as follows:

In the time of the Apostles there lived a man named Scythianus, who is described as coming 'from Scythia,' and also as being 'a Saracen by race' ('ex genere Saracenorum').

¹ ed. M. T. Houtsma, Leyden, 1893.

² ed. G. Flügel, and published after his death by J. Bödiger and A. Müller, Leipzig, 1871-72. The section relating to Manichæism was published separately by Flügel, with a Germ. tr. and copious notes, under the title *Māni, seine Lehre und seine Schriften*, Leipzig, 1862. The author of the *Fihrist* is sometimes called al-Nadīm, but it is doubtful whether this name, or rather nickname, belonged to him or to one of his ancestors.

³ ed. E. Sachau, Leipzig, 1878, and tr. by him into Eng., *The Chronology of Ancient Nations*, London, 1879. Al-Bīrūnī is the Arab. form of the Pers. Berūnī.

⁴ ed. W. Cureton, London, 1846, and tr. into Germ. by T. Haarbröcker, Halle, 1850-51.

He settled in Egypt, where he became acquainted with 'the wisdom of the Egyptians,' and invented the religious system which was afterwards known as Manichæism. Finally he emigrated to Palestine, and, when he died, his writings passed into the hands of his sole disciple, a certain Terebinthus.¹ The latter betook himself to Babylonia, assumed the name of Buddha, and endeavoured to propagate his master's teaching. But he, like Scythianus, gained only one disciple, who was an old woman. After a while he died, in consequence of a fall from the roof of a house, and the books which he had inherited from Scythianus became the property of the old woman, who, on her death, bequeathed them to a young man named Corbicius,² who had been her slave. Corbicius thereupon changed his name to Manes, studied the writings of Scythianus, and began to teach the doctrines which they contained, with many additions of his own. He gained three disciples, named Thomas, Addas, and Hermas. About this time the son of the Persian king fell ill, and Manes undertook to cure him; the prince, however, died, whereupon Manes was thrown into prison. He succeeded in escaping, but eventually fell into the hands of the king, by whose order he was flayed, and his corpse was hung up at the city gate.

It is needless to say that this narrative, as it stands, has no claim to be considered historical. Some details, in particular the account of the execution of Manes, are confirmed by more trustworthy authorities, but as to the main point—the existence of Scythianus and Terebinthus—no such confirmation is forthcoming. The assertion that Terebinthus took the name of Buddha seems to be a confused reminiscence of the fact that Māni represented the Indian Buddha as one of a series of prophets who had preceded him. But this, so far from tending to support the story as a whole, is rather an argument against it.

The accounts of the principal Muhammadan authorities may be briefly summarized thus:

Māni,³ the son of F-t-q,⁴ was born in Babylonia⁵ about A.D. 216.⁶ His father was originally a heathen, and frequented an 'idol-temple' at or near Ctesiphon, the Persian capital, 'as other people were wont to do.' But shortly before the birth of Māni he abandoned his former religion, and joined⁷ the sect of the Mughtasila, i.e. 'those who practise ablutions.'⁸ Māni at an early age became convinced that he had received divine revelations, and that he was chosen to preach a new faith.⁹

¹ As to this name the authorities vary.

² This name also is uncertain.

³ So the name is written in Arab., and the adj. derived from it is usually *mānawī* (formed according to the ordinary rule in Arab.), but sometimes *manawī*, *manānī*, or *mānī*. In Syr. the name Māni seems to have been pronounced as in Arab., although the Syr. spelling does not enable us to decide positively whether the first vowel was long or short. In the case of rare proper names the vowel-points added by later Syrian scribes have, of course, no authority. In Zoroastrian writings the name appears with a final aspirate, *Mānih* (adj. *mānīhik*), and this aspirate accounts for the form *Manichæos*, *Manichæus*, which Gr. and Lat. writers often use, not only as an adj., but also as the equivalent of *Māni*, *Manes*. The origin and meaning of the name Māni are unknown. But this very fact tends to show that it is a real name, not an honorific title like Christ or Buddha.

⁴ This is the form given in the *Fihrist*. The vowels are uncertain, but the consonants agree with those of *Manes*, who is expressly mentioned as the father of Manes in the Gr. *Formula of Abjuration*. In the Arabic version the Arab. have no sign for P, and use F or B instead. According to the *Fihrist*, F-t-q also bore the name of Bābak (=Pers. Pāpak), while al-Ya'qūbi calls him Ḥammād. The last name, which is purely Arabic, must be due to some mistake.

⁵ According to al-Bīrūnī, the birth-place of Māni was a village called Mardīn, on the upper part of the Kūthā canal, i.e. a little to the south of Baghdad.

⁶ The statement of al-Bīrūnī that Māni was born in the year 527 of the era of Alexander (i.e. the Selencid era) agrees very nearly with what we are told in the *Fihrist* as to the age of Māni when he came forward as a public teacher.

⁷ G. T. Stokes, in *DCB*, s.v. 'Manes,' states that Māni's father 'founded' this sect—an assertion for which there is no authority.

⁸ These details are given in the *Fihrist*, evidently from a Manichæan source. What was the precise form of heathenism which Māni's father originally professed is not clear. The terms used in the *Fihrist* point to some local cult rather than to Zoroastrianism. The religion of the Mughtasila seems to have been a kind of Judaic Christianity mingled with heathen elements. It was not identical with that of the Mandæans in later times, though the two sects had much in common.

⁹ The narrative in the *Fihrist* clearly implies that Māni did not derive his system from any human teacher. On the other hand, al-Bīrūnī describes Māni as a 'disciple of Fāḍarūn,' and a similar statement appears in the well-known historical work of al-Mas'ūdī, who lived about a century before al-Bīrūnī, except that the name is there written somewhat differently (see Mas'ūdī, *Les Prairies d'or*, ed. C. Barbier de Meynard and Pavet

Before he was twenty-five years old he had privately gained a few disciples, but he began his public propaganda on the day when Šāpūr I, the son of Ardāšīr, was crowned king, i.e. March 22, A.D. 242.¹ He succeeded in securing the patronage of the king's brother Pērōz, and through him obtained access to the king himself.² In the course of his travels he is said to have visited Central Asia, India, and China, but it does not appear that he ever penetrated into the Roman Empire. He composed numerous books and epistles in Aramaic, and at least one book in Persian, probably the work known as the *Šāpūraqān*, which, according to al-Bīrūnī, was written for king Šāpūr.³ We learn from Ephraim Syrus that Mānī illustrated his writings with coloured pictures;⁴ his fame as a painter survived for many centuries in the East. He is also said to have invented the peculiar alphabet which the Manichæans afterwards employed; it was a modification of the Syriac *Estrangēla* character, as the recent discovery of fragments prove. Mānī was put to death: king Bahrām I, who reigned from about A.D. 274 to 277,⁵ whether he was flayed alive, as al-Ya'qūbī and some other authorities state, is doubtful. His corpse, or, according to others, his skin stuffed with straw, was hung up, by order of the king, at the gate of Gundē-Šāpūr, an important city which lay a little to the east of the ancient Susa. In after times that gate was always known as 'the Māni-gate.' The execution of Mānī was evidently due not so much to the personal caprice of the king as to the enmity of the Zoroastrian priesthood. At the same time the Persian government made a strenuous, but wholly fruitless, attempt to exterminate the adherents of the new religion.

3. The Manichæan system.—Manichæism, like other forms of Gnosticism, professes to be at the same time a religion and a philosophy, inasmuch as it not only sets up an ideal of holiness, but also undertakes to explain the constitution of the world. It is not, however, to be regarded as a philosophy in the ordinary European sense of the word. It attempts to arrive at philosophical truth by means of a method which, to us, appears wholly unphilosophical. Though the Manichæans confidently appealed to human reason and were always ready to defend their conclusions by argument, they did not pretend that those conclusions had been reached by abstract logic or by any kind of scientific induction; on the contrary, they claimed, no less than the primitive Christians, to be in possession of a direct revelation from God. Thus Mānī himself says, in a passage which al-Bīrūnī quotes from the *Šāpūraqān* (see above):

'Wisdom and deeds have always from time to time been brought to mankind by the messengers of God. So in one age they have been brought by the messenger called Buddha to India, in another by Zardūšt (Zoroaster) to Persia, in another by Jesus to the West. Thereupon this revelation has come down, this prophecy in this last age, through me, Mānī, the messenger of the God of truth to Babylonia.'

Such was the claim put forward by Mānī. We have now to consider the substance of his teaching.

The Manichæan system is based upon the idea of the essential and eternal contrast between good and evil, between light and darkness. But it is not correct to say, as Western writers have fre-

quently done, that Mānī identified good with spirit, and evil with matter (*ūlā*). Whether he ever attained to the conception of matter may be doubted;⁶ at all events, it is clear that he represented evil, or darkness, as something capable of thought and volition;⁷ in other words, his dualism was of the imaginative, or poetical, not of the philosophical kind. The following is an abstract of the account given in the *Fihrist*.

Originally the light and the darkness bordered on one another, but were unmingled, the light being limitless above and the darkness limitless below. The light is identical with God, who is called 'the King of the Light,' but the realm of light includes also an atmosphere and an earth which are co-eternal with the Godhead. Moreover, there are various other beings called gods,⁸ who are subordinate to the King of the Paradieses or Light. Out of the darkness arose Satan, the Primal Devil, who 'did not exist from all eternity, although the elements of which he is composed are eternal.' At first he wrought havoc in his own domain, and then invaded the kingdom of light.⁹ 'When he saw the flashes of light, he conceived a hatred for them, shuddered, and rejoined his native elements.' He made a second attack, and the King of the Paradieses of Light, in order to repel him, produced a being called the Primal Man, who went forth armed with a fivefold panoply—the breeze, the wind, the light, the water, and the fire. Satan, on the other hand, arrayed himself in the smoke, the consuming flame, the darkness, the scorching blast, and the cloud. After a long struggle Satan prevailed over the Primal Man. The heavenly powers then intervened and rescued the Primal Man, but the elements which formed his panoply became mingled with the elements of darkness. Out of this confused mass the heavenly powers fashioned the actual world which we inhabit. Not only all animal and vegetable organisms, but even objects which we regard as wholly inanimate, such as metals, contain portions of divine light. Hence the distinction which we are accustomed to make between natural and spiritual phenomena does not exist in Manichæism, since it represents all the processes of nature as part of a spiritual contest.¹⁰ The visible universe is, in fact, a vast and complicated machine devised by God for the purpose of enabling the elements of light to effect their escape. When the light contained in the earth separates itself from the darkness, it ascends in the form of a pillar, called 'the pillar of glory,' first to the moon, thence to the sun, and thence to the higher regions. This process continues until at length the final separation is brought about by a conflagration, which will last 1458 years. Thereafter the light will be separated for ever against the assaults of the darkness.

The most singular part of the Manichæan system is that which relates to the origin and history of mankind. Unfortunately, the statements of the *Fihrist* on this subject are fragmentary and full of obscurities, which the other sources do not enable us to explain in an altogether satisfactory manner. But it is clear at least that the first human beings, whom Mānī called Adam and Eve,¹¹ were represented as the offspring of devils, the object of the devils in producing them being to imprison, and so to keep in their own possession, a portion of the elements of light. The heavenly powers, in order to frustrate the purpose of the devils, sent Jesus (who is here regarded as a celestial being) to instruct Adam on the subject of 'the Paradieses and the gods, Hell and the devils, the earth and the heaven, the sun and the moon,' and in particular to warn him against sensuality. As to the history of Adam and Eve many details are given, some of which have been borrowed from the OT, some perhaps from sources unknown to us, while some appear to be wholly fantastic.

¹ Alexander of Lycopolis (ed. Brinkmann, p. 5) observes that in the Manichæan system the term *ūlā* is not used in the Platonic or the Aristotelian sense; accordingly Alexander defines the Manichæan *ūlā* as 'motion without order' (*ἡ ἀτακτος κίνησις*).

² According to al-Shahrastānī, some Manichæans held that the mingling of the darkness with the light had taken place 'blindly and by accident,' not as a result of volition. But this is obviously a later philosophical speculation.

³ The nature of these gods is not clearly defined; they are regarded as the offspring of the Supreme God.

⁴ It is instructive to compare this narrative with the parallel passage in Titus of Bostra, bk. i. § 17. For 'the Primal Devil' Titus substitutes *ἡ ὕλη*.

⁵ Thus, for instance, the rain is explained as due to the perspiration of devils (Titus of Bostra, bk. i. § 17).

⁶ The moon, as it waxes and wanes, is compared to a bucket which alternately fills and empties itself (*ib.*).

⁷ It is to be observed that Adam, 'the first man' (in Arabic *al-insān al-awwal*), is wholly distinct from 'the Primal Man' (*al-insān al-qadīm*).

de Courteille, Paris, 1861-77, ii. 167; also Flügel, *Mani*, p. 141). Who Fādrān was we are not told; it is therefore vain to inquire whether he really existed, and, if so, whether Mānī had any connexion with him. The assertion of Barhebræus that Mānī was at one time a Christian, and even 'a presbyter,' rests upon no evidence whatever.

¹ See T. Nöldeke, *Geschichte der Perser und Araber zur Zeit der Sasaniden*, Leyden, 1879, p. 412.

² That king Šāpūr was ever converted to Manichæism, as al-Ya'qūbī states, is very improbable.

³ The fullest list of Mānī's writings is to be found in the *Fihrist* (p. 336 ff.). Unfortunately many of the titles are doubtful, and even those which are certain seldom give us any clue as to the nature of the contents.

⁴ See C. W. Mitchell, *op. cit.* i. 126 ff. of the Syr. text.

⁵ That Mānī was executed under Bahrām I. seems tolerably certain, though one historian (Theodore bar-Khōnī) places the event in the reign of Šāpūr, another (al-Dīnawarī) in the reign of Hurmuz (i.e. Hormizd I., about A.D. 273), and a third (Eutychius) in the reign of Bahrām II., the son and successor of Bahrām I. For the sake of readers unacquainted with Arab. it may be worth while to point out that in Sachau's tr. of al-Bīrūnī's *Chronology*, p. 191, line 17, the word 'Hurmuz' is a slip of the pen; the Arab. text says merely 'and he killed,' referring to Bahrām. By a curious coincidence there is an exactly similar mistake in H. Zotenberg's tr. of the corresponding passage in the history of al-Tha'alibī (Paris, 1900), p. 508: 'Šābūr fit asasi matra' a mort. . . . Cette action gagna à Šābūr. . . . Here again Bahrām is meant.

⁶ i.e. the theory and the practice of religion.

As we learn from the passage of the *Shāpūraqān* quoted above, Māni held that a series of divine revelations had been promulgated in the world by Buddha, Zoroaster, Jesus, and finally Māni himself.¹ Al-Bīrūnī adds that Māni, in another of his books, claimed to be 'the Paraclete (*al-Fāraglūt*) announced by Christ,' and this we learn from other sources also, both Christian² and Muhammadan. As the Muhammadan authorities use the Greek word, it may be assumed that it was used by the Manichæans themselves, but we are not to conclude that Māni knew Greek, still less that he had read the NT in the original. The term Paraclete was in common use among Aramaic-speaking Christians, from whom Māni doubtless borrowed it. Precisely what meaning he attached to it is a question not easy to answer. From the statements in the *Fihrist* as to his parentage and birth we may infer with certainty that, though he laid claim to a divine commission, he did not profess to be more than a human being in the ordinary acceptation of the term.³ And it is to be observed that in the *Shāpūraqān* the earlier prophets, including Jesus, are placed on a level with Māni. This would seem to imply that they also were regarded as mere men. It is, therefore, not a little surprising to find that Christian authors, such as Titus of Bostra⁴ and Augustine, frequently represent Māni as holding a Docetic theory with regard to Jesus, namely, that He was not born of a woman and that His body was a phantom.⁵ And the difficulty of ascertaining what was really the Manichæan doctrine on this point is still further increased by the statement in the *Fihrist* that Māni pronounced Jesus to be a devil (*shaitān*).⁶ The *Fihrist* informs us also (p. 336, line 10 ff.) that one of Māni's works, *The Book of Secrets*, contained a chapter on 'the son of the widow, that is to say, according to Māni, the crucified Messiah, whom the Jews crucified.' How the strange phrase 'the son of the widow' is to be explained, and how this passage is to be reconciled with that in which Jesus is said to have been called a devil, we have no means of determining. But, whatever the Manichæans may have believed as to the origin of the historical Jesus, the nature of His body, etc., it would

¹ The list of prophets given by al-Shahrastānī (i. 192) is longer, viz. Adam, Seth, Noah, Abraham, Buddha, Zoroaster, Christ, Paul—'then shall come the seal [i.e. the last] of the prophets to the land of the Arabs.' Whether this sentence is simply a Muhammadan interpolation, or a distorted form of some passage referring to Māni, is uncertain.

² Christian writers, from Eusebius onwards, sometimes wrongly interpret this to mean that Māni identified himself with the Holy Ghost. It is scarcely necessary to recall the fact that even in the NT the term *παράκλητος* is applied not only to the Holy Ghost but also to Christ (1 Jn 2). The statement of Titus of Bostra (bk. iii. § 1), Augustine, and other Christian writers, that Māni called himself an 'Apostle of Jesus,' has been confirmed by one of the recently discovered fragments (F. W. K. Müller, M. 17). This title does not necessarily imply more than that Māni believed his own teaching to be substantially identical with that of Jesus.

³ The fact that in one of the fragments published by F. W. K. Müller (M. 311) Māni is addressed as 'Māni, son of the gods' (*Māni yazdān frāzād*), does not prove anything to the contrary, since the phrase may be understood in a purely spiritual sense.

⁴ Bk. iv. § 83 ff., p. 146 of the Syr. text.

⁵ As Baur remarks (*Das manich. Religionsystem*, p. 285), the Christian Fathers tell us at great length what Māni denied with respect to the person of Christ, but they say scarcely anything about his positive teaching on the subject.

⁶ *Fihrist*, p. 335, line 8; see Flügel, *Māni*, note 284. A more explicit statement is to be found in the treatise *De Fide contra Manichæos*, ascribed to Euodius, a friend of Augustine: 'Sic enim in Epistola Fundamenti dicit: Inimicus quippe qui eundem Salvatorem Injustorum patrem crucifixisse se speravit ipse est crucifixus, quo tempore aliud actum est, atque aliud ostensum. Principes itaque tenebrarum affixus est cruci, idemque spineam coronam portavit cum suis sociis, et vestem coccineam habuit, acetum etiam et fel bibit, quod quidam Dominum potasse arbitrati sunt, atque omnia quae hic sustinere visus est, tenebrarum ducibus irrogata sunt, qui clavus etiam et lancea vulnerati sunt' (ch. 24 [PL xlii. 1147]). The fragment on the Crucifixion published by F. W. K. Müller (M. 18) unfortunately leaves the question open.

certainly appear that they denied the fact of His crucifixion. Hence, according to Augustine,¹ they were in the habit of contrasting the unreal sufferings of Christ with the real sufferings of Māni, which they solemnly commemorated by an annual ceremony known as the *Bḡma*. That the Muhammadan writers say very little on this Christological question may be due to the fact that here their own views happened to resemble those of the Manichæans.²

The teaching of Māni as to the duties and ultimate destiny of individuals was in accordance with his theory of the universe as a whole. Since the visible world has as its aim the separation of the light from the darkness, practical religion must consist mainly in the furthering of this process. The divine element in man must be freed from its fetters in order that it may return to its heavenly source. With regard to this part of the Manichæan system much misconception has prevailed in the West, from the time of Augustine to the present day. The divine element in man is not to be identified absolutely with the soul, though the Manichæans sometimes used language which admitted of such an interpretation. Yet, if we examine the evidence carefully, it becomes clear that, when they spoke of the soul as divine, they meant only that it contained something divine; and even this was not asserted with respect to the soul of every individual.³ Another misapprehension, due chiefly to Augustine's treatise *De Duabus Animabus*, is that man was represented as having two souls, one good and the other evil.⁴ In reality the passages which are cited as proofs of this theory affirm only the existence of two opposite tendencies in man. And, just as the soul is not wholly good, so the body is not wholly evil; for, according to the *Fihrist* (p. 335, line 16 ff.), the Manichæans held that after the death of the righteous man the 'powers' contained in his body, namely, the water, the fire, and the breeze, have to be extracted by 'the sun, the moon, and the shining gods,' and then 'the rest of his body which is altogether darkness is cast into hell.'

But, although it was the duty of all Manichæans to take part in the liberation of the light from the darkness, their share in the great work naturally varied according to their several capacities. First of all, a broad distinction was made between the ordinary Manichæans, who were known as 'the Hearers' or 'the Combatants,' and the inner circle of teachers or ascetics, whom Western writers call 'the Elect' (*oi Eklektoi*, *Electi*) and Muhammadans *al-Siddiqūn*.⁵ The Elect again were subdivided

¹ 'Cum sæpe a vobis quærerem illo tempore, quo vos audiebam, quæ causa esset, quod Pascha Domini plerumque nulla interdum a paucis tepidissima celebritate frequentaretur, nullis vigiliis, nullo prolixiore ieiunio indicto auditoribus, nullo denique festivo apparatu; cum vestrum Bema, id est, diem quo Manichæus occisus est, quinque gradibus instructo tribunali et pretiosis linteis adornato ac in promptu posito et oblecto adornatibus, magnis honoribus prosequimini; hoc ergo cum quærerem, respondebatur ei diem passionis celebrandum esse, qui vere passus esset; Christum autem, qui natus non esset, neque veram sed simulatam carnem humanis oculis ostendisset, non pertulisse, sed finxisse passionem' (Augustine, c. *Epistolam Fundamenti*, viii.).

² It is well known that, according to the Qur'ān (iv. 156), Christ was never crucified; but, when His enemies sought to slay Him, He was removed from the earth and 'a likeness was made to appear to them.' This theory, it will be observed, does not imply any denial of the reality of Christ's body. That Muhammad borrowed the conception from the Manichæans is very improbable, but at all events there is a striking analogy.

³ The souls of those who are finally lost seem to have been regarded as wholly evil. Thus we read in the *Fihrist* (p. 331, line 16 ff.) that Eve had two daughters, one of whom possessed an abundant measure of divine light and wisdom, whereas the other possessed none at all.

⁴ See the very instructive discussion by Baur, p. 162 ff.

⁵ This expression means in Arab. 'the vicious,' but, as Kessler has pointed out (*Māni*, p. 318, note 4), it is here to be understood in the sense of its etymological equivalent in Syr.,

into several grades and formed an elaborate hierarchy, at the head of which stood the representative of Māni himself. But the position of the Elect differed essentially from that of the Christian clergy, inasmuch as the Elect exercised no sacerdotal functions properly so called. Whether Māni instituted anything of the nature of a sacrament is doubtful; in any case, if there were Manichæan sacraments, they cannot have occupied an important place in the system, since the Oriental authorities make no mention of them, unless, indeed, we apply the term 'sacrament' to such practices as prayer and fasting.¹ Hence the main characteristic of the Elect was not that they had the exclusive right, or power, to perform certain acts, but rather that they possessed a fuller knowledge of religion and abstained from certain things which were lawful to the rest of the community. This duty of abstinence was called by the Manichæans 'the three seals,'² which Augustine more definitely characterizes as *signaculum oris*, *signaculum manuum*, and *signaculum sinus*.³ The first 'seal' imposed restrictions with respect to food and speech, the second with respect to outward acts, the third with respect to thoughts and desires. Thus the Manichæan asceticism implied no thought of expiation; the idea that self-inflicted suffering atones for sin—an idea which has exercised so disastrous an influence in some sections of the Christian Church—was quite foreign to the religion of Māni. The prohibitions which he issued are based upon the belief that certain acts, such as the destruction of life and the intercourse of the sexes, are essentially Satanic, and therefore retard the liberation of the light. In matters of detail the Manichæan code naturally appears arbitrary to us; it is evident that in drawing the line between what is 'Satanic' and what is not Māni was guided much more by his fancy and by various casual associations than by any abstract logical principle. Thus, for instance, all Manichæans were forbidden to kill animals, but it would seem that the Hearers were permitted to eat flesh. The Elect abstained from both flesh and wine; they were also forbidden to pluck fruit or vegetables, so that the food on which they subsisted had to be supplied by the Hearers. Similarly the Hearers were allowed to marry and to engage in worldly avocations, whereas the Elect might neither marry nor acquire property, 'except food for one day and clothing for one year.'⁴ It is remarkable that among the things most strictly prohibited were idolatry and magic.⁵ As in nearly all Oriental religions, fasting played an important part. Sunday was observed as a fast-day by ordinary Manichæans, Monday by the Elect; viz. *Zaddiqā*, 'the righteous,' which we may assume to have been the form employed by the Manichæans themselves (see C. W. Mitchell, *op. cit.* i. 30: 'A Manichæan who is called a *Zaddiqā*', p. 127 ff.: 'Those idle women of the party of Māni, those whom they call *Zaddiqāhā*'). Neither Kessler nor any previous writer seems to have noticed that from the same Syr. word is derived *zandīq*, or *zindīq*, 'heretic,' a term which was applied especially to the disciples of Māni by the Persians of the Sasanian period, and afterwards by Muhammadans. Various other interpretations of this word have been proposed, but none that is at all plausible. The substitution of *nd* for *dd* is a phonetic change for which there are many analogies. That a term which was originally used as a title of honour should afterwards have acquired an opprobrious sense is likewise quite natural; cf. the Germ. *Ketzer*, from *kalabās*. The Persian terms for the 'Hearers' and the 'Elect' respectively are *Niyōshāgān* and *Viždagān*.

¹ According to Augustine (*c. Fortunatum*, i.), the Elect were supposed to celebrate a kind of Eucharist in their secret meetings. But, as Augustine himself admits that he knew nothing definite on the subject, we cannot attach much importance to his testimony.

² *Fihrist*, p. 333, line 5; Flügel, *Māni*, note 217.

³ *De Moribus Manichæorum*, ii. 10.

⁴ Al-Birūnī, *Chronology*, p. 308.

⁵ The prohibition of idolatry is the first of the ten commandments which, according to the *Fihrist* (p. 333, line 10 ff.), all Manichæans were required to observe.

there were also monthly and annual fasts. Of the prayers, which were recited several times in the day, the following specimens are given by the author of the *Fihrist* (p. 333, line 15 ff.):

(1) Blessed is our Guide, the Paraclete, the Ambassador of Light, blessed are his guardian angels and adored are his shining hosts.

(2) Adored art thou, O shining one, Māni our Guide, source of brightness, branch of life, thou great tree which art wholly good.

(3) I prostrate myself and adore, with a pure heart and a truthful confession, in the name of God, the Father of lights, the Liberator of the world, the Lord of life, the Lord of the universe, and Thy hosts, who art the Father of all, the Lord of all, the Lord of all, and Thou who adorest Thy hosts, Thy holy ones, Thy word, Thy majesty, and that which seemeth good to Thee, because Thou art the God who is all truth, life, and holiness.

(4) I adore and prostrate myself before all the gods, all the shining angels, all the lights, and all the hosts, who proceed from the great God.

(5) I prostrate myself and adore the great hosts and the shining gods who by their wisdom have pierced, expelled, and overcome the darkness.

(6) I prostrate myself and adore the Father of majesty, the Great, the Luminous. . . .⁷

It will be noticed that these utterances contain not a single petition, no confession of sin, and no reference to the need of pardon. But we should not be justified in arguing that such conceptions were alien to the Manichæan system, for great stress seems to have been laid on repentance and the forgiveness of sin.⁸ Since, however, the Manichæans did not admit the idea of a propitiatory sacrifice, their theory as to the forgiveness of sin necessarily differed from that which was accepted by the great majority of Christians. Precisely what Māni himself taught on this subject we cannot hope to determine; but the view which appears to have been current among the Manichæans, at least as early as the 4th cent., was that repentance naturally leads to forgiveness, 'since man is not punished for sinning, but for failing to grieve over sin.'⁹

With respect to Māni's doctrine of the future life we have somewhat fuller information. The division of mankind into three classes, the Elect, the Hearers, and the Wicked, is here specially emphasized. The Elect, immediately after death, ascend by means of 'the pillar of glory' to the moon, and thence are conveyed to paradise; the Hearers must pass through a long process of purification and of wandering to and fro, before they join the Elect; while the souls of the wicked roam about the world, in a condition of hopeless misery, until the final conflagration, and are then consigned for ever to the realm of darkness.¹⁰

4. The relation of Manichæism to other religions.—When we consider the complex nature of Māni's teaching, it will not surprise us to find that very different opinions have been expressed as to its general character and its connexion with other religious systems. Until comparatively recent times it was the fashion to represent Manichæism, and Gnosticism generally, as a mere fantastic perversion of Christianity. When Zoroastrianism and Buddhism began to attract serious attention in Europe, the real or apparent resemblances between these religions and Manichæism naturally gave rise to the theory that Manichæism is a combination of Christian with Zoroastrian or

¹ For *ḥayā*, 'bashfulness,' we should no doubt read *ḥayāt*, 'life,' as Nöldeke has suggested.

² That is, apparently, 'called into existence'—the Arab. verb *da'a* seems here to be a rendering of the Aram. *ḡrā*, on the use of which see H. Pognon, *Inscriptions mandaiques*, p. 185, note 1.

³ Here follows a short clause which is unintelligible.

⁴ See Baur, p. 262, and the *Khustaunāfi*, ed. A. von Le Coq (*JRAS*, 1911).

⁵ 'Non enim puniuntur quia peccavit sed quia de peccato non doluit' are the words of the Manichæan Secundinus, cited by Augustine (*c. Secundinum*).

⁶ *Fihrist*, p. 335. In this passage we find nothing which distinctly confirms the statement of Augustine that the souls of the Hearers and of the Wicked were believed to pass into plants and animals (cf. *Fastum*, bk. v. 10, *de Her.* xlv.). At the same time the idea of metempsychosis is not definitely excluded.

Buddhist elements, but whether Christianity, Zoroastrianism, or Buddhism formed the basis of the system was a disputed point. During the last twenty years the prevalent tendency to explain everything in the ancient world as due to Babylonian influence has led to the belief that Manichæism and all other forms of Gnosticism are simply modifications of the old Babylonian religion.

But to those who impartially examine the sources none of these hypotheses will appear satisfactory. Whatever elements Māni may have borrowed from older Oriental religions, it is clear that the fundamental principles of his system are neither Zoroastrian, Buddhist, nor Babylonian. The relation in which Manichæism stood to Christianity was undoubtedly closer, but to call Manichæism a Christian heresy would be misleading. The characteristics which Manichæism and other Gnostic systems share with primitive Christianity are not necessarily derived from any Christian source; they are, for the most part, products of a general movement which, as mankind outgrew the older religions, spread over the civilized world and assumed various forms, according to the special circumstances of each case. The general movement in question has been well described by H. Oldenberg as a shifting of the centre of gravity, in religious matters, from without to within.

'The antique conception of religion, as a sort of offensive and defensive alliance between man and God, a mutual agreement whereby the worshipper secured for himself prosperity, success, and victory over his enemies, gradually faded away, or sometimes was violently shattered, and in its place there arose a new kind of belief, which held out the hope, not of earthly enjoyment, triumph, and dominion, but rather of rest, peace, and redemption' (*Buddha*¹, Berlin, 1897, p. 8).

In the time of Māni the old heathenism was by no means extinct in Babylonia, though Zoroastrianism had become the religion of the State.¹ Moreover, large Jewish colonies had long been established in the country. Of the early history of the Christian Church in those regions next to nothing is known, but there can be no doubt that before the beginning of the 3rd cent. Christianity had taken root among the Aramaic-speaking population which occupied the Western provinces of the Parthian Empire. It is also tolerably certain that the Christians of Babylonia were divided into various parties, and that their beliefs sometimes diverged widely from the ordinary orthodox type.² In particular the sect founded by the Syrian Christian Bar-daisān (Bardesanes), who died in A.D. 222, seems to have had great influence. Ephraim Syrus goes so far as to call Bar-daisān 'the teacher of Māni';³ this is not meant to imply that Māni was ever a Bardesanist, but merely that he adopted certain Bardesanist doctrines. In any case it is essential to realize that Manichæism arose in a country where several religions were competing with one another, and where, in consequence of this, various hybrid sects had been formed. Of such sects we have already had an example in the Mughtasila, the community to which Māni's father attached himself.

The hostility of Māni to popular paganism is sufficiently shown by his strict prohibition of idolatry. That he clearly distinguished between ordinary paganism and Zoroastrianism appears from his inclusion of Zoroaster among the messengers of God. He must, therefore, have regarded the Zoroastrianism of his own age as corrupt rather than as radically false; but how much he actually

¹ The theory that Zoroastrianism did not become the State religion till after the overthrow of the Parthian dynasty (about A.D. 224) rests on no trustworthy evidence.

² T. C. Burkitt's *Early Eastern Christianity* (London, 1904) relates chiefly to the Christianity of Edessa and its immediate neighbourhood; but much of what he says probably applies also to Babylonia.

³ C. W. Mitchell, *op. cit.* p. 8.

borrowed from it is a very difficult question. To suppose that Māni's dualism was due mainly to Zoroastrian influence would be an unwarranted assumption; for, though both systems are rightly described as dualistic, they nevertheless differ profoundly. The aim of the Zoroastrian is to banish evil from the world; the aim of the Manichæan is to extract from the world that which is good. In this respect Manichæism has more in common with Buddhism than with Zoroastrianism; but from the fact that Māni represented Buddha as the communicator of a divine revelation we must infer that Māni's acquaintance with Buddhism was of a very vague kind. It is manifest, however, that in matters of detail he appropriated freely elements derived from very different quarters. Thus we can attach no great importance to his adoption of certain ancient Babylonian myths—e.g., such as relate to the nature and movements of the heavenly bodies.¹ In like manner he borrowed narratives, directly or indirectly, from the OT, although his general attitude towards Judaism was one of decided opposition. That he refused to recognize Moses as a prophet is abundantly proved;² hence in Christian writings directed against Manichæism the defence of the OT generally occupies a prominent place. It is probable that Māni's aversion to Judaism was largely due to his horror of a practice which Judaism notoriously has in common with popular paganism, namely, the sacrificing of animals.³

Towards Christianity he was much more favourably disposed. Whence he derived his information on the subject is indeed uncertain, for, though it seems probable that the greater part of the NT had been translated into Syriac some time before Māni was born, we cannot safely assume that he had access to it. Hence his peculiar teaching as to the person and history of Christ, to which allusion has been made above, may be due in some measure not to perversion of the gospel narrative on his own part, but to the beliefs of his Christian informants. In any case it is clear that some of the most essential features of primitive Christianity, in particular the ascetic view of the present world, were thoroughly congenial to Māni. But he had one great advantage over the Christians, namely, that he provided a much more secure dogmatic basis for asceticism than any previous teacher. The Christian ascetics, in condemning natural feelings and appetites, were constantly hampered by their theory of God as the Creator of the universe in general and of man in particular; the distinction which they were obliged to make between human nature as such and human nature in its present corrupt state gave rise to endless difficulties. On the other hand, the Manichæan dogma that humanity is of Satanic origin, however shocking it may be to modern sentiment, greatly simplified the problem. In this, as in some other points, Māni displayed a boldness and originality of conception which entitle him to be regarded as a genius of the first order. To represent his system as a mere patchwork of older beliefs is therefore a total perversion of the facts.

5. History of the Manichæan community.—At the time of their founder's death the Manichæans were already a numerous and highly organized

¹ Astrological myths and speculations played a considerable part in some other Gnostic systems, notably in that of Bar-daisān.

² See, for instance, the beginning of the account of Manichæism in al-Shahrastāni (i. 188). The statement in the *Fihrist* (p. 385, line 5 ff.) that Māni rejected the prophets generally, is an exaggeration based mainly on his treatment of Moses.

³ In this respect, of course, Māni did not differ from some of the early Christians. Thus the *Epistle to Diognetus*, which is usually regarded as a product of orthodox Christianity, speaks of animal sacrifices in terms of unqualified condemnation, and even in Rabbinical literature a tendency to disparage sacrifice occasionally shows itself.

sect, scattered over a great part of the Persian Empire and drawn from the ranks of various older religions. Some of them belonged to the Persian aristocracy; hence the bitterness with which the Zoroastrian priesthood opposed the new faith. Mānī's immediate successor, as head of the community, was a certain Sis (Gr. *Σίσιννος*). For many centuries Babylonia continued to be the headquarters of the Manichæan organization, in spite of repeated persecutions on the part of the Persian government. Now and then there was a king sufficiently powerful and intelligent to restrain the intolerance of the priests, but as a rule the Manichæans were treated even worse than the Christians.¹ For this no political pretext could be alleged, since the Manichæans were politically inoffensive, whereas the Christians not infrequently brought persecution upon themselves by an ostentatious display of their philo-Byzantine sentiments. The principal result of these attempts to suppress Manichæism in Babylonia and Persia was that large numbers of Manichæans took refuge in Central Asia, where they carried on a successful propaganda among the Turkish tribes.

The precise date at which Manichæism began to spread in the Roman Empire is not certain, but it was undoubtedly well known there early in the 4th century. With respect to its prevalence in N. Africa, two or three generations later, Augustine furnishes ample evidence. The Christian emperors, as we might have expected, showed themselves no less intolerant towards Manichæism than the kings of Persia. In the persecution of the Manichæans Pope Leo I. played a specially prominent part. As to the later history of the Manichæans in Europe very little can be discovered with certainty, on account of the vagueness with which the term 'Manichæan' is used by Catholic writers. Thus the charge of Manichæism was brought against the Bogomils in the Byzantine Empire and the Albigenses (*g.v.*) in Provence, but how little these accusations prove may be gathered from the fact that even at the present day the religion of the Russian Molokany has been described as a modified form of Manichæism.

On the overthrow of the Persian Empire by the Muhammadan Arabs, about the middle of the 7th cent., the followers of Mānī in the East enjoyed a period of comparative repose. Strictly speaking, they had no legal claim to toleration, for the Qur'ān, which expressly recognizes Jews, Christians, and Sabians² as capable of deserving the favour of God (ii. 59, v. 73), does not mention Manichæism. Nevertheless, it would appear that in the early days of the Muhammadan Empire no penalties were inflicted upon the Manichæans. The extreme simplicity of their cult, and in particular their abhorrence of idolatry, may for a while have served to protect them from molestation under Muhammadan rule. At length it began to be rumoured that some Muhammadans in high positions had secretly adopted Manichæism. In many cases these reports were certainly false; thus, for instance, the Khalifa al-Walid II. (A.D. 743-744), whom Muhammadan historians depict as a monster of impiety, is accused of having said that Mānī was the only prophet whom God ever

sent into the world.³ If al-Walid really uttered these words, they would prove not that he was a Manichæan, but that he knew next to nothing of Manichæism. It is, however, impossible to deny that secret conversions to Manichæism actually took place among the literary classes. Apostasy from Islām is notoriously a capital offence according to Muhammadan law (see art. APOSTASY [Muhammadan]). Hence we cannot wonder that in the latter half of the 8th cent., when under the 'Abbāsīd dynasty the spirit of religious intolerance became dominant in the Muhammadan world, a systematic attempt should have been made to extirpate Manichæism.⁴ The organizer of this persecution was the Khalifa al-Mahdī (A.D. 775-785), who instituted for the purpose a State Inquisitor, with the title of 'Inspector of the Zanādiqa.' The term *zanādiqa* (plural of *zindiq*)⁵ was used primarily to denote the Manichæans, though Muhammadan writers often employ it vaguely in the sense of 'heretics' or 'atheists.'⁶ That al-Mahdī did not make a very clear distinction between Manichæism and some other heresies may be inferred from a passage in which he is represented as elaborately justifying his policy of persecution;⁷ the accusations here brought against the Manichæans include, *e.g.*, the practice of marriage with near relatives (*nikāh al-akhawāt wa-l-banāt*), which was characteristic of the Zoroastrians (see art. MARRIAGE [Iranian]), but seems to have been altogether foreign to Manichæism.

The religious policy of al-Mahdī was generally followed by his successors. The number of persons put to death on the charge of Manichæism certainly amounted to many thousands, while Christians and Jews, though subject to various disabilities, were usually tolerated. But, in spite of all, the religion of Mānī long survived even in the heart of the Muhammadan Empire. Some two centuries after al-Mahdī, the author of the *Fihrist* tells us (p. 337, line 26 ff.) that he had been acquainted with about 300 Manichæans in Baghdād alone. But the region in which they were most numerous was Central Asia. In the territory of the Turkish tribe Taghazghaz the majority of the population professed Manichæism; a Muhammadan traveller who visited that country describes it as flourishing and civilized.⁸ When, in the reign of the Khalifa al-Muqtadir (A.D. 908-932), the Muhammadan governor of Samargand condemned to death a large number of Manichæans, they were saved, it is said, by the intervention of their co-religionist, the prince of the Taghazghaz.⁹ This is the only known case in which Manichæism became the religion of a political community. We do not know how long this state of things continued, or when Manichæism finally died out; but we may conjecture that it was swept away, like many other beliefs and institutions, by the great Mongol invasion of the 13th century.

That the Manichæan community in the course

¹ *Kitāb al-Aghāmī*, vi. 135, last line.

² See the very interesting paper by I. Goldziher, 'Salih ibn 'Abd-al-Kuddas und das Zindikthum während der Regierung des Chalifen al-Mahdī,' in *Trans. of the Ninth Intern. Congress of Orientalists*, London, 1893, ii. 104 ff. Goldziher is of opinion that the Manichæan propaganda under the early 'Abbāsīds was somehow connected with the anti-Arabian movement of the Persian nationalists (the so-called *Shu'ūbiya*). Whether there is any truth in this view may be doubted, for Manichæism had nothing to do with nationality. At the same time it is not surprising that Muhammadans should often have confounded these wholly distinct tendencies.

³ See p. 398^b, note 5.

⁴ Thus from the statement in Ibn Qutaiba, *Kitāb al-Ma'arīf* (ed. F. Wüstenfeld, Göttingen, 1850, p. 290), it is very unsafe to conclude, with G. Jacob (*Altarabisches Beduinenleben* 2, Berlin, 1897, p. 107), that there were Manichæans at Mecca in the time of Muhammad.

⁷ *Fihrist*, p. 337; Flügel, *Mani*, p. 106.

¹ The Persian officials, in dealing with persons suspected of Manichæism, sometimes adopted the curious method of requiring the accused to 'kill ants,' just as Christians, in the Roman Empire, were required to throw incense upon a heathen altar (see E. Rödiger, *Chrestomathia Syriaca* 2, Halle, 1868, p. 94).

² The Sabians (a name which, of course, has no connexion with that of the ancient Sabæans) seem to have been a sect, or possibly a group of sects, who existed in Arabia at the time of Muhammad. The disciples of Muhammad were at first called Sabians by the heathen Arabs, and in later ages the title of Sabians was falsely assumed by several religious communities, as a means of protection—*e.g.*, by the pagans of Harrān, in Mesopotamia, and by the Manichæans of Samargand, as we learn from al-Birūnī.

of its long history was not altogether free from internal dissensions might have been safely assumed. But the positive information which we possess on this subject is very scanty. We learn from the *Fihrist* (p. 334, line 4 ff.) that at a date which is not specified, but in any case some time before the end of the 7th cent., a party among the Manichæans severed their connexion with the central authority established in Babylonia and set up an independent organization; whether this schism was due to dogmatic differences or to other causes it is impossible to say. A second division took place about the beginning of the 8th cent., when a branch-sect was formed and became known as the *Miqlāsiya*, after the name of their leader *Miqlās*. The majority of the Manichæans, who remained faithful to the head of the community, a certain *Mihr*, were thenceforth called the *Mihriya*. The points in dispute between these parties seem to have been matters of discipline rather than of religious belief.

LITERATURE.—In modern times, the first serious attempt to investigate the subject was made by the French Protestant theologian I. de Beausobre in his colossal work, *Histoire critique de Manichéisme et du manichéisme*, Amsterdam, 1754-1759; in dealing with the sources he shows considerable acumen, but his book is ill-arranged and contains many irrelevant digressions. An admirable summary and examination of the evidence, so far as it was then available, will be found in the treatise of F. C. Baur, *Das manichäische Religions-system nach den Quellen neu untersucht, und entwickelt*, Tübingen, 1831. Perhaps the best general account is F. Spiegel, *Brünnische Alterthumskunde*, Leipzig, 1871-73, ii. 195-232. The works of K. Kessler—*Mani, Forschungen über die manichäische Religion*, i., Berlin, 1889, art. 'Mani, Manichæer,' in *PRE³* and *PRE³*—supply much valuable information, but they should be used with extreme caution; the author's speculations are often fantastic and his linguistic knowledge is very superficial. A. Harnack, art. 'Manichæismus,' in *EBR⁹* (revised by F. O. Conybeare in *EBR¹¹*), is largely based upon Kessler. The same may be said of the work of E. Rochat, *Essai sur Mani et sa doctrine*, Geneva, 1897. Very important contributions to the study of the subject are contained in a series of monographs by F. Cumont and A. Kugener, entitled *Recherches sur le Manichéisme*, Brussels, 1903-1912.

A. A. BEVAN.

MANIPURIS.—Officially the Manipuris are Vaisnavite Hindus. They cremate the dead, they receive the *mantra* from a recognized Hindu *guru* in many but not in all cases, they recognize Hindu festivals (but observe them a day late), they revere the cow, they are scrupulous in the matter of food, but, on the other hand, they do not practise child-marriage, they do not seclude their women, they permit divorce, they permit the remarriage of widows, they do not allow the supremacy of the Brahman, and none of the ordinary definitions of caste applies to their social order. Knowledge of the Vaisnavite doctrines is spreading with the spread of education, but they are still the most backward of all Hindu groups in Assam. With them Hinduism, adopted as the State religion by royal edict (c. A.D. 1705), is of social and political value in that it separates them from the ruder tribes inhabiting the hills and from the subordinate peoples of the valley. It provides the rites and ceremonies of everyday life. It is, so far as externals are concerned, the religion of the Meitheis. It exists side by side with the earlier faith to which in the hour of trial and trouble, be they Rāja or ryot, they turn unhesitatingly. The continued existence of this earlier faith in such vigour is a notable fact which enables the student of religious development in India to study at close quarters the process by which in Hinduism animism is tempered by metaphysics, and magic transformed by philosophy.

The historical records of Manipur, *Ningthaurol*, are valid documents for at least five centuries. It is a settled State far removed from savagery. At the present time the population consists of two main divisions—the Meitheis and the Lois. The Meitheis consist of seven clans, each divided into

numerous families, the principal clan being that known as the Ningthauja, or Royal, clan. The name Meithei now borne by all the clans is thought to have been the name of the Ningthauja clan before its hegemony was completely established. The Lois, or the conquered people, are not admitted into the Meithei confederacy, but are of similar stock to the Meitheis, and the Meitheis worship the gods of these Loi villages as much as the Lois themselves. The Meithei confederacy is an endogamous group in theory, although in practice the issue of mixed marriages is admitted. The principal order of divine beings is the *ūmang lai*. There were originally, as recent research has shown, nine *ūmang lai*, or forest gods, with whom were associated seven *lairemas*, or goddesses. There are now 364 such deities. The gods married with mortals, and their issue were promoted to divine rank. The deities have different names in different places, and there are cases where Rājas have been deified after death. The creator deity is identified both with the chief of the gods and with the snake ancestor of the royal family. Other gods are identified with the clan deities of clans still existing. Yet others are members of a special group, whose function is to guard certain areas and who are therefore known either as *maikeingākpa*, watchers over or guardians of direction, or *lamlai*, gods of definite areas. Here there is obviously a combination of ideas dating back to the time when definite areas were occupied by local groups each possessing a group deity. Then among the *ūmang lai* is the rain-god, and last is the god of the household (*Sena-mehi*), who is occasionally said to be the son of one of the seven goddesses. The function of the *maikeingākpa* deities was to keep sickness from entering the State. Each family has a special deity, male or female, who is obviously in origin a deified ancestor, but the worship of some at least of these group deities is not now confined to members of the group. The seven goddesses bear titles describing their functions. From each of them is sprung one of the clans composing the Meithei confederacy. The earth, water, grass, rice, iron, fish, gold and silver, salt, cotton, fire, and the winds are sprung from these goddesses, either directly or from their daughters. Each of these deities has a *laiphām*, or god's place, specially sacred to him or her. Some reside on hill-tops, but for the convenience of their worshippers have abodes in more accessible spots. Such *laiphām* abound, notably on the ridges and passes, and are marked by heaps of stones and leaves. In the sacred groves near the villages of their special worshippers are houses for the deities, and these groves are sanctuaries for bird and beast. The gods play the national game of polo, and a stick and ball are kept for their use. In some cases they are represented by images or material objects. They also reside in the chief official of the group, village, or family which forms their special clientele. The principal ceremony in the worship of the *ūmang lai* is called the *laiharaoba*, literally 'pleasing the god.' In every case the god has to be enticed from running water. The ceremony rouses him from a state of quiescence into activity, as is shown by his entering into some selected worshipper. The god benefits directly by the rite, which gives him strength so that he becomes thereby more potent to aid his worshippers. The process of enticing the deity varies somewhat according to the deity, and is accompanied by numerous subsidiary rites, mainly in order to avert all evil influence. Special precautions have to be taken—e.g., clean fire must be manufactured by means of a bamboo and a cane in cross friction. Dancing is a necessary accompaniment of the rite, which often includes the use of foul abuse—a feature which gives the god great

pleasure. While the ceremony is in progress, social and sexual tabus, immediately paralleled by the customs of the hill-tribes, are strictly enforced, thus indicating that the purpose of the rite is to restore the solidarity of social life and to produce in the worshippers a sense of religious exaltation. The social divisions, resting on age and other lines of social cleavage, function separately on these interesting occasions. The offerings are in some cases such as render the active participation of professing Hindus a matter of some difficulty, but the difficulty is surmounted by substituting a *Loi*, a member, i.e., of the non-Hindu section of the community, for the Hindu believer for and by whom and on whose behalf the rite is performed. The Hindu may save his conscience by merely sniffing the savour of the sacrifice, unmindful of the fate of the *Pir Alis* of Bengal, who fell from orthodoxy by mischance in that manner. In general, the tendency would seem to be to substitute offerings of fruit and flowers for animal flesh. Human sacrifice was undoubtedly practised, probably at no very distant date.

The priests of the ancient order are designated *maibas* and *maibis*, and are recruited by the admission of those who become possessed by the deity at one of the high religious festivals. Inasmuch as sickness and disease are attributed to spiritual beings, the *maiba* is also the doctor of the community, but here there are specialists, and the practical knowledge of the *maibas* is far from despicable. The wide-spread belief in possession as a token and source of abnormal power and religious authority is beyond a doubt at the root of much that is important in Hindu doctrine. There is no evidence forthcoming as yet from Manipur to show that the priesthood is hereditary or that the members of the order, like *bhakats* and *jogis*, are regarded as *jivanmuktas* (q.v.), or that their funeral rites differ from those of ordinary people. On its practical side the religion ministers to the simple needs of an agricultural community dependent on the regularity, adequacy, and seasonability of the rainfall for their subsistence. There are rites to secure rain and rites to stop excessive rain. Not the least interesting of the numerous rites to secure good fortune for the State is the annual selection of the *chāhitāba*, the person who gives his name to the year. Various means of divination are employed for the purpose of securing for this office a person who shall bring the good luck that is dependent on his personality.

Beliefs in evil spirits, who accompany animals and fish, and are ever hurtful to mankind, in beautiful sirens who lure young men and make them insane, in vampires, in witchcraft, in the power of trees and of tree-spirits to cure as to cause sickness, and in the maleficent activity of the ghosts of those who die by violence or of women who die in childbirth are also notable features of their organized religious system. The rites which are performed for the purpose of protection and exorcism in these cases are full of interesting detail, but in general outline resemble the rites performed elsewhere on a similar level of culture for similar purposes.

LITERATURE.—W. McCulloch, 'Account of the Valley of Munnipore,' *Selections from the Records of the Government of India* (Foreign Department), xxviii., Calcutta, 1859; T. C. Hodson, *The Meiteis*, London, 1909; J. Shakespear, 'The Religion of Manipur,' in *FL* xxiv. [1913] 409 ff.

T. C. HODSON.

MANITU.—*Manitu*, a word originally applied by the Eastern Algonquins to a spirit, is properly *anit*, 'spirit,' with the sign *m*, meaning any spirit or genius in the shamanistic devil-cult of the Indians, and also any *genius loci* without the implication of evil. In consequence of the teaching of the missionaries, the conception of one Great

Spirit became current among the Indians, and this was expressed by the word *kit* or *keht* prefixed to *anit*; thus *Keht-anit*, or *Kitanit* (Kittanit), to which was again added the syllable *wit*, meaning a mode of existence; hence *Kittanitowit*, 'the existence (known as) the Great Anito,' the paraphrase of God as taught by the missionaries. That the Indians themselves had evolved no such conception is abundantly manifested by the absence in any American language of a word capable of expressing the idea of God, the words used in John Eliot's Bible (Cambridge, Mass., 1663) and employed by the Penobscot Indians, *Kiehtan* and *Keitanitom*, being merely variants of this artificial compound. As such the conception was introduced in opposition to a spirit variously called *Hobbomoco*, the Evil Spirit, or *Malsum*, 'the Wolf.' Another form of the latter appears to have been evolved in antithesis to a contracted form of *Keitanitom*, namely, *Tan'tum*, as opposed to *Squantum*, the Devil ('angry god'). *Manitu* is, then, a general word for any sort of a daemonium, good or bad, and it has reached a higher significance by purely artificial means.

Nevertheless, the missionaries did not invent the idea of a good spirit, or of an evil spirit, or of a spirit-creator. What they did was to seize upon ideas already current in another form, fuse them, and present to the Indians the fusion (really confusion) as the embodiment of one unitary conception. The Indians believed that a spirit might be a good or good-natured power, and that he might be an inimical power, and they also believed that a certain ancestral spirit had always been favourably disposed towards his children, but it was far from the thought of the Algonquins that there was an ever good and supreme Great Spirit, creator and benefactor, opposed to a Great Spirit of Evil. Wherever such ideas are found, they reflect the thought inherited from forefathers who had been under Christian influence. Thus the Mandans painted upon one side of the tent a figure representing the Good Spirit and on the other side a figure representing the Evil Spirit, that they might be under the protection of both these powerful spirits; but this is merely the degradation of teaching originally strange to them. They recognized certain spirits who aided and certain spirits who opposed them, but not as in any case Great Spirits. They believed rather that the 'medicine-man' could control all spirits. Similarly, when the 'epic' of Kulōskap describes this god of the Passamaquoddies as the son of a divine unknown mother and antithetical to a twin evil spirit, as the principle of goodness opposed to a sort of Ahri-man, it must be remembered that the Passamaquoddies have long been under higher religious guidance than that of their medicine-men. Even the 'vague faith in a Supreme Spirit' ascribed to them is derived from the same source. What is original is the conception of a superior being, who is father of the special tribe or race that reveres him as leader and helper. In general it may be said that worship is not paid to any evil spirit as such, but also that worship is not paid to any good spirit as such.

The *manitu* is often confused with the *wakan* of western tribes. But the latter is often less a spirit than a power, like the *mana* (q.v.) of the Polynesians, which lies inherent in certain objects as well as in certain men. Its possession gives power; not, to the Indian's thought, a supernatural power, but a perfectly natural, although unusual, power. Between the two conceptions lies that of the ordinary *oke*, which at bottom is one with *wakan*, but is conceived as sometimes a spirit and sometimes a spiritual power. There is some corresponding word to be found in most of the languages of the American Indians, and every one of them con-

notes a power which may be called spiritual. Sometimes it is the purely shamanistic power contained in the medicine-bag, which is not really a medicine-bag at all, but a collection of objects of fetishistic nature, and sometimes it is a spirit, embodied or disembodied, such as the spirit of a waterfall, the spirit of thunder, the spirit of animals, etc. It is a mysterious force which may inhere in matter or may make itself felt as an expression of spirit. The powers of nature have it, generally winds, storms, productive earth, and animals all have it, though some in larger amount than others. Finally, men have it in certain cases. But there is no sharp distinction between this power and that found in spirits proper, where it becomes individualized. It is this very power that is the 'medicine' of the conjurer and nature-subduing priest. Whether it be called *manitu*, *oke (oki)*, *wakan*, or even *ku* (in Maya form), it is always the same thing under a shifting terminology, except that among certain tribes it is more apt to be conceived as impersonal and among others as personal. *Manitu* is generally personal, *wakan* is generally impersonal, but the alternate use of either is not unusual. *Wakan* has been defined by Brinton (*Myths of the New World*, p. 45) as 'supernatural in its etymological sense,' in that it means in the forms current among the Iroquois and Dakotas, namely, *oke* and *wakan* respectively, something 'above,' and Brinton interprets this as *super* in the sense of supernatural. But it is more probable that the word means *super* in the sense of superior. These Iroquois and Dakota forms are etymologically allied, and a possible connexion with Sioux *oghee* may be admitted; but it would be unprofitable to attempt, with Brinton, to connect these terms with the above-mentioned *ku* of the Mayas. The 'Quaker' of the Powhatans is another form of the same word, the quaker gods being, however, not the higher but the lesser spirits. This word, like *Tantum* and *Squantum* above, is an adaptation from approximately corresponding Indian sounds (Quaker is *qui-oki*, 'small spirits') and contains the *oki* of the Iroquois and Algonquins, but it is not probable that it is one with the southern *huaca*, *ku*, etc. The Algonquin *oki* means a spirit of any sort—e.g., the spirit of a body of water, or the spirit of winter—and expresses also the idea of a distinctly demoniac power ruling the winds, but not in a devilish manner; for, especially among the Hurons, the *oki* gives good fortune and regulates the winds for the benefit of the good Indian. It also implies a ghost, and in this respect differs from the conception of *anit (manitu)*, though in other respects it is difficult to perceive any distinction between the *anit (manitu)* and the *oki*; perhaps, as appears from the geographical distribution of the two words, the *anit* was confined to the East, while the *oki* penetrated from the West to the Eastern tribes.

The *manitu* of greatest authority among the Algonquins was Michabo, and an analysis of this peculiar being shows that he was far from being a supreme spirit. Like many of the Indian spirits, he was a very superior animal, Michabo meaning 'great hare' (originally *manibozho*). This *manitu* was revered from the Northern line of the States to Virginia and from the East as far West as the Mississippi. He was represented as the originator of all the system of conjuring and exorcizing which makes the real science of the medicine-man; he ruled the winds and guarded his people, but was as often tricked and deceived as he in turn tricked and deceived; he was for the most part a humorous buffoon, whose exploits amused the Indians, as those of Brer Rabbit amuse the Negroes. On the other hand, he is referred to as 'the hare that made the moon,' and he is even said to have created

the earth. But as creator he is not dignified, nor even serious. It is more natural to him to hunt, and, when autumn comes, to smoke his last pipe before turning in to sleep through the winter. It is the smoke of his last pipe that makes the haze in the air of autumn. That he originally came from the East, and, according to the earlier accounts, sends (not creates) the sun and moon out of the East, has led to the ingenious conjecture that Michabo has come from a confusion of *wabos*, 'hare,' with *wabi*, 'light' (Brinton, *Myths of the New World*, p. 165). There is the greatest confusion in the form of the name now known as Michabo, which appears as Missibizi and Messou as well as Nanibozho and Manibozho, apparently because the name was sometimes rendered *michi* ('great') and sometimes *manitu* ('spirit'), with *wabos*, 'hare.' That is, Michabo was thought of as the 'spirit-hare' or as the 'great hare,' and this 'hare,' according to Brinton, is a later Indian mistake for 'light.' Although the words are alike, and *wabi* means 'white' (*wapa* means the eastern light), yet nothing is more apt to lead one astray than reliance upon such etymological chances. We are, then, far from agreeing with Brinton when he says that 'beyond a doubt this is the compound in the names Michabo and Manibozho which therefore means the Great Light, the Spirit of Light, the Dawn' (*ib.* p. 166). Much as Brinton has done for American studies, he wrote under the dawn-myth influence of his day and probably laid more stress upon etymology than upon ethnology. The truth is that the 'great hare' is the interpretation best justified in accordance with Indian belief and tradition. Michabo was a demoniac animal of kindly disposition and endowed with a great magician's knowledge and cunning, which, however, could not keep him out of ludicrous difficulties. He was not a god, still less a god of goodness, but, as has been said of similar Indian spirits, a spirit of good-nature. He is the son of the wind, one of four brothers born at a birth, but he took command of them. As they were born North, South, East, and West, it seems as if he represented one of the four winds. Yet the early missionaries declared that he and the four winds were the chief Algonquin gods. As expressed in the account of the year 1616, Michabo and the four winds were the only gods that the Algonquins had at that time. Further, it must be remembered that Michabo is sometimes portrayed (as among the New Jersey Indians) as a devil, while at others he is represented as the 'ancestor'—a term which has often led to the false conclusion that believers in an ancestor-spirit must necessarily believe in a creator-god. Other tribes also have ancestral or at least specially revered animals, such as the bear, deer, and wolf of the Mohicans. None of the Western or Southern American Indians had the conception of a Creator-God, but many of them derived their stock from certain animals. To this class of animal-gods Michabo, the greatest *manitu* of the East, appears to belong. The history of the brothers is told in various forms in various tribes, and has been interpreted as additional evidence that, when there is a good and a bad brother, we have a fundamental dualism, which, however, is unsubstantiated by any close analysis even of the tales as handed down. In the Iroquois version there are two brothers, the Beautiful Spirit and the Ugly Spirit or Good Mind and Bad Mind, as interpreted by the missionaries. But these are in reality the two brothers, 'White' and 'Dark,' Ioskeha and Tawiskara, who contend with one another till White Spirit conquers and rules from the East. Both are grandchildren of the moon, but Ioskeha becomes 'father of mankind'—an expression which means that he is the ancestor of

the Iroquois. He destroyed the frog, which had made earth a desert by swallowing all the water, and he learned the wisdom of the tortoise which supports the world, namely, how to make fire. Ioskeha gave this knowledge to man. Yet here the brother is not represented as an animal; it is a simple conflict of white and dark, or light and darkness, a culture-myth which the Algonquins kept in animal-form, while the Iroquois preserved or invented it without basing the myth upon anything save the natural antithesis of light and darkness (cf. art. DUALISM [American]). It is this myth that caused the belief in American Indian dualism to receive wide acceptance, as it was thus originally interpreted by Brébeuf in 1626.

As the word *manitu* has been widely used by ethnologists, it has naturally lost somewhat its original signification and at the same time has gained a new connotation, so that it has come to mean special forms of spirit-power more or less unknown to the Algonquins. Thus it has come to denote the personal guardian-spirit of certain Western tribes which has occasionally arisen out of the personal guardian of an individual. The mythical ancestor of a village at a certain period in his life retires into solitude, and after fasting and prayer is rewarded with the vision of a certain animal, which then becomes his totem. This is adopted by his clan; and, when the clan becomes part of a larger tribal organization, it still remains as the guardian of the clan, though with a marked tendency to become simply a totem-crest. The tutelary guardian-*manitu* thus becomes a mere symbol. Sometimes such crests become merely the property of certain families. The ancestors who received the totem-*manitu* received with it the powers or privileges still retained by the *protégés* of the spirits, who continue to appear to the young men of the tribe, and the possession of these secrets forms the basis for the secret societies widely spread among the Indians of the North-West. This is the 'individual totem' acquired by every youth at puberty, which, when the organization of the clan is in a decayed state, is no longer identical with that of the ancestor and is no longer inherited. The youth at this period wanders from his father's lodge and in a secluded spot fasts and cries to the spirits, inviting any one of them to become his spiritual patron (cf. art. COMMUNION WITH DEITY [American]). During this period, when he falls asleep, the first animal, bird, or reptile of which he dreams he considers to be the one designated by the Great Spirit of the tribe for his mysterious protector during life. He then returns home, kills such an animal as he has seen in his dream, and preserves its skin in his mystery-bag ('medicine-bag'). It is possible that the individual *manitu*, though in some cases a later development than the clan-totem, is in other cases, notably among the Eastern tribes, of independent origin and as antique as the totem-*manitu*. Even among the Eastern Algonquins the acquisition of a special *manitu*-spirit in animal form by the youth who fasts is not well known.

LITERATURE.—G. Catlin, *The North American Indians*, London, 1842; D. G. Brinton, *Myths of the New World*, New York, 1888; *The American Race*, do. 1891; A. H. Keane, *Man, Past and Present*, Cambridge, 1899; *Relation de la nouvelle France pour l'an 1637* (and subsequent years); H. Webster, *Primitive Secret Societies*, New York, 1908. The earliest source of information is contained in the *Relations* of the early missionaries. Brinton and Webster (op. cit.) give full bibliographies. The *Annual Reports* of the Bureau of American Ethnology should be consulted for modern conditions.

E. WASHBURN HOPKINS.

MAÑJUŚRĪ.—Like the majority of Buddhist 'gods,' Mañjuśrī is represented under various aspects: (1) in the Great Vehicle, or Mahāyāna (q.v.), properly so called, he is a *bodhisattva*, an entirely Buddhist personage in definition if not in

origin (his origin is obscure; cf. AVALOKITEŚVARA); (2) in the 'Tāntric Vehicle,' which is of very early date and is not always distinguished from the Great Vehicle proper, Mañjuśrī becomes one of the names, and often the principal 'exponent,' of the Supreme Being; (3) the cult of Mañjuśrī, originating in India, took a peculiar development in China: it probably spread from China into Nepal, where Mañjuśrī is the mythical giver of civilization.

1. As *bodhisattva*.—The most ancient of his numerous names is perhaps Mañjughōṣa, 'pleasant voice.' His usual epithet is *kumāra*, or *kumāra-bhūta*, 'young man,' 'royal prince';¹ this title, whatever its origin, means technically a *bodhisattva* at the stage when, having received consecration (*abhiṣeka*) as a prince, he is associated with the power of a Buddha and becomes his right arm (see BODHISATTVA, vol. ii. p. 748*). He is named in the first rank of *bodhisattvas*, before Avalokiteśvara, at the beginning of the *Lotus of the True Law* (translated into Chinese A.D. 147–186), where he is represented (ch. xi.) as a great converter. The 'scholastic' *sūtras* and devotional works give him as a type of *bodhisattva*, relate his vow, attribute to him moral counsel for the conduct of true believers of the Great Vehicle, and celebrate his power.² Legend associates him with the revelation of the books of the *Prajñāpāramitā*.³ Revealer of the *Prajñā*, god of the world, he is the patron of the Great Vehicle, of the 'second dispensation,' and becomes the god of wisdom, a personage of high importance. According to Fa-Hien (see J. Legge, *Fa-Hien, A Record of Buddhistic Kingdoms*, Oxford, 1886, p. 46), the followers of the Mahāyāna worshipped the *Prajñā*, Mañjuśrī, and Avalokiteśvara. We have many images of Mañjuśrī; the most ancient, with two arms, are those which make his characteristic mark the *Prajñā* carried upon a lotus.

2. As Tāntric god.—It is in the Tāntric section of the Tibetan scriptures (*Regyud*, *Kanjur* as well as *Tanjur*) that Mañjuśrī takes an extraordinary development.⁴ Half a dozen *Tantras* (*Kanjur*) bear his name; among them is 'The List of the true Names of Mañjuśrī Jñāna-sattva.'⁵ The last term, 'Essence-of-knowledge (!),'⁶ is opposed to the name *bodhi-sattva*, and is more dignified. We find it again in one of the numerous magic rituals devoted

¹ On this expression see H. Kern, in *SBZ* xxi. [1884] 4; cf. *Saddharmapuṇḍarīka*, ed. H. Kern and B. Nanjio, Petrograd, 1908 ff., p. 66: 'A certain Buddha will live twelve cosmic ages, not counting the time he is *kumāra*.'

² Various legends are told of his former human lives, but they are not so developed as the legends relating to Maitreya. See (1) E. Chavannes, 'Le Sūtra de la parole occidentale de l'inscription de Kiu-yong Kuan,' in *Mélanges Harlez*, Leyden, 1896, p. 75 (this *sūtra* is a *dhāraṇī*, sacred to Vairocana, 'the Brilliant,' the Buddha to whom Mañjuśrī is sometimes subordinated); (2) the *Mañjuśrīgūṇakṣetrayyūha* (translated into Chinese A.D. 300), where Mañjuśrī tells how he took his *bodhi-sattva* vow: 'I do not wish to become a Buddha quickly, because I wish to remain to the last in this world to save its beings'; 'In all my existences I wish to follow the example of Akṣobhya and be a monk' (*Śikṣāsamuchchaya*, Petrograd, 1902, p. 13); (3) the *Mañjuśrīvikrīḍita* (translated into Chinese in 318), a book patronized by the Mādhyamikas, giving the story of the conversion of a light woman by Mañjuśrī in the guise of a handsome young man; the only real sin of the *bodhisattva* is the sin of hatred (*Śikṣāsamuchchaya*, p. 149). All these works are scholastic, as is the *Bodhipakṣanirdeśa*, an account by Mañjuśrī of the 'wings' (*pakṣa*) of illumination. The devotion to Mañjuśrī, the virtue of his name, which protects against all female birth, and his glorification as the hero (*śūra*) are to be noted. Mañjuśrī is one of the saviours and patrons invoked in the 'Stanzas of Good Practice' (*Bhadracharyāgāthā*), one of the classical texts used every day by the Buddhists of the Great Vehicle (*Śikṣāsamuchchaya*, pp. 297, 385; *Bodhicaryāvatāra* [Introd. à la pratique des futurs Bouddhas, Paris, 1907, p. 8 f.]).

³ Tāranātha, *Gesch. des Buddhismus*, tr. A. Schiefner, Petrograd, 1899, p. 68.

⁴ See P. Cordier, *Catalogue du fonds tibétain de la Bibliothèque nationale*, iii., Paris, 1810.

⁵ *Nāmasaṃgīti*, ed. J. P. Minayeff, Petrograd, 1887.

⁶ Probably this term has been invented on the model of *bodhisattva* for the purpose of implying something more sublime, and yet more mysterious, than the word *bodhisattva*. This heaping up of terms is characteristic.

by the *Tanjur* to Mañjuśrī: 'spell (*sādhana*) of the Ādibuddha, the Essence-of-knowledge Mañjuśrī,'¹ which begins as follows:

'Homage to the Buddha of the beginning, the middle, and the end, free from every stain of sin, a body immaculate by nature, primordial Buddha.'

*Sādhana*s (spells) are magical operations by means of which the worshipper brings a deity into his presence in order to identify himself with the deity—which is not difficult to accomplish, since every man is essentially nothing but deity, though particularized and stained. These operations include 'diagrams' (*maṇḍalas*), 'geometrical figures formed of squares and circles, more or less ornamented, and inscribed within each other, upon which is ranged an endless succession of deities' represented by magic syllables.² Mañjuśrī often occupies the centre of these *maṇḍalas*.

Tāntric gods have two aspects, a 'right hand' aspect and a 'left hand' (or erotic) aspect. Under the former Mañjuśrī is called 'Lord of speech of the ontological Universe' (*Dharmadhātuvāgīśvara*); under the latter he is 'Diamond-Love,' 'Thunderbolt-Love' (*Vajrānāga*).³ His right-hand aspect is seen from the following:

'Qu'on s'identifie à Dharmadhātu-Vāgīśvara, qui a le corps tout blanc, quatre faces, huit bras: les cinq Bouddhas [who represent the five kinds of knowledge of which Mañjuśrī is the synthesis] ornent sa couronne de joyaux... les deux mains (originelles) font le geste de l'enseignement; les trois autres de droite tiennent le glaive, la flèche, la hache; les trois autres de gauche, le livre de la Prajñā.'⁴

Here, Foucher goes on to say, the book, the four arms (the eight is simply a multiple), and especially the four faces, suggest representations of Brahmā. Grünwedel remarks that Mañjuśrī and Brahmā share the favours of a common *śakti* (divine energy, feminine aspect, of a god), *Sarasvatī*.⁵

It is noteworthy also that the *Nāmasaṃgīti* (viii. 19) gives Brahmā among the names of Mañjuśrī. As soon as the Buddhas and *bodhisattvas* became 'gods,' they inevitably became gods after Hindu fashion: Avalokita has more likeness to Siva, and Mañjuśrī to Brahmā. Mañjuśrī always occupies an important, and often the chief, place in Buddhist polytheism.

3. As developed in China.—E. Huber was the first to observe that the canon of one of the Buddhist schools of the Little Vehicle, or *Hinayāna* (*q.v.*), contained traditions foreign to India—*e.g.*, the legend of a town of Khotan—and he wondered, therefore, whether 'this canon had not been considerably augmented and modified in Turkestan itself.'⁶ It is now certain that 'Serindia'⁷ and, later, China itself collaborated in the development of Buddhism. The story of Mañjuśrī, who, according to the Chinese pilgrim,⁸ now dwells in China, who is represented in the miniatures of the Nepālese MSS as a god worshipped in China,⁹ and who, according to the Nepālese tradition, came from China to Nepāl, is interesting from this point of view.¹⁰

MĀRA.—It seems that during the so-called late Vedic period, new gods, gods of a new style, were created. They wear, on the one hand, an aspect which is popular and mythological, and, on the other, one which is sacerdotal and esoteric; they are the expression of a pantheistic and pessimistic philosophy; but they, nevertheless, appeal to devotion and worship. Brahmā-brahman is the most eminent among them. Kāla, 'Time,' creator and destroyer, Kāma, 'Desire,' a cosmical entity, and many others may be embodied in the figures of the popular pantheon. Our Brāhmanic information on these gods is, as a rule, scanty, and, in many cases, we are largely indebted to Buddhist or epic sources.

This is the case with Māra, who is not known in the Atharvaveda, that aristocratic compendium of demonology; he is an important figure in Buddhism, and the Upaniṣads show the elaboration of the ideas which constitute his frame in Buddhism.

The Atharvaveda joins together Yama, the old Aryan king of the dead, Mrtyu, Death, Agha Māra, the evil slayer or hateful murderer, Nirṛtha, the destroyer, and Sarva, the prototype of Siva (vi. xciii. 1). Elsewhere (xi. viii. 19) it mentions the 'deities called Misfortune, or Ill, or Evil' (*pāpmāno nāma devatāḥ*), and has deprecatory invocations (vi. xxvi. 1-2, xciii. 2, xvii. i. 29) to Misfortune (*pāpman*). Māra, or Mrtyu, is Death personified, the god who kills, and he has already acquired his Buddhist qualification *pāpman*, 'the evil one' (Pāli, *pāpiman*). With this dark figure may be identified Yama or Sarva, also a mythological god.

That is what we know of Māra from the oldest literature. He quickly acquired a metaphysical and moral significance. For the thinkers of the age of the Brāhmanas and of the Upaniṣads, who admit transmigration and are anxious to find the path to the other shore of transmigration, Māra, or Death, may be regarded as the sovereign of this subsolar universe: whoever obtains a passage beyond the sun reaches the realm of immortality. For the common people, the recurrence of birth and death is the rule; the sun is Death. The legend of Nachiketas in the *Kāthaka Upaniṣad* is of importance for the history of Death: a young Brāhman descends to Hades, and, unmoved by all promises of transient pleasures, wrings from Yama, the god of death, the secret of that which lies beyond death and the means of liberation from death, this only means being the knowledge of Brahman which confers immortality. H. Oldenberg rightly compares this Nachiketas-Yama legend with the Buddha-Māra legend. Buddha also rejects the offers of Māra in order to obtain the *summum bonum*; but, whereas Yama is benevolent and himself reveals the liberating truth to Nachiketas with only the habitual jealous reluctance of a god, Māra is the evil one, the tempter.¹

In the Buddhist scriptures all these premisses are fully developed. Māra actually assumes the rôle of the sovereign of the world, both of men and of gods; god of death, he is also the god of the living, who are only the food of death; he is the god of re-birth. Māra is Kāma, 'Desire,' since desire is the *raison d'être* of birth and death; and, because

¹ Oldenberg, *Buddha*, tr. Hoey, p. 54.

Buddha is the deliverer from death and birth, Māra is the personal enemy of Buddha and Buddhism, the evil one, the tempter of Buddha and Buddha's disciples.

The dogmatic position of Māra is clear in all our texts: Māra embodies desire, the universal fetterer, the sensual life both here and in the other world.

In scholasticism three Māras—*devaputra māra*, the deity Māra, *marānamāra*, Māra as death, and *kleśamāra*, Māra as vices and passions—are distinguished. In ancient times these Māras were confused. Māra is not an allegory in the Pāli stories of temptations; he is a demon; he is spoken of as Namuchi, a Vedic demon killed by Indra.

It follows that mythological features are not wanting, even in the oldest tales of the Pāli canon. They are not, however, predominant. We are actually confronted with the temptation of Buddha by Māra's daughters; but these daughters are Desire, Unrest, Pleasure (*Tanhā*, *Arati*, and *Rati*). It has been said that these stories—the intervention of Māra in order to make the future Buddha abandon his austerities (a common topic in the *Mahābhārata*: gods grow jealous of the power acquired by penitents, and dispatch fair damsels to trouble their meditation), or in order to make Buddha reach *nirvāṇa* prematurely—are only poetical descriptions of the *crises de conscience* of Śākyamuni. This view is by far too rationalistic. Such stories, it may be, were looked upon in this light by some philosophers or 'modernists,' but it is safer to admit that the Buddhists believed in a divine enemy of the eternal welfare of men, and embodied this enemy in the traditional god of death. Mythical and folk-lore accretions, as well as scholastic concoctions, naturally follow from such a belief. Monks and nuns, especially when living in the 'hermitages,' knew that Māra could appear to them under any form, and ensnare them into philosophical discussions.

The Sanskrit sources, late when compared with the Pāli ones, but not insignificant even for the restitution of the passages which they have in common with Pāli, indulge in much more dramatic and would-be poetical descriptions of Māra's attacks upon Śākyamuni. Some episodes are entirely unknown in the *Tipitaka*, viz. the battle for the *bodhi*-tree, the possession of which, for the compilers of the *Lalitavistara*, seems to be almost identified with the possession of the *bodhi*, the Enlightenment, itself.

It has been pointed out that even in the Pāli canon the Māra-stories show a gradual development, and that the inventions to be found in the more modern biographies of Śākyamuni, the *Lalitavistara* and the *Buddhacharita*, mark a further point in this development. There is truth in this statement—the multiplication of Māra's daughters and their counter-attacks, a large part of the *mise en scène* of the *Lalitavistara*, are not archaic—but the course of the development is not necessarily a chronological one. Less or more mythological versions may be productions of the same age in different circles.

It appears that the Māra folklore has been more luxuriant than can be judged from the Pāli canon. Some bits of popular folklore which have found their way into the authorized literature may be regarded as fragments of a larger cycle. It is only by a mere chance that we know that Māra roams everywhere, 'in the visible shape of murky smoking,'¹ to catch the souls of the dying.

It is worth while mentioning that Māra, who is often associated with *Brahmā* ('the world of men and gods with *Brahmā* and Māra'), has no fixed

Original sources, Vedic, Pāli, and Sanskrit, have been studied by Senart and Windisch.

L. DE LA VALLÉE POUSSIN.

MARCIONISM.—1. The founder.—According to the earliest and most reliable accounts, Marcion was a shipmaster (*navoclerus*, or *παιρης*) of Pontus, and may have been a native of Sinope. The story¹ which makes him the son of a Christian bishop in that region, and declares that he was excommunicated by his father for corrupting a virgin, is, on the whole, improbable, and may have been based on a misunderstanding of some phrase about his corrupting the doctrinal purity of the Church. It is possible that he was born and bred a pagan, and was converted to Christianity about the time of his journey to Rome. But the fact that his system of doctrine is based entirely on the Jewish and Christian Scriptures makes it, on the whole, more probable that he spent his youth in a Christian atmosphere.

Marcion arrived in Rome in or near A.D. 140—'after the death of Hyginus,' according to Hippolytus (see Epiph. *Hær.* xlii.). Whether or not a recent convert, he at first became a zealous member of the Roman Church, to which, according to Tertullian (*de Præscr.* 30), he presented the sum of 200,000 sesterces. But before long trouble arose through his falling under the influence of the Syrian teacher Cerdo, who had a certain connexion with the Gnostics, and whose distinctive doctrine was that 'the God proclaimed by the law and the prophets was not the father of our Lord Jesus Christ. For the former was known, but the latter unknown; while the one also was righteous, but the other benevolent' (Iren. *Hær.* i. xxvii. 1).

It is easy to see how Cerdo's teaching would lead Marcion into uncomfortable relations with the orthodox Church; and it is not surprising to learn that his gift of money was returned to him, and that he was placed outside the pale. This took place about the year 144, and from that date the Marcionite propaganda must have been active, since Justin Martyr tells us in his *First Apology* (c. 150) that Marcion

'by the help of devils has caused many of every nation to speak blasphemies, and to deny that God is the maker of this universe, and to assert that some other being greater than He has done greater works' (xxvi.).

Tertullian, who was writing his *adversus Marcionem* in 207 or 208, places the activity of Marcion in the reign of Antoninus Pius ('sub Pio impius'). Irenæus (*loc. cit.*) says that Cerdo came to Rome in the episcopate of Hyginus (c. 137–141), and that his successor Marcion flourished under Anicetus (154–166). In view of the different statements, we may conclude that Marcion became active as a teacher some years before 150, and that his activity ended before or about the time of the death of Anicetus. For Marcion's own death no date can be definitely assigned.

2. The doctrine.—The teaching of Marcion may be reviewed under five heads: (a) theology proper, or the doctrine of God, (b) Christology, (c) criticism

¹ This account, which was unknown to Tertullian, may be traced through Epiphanius to Hippolytus. The Armenian version is thus given by Eznik (5th cent.): 'This Marcion was a native of Pontus, the son of a bishop. And having corrupted a virgin, he went into exile on account of his father's having expelled him from the Church. And going to Rome at that time to seek absolution (lit. penitence) and not obtaining it, he was irritated against the Faith' (*Against the Sects*, bk. iv.).

and exegesis of the Scriptures, (d) the application of religion to practical life, and (e) the ritual of worship.

(a) *Theology*.—In theology Marcion's main assertion was that the just God of the law and of the OT generally was other than and inferior to the God revealed in Jesus Christ, the chief attribute of the latter being goodness or loving-kindness. The idea of a dual godhead seems to have come from the Gnostics through Cerdo, and this fact may be connected with the (otherwise doubtful) statement by Clement of Alexandria (*Strom.* vii. xvii. 107) that Marcion, 'being contemporary with' Basilides and Valentinus, 'companyed with them as an elder with younger men.' At all events, Marcion's theology differed from the Gnostic in excluding any doctrine of æons, and, indeed, any element which could not be derived from his interpretation of the Jewish and Christian Scriptures.¹ His teaching was not in any sense pagan. His lost work named the *Antitheses* contained the proofs of his theology, which were attained by placing utterances by and concerning God in the OT side by side with opposed statements by Jesus and Paul about God in the NT.

He further differed from the Gnostics by abstaining from any attempt at a completed speculative system. The contrasts which he drew out were final, and he did not seek to harmonize them in a higher principle; for him the two *apxal* were and remained completely separate, in spite of the moral superiority of the God of the NT. The logical weakness of the position is well shown by Tertullian. On the one hand, the introduction of number or plurality was inconsistent with the essence of true godhead; and, on the other, the interposition of the good God—'the Stranger'—in a world which had been created by and belonged to another was an obvious stumbling-block.

(b) *Christology*.—The mode of self-revelation employed by the good God was, according to Marcion, that 'in the 15th year of the reign of Tiberius He (i.e. Jesus Christ) came down to the Galilaean city of Capernaum'—to which Tertullian adds the explanation, 'of course meaning from the heaven of the Creator, to which He had previously descended from His own' (*adv. Marc.* iv. 7). The relation of Christ to the good God His Father does not seem to have been otherwise defined than by the idea of sonship. Of the human experience and suffering of Christ Marcion took a wholly Docetic view. Rejecting the Gospel accounts of a human birth, he represented the supposed sudden appearance of Christ in the year 29 as an entirely new phenomenon, without any root in the past history either of the people or of the human race. And, while he regarded the life of Christ on earth and His crucifixion as the means of salvation for men, he nevertheless believed that our Lord suffered only in appearance. On the other hand, he did accept the historical facts narrated in those portions of the Third Gospel (see below) which he believed to be genuine, and shared the belief of his time in other elements of the Christian creed; thus he laid great stress on our Lord's descent into Hades and His preaching to the men of former generations who were there confined.

Again, as he believed in two Gods, he also recognized two Christs. According to him, the Messianic prophecies of the OT were true predictions, referring, however, not to Jesus Christ but to another Messiah who was to appear later as the messenger of the just God of the OT. But his exposition of the work of this Messiah does not

¹ Marcion appears to have held the independent, though positive, existence of *án*, or matter. He certainly did not attribute to it the degree of activity which some of his followers did. In his view the Creator (i.e. the just God or God of the law) was the ruler of the whole material universe.

seem to have proceeded beyond applying to him the language of OT prophecy.

(c) *Criticism and exegesis of the Scriptures*.—In his dealing with the Scriptures Marcion combined a high estimate of the objective truth of the OT as a historical document with a startling and audacious subjective criticism of the NT. His mode of handling each was largely dictated by the necessities of his position. Convinced of the fundamental discrepancy between the theologies of the OT and of that which he regarded as the genuine kernel of the NT, he naturally laid stress on every narrative, discourse, or even verse in the Jewish Scriptures which seemed to him to set forth the Jewish as opposed to the Christian view. His treatment of the OT has at least one great merit—he rejected allegorical explanations such as were current among the Gnostics; he took the history literally, and laid full stress on its distinctive characteristics. In the NT, on the other hand, while he similarly preferred the literal to the allegorical explanation, he proceeded ruthlessly in the way of cutting out such books or portions of books as did not fit in with his view of the facts, and in re-editing the text to any extent on subjective grounds. As the Third Gospel seemed on the whole to suit best the requirements of his theology, he adopted this, though in a mutilated and much altered state, as the only reliable portion of the historical writings contained in the NT. To him Paul was the only true apostle of the Master, and he believed that the Third Gospel—which he did not call Luke's—had been written under Paul's supervision and expressed Paul's view of the life of Christ. The other Evangelists¹ he regarded as handing on a false Judaic tradition which had grown up among the Twelve, and he therefore rejected their works *in toto*. In the rest of the NT he accepted only ten Pauline Epistles, rejecting the Acts, the Pastoral Epistles of Paul, and the rest of the NT writings so far as known to him. And in the ten Epistles he used considerable freedom in rejecting or altering passages which conflicted with his views. An understanding of his detailed treatment of the NT can be best obtained by reading the fourth and fifth books of Tertullian's *adv. Marcionem*.

(d) *The application of religion to practical life*.—It is easy to see that, however arbitrary and subjective was Marcion's attitude in relation to the Christian tradition and its literature, his main interest in the matter was not speculative or theoretical, but religious and practical. This is shown by the fact that he attempted no higher synthesis, but allowed what seemed to him the irreconcilable opposition between the Creator and the NT God to continue until the end of time. To him the means of salvation was faith in Jesus Christ and in His Father. This faith was to issue in an ascetic life which despised and rejected the works of the Creator, so far as the conditions of human life allowed. Thus the celibate alone were admitted to baptism. A further consequence of this attitude was that Marcion denied the resurrection of the body; the salvation through Christ was for the soul and spirit only. The moral earnestness of the Marcionite community was proved both by the zeal of its propaganda and by the large number of its martyrs.

(e) *The ritual of worship*.—The aim of Marcion was to found not a school, but a church. Accordingly, in points of ritual he for the most part followed the usage of the orthodox Church, but admitted catechumens to the same privileges in Church worship as baptized persons, and forbade the use of wine in the eucharistic service. Some

¹ There is no definite evidence as to whether Marcion knew the Fourth Gospel.

of the peculiarities of usage in the Eastern branch of the Marcionite church may be gathered from the statements of Eznik (bk. iv.):

'He allows not one baptism only, but three after (successive) transgressions, and in place of catechumens who have died he urges others to be baptized. And he has the boldness to direct women to administer baptism—which no one from the other sects has taken upon himself to do—but not to administer a second or a third baptism, nor (does he venture) to admit women to be priests,' etc.

Marcion's followers seem to have elevated him (at least virtually) to the rank of bishop, and the constitution of the sect was probably episcopal, though on this point we have not much information.

3. **Later developments.**—Among the followers of Marcion some, like Potitus and Basilicus, followed their master in recognizing two principles or divine beings; but some, like Apelles, held only one ultimate principle, the God of the NT, while others accepted three independent principles—the Good, the Just, and the Evil. Of these different teachers Apelles is the most interesting. Starting from the Marcionite opposition between the Creator and the NT God, he seems to have regarded the former as 'an opposing spirit' who owed his existence to the supreme God. The material world, in the view of Apelles as of Marcion, was created by this 'opposing spirit,' and so Apelles also taught an ascetic view of life. On the other hand, he rejected Marcion's Docetism, and held that Christ really felt and suffered in His earthly experience, although He did not possess a truly human nature in the orthodox sense. But he maintained that in the Crucifixion lay the hope of man's salvation.

The doctrines of Marcion were for a time widely spread both in the West—Rome and Italy—and in the East—Arabia, Syria, Armenia, Cyprus, Egypt, and perhaps even Persia. After sharing in the persecutions inflicted on the Church, particularly under Diocletian, the Marcionites seem to have enjoyed a short period of toleration early in the 4th cent., to judge from an inscription of A.D. 318–319 discovered a few miles south of Damascus, which records the existence of a village community of Marcionites. But their worship was soon prohibited by Constantine. In the West they seem early to have succumbed to the more powerful propaganda of Manichæism (*q.v.*), but in the East they may be judged to have exerted a stronger and more enduring influence. We infer from the attention given to them in the controversial works of Ephraim, and from the careful account of their doctrines left us by Eznik, an Armenian writer of the 5th cent., that they counted for much in Eastern Christendom. So late as the 10th cent. they are mentioned in Arabic by the *Fihrist*.

As the best illustration of the nature of Eastern Marcionism, we subjoin a literal translation of Eznik's Armenian account:

'Marcion wrongly introduces a strange element (lit. strangeness) in opposition to the God of the Law, positing with him also Hyle, by way of essence, and three heavens. In the one (they say) dwells the Stranger, and in the second the God of the Law, and in the third his armies; and in the earth Hyle, and they call her the Power of the Earth.

And he so orders the world and the creatures, as the law says. But he adds that in union with Hyle he made all that he made, and Hyle was as though a woman and a wedded wife. And after making the world, he went up together with his armies into heaven; and Hyle and her sons remained in the earth, and they each held authority—Hyle in the earth, and the God of the Law in heaven.

And the God of the Law, seeing that the world is beautiful, thought to make in it a man. And going down to Hyle in the earth, he said, "Give me of thy clay, and from myself I give spirit, and let us make a man according to our likeness." On Hyle giving him of her earth, he moulded it and breathed into it a spirit, and Adam became a living soul, and therefore was called Adam because he was made from clay. And moulding him and his wife, and putting them in the garden (as the law says), they continued giving him commands, and rejoiced in him as in a common son.

And (he says) the God of the Law, who was lord of the world, seeing that Adam is noble and worthy of ministration, pondered

how he could steal him from Hyle and appropriate him to himself. Taking him aside, he said, "Adam, I am God, and there is no other, and beside me thou shalt have no other god. But if thou takest any other god beside me, know that thou shalt surely die." And when he said this to him and mentioned the name of death, Adam, struck with fear, began by degrees to separate himself from Hyle.

And Hyle, coming to give him commands according to custom, saw that Adam was not obeying her, but was purposely holding aloof and not coming near her. Then Hyle, amazed in her mind, knew that the Lord of Creatures had deceived her. She said, "From the source of the fountain its water is befouled. How is this? Before Adam is increased with offspring, he has stolen him by the name of his godhead from me. Since he hates me, and has not kept with me the covenant, I will make many gods, and will fill with them the whole world, that he may enquire who is God and not find out."

And she made (they say) many idols and named them gods and filled the world with them. And the name of God, that of the Lord of Creatures, was lost among the names of the many gods, and was not found anywhere. And his offspring was led astray by them and was not serving him, for Hyle claimed them all for herself, and did not suffer one of them to serve him. Then (they say) the Lord of Creatures was enraged, because they forsook him and obeyed Hyle; and one after another, who were departing from their bodies, he was casting in anger into Hell. And Adam he cast into Hell because of the tree, and so went on casting all into Hell, up to twenty-nine generations.

And (they say) the good and strange God, who was sitting in the third heaven, seeing that so many peoples perished and were tortured between the two deceivers, the Lord of Creatures and Hyle, was grieved for those fallen into the fire and tortured. He sent his son to go and save them, and to take the likeness of a servant and assume the form of a man among the sons of the God of the Law. "Heal," he said, "their lepers, and raise their dead to life, and open the eyes of their blind, and do among them great cures without price; until the Lord of Creatures see thee, and be jealous, and crucify thee. And then when thou diest, thou shalt go down into Hades, and bring them from thence; for Hades is not wont to admit life within it. And therefore thou goest up on the cross, that thou mayest become like the dead, and Hades may open its mouth to admit thee, and thou mayest enter into the midst of it and empty it."

And when he crucified him (they say), he went down into Hades and emptied it. And taking the souls in the midst of it, he led them into the third heaven to his Father. And the Lord of Creatures, being enraged, in anger tore his garment and the veil of his temple, and darkened his sun and clothed his world in blackness, and sat in grievous mourning.

Then Jesus, going down a second time in the form of his godhead to the Lord of Creatures, was entering into judgment with him about his death. And the Lord of the World, seeing the godhead of Jesus, knew that there is another God besides himself. And Jesus said to him, "I have a suit with thee, and let none be judge between us but thine own law which thou didst write." And when they produced the law, Jesus said to him, "Didst not thou write in thy law that whoso killeth shall die; and whoso sheddeth the blood of a righteous man, they shall shed his blood?" And he said, "I so wrote." And Jesus said to him, "Now give thyself into my hands, that I may kill thee and shed thy blood, as thou didst kill me and shed my blood, for I am indeed juster than thou, and have wrought many benefits in thy creation." And he began to reckon up the benefits which he had wrought in his creation.

And when the Lord of Creatures saw that he had conquered him, and knew not what to say because out of his own law he was condemned, and was finding no answer because he deserved death in return for his death, then falling to prayer he was beseeching him, "Because I have sinned and killed thee in ignorance, because I knew not that thou art a God, but reckoned thee a man, it is given thee as satisfaction for that to carry off where thou wilt all those who shall be willing to believe in thee." Then Jesus leaving him laid hold of Paul and revealed to him the purchase and sent him to preach that "We are bought with a price, and every one who believes in Jesus has been sold by the Just to the Good."

This is the beginning of the heresy of Marcion, besides many other worthless things. And this all do not know, but a few of them. And they hand on the teaching to one another orally. The Stranger (they say) has bought us with a price from the Lord of Creatures; but how or with what the purchase has been made, that not all of them know.

LITERATURE.—A full list of authorities is supplied by A. Harnack, *Geschichte der altchristlichen Literatur bis Eusebius*, Leipzig, 1893–1904, i. 191–200; and a shorter list by G. Krüger, in *PRF* xii. 286f. The main ancient sources are Irenæus, Tertullian (esp. *adv. Marcionem* and *de Præscr. Hær.*), Clement of Alexandria, Origen, pseudo-Tertullian (*Carmen adv. Marcionem*), Adamantius, Ephraim, Epiphanius, Theodoret, and Eznik. An exhaustive account of Marcion's dealings with the NT will be found in T. Zahn, *Geschichte des NT Kanons*, Erlangen, 1888–92, i. 585–718. N. MCLEAN.

MARCUS AURELIUS ANTONINUS.

1. **Early influences.**—By birth and training, alike on his father's and his mother's side, Marcus, son of Annianus Verus, belonged to the official aristocracy of Rome. From boyhood he was inured to the

round of absorbing and ceremonious etiquettes which, under the régime of Hadrian, made up the official life of the capital. Through his uncle Antoninus, whom Hadrian appointed *Quatuor vir* for the administration of Italy, he was brought from childhood into personal touch with the Emperor himself, and the playful 'Verissimus' accorded to him by Hadrian re-appears even in the formal address of the Christian apologist.

Another influence, which he himself attributes to his mother's fostering care, sank deep into the fibre of his being. In the antique life of Rome, *religio*, dependence upon God, pervaded every turn and act; and from the simpler life of the home and farm the ancient pieties and rituals had never died away. Under Augustus the historic festivals and shrines, the ancient brotherhoods and colleges and gilds, of Salian priests, of Arval Brothers, of Vestal Virgins, and others were revived, and a profusion of new cults was introduced. Priesthoods became the dress of leadership and rank, and patriotism found articulate expression in the worship of the Emperor and in countless forms of mystery worship. To this religious complex Marcus was acclimatized from youth. At eight years old he was enrolled among the *Salii*, the most primitive of all the priestly colleges at Rome, and 'got all the forms and liturgies by heart.'¹ At sixteen, as *Præfectus feriarum Latinarum*, he solemnized the fête upon the Alban Mount; and besides the formal dignities of *Pont. Max.*, *XV vir Sac. Fac.*, and *VII vir Epul.*, he wore the cowl of Master among the Arval Brotherhood. The prayer of the college is still extant which besought blessing for him and L. Verus in their conflict with the Marcomanni. At the outset of his great campaigns he purified the people with the solemn ritual of the *Lectisternium*; at Athens he was himself initiated in the Eleusinian mysteries; on the Danube he approved the casting of lions into the stream at the bidding of the Eastern magi. His Stoic monotheism lent itself to sympathy with cults of every kind, as witnesses to the divine power.

2. Life.—His boyhood was given to wholesome and studious disciplines. At Rome he fenced, played ball, and eschewed the mischievous excitements of the circus and the amphitheatre; at Lorum he rode, hunted, walked, and shared the glee of rural industries and festivals. The correspondence with Fronto, his master in rhetoric, shows rare docility of type. Boyish experiments in philosophy ended in complete conversion under the perusal of Aristotle, the influence of Rusticus, and the charm of Epictetus.

His life falls into three sections: A.D. 121-138, boyhood, ending with his adoption in 138; 138-161, apprenticeship to rule, as Caesar and lieutenant to his adoptive father, Antoninus; 161-180, Imperial rule, shared nominally in 161-169 with L. Verus, and from 177 with his son, Commodus.

Till 167, when the Danubian campaigns begin, the years are filled with unremitting administrative activities. The *Edictum perpetuum* of Salvius Julianus furnished the basis of the Pandects of Justinian; Gaius and Papinian immortalize the era, as master-builders among those who reared the great fabric of Roman law. Under the direction of Stoic principles the rigours of the *patria potestas*, the slave-owner, and the creditor were brought within control; protection was accorded to women, children, wards, minors, freedmen, slaves; educational and charitable endowments were multiplied; professorships were established at Universities; and medical service was organized for communities. Commerce, industries, and communications were liberally fostered by pro-

¹ *Capit. 4.*

vision of roads, aqueducts, bridges, and havens, while in special crises, as of earthquake, fire, famine, or inundation, State aid was ungrudgingly extended. The collection and distribution of taxation were vigilantly supervised, and vast extension given to the forms and activities of local and municipal government. Wealth lavished its resources upon the provision of temples, baths, gardens, colonnades, and other embellishments of city life, while among all classes of the community gilds, colleges, and clubs, though kept under strict surveillance, multiplied to an almost incredible extent.

In his dealings with the Christians, Marcus followed the practice of his predecessors. First by Nero, then by the Flavian Emperors, especially Domitian, Christianity had been treated as a form of sacrilege (*ἀσέβεια, ἀθέωρος*) and treason, that lay outside the province or protection of law and entailed the penalty of death. Like rebellion or brigandage, it fell under the summary jurisdiction of the Emperor or his representative. Trajan, setting his face against professional or anonymous delation, and Hadrian, going still further in discouragement of malicious information or assault, did much to arrest active persecution; but Christianity continued to be a capital offence, and the forms of the Imperial cult furnished a standing test of complicity or disclaimer. Enforcement of the penalty rested with the Emperor's delegate, and was rarely exercised. But outbursts of personal hostility, of local prejudice, or of racial or religious jealousies might at any moment bring it into play. The progress of Imperial consolidation, and the rapid social developments of Christianity, both tended to enhance the seeming disaffection of Christians to Imperial unity. In Pliny the note of condescension and compassion softens contempt for the perverse superstition, which seemed to invite and almost compel persecution; in Marcus the accent of irritation becomes prominent; to him Christian defiance seemed like the melodramatic pose which induced Proteus Peregrinus, in the story of Lucian, to cast himself on the pyre as the finale of the Olympian festival. On the main merits of the case he shared, no doubt, the judgment of his compeers, the leading Hellenists of the time, and among them his own intimate associates. The persiflage of Lucian and the malignant disdain of Celsus do not stand alone; Fronto still credits the Christians with nameless crimes and immoralities; Ælius Aristides satirizes their mean and mischievous self-seeking; Galen quotes them as the type of impenetrable bigotry. The Emperor's political philosophy led him the same way. The Græco-Roman unity of Empire was the World-Cosmos finding realization in the communities of men; the highest and best hopes of the world were centring in that consummation of the civic bond about the person of the Emperor; and the self-willed isolation of the Christian was essential atheism, in its estrangement from the divine impulse immanent in man.

But, as a statesman, Marcus holds to the prescriptions of Imperial policy. The rescript, cited by Eusebius,¹ is plainly unauthentic, and belongs, if to any period, to that of Antoninus. Melito² himself discredits the persecuting edicts to which he refers, and bears witness to the clemency and philosophy of the Emperor in checking tumultuary acts of violence against the Christians. The decree, or rather rescript, uttered against 'demoralizing superstitions' may have been partly aimed at Christians; but the terms were general, and it was retained upon the statute-book under later Christian Emperors. Possibly under its terms Christians were sent to the mines of Sardinia, but

¹ *HE iv. 13.*

² In Eus. *HE iv. 26. 51.*

in point of fact the penal provisions—deportation for those of higher rank, and death for humbler offenders—would mitigate, not enhance, the penalty to which all avowed Christians stood liable. In their social organization the Christians remained as free as other sects. In Rome itself Church-membership and jurisdiction, episcopal authority, and literary activity advanced apace. Apologists, such as Justin, Melito, Athenagoras, one after another addressed their pleas to the Emperor in person; Tatian and Hermas retort scorn and invective on their antagonists. Christians served in the Imperial households and, as the story of the Thundering Legion proves, were numerous among the legionaries.

None the less, illogical as was the situation, the profession of Christianity remained under the Imperial ban, and Christians as such were judicially liable to death. In two of the most famous instances when the penalty was enforced, responsibility devolves directly on the Emperor. The first concerns Justin, apologist and martyr, who with six associates was brought before the bar of Rusticus, prefect of the city, on the charge of 'atheism and sacrilege'; each in succession adhered to the Christian confession, and, on refusing to abjure or to offer sacrifice, was ordered to execution. Marcus was at the time resident in Rome, and, no doubt, endorsed the sentence passed by the Stoic prefect, his close friend and ex-preceptor. Still more famous is the persecution recorded in that masterpiece of Christian martyrologies, the letter of the Christians of Lyons and Vienne to the sister churches in Asia and Phrygia.¹ The outbreak, rooted in racial, even more than religious, antipathies, was fanned to fever heat by the frenzies of the amphitheatre, where the Christians were subjected by the mob to hideous and revolting tortures and indignities. When order was restored, and the martyrs, rescued from the fury of the mob, were remanded to prison, their sentence was referred to the Emperor himself, whose ruling was that, if they still persisted in recalcitrance, the law must take its course. The incident was fresh in his mind when he wrote down his reflexion on Christian perversity and bravado.² In Asia too, and in Africa, sporadic acts of persecution took place, and martyrdom was judicially inflicted, though for the most part Christians were screened under the Imperial ægis from outbreaks of popular fanaticism or dislike. Of systematized persecution there was none, and to the Church historians and apologists of the next generation the era of the Antonines was an age of peace and toleration.

Marcus's latter years were clouded with calamities, public and personal. In 166 Italy was desolated by plague, from which it never recovered; in its track came famine, earthquakes, and inundations of unusual severity; then the yet more terrific inroad of barbarians, streaming across the Alps, and knocking at the gates of Aquileia. From that date onwards the legions of the West were locked in a life-and-death struggle with Marcomanni, Quadi, Jazyges, and other trans-Danubian hordes, sustained and carried to a triumphant conclusion only by the dogged and intrepid leadership of Marcus himself.

3. The 'Thoughts'.—From these ordeals the *Thoughts* emerge. They are not the exposition of a system, but a criticism of life; reflexions confided 'To Himself' in the hours of loneliness and interstices of strain; a retrospect and record of experience; a manual of duty and endurance. In them a soul communes with itself, examines motives, probes illusions, corrects or re-affirms conclusions, emits the sigh of weariness or the

ejaculation of disgust, but perpetually renews resolve, unalterably clinging to the noblest hypothesis with which it was familiar. Beginning in almost random reminiscence, composition gave relief from strain, and became a substitute for company, and a pleasure for its own sake; and for Marcus Stoic principles so interpenetrated the whole fabric of conduct and creed that these self-communings shed clearer light upon the actualities of Roman Stoicism than the homilies of Seneca or the *Memorabilia* of Epictetus.

(1) *Logic*.—In his theory of knowledge and sensation he adheres closely to the terms of Epictetus. The *φαντασμοί* are in part sense-impressions proper, derived from things, in part impressions of aims, qualities, or attributes, moral or æsthetic, belonging to things, and conveyed to the reason. It is for reason to sit in judgment on them, determine their true content and value, and firmly maintain its own prerogative. In the one passage in which he formally discusses the doctrine of assent (*συγκατάθεσις*, v. 10) he drops the Stoic claim to final certitude—*τὰ πράγματα ἀκατάληπτα*. But there remains a tenacity of moral assurance which suffices for conduct of life. Reason as part of the divine immanence attains a coherence, a consistency, and strength which give the indefeasible assurance of truth.

(2) *Theory of being*.—In Stoic monism matter, form, and force are an inseparable unity. The life-power, self-determined from within, is embodied in the various forms of phenomenal and spiritual being. The variety of being is explained physically by the doctrine of *τόνος*, that is, of 'tension within the life-producing force,' present in ever-varying grades in all forms of existence, material or spiritual. In the successive grades of inorganic, vegetable, animal, and human life each variation represents a different degree or kind of tension in the informing *πνεῦμα*, or life-power. Cohesion, life, and reason are resultant phases of embodied spirit, varying in the same way as inorganic substances are seen to vary under processes of rarefaction or condensation. 'Εξίς, 'hold,' or 'cohesion,' is the characteristic property of being in its inorganic forms, *φύσις*, 'growth-power,' of vegetable life (vi. 14), *ψυχή* of 'soul' realized in the animal phase (ix. 9, x. 33), while the higher grade of 'reason'—*λόγος*, co-extensive, it will be noted, with the faculty of speech—appears only at the stage attained by man. The higher tension always includes the properties of the lower, so that the higher order shares the attributes of the lower, but with its own *differentia* superadded. Thus man shares with the inferior orders *εἰς*, *φύσις*, and *ψυχή*, but 'reason' is all his own.

Each type finds its guarantee of individuality and perpetuity in the seminal or generative principle, the *σπερματικός λόγος*, which defines and reproduces the type. This survives immutably, until its final re-absorption into the 'seminal principle' of the universe, the primal reservoir of life (iv. 14, 21, vi. 24). That of the universe at large contains and is likewise immanent in the countless individualized *σπερματικοὶ λόγοι*, which determine, conserve, and reproduce life in all the several orders of being through their 'productive capacities of realization, change, and phenomenal succession' (iv. 14, ix. 1).

(3) *Soul*.—Man, the microcosm, within his individual range, is the counterpart of the macrocosm, in which he dwells, and with which he reciprocates currents of sensation (*αἰσθησις*), impulse (*ὁρμή*), emotion (*πάθος*), and reason (*διάνοια, νοῦς*). All these are activities and reactions of the soul, the counterpart and product of that cosmic soul which permeates and moves the universe. Soul is self-moved, within the range of those seminal principles

¹ Eus. *HE* v. 1.

² xl. 3.

from which it originated. As, in the individual, soul actualizes itself in physical energies, such as life, growth, sensation, and all bodily functions and appetites, in moral, such as impulse (*ὁρμή*), inclination (*ὁρεξις*), aversion (*ἐκκλισις*), will (*προαίρεσις*), or in intellectual, such as perception (*φαντασία*), judgment (*ὀρθότης, κατὰληψις, πρόληψις*), mind (*νοῦς*), or reason (*διάνοια*), so, too, the world-soul operates in energies no less diverse in operation, now as the natural forces that actuate all inorganic or organic life, e.g. heat, moisture, breath, contraction, expansion, or the like, now as the moral forces which we know as fate, destiny, necessity, the 'laws' of nature or of God, and now, again, as those purposive or reasoning powers which, as design, providence, Zeus, God, direct the plastic movement of the whole.

For Marcus these conclusions are the key which unlocks all problems of life and thought. No Stoic thinker applies this key more resolutely and consistently to the whole field of ethics, personal and social. Every action, every relation, is referred to the cosmic test; by it he construes all the accepted formulas of the school, and resolves their ambiguities.

(4) *Cosmic unity*.—Cosmic unity stands at the centre of his thought, the pole to which his moral compass continually turns. In its contemporary phase of microcosmic self-expression the unity of the cosmos was realized and reflected in that world-Empire of Rome whose vital activities centred in and radiated from Marcus himself. The Emperor was the indwelling god of the State, as earth was of the universe.

Unity is written large upon the face and in the heart of things. The idea that the world-order can result from chance, from the confused clash and welter of atoms, is impatiently dismissed. It would imply permanent confusion, moral and intellectual—a universe as unintelligible as intolerable. Beyond all possibility of mistake, materially and spiritually, the cosmos is a perfectly co-ordinated unity, 'one order made of all things, one God through all, one being, one law, one reason common to all things intelligent and live' (vii. 9), as is shown by the ramifying bond of ubiquitous design (*συνάφεια ὁλόγος*, iv. 45) and that unfailing rapport between the constituent parts (*συμπάθεια τῶν μερῶν*, v. 26, ix. 9) which results from perfect interpenetration (*κρᾶσις δι' ὅλων*), and makes the whole inseparably one.

Design is everywhere apparent, in small and great—in all the processes of nature, in the adjustment of means to ends, in the social life of animals, in economy of materials, in the entire 'concatenation of the web.' Nature is a vast laboratory, in which there is no destruction and no waste, but processes of cyclic transmutation and repair. Divination, oracles, dreams, add their corroborative testimony to the providential plan that runs through all.

Without reserve Marcus embraces the Stoic explanation of reason immanent within the world, accounting for its unity, its order, and its constitution. The most general term employed for this pervading and directive reason is the unifying Logos, which the Stoic school derived from Heraclitus, 'the reason and the ordinance of the city and commonwealth most high' (ii. 16), the all-pervading, all-directing, all-perfecting principle and power which animates and operates in all that is. Less frequently it is called nature, or 'the nature of the whole' (vi. 9, x. 6, 7). But the preference is for terms which associate it with those analogies in human consciousness on which the whole conception is based. Marcus speaks not only of the world-mind and thought (*νοῦς, διάνοια*), world-soul and moral sense (*ψυχὴ, ἡγεμονία*), but also of world-impulse and world-sensation. The world, as a live whole and being (*ἐν ζῳον*, iv. 40, x. 1), throbs to one master purpose as truly as all the energies of man respond to the direction of the unitary sovereign self.

(5) *Unity of things*.—The unifying power, a common gravitation revealing itself in man as truth, beauty, and love, combines, constrains, and co-ordinates all to a common end (xii. 30). It finds its type or organ in the central sun.

'I am the eye with which the Universe
Beholds itself and knows itself divine'

(Shelley, *Hymn of Apollo*, vi. 11.).

But the splendid harmony invests common things and processes with an appeal and beauty of their own; they contribute to the advantage of the universe; they are notes, or discords, which swell the great accord. Not only the heavenly bodies in their orbits, sun and stars, rain and air, the hiving bees and nesting birds, the lustre of the emerald, and the bending of the corn, but even things unprepossessing in themselves—the cracks and crevices in bread-crust, the foam that flecks the wild boar's mouth—appeal to him who is in unison with nature, and touch hidden springs of answering admiration and desire.

'Earth is in love with rain, and holy aether loves—Yea, the world-order is in love with fashioning what is to be. To the world-order I profess Thy love is mine' (x. 21).

(6) *World-soul*.—The unity of the indwelling mind corresponding to personality in the individual man is commensurate with the scale of the universe, beneficent and rational in aim. Degrees of goodness and of value are part of the great scheme, but everywhere 'things lower are for the sake of things higher' (v. 16, 30, vii. 55, xi. 10, 18, etc.), and all is for the best.

(7) *Evil*.—The oneness of the cosmos is utilized to explain the mystery of evil. Seeming evil is good misapprehended or disguised. The course of nature is all good. 'It contains no evil, does no evil, and inflicts no hurt on anything.' Analyze the facts, suppress the hasty, ill-formed inference, and the evil ceases to exist, or changes its complexion (vi. 36, vii. 26). It is the discord that prepares and shapes the harmony; the coarse jest (as Chrysippus said) that gives the comedy its point (vi. 2). 'Nothing is hurtful to the part which helps the whole' (x. 6).

(8) *Providence*.—The mind of the universe is social, 'civic' (*πολιτικός*) in all its aims. Fate, destiny, necessity (*μοῖρα, τὸ περρωμένον, τὸ ἐλαφμένον, ἀναγκή*), overrule all things for good; man's freedom is accord with the movements of the universal Providence, the object of his reverence, trust, regard.

(9) *The round of being*.—Everywhere there is the recurrent transformation of elements, pursuing their continuous round. Change is nature's joy (ix. 35, iv. 36), the life of individuals, of nations, and of the universe at large. The 'passage up and down' repeats itself in history, upon the small scale and the great; always 'the same dramas, the self-same scenes reproduced; the court of Hadrian, the court of Antoninus, the court of Philip, Alexander, Croesus; the same stock rôles, only with change of actors' (x. 27; cf. vi. 46). This is the depressing side of the Emperor's philosophy, the resignation from which he would not deign to extricate himself by self-deception.

(10) *Man a part of cosmos*.—Man is by nature an inherent part, a living and organic member—*μέλος*, not *μέρος* merely—of the whole. He draws from its organic life as vitally as the branch draws sap from the parent tree. His 'nature' is the nature of the universe; self-realization of that nature is an instinct and a call as primary as that of self-preservation, attained by deliberate co-operation with its designs and ends, by loyal following

of law and reason, by active citizenship in the world-commonwealth.

(11) *Virtue*.—Moral obligation is fulfilment of function, active acknowledgment of reciprocal relation to the whole. And this alone is able to minister interior content, 'life with the gods,' 'citizenship in heaven.' The soul—a particle of Zeus (v. 27), the good genius or the God within (iii. 4, 6, 16), the lord and law-giver (iv. 1, 12), the pilot reason (vii. 64), the fellow-citizen, the priest and minister of God—is the power within which makes for righteousness. The indwelling presence becomes almost that of the Holy Spirit in the Christian believer. Prayer is not merely communion with the inner self, but a true intercourse with God; the self-communings which the sage has left us are but part and sample of his habitual practice of the presence of God.

(12) *Littleness of man*.—Man is indeed part of the universe, but how immeasurably small a part—a morsel in the mighty sum, a moment between two infinities. Fame is as transient as it is brittle and precarious—a short-lived rattle of tongues, a bubble that bursts and vanishes (ii. 7, iii. 10, iv. 3, 19, viii. 20, etc.); gratitude is precarious and belated; virtue is its own and sole reward; it consists in mastery of the will, ability to uphold and satisfy the instincts of reason in fellowship with nature and God. If ever that is forbidden or debarred, then indeed God sounds the signal for retreat. Unmurmuring and undispleased, we quit the rank. The exodus is quick and easy—a 'bare bodkin' is enough. The play is ended (xii. 36); ring the curtain down. Death is the natural end of man's ephemeral endeavour. Whatever be its physical analysis, extinction, dispersion, or transmutation (xi. 3)—alternatives which are dispassionately considered—the dissolution of the material elements ends the present resultant; they take their place in other compounds, while the 'seminal principles,' or life-seeds, will either integrate new forms and activities of being or themselves be resumed into the central reservoir of the world-life.

(13) *Ethics*.—In ethics the eye is fixed upon the inner self, upon the duties, disciplines, and obligations proper to his own experience. But the Imperial position assumed gives breadth and elevation of view, and the fixed sincerity of the writer atones for lack of form, or method, or variety. The commonplaces or the paradoxes of Stoicism—the inseparateness of virtue, or the indefectibility of the wise—are not discussed at large. The more developed casuistry of later Stoicism, with its scheme of conditional duties (*officia*, or *καθήκοντα*), its recognition of preferential moral choice (in *προηγμένα* and *ἀποπροηγμένα*), its admission of relative moral values (*κατ' ἀξίαν*), its belief in 'proficiency' (*προκοπή*), or progressive growth in philosophic grace, is everywhere assumed, though seldom in scholastic phraseology. The philosopher is on the throne, and passion is outlived. Duties of inferiors, sins of the flesh, all vulgar vices of the tyrant or the profligate, even the licence and the luxuries of city life, are not in view. The whole attitude is one of strained, insistent obligation, wrought out in patience inexhaustible; men are the recipients, himself the dispenser, of benefits; in realization of the social tie, duties to equals and duties to inferiors monopolize the field. Against ingratitude nature has provided forbearance as an antidote. Of the four cardinal virtues courage seldom receives mention; truth is not protest or resolve, but that singleness of word and act, that quiet undeviating 'pursuit of the straight course,' which power and place make doubly difficult; justice comes urging, not the rights of the oppressed, but the obligations of the strong; as regards wisdom or self-control, it

may be said that the whole book is an enlargement upon that theme. The moral perturbations which he dreads are those which beset power and place and privilege, such as impatience, discourtesy, distrust, officiousness, or such more delicate delinquencies as self-absorption in the press of current duties, the want of moral nerve or fixity of aim, or the indolence which, rushing to hasty conclusions, admits unwarranted impressions or desires. And beside the solid virtues and charities incumbent on the ruler are set the social graces which adorn the official and the gentleman—consideration, candour, modesty, attentive and intelligent perception, courtesy, tact, address in conversation; and the compass of morality is extended to such refinements as cheerfulness in leadership, belief in friends' affection, wise husbandry and just apportionment of powers, careful selection among competing claims, reserve of opportunities for self-examination and recreation of the inner life. Leisure as well as labour, thought as well as action, deportment as well as motive, are scrupulously moralized.

'Blame none,' 'Do not find fault,' 'To expect no one to do wrong is madness' (xi. 18), are maxims for the ruler rather than prescriptions of the teacher. 'Can the world go on without shameless people? Certainly not. Then do not ask for the impossible' (ix. 42). The supremacy of the *ἡγεμονικόν*—in Marcus the favourite and characteristic term for man's highest governing self—secures to man self-mastery and personal equilibrium in an unstable world; within his own circumference he becomes 'a sphere self-orbed,' proof against all assaults of circumstance, all enticements and deceits of sense, and all dominion of impulse, appetite, or feeling. To that extent he can identify himself, his will, with the sweep of the great cosmic current, and, at one with nature, reason, God, be wrapped in calm. To such an one all outer things become 'indifferent,' for 'no man can rob us of our will' (xi. 36). Man is a citadel, 'a promontory against which the billows dash continually; but it stands fast, till at its base the boiling breakers are lulled to rest' (iv. 49). This attitude of set endurance gradually moulds his moral as well as his physical lineaments to that resolved serenity which is engraved upon the stones of the Imperial arch, and abstinence rather than action, isolation rather than corporate fellowship, becomes the keynote of morality. Towards this the influences all conspired—the austere renunciations of his creed; the mood of sombre, almost wilful, resignation; the solitude and destitution of the close. Before his eyes Latin literature breathed its last. The great equestrian statue, the memorial column, the reliefs of his triumphal arch, the apotheosis of Faustina, are the last triumphs of expiring art. Human fecundity was stricken with a strange paralysis of reproductive power; the very Campagna was changing to a depopulated waste. Religions, politics, literatures, and Rome herself were dying. In unmistakable letters the handwriting was blazed upon the wall, and he himself was *ἐρχαρος τοῦ γένους*. With his death decline and fall set in, not on the Danube only, but throughout the whole Empire of the West. His end was like his life, a slow tenacious struggle with the inevitable. No longer able to eat or drink, he lay upon his couch, still exercising the habits of duty and authority; spoke passionately of the vanity of life; and with the words, 'Hæc luctuosi belli opera sunt,' turned to his rest.

LITERATURE.—i. *TEXTS, ETC.*—Text: Gul. Zyländer, Zürich, 1858; M. Casaubon, London, 1648; T. Gataker, Cambridge, 1652; London, 1897; Tauchnitz ed., J. M. Schultz, Leipzig, 1889, etc.; Teubner ed., J. Stüb. rec. H. Schenkl, do. 1913 (full conspectus of MS variants); Oxford ed., J. H. Leopold, Oxford, 1908 (with valuable digest of emendations). Editions: T. Gataker, Cambridge, 1652 ff. (far the most learned and copious);

MARKET.—I. Definition.—The term 'market' may be defined as a periodic gathering of persons at an appointed place for the purpose of trading by way of exchange or purchase and sale, subject to the special regulations which law or custom may impose. The term 'fair' is frequently used in conjunction with the term 'market,' and has been defined as 'a greater species of market recurring at more distant intervals.' In either case, the essential element is the same—recurrence, namely, at a fixed time and at a fixed place.¹

Provided that this element is present, any circumstances which bring men together can produce a market or a fair.² The occasion may be a religious festival,³ a popular assembly,⁴ the formation of a camp,⁵ the temporary sojourn of a court at a royal residence,⁶ the stay of a caravan at one of its customary halting-places,⁷ the concourse at a saint's tomb,⁸ the celebration of funeral games at the burial-place of a hero,⁹ or the temporary cessation of hostilities between besieger and besieged.¹⁰

2. **Geographical distribution of the market.**—The institution of the market is not universal; in many parts of the world it is either altogether unknown or known only in its most rudimentary forms.¹ It has been pointed out that certain geographical conditions and certain racial characteristics are more favourable than others to its establishment and development. Thus, the markets of insular regions, especially those which are situated on the coast, are, in general, of little importance, perhaps because the necessity for an exchange of articles of diet hardly arises among populations whose economic status is the same, and whose daily needs are supplied by the bounty of nature seconded by their own exertions. In such regions the occasion for a market arises only where different economic conditions come into touch—where, e.g., a tribe of fishermen have a tribe of agriculturists for neighbours.²

According to J. G. F. Riedel,³ there are no market-places in Ceram; and, while we hear of the market in Java,⁴ Sumatra,⁵ and Borneo,⁶ we are reminded by a high authority⁷ that, in many of the islands inhabited by Malay peoples, the institution does not exist, or, if it does exist, is to be regarded as imported rather than as indigenous.

In New Guinea, markets are to be found in the German⁸ as well as in the British portion of the island.⁹ W. Ellis¹⁰ supplies an account of those in Madagascar; and we have a few notices of Polynesian and Melanesian markets.¹¹

The market thrives best where, in addition to favourable geographical conditions, the natural bent of the population is towards commercial pursuits, as in the case of the Negro and Bantu races.¹²

In N. America we find only few and scattered indications of the existence of the market;¹³ and to the hunting tribes of S. America it is practically unknown; while among many of the peoples of Central America,¹⁴ and especially in the old

¹ As to native markets in Australia see art. GIFTS (Primitive and Savage), 6 (2).

¹⁰ *History of Madagascar*, London, 1833, i. 382 ff.

¹¹ We hear of the markets on the river Wairuku in Hawaii (W. Ellis, *Polynesian Researches*, London, 1832-36, iv. 325), at Somu-Somu in the Fiji Group (C. Wilkes, *Narrative of the United States Exploring Expedition during the Years 1838-40*, London and Philadelphia, 1845, iii. 300 f.), in the Bismarck Archipelago (R. Thurnwald, 'Im Bismarckarchipel und auf den Salomoninseln,' *ZE* xlii. [1910] 119; G. Brown, *Melanesians and Polynesians*, London, 1910, p. 297; Hagen, p. 117 f.), and in New Caledonia (J. J. Atkinson, 'The Natives of New Caledonia,' *FL* xiv. [1903] 245; J. Moncelon, 'Réponse alinéa par alinéa pour les Neo-Calédoniens,' *BSAP* III. ix. [1888] 374).

¹² Lasch, p. 702. The Boloki are a Bantu people, yet they have no markets (J. H. Weeks, *Among Congo Cannibals*, London, 1913, p. 114).

¹³ The principal market resorted to by the tribes on the coast near the Stikine river was held three or four times a year at a village about 60 miles from Lake Dease (G. Simpson, *Narrative of a Journey round the World during the Years 1841 and 1842*, London, 1847, i. 210). Markets are held by the Eskimo of Point Barrow and those of Demarcation Point (J. Simpson, 'Observations on the Western Esquimaux and the Country they inhabit,' in *Further Papers relating to the Arctic Expeditions, presented to both Houses of Parliament*, 1856, London, 1856, p. 986; see N. A. E. Nordenskiöld, *The Voyage of the Vega round Asia and Europe*, tr. A. Leslie, do. 1881, II. 118 and note). Markets were also held at the Falls of the Columbia (M. Lewis and W. Clarke, *Travels to the Source of the Missouri River . . . in the Years 1804-06*, new ed., London, 1815, II. 427), and at Prairie du Chien (J. Carver, *Travels through the Interior Parts of North America in the Years 1766-68*, London, 1778, p. 99).

¹⁴ Among the Toltecs (F. de A. Ixtlilxochitl, *Relaciones históricas*, in A. Aglio, *Antiquities of Mexico*, London, 1880-48, ix. 332) and the Chibchols (J. de Acosta, *Compendio histórico del descubrimiento . . . de la Nueva Granada*, Paris, 1848, p. 207), and in Yucatan (G. F. de Oviedo y Valdes, *Historia general y*

civilizations of Mexico¹ and Peru,² it formed an important element in the national life. In Arabia fairs and markets arose at places whither pilgrims were wont to repair.³ The fairs at Ukāz,⁴ Mujauna, and Dzul Majāz⁵ were visited by the Prophet, and there were great markets at Senaa and Bagra.⁶ Not infrequently the resting-places of caravans are little markets, where the Bedawi may lay aside his animosities and trade in peace.⁷

So, too, the religious festivals of Harar, Batne, and Mabug were the resort not only of pilgrims but of traders;⁸ and the immense assemblage which gathered twice a year at the sacred tomb at Teuta, a city of the Delta, was devoted to commerce as well as to worship.⁹

The antiquity of the market in China is vouched for by the Book of Rites, which contains elaborate regulations for its conduct.¹⁰ G. M. Curzon¹¹ speaks of the markets as the most picturesque and characteristic of Annamite spectacles; and the great feature of life in the Shan country is the bazaar, which is held on every fifth day in all the chief villages of the States.¹²

The Khāsis of Assam hold a market every four days.¹³ Lasch¹⁴ observes of India that, in early times, fairs and markets were to be found at the holy places frequented by pilgrims; and that the Rīgveda and the *Laws of Manu* contain references to markets.

We know that markets were held on the boundaries of certain Greek States under the protection of *θεοὶ ὑποσταίοντες*,¹⁵ and that an active commerce found its home in the sanctuaries of Olympia and Delphi; and Homer and Herodotus tell us of the market-places of foreign seafarers, and especially of those of Phœnician visitors.¹⁶ In later times the institution of the

Od. xv. 415 ff.; Herod. i. 1. G. Grote (*A History of Greece*, London, 1872, iii. 284, note) observes that both Velieius Paterculus (i. 8) and Justin (xiii. 5) refer to the Olympian festival as *mercatus*. See also Cic. *Tusc. Quæst.* v. 8.

market spread from Massilia, from the north of the Balkan Peninsula, and from the cities on the shores of the Euxine to the countries of the neighbouring barbarians.¹ In Latium the fairs were of great antiquity. In Rome and in Etruria they were associated with religious festivals; and the most important of the Italian fairs was held on the boundary which separated the Etruscan from the Sabine land at Soracte in the grove of Feronia.² In heathen times the religious festivals and popular gatherings of Norway and Sweden³ and, in ancient Germany,⁴ the tribal assemblies seem to have supplied occasions for the holding of markets.

So, too, in the past, the great markets of France, Germany, and England showed their close connexion with the observances of the Church.⁵

3. Origin of the market.—We have seen⁶ that one of the earliest, if not the earliest, of the forms of commerce is that which has been called 'the silent trade.' Those who engage in it are strangers to one another and are consequently enemies. But, so long as it lasts, they observe a truce, which is safeguarded by a supernatural sanction. This sanction derives its force primarily from the sacredness of the relation between the traders, which the trade creates, and—in very many cases—in a degree hardly less considerable, from the sanctity of the place where the trade is carried on. This spot lies often within a border-land—a locality which is very generally regarded by primitive peoples as holy ground—and such a situation is frequently chosen not only because it possesses this characteristic, but because it is easily accessible. Goods set out on the seashore, on a river bank, or at a meeting of ways are likely to catch the eye of the passing trader; and, if he is satisfied with his exchange, he will return, as we are told, again and again, to the known place at the known time. In this strange custom is to be seen, in our opinion at least, the germ of the market.⁷ Richard Lasch, however, in his admirable essay on the 'Primitive Market,'⁸ urges two objections to this view. He contends that, in its beginnings, the market is, to a large extent, a provision market, mainly in the hands of women. He admits that, in certain cases, an exchange of articles of food may be transacted by the methods of the silent trade. A tribe of bushmen, e.g., which has a tribe of agriculturists for neighbours may employ these methods in bartering game for bananas. In such a case the traders are men, not women. But to infer from such evidence that the market is derived directly

Anderson, *The Hildesheim, or the Siles of the Norse Kings, from the Legends of Surfer Sturluson*, London, 1889, i. 164; J. J. A. Worsaae, *An Account of the Danes and Norwegians in England, Scotland, and Ireland*, do. 1852, pp. 100, 232.

⁴ Schrader, *Reallex.* p. 521 f. The Roman word *mercatus*, applied in the first instance to the trading of pedlars and hawkers in S. Germany and the Rhineland, was not used to designate the market as a place until the Germans had come to settle in towns. Thereafter, the word was adopted in almost all the Germanic languages as the expression for market (*ib.* p. 528; see Rathgen, p. 31; S. Rietschel, *Markt und Stadt*, Leipzig, 1897, p. 83 ff.). Rathgen (p. 9) observes that, in Karolingian times, the institution of the market was fully developed.

⁵ See the works of Huvelin, Rathgen, and Rietschel cited above; O. Elton and B. F. C. Costelloe, 'Report on Charters and Records relating to the History of Fairs and Markets in the United Kingdom,' in *First Report of the Royal Commission on Market Rights and Tolls*, London, 1889, i. 5; C. Walford, *Fairs, Past and Present*, do. 1838.

⁶ See art. *Gifts* (Primitive and Savage). As to the markets in ancient Ireland see § 14 below.

⁷ See Hamilton-Grierson, p. 28 ff., and 'The Boundary Stone and the Market Cross,' *Scottish Historical Review*, xii. [1914] 251. The view indicated above as to the origin of the market is held by H. Schurtz, *Das afrikanische Gewerbe*, Leipzig, 1900, p. 123 ff.; A. Sartorius von Waltershausen, 'Die Entstehung des Tauschhandels in Polynesien,' *Zeitschr. für Social- und Wirtschaftsgeschichte*, iv. [1895] 64 f.; M. Kullischer, 'Der Handel auf den primitiven Kulturstufen,' *Zeitschr. für Völkerpsychologie und Sprachwissenschaft*, x. [1878] 860 ff.; cf. Huvelin, p. 10; O. Schrader, *Linguistisch-historische Forschungen*, pp. 11, 84, *Reallex.* s.v. 'Handel,' 'Markt.'

⁸ Pp. 623 ff., 700.

from the silent trade seems to Lasch to be wholly unwarranted. His second objection rests on the nature of the goods brought to market, which are, he says, for the most part perishable. They are produced constantly and they are in constant demand. Accordingly, market must follow market at a short interval, the times being fixed to suit the convenience of the traders. But the existence of such arrangements presupposes an exchange of views between those interested; and such an exchange involves a complete breach with the principles of the silent trade. The best way of dealing with arguments such as these is to turn to what evidence we have regarding the market in its beginnings. We shall find that it is attended by men only, and that, in some instances, it exhibits features which recall to us those of the silent trade.

S. Passarge,¹ e.g., describes a market on the Benue to which a river tribe resorted for the purpose of exchanging fish and grain for the skins and game brought in by a tribe of bushmen. The former left a man in each canoe to hold it in readiness in case of a quarrel. Only men were present, and each man stood, weapons in hand, in front of his merchandise. On an alarm the bushmen sprang into the jungle, and the river-men took to their canoes. Insults were hurled, and arrows began to fly; and, in the end, after a few men had been killed on either side, each party returned home, satisfied with the day's work. Another example is supplied by Ellis's² account of the fair or market held in the island of Hawaii on the banks of the Wairuku river. The inhabitants of the different divisions³ into which the island was parcelled out, although frequently at enmity, frequented this meeting-place for the purpose of exchanging the specialties of their respective districts. These consisted of mats, native cloth, dried fish, hogs, and tobacco. 'From bank to bank the traders shouted to each other and arranged the preliminaries of their bargains. From thence the articles were taken down to a large square rock which stood in the middle of the stream. 'Here they were examined by the parties immediately concerned in the presence of the king's collectors, who stood on each side of the rock, and were the general arbiters in the event of any dispute arising. To them also was committed the preservation of good order during the fair; and they, of course, received a suitable remuneration from the different parties.' Again, we are told⁴ that at Somu-Somu, in the Fiji group, 'the market is held on a certain day in the square, where each deposits in a large heap what goods and wares he may have. Any one may then go and select from it what he wishes, and carry it away to his own heap; the other then has the privilege of going to the heap of the former and selecting what he considers to be an equivalent. This is all conducted without noise or confusion. If any disagreement takes place, the chief is there to settle it; but this is said rarely to happen.' It is reported of the Eskimo of Point Barrow that, in their intercourse with those of Demarcation Point, they 'seem to be very wary, as if they constantly keep in mind that they are the weaker party and in the country of strangers. They describe themselves as taking up a position opposite the place of barter on a small island to which they can retreat on any alarm, and cautiously advance from it making signs of friendship. They say that great distrust was formerly manifested on both sides by the way in which goods were snatched and concealed when a bargain was made; but in later years more women go, and they have dancing and amusements, though they never remain long enough to sleep there.'⁵

A very curious instance, in which women were the traders, and in which the method employed recalls that example of the silent trade mentioned by R. and J. Lander,⁶ is recorded by Torquemada⁷ in his account of the Mexican markets. He tells us that the Indian women made exchanges without a word being spoken. One held out the article of which she wished to dispose to another, who herself had something to barter. The latter took what was offered in her hand, and indicated by signs that it was worth very little in comparison with the value of her own article, and that something must be given in addition before she could consent to the exchange. If the addition required was made, the bargain was complete; if not, each retained her own property.

In these instances we have the mutual distrust, and, in some of them, traces of the strange methods, which marked the silent trade. Further, the evidence shows that, so long as the market may at any moment become a battle-field, it is, even where its business is confined to the exchange

of provisions, entirely in the hands of men. So soon, however, as women can visit it in security, they assume the entire conduct of its traffic in articles of food, and the men attend only as guardians of its peace,¹ or confine themselves to dealing in the objects of their special concern, such as cattle and slaves.²

Two further observations may be made in reference to Lasch's arguments. In the first place, there are many instances in which perishable articles, such as fresh fruit and fresh meat, are exchanged by the methods of the silent trade.³ In the second place, many cases can be cited in which the places where the silent trade is to be found in operation are matters of common knowledge.⁴

4. Situation of the market.—The primitive market was held, just as the silent trade was practised, at spots so situated as to secure the safety of the trader.⁵

Thus, a river separated those who resorted to the market on the Wairuku, the articles to be bartered being laid upon a flat rock in mid-stream.⁶ In many instances the market is held within a border-land,⁷ as in the Baluba country,⁸ in Somaliland,⁹ and in British New Guinea.¹⁰ We have already mentioned the border markets of Greece and Rome;¹¹ and we are told that the frontiers of the Roman world formed a vast zone of markets.¹² In Usambara¹³ and in some districts in British New Guinea¹⁴ the markets are held on the borders of different districts; and the Batua markets¹⁵ in the virgin forest and those of Angola¹⁶ are generally equidistant from the nearest villages. Among the Akikuyu the site chosen for the market is an open space where the inhabitants of several districts can conveniently attend,¹⁷ while in the Congo countries the market-places are often situated in an open country.¹⁸ In both cases a hill-top is a favourite situation. Among the Gallas of the Western Abyssinian country markets are usually held on the top of a small hill, near some big farm;¹⁹ in the Gazelle Peninsula, on plateaux, about an hour's journey from the coast;²⁰ and, among the Lapps, sometimes in open fields, and sometimes on the ice.²¹ On the Lualaba,²² at

⁷ xiv. 32.

Mogelo,¹ at Andshira,² and among the Kabyles³ markets are situated in uninhabited places, while in Benin the two great markets were held in large clearings, with only small villages adjacent.⁴ At Malani, which consists of two villages, the market lies between them,⁵ and a somewhat similar account is given of that at Abu-Gher.⁶ In one of the districts of Bornu the market is generally held at some distance from the town,⁷ and a like practice is frequently to be found elsewhere.⁸ In some countries it is held near a principal town, as in Madagascar,⁹ or in an open space near a village, as in German New Guinea,¹⁰ or outside a town, as among the Western Mandingoes,¹¹ or between the town-wall and a river, as at the chief town of the Wymar country.¹² Markets are not infrequently held on islands. Thus, on the Gwosdew Islands an exchange takes place between natives of N. America and N. Asia;¹³ and a fair, attended by the Chukchis and other nomad tribes, takes place annually on an island on the Anui River.¹⁴ Markets are held on river-banks on the Niger¹⁵ and on the Benue,¹⁶ at points equidistant from the neighbouring villages, as on the Congo,¹⁷ or at cross-roads, as on the Congo¹⁸ and in Dahomey,¹⁹ at spots easy of access by visitors from several districts, as in Somaliland,²⁰ on the seashore, as in New Caledonia²¹ and among the ancient Northmen,²² on the banks of great lakes, such as the Victoria Nyanza,²³ and, as at Guzzula, on a plain between mountains.²⁴

Many of these situations point to a time when the fear of attack was prevalent; and Schurtz²⁵ suggests that the arrangement in the Mahee²⁶ country by which the weekly markets were held outside the walls, so that strangers might not enter the town, while the daily markets attended by the inhabitants were held within it, is a survival of the old state of things.

Where an established order exists, however, the market is generally held within the town.

Thus, at Kooifu and Zaria the market-place is within the walls;²⁷ and at Kanó it is situated on a neck of land stretching

across a marsh, which nearly intersects the city.¹ The markets at Hang-Chau² and in the city of Mexico³ were held in great squares within the town. Timbuctu may be cited as an instance of a town which had its beginnings in a temporary market.⁴ In Java the markets are held under large trees on spots dedicated to the purpose from time immemorial.⁵ In Silindong the market-places are generally at the foot of the hills, and are marked by old fig-trees.⁶ In the Sherbro and its Hinterland the markets are always held under large trees;⁷ and those on the upper Lualaba frequently take place on grassy mounds under the shade of great spreading trees.⁸ In the chief town of Uganda,⁹ at Loango,¹⁰ at Pawee and Seka in the Mahee country,¹¹ among the Kabyles,¹² and in the Mekeo district of British New Guinea¹³ the markets are held under the shelter of large trees; and a somewhat similar account is given of markets on the Congo.¹⁴

5. Day of the market.—In the Shan States and in Korea the market is held on every fifth day in all the chief villages.¹⁵ This practice prevails throughout western Yun-nan,¹⁶ and is found in Java¹⁷ and Abeokuta,¹⁸ at Igbegbe and Onitscha,¹⁹ at Kong, and at Bobo,²⁰ in the Mekeo district of British New Guinea,²¹ in ancient Mexico,²² and in many other places.²³ At Ikoradu, on the lower Ogun, the market between the townsfolk and the bushfolk takes place every eight days,²⁴ and in the Banyang country markets are generally held with an eight days' interval.²⁵ In regard to the markets on the caravan routes between Matadi and Leopoldville, a distinction must be kept in view between those held daily by the neighbouring villages for the caravans' supply and the weekly markets. The Fioti week is one of four days; but frequently the market is held every eighth day. In order to mark the week when there is no market, it is called *onduelo*, 'little,' 'insignificant.' On the Lower Congo each market bears the name of one of the days of the Fioti week, followed by the name of the village where it is held.²⁶ The Khâsis of Assam,²⁷ the Battak of Sumatra,²⁸ the tribes of the Lower Niger,²⁹ and the Alikikyu³⁰ hold a market every four days. On the Lualaba the

²⁵ Duncan, i. 100. 'Where a town or city has two walls, the public market is held within the outer walls. This market is often attended by strangers from a great distance. The private market is invariably held within the walls' (*ib.* ii. 101).

See Alexander's observations regarding the Bornu markets quoted above. A similar practice prevails in some of the towns of Adamawa (Passarge, p. 86). A. W. F. Verkerk

Fistorius, in his *Studien over de inlandse huishouding in de Paalgaache Bovenlanden*, Zeit-Bommel, 1871, p. 13, observes that the market-place, situated on a large open space in the middle of the village, is called *perdameian*, or place of peace.

But, when circumstances permit, the site chosen for the market is outside the village; and some markets are held on spots quite uninhabited.

²⁷ Clapperton, pp. 185, 188.

market is held every fourth day, other markets being frequented in the interval.¹ At Amba Bay the market takes place every third day.² There are daily markets at Loango,³ at Kanó,⁴ and at Mogelo.⁵ The Bini have now eight days in their week; but formerly they had four only. On each day there is a market in or near Benin city.⁶ Three markets a week are held at Kassa-Kanó;⁷ and two a week at Marrakesh,⁸ at Koolfu,⁹ and at Banjaribuan.¹⁰ Weekly markets are held in Morocco,¹¹ at Popalahun in the Sherbro,¹² in Lega-land,¹³ among the Oromó,¹⁴ among the Kabyles,¹⁵ and at Passumah in the southern part of Sumatra.¹⁶ In the Kuantan districts of Central Sumatra each market has its own special day of the week allotted to it.¹⁷ In Silindong there is a daily market, but the place at which it is held varies from day to day.¹⁸ In this last instance, and in many other cases,¹⁹ the market takes place here to-day, there to-morrow, and in a different locality on each of the days following, until the round is completed. The order is fixed, and so the inhabitants of each district know where the market is to be held each day.

6. Hour of the market.—In Kúkawa, Maseña, Kanó, Sókoto, and Timbuctu, the market is held in the hottest hours of the day.²⁰ According to Clapperton,²¹ the market at Kanó is crowded from sunrise to sunset. The Yo (Bornu) market begins about 9 a.m. and ends about 3 p.m.;²² and the Congo markets commence towards 10 or 11 a.m. and cease at 3 or 4 p.m.²³ In some places in the neighbourhood of Harar the markets begin about noon;²⁴ and at Gire in Adamaua they are in full activity by that hour.²⁵ At Saria the busiest time of the market is from 2.30 p.m. to 5.30 p.m.,²⁶ and at Kulka in Bornu about 3 p.m.²⁷ In Tshambá the market is held in the late afternoon,²⁸ and at Coosoo²⁹ in Yoruba in the evening. It takes place at Aden two hours after sunset,³⁰ and at Bida and Ilorin³¹ and in some parts of Malacca³² in the night. On the upper Ubangi it is held from 8 to 10 in the morning.³³ On the Livingstone it is deserted after noon.³⁴ In the Padang district of Sumatra it

is little frequented in the early morning, but by 10 o'clock it is full.¹ Markets in the early morning are less frequent, for the obvious reason that they interrupt the day's work of those who resort to them more than do markets held towards the close of the day, and also because those at a distance cannot attend them.²

7. Frequenter of the market; market-women.

—H. H. Johnston³ observes that both men and women make long journeys to sell their goods, the men always travelling furthest.

Among the Bondel, if the market be near, the woman goes and her husband supplies the goods. If it be at a distance, the husband generally goes alone.⁴ At Whydah on the Gold Coast,⁵ and among the Battak of Sumatra,⁶ traffic in slaves was confined to the men. Among the Bakuba the men bring goats and palm-wine to market,⁷ and in the Mandingoes markets they trade in cloth.⁸ At Woodie the women sell milk and honey, fowls and herbs, while the men sell oxen, sheep, and slaves.⁹ At the Harar markets the frequenters are grouped by sexes, i.e. according to the articles which they sell.¹⁰

In many instances the business of the market is entirely in the hands of women.

Thus, in the districts near Kilimanjaro, 'the women do all the trading, have regular markets, and will, on no account, allow a man to enter the market-place.'¹¹ At Koolfu, the principal town of Nupe, nine out of ten of those who resort to the daily market are women;¹² and the Foulahs or Fallatas leave the market in their hands.¹³ A similar state of things is reported from many quarters.¹⁴ It is of interest to observe in this connexion that, in the Congo area, when a thief is caught, his punishment—that of being stoned to death—is inflicted by the women.¹⁵ In Nicaragua no male above puberty might enter the market-place of his own village to buy or sell. He might not even look at it from a distance. But men and women from other friendly or allied villages might go to it.¹⁶ The women selling at the market of Brunel in Borneo are generally old slaves.¹⁷ At Kuka in Bornu the principal slaves are generally the traders, while their masters loiter about, spear in hand.¹⁸ The Oromó market people form a caste by themselves; they attend all the larger markets in person, and send their servants to the smaller ones.¹⁹

8. Religion and the market; the market peace.

—The market peace is sacred; and this quality may be due to one cause or to a concurrence of

³³ Schurtz, p. 118.

³⁴ Stanley, ii. 107.

several causes. It may be due to the nature of the relation between traders which the act of exchange creates, to the sacredness of the place where the trading takes place, to the consecration of the market at the time of its foundation,¹ or to the fact that the market is under the protection of a god,² or is associated with a religious festival.³

Large fairs, held at different points on the Niger, are professedly regarded as sacred ground, whatever wars there may be in the land; and, although this neutrality is not infrequently violated, still the traders return with remarkable pertinacity.⁴ The Shilluks enticed the Khartum traders to their camp by a display of attractive merchandise, and then butchered them for their arms and ivory;⁵ at the close of a Bakuba market the chief allowed his bodyguard to plunder the market-women;⁶ and Livingstone speaks of a massacre of Manyema market-women by Arab traders.⁷ 'But,' he observes, 'they have great tenacity and hopefulness. An old established custom has great charms for them: and the market will again be attended, if no fresh outrage is committed.'⁸

Sometimes such violence kills the market.⁹ 'To "revive" a "dead" market, there must be an assemblage of the local magnates; a pig or pigs must be furnished by the town to which the market

¹ It is said that, at Stanley Pool, the establishment of a market was the occasion for the sacrifice of a slave (Costermans, 'Le District de Stanley Pool,' *Bulletin de la société d'études coloniales*, 1895, p. 62); and it seems not improbable that the object of this sacrifice was to convert the soul of the victim into a protecting demon (PC⁴, London, 1903, i. 106; GB³, pt. II., *Taboo and the Perils of the Soul*, do. 1911, p. 90; F. Liebrecht, *Zur Volkskunde*, Heilbronn, 1879, p. 284 ff.; cf. A. Wuttke, *Der deutsche Volksaberglaube der Gegenwart*, Berlin, 1900, § 440, and R. Proctor, *The Story of the Luddites done into English*, London, 1903, ch. 17, where we read that Hrapp desired to be buried standing in the firehall doorway that he might look after his household gods; see also the story of the Philani [Sall. de Bell. Jugurth. 79]. A. B. Ellis, *The Tshi-Speaking Peoples of the Gold Coast of West Africa*, London, 1887, p. 58, tells us that it was regarded as impossible for a hostile force to make its way into Elmina, if the body of a human victim were cut up and distributed round the outskirts of the town so as to enclose it. The victim, for which nowadays a sheep is substituted, was offered to a river-god. With this may be compared C. Coquilhat's statement (*Le Haut Congo*, Brussels, 1883, p. 85) that, among the Bayanzi, when an agreement has been made between two villages as to the price of victuals, it is solemnized by digging a ditch between them, and throwing into it a slave whose arms and legs have been broken, and to whom no one may give either meat or drink. Among the Bondi, when a market is founded, the witch-doctor sets up his *finjo* at every road which opens into it (Dale, *JAI* xxv. 281); and in the Congo countries a gun is buried on a like occasion, and an agreement made that no arms of any kind shall be introduced (Dennett, p. 48). Cf. also, in general, art. FOUNDATION, FOUNDATION-RITES.

² M. H. Kingsley ('African Religion and Law,' in *National Review*, xxvii. [1897] 134) tells us of a W. African market-god who punishes the cheat and the thief; and among the Ewe-speaking peoples Aisan is the protector of markets and public places, performing the functions of the multitudinous gods of the Tshi-speaking peoples (A. B. Ellis, *The Ewe-Speaking Peoples of the Slave Coast of West Africa*, London, 1890, p. 52). See also Hamilton-Grierson, p. 58 and note 2. Lasch (p. 711) holds the view that the market-trees either are personifications of market-gods or serve as their abodes, and that, as a consequence, they are regarded as 'tabu,' or sacred. He bases his view upon the facts that, according to primitive conceptions, the market-place is holy ground, and the sanction which secures its peace is supernatural; but, while we admit these facts, we cannot regard them as in themselves justifying the inference which he draws from them.

³ See above, § 2. In the ancient North the market peace was a peace of God, when the market was held during a religious festival. When the king went to the frontier to settle boundary questions, and a trade arose, the peace was a host's peace (K. Lehmann, p. 50 f.). In Greece a special religious peace extended beyond the territory where the great festivals were celebrated, and secured the person and property of those who frequented them, even in their passage through a hostile district (Huvelin, p. 76 ff.; see above, § 2).

⁶ Von Wissmann, etc., *Im Innern Afrikas*, p. 250.

⁷ *Last Journals*, II. 133 ff.

⁸ *Id.* II. 139. It is for this reason that sellers prefer to do their business at the market. If an offer is made, the reply is 'Come to the market' (*Id.* II. 112, 132). The same view prevailed in Mexico (Torquemada, xiv. 18).

⁹ When the market has been 'killed,' all law is suspended, and crimes may be committed, the responsibility for which falls upon the family of the person in fault, until he has been delivered up (M. de Saegher, 'Les Coutumes des Indigènes de l'état indépendant du Congo,' *Bulletin de la société d'études coloniales*, Brussels, 1894, p. 91).

belongs, and slaughtered, and divided up among the towns represented. Whenever possible, the culprit who caused the disturbance, or his substitute, if he is a wealthy man, is burned or buried alive; if other ways of killing are resorted to, his skull is fixed up on a post in the market-place to "strengthen the law."¹

The Congo markets, held at points equidistant from several villages, are neutral spots;² and the market at Mogelo, held within an enclosed space, is neutral.³ Market-places on the banks of the Livingstone, at intervals of three or four miles, are resorted to by the aborigines of either bank, and are regarded as neutral ground;⁴ and a similar privilege attaches to a fair held on the Lukalla, in the territory of the Kalosh,⁵ and to a trading-place which lies deep in the forest at a point where the countries of the Baluba, the Babinde, and the Balunga touch.⁶

Dennett⁷ says of the 'silent' markets of the Bavili that he has never known of their being abused; and in many places in the Philippines, especially in Mindanao, commerce is carried on at regular intervals on neutral ground by the method of the silent trade.⁸

During the last two months of one year and the first and seventh month of the following year, war was suspended throughout Arabia, and fairs were held;⁹ at Guzzula there was a complete truce three days a week, when the markets were held, and for two months during the annual fair.¹⁰ Again, at the great fair at Prairie du Chien hostile tradersmen abstained from all unfriendly acts;¹¹ and during the Batta markets hostilities are entirely suspended. 'Each man who possesses one carries his musket with a green bough in the muzzle as a token of peace, and afterwards, when he comes to the spot, following the example of the director or manager of the fair, discharges his loading into a mound of earth, in which, before his departure, he searches for his ball.'¹²

Among the Kabyles the market is a neutral ground placed under the *anaya* of its owners; and, while within their territory, all who frequent it are under their protection.¹³ By the Rifis the market, with the roads leading to it, is regarded as safe from the exercise of private vengeance.¹⁴ Women from different districts, even when those districts are engaged in actual hostilities, pass to and from the Lualaba markets unmolested;¹⁵ and a like immunity is secured to the women of the Masai and Wachaga by agreement, although those tribes are mortal enemies.¹⁶ A compact to the same effect holds good between the Masai and Wa-Kikuyu;¹⁷ and at Nyangwé¹⁸ and among the Somali¹⁹ feuds are suspended during the passage of traders to and from market. This protection is afforded by the tribe where the form of society is tribal, by the king where it is monarchical, and by the king or the feudal lord where it is feudal.²⁰

The history of the boundary-stone and of the market-cross is of great interest in this connexion. It has been pointed out²¹ that the intimate relation of the market, the border-land, and the supernatural is illustrated by the characteristics of Hermes-Mercury. His symbol was an upright stone; and, as boundaries were marked by such

stones, he came to be regarded as the god of boundaries. In many cases the border-land consisted of tracts of neutral territory whither merchants repaired to exchange their wares; and thus the god of boundaries became the god of traders.¹ Now we are told that the ancient Germans used to raise poles at their public meetings, which were consecrated to the god of the public assembly.² These poles were, in all probability, erected upon a stone;³ and it has been suggested that this 'truncus super lapidem,' replaced in later days by a stone column, is the prototype of which Irminsäulen, Rolandsäulen, *perrons*,⁴ and many of the market-crosses of Scotland⁵ are later forms. In view of the facts, it is tempting to conjecture that the stone which formed the base of the column, and which seems to have served as a seat of justice, was, in many cases at all events, a boundary-stone.⁶

In the Middle Ages the market-cross was not always fixed, but was raised at the commencement of the fair. It became fixed only when the temporary market became a permanent market, when the temporary peace became a permanent peace.⁷

In China an official notified the beginning and end of the market peace by hoisting and lowering a flag;⁸ in British New Guinea a drum is beaten at the opening and closing of the market;⁹ the trade between the people of the Riff and the Spanish garrison whom they were besieging ceased on the ringing of a bell.¹⁰

Many instances might be cited of trading during a truce, followed by a resumption of hostilities as soon as the trading was over.¹¹

¹ See also Schrader, *Ling.-hist. Forsch.*, pp. 97-100; Hamilton-Grierson, pp. 29, 60.

² Goblet d'Alviella, *The Migration of Symbols*, Westminster, 1894, p. 118. This god was probably Thingus, the Germanic equivalent of Zeus Agoraios (see note below); see, however, Mogk's art. *Gon* (Teutonic), vol. vi. p. 304. According to Caesar (*de Bell. Gall.* vi. 17), the Gauls worshipped a deity whom he identified with Mercury.

³ D'Alviella, p. 117.

⁴ D'Alviella, (*Les Perrons de la Wallonie et les Market-Crosses de l'Ecosse*, Brussels, 1914, pp. 27, 42, *The Migration of Symbols*, p. 103 ff.) indicates his agreement with the views of E. Monseur (*Supplément littéraire de l'indépendance belge*, 3rd May 1891). He observes that, before the diffusion of Christianity, the poles, to which we have referred, were at once the symbol of the god of assemblies (Thingus, the equivalent of Zeus Agoraios) and of the autonomy of those assemblies. It is not improbable that, for the purpose of ornament, a representation of the god in the likeness of an armed man was attached to them or carved upon them; and that, when the meaning of these representations came to be forgotten, the popular imagination gave to them the name of the Paladin most popular at the time, and the Irminsäulen became Rolandsäulen. When the Church established herself among the barbarous peoples, the old columns continued in many places to serve as the rallying points of collective life. Sometimes they bore the emblem of Christianity; sometimes they were altered or transformed so as to symbolize something new or additional; and sometimes they were replaced by the crosses planted by the Church in sign of possession.

⁵ The resemblance which many of the market-crosses of Scotland bear to the *perron* has been pointed out by W. G. Black (*Glasgow Cross, with a Suggestion as to the Origin of Scottish Market-Crosses*, Glasgow and Edinburgh, 1913), and his suggestion as to their origin has been approved by d'Alviella in the later of his two works cited above. At p. 89 of this work d'Alviella figures certain of the Scottish crosses, and it is curious to observe how close is the similarity of some of them with the image of Hermes figured by him on p. 194 of *The Migration of Symbols*.

9. The law of the market and its enforcement. —We have already seen¹ that acts of violence perpetrated upon the frequenters of a market may and probably will 'kill' it—for a time, at all events. The recognition of this fact appears to produce two results. In the first place, offences committed within the market are punished with exceptional severity, as imperilling its peace. In the second place, since offences committed outside of the market are not regarded as a danger to its peace, those who have committed them are in consequence not subjected to punishment so long as they are within it.

On the lower Congo every breach of the regulations of the market renders the culprit liable to death. He is 'either buried to his neck in a hole, in the centre of the market place, and his skull crushed by a heavy stone; or he is beaten to death with sticks, and his body is subsequently lashed to a pole, which is erected alongside a native path.'²

Bentley³ tells us that in some of the Congo markets 'a man who brought a gun with him would be promptly buried alive, and the muzzle of his gun would be left protruding' as a warning to the rowdy elements in the fair. 'Sometimes a pile of firewood is ready to burn the culprit alive. On some markets no stick or knife may appear, a heavy fine being imposed in case of infraction.'

Among the Kabyles every offence committed in the market is punishable with death without trial. The crowd seize the offender and stone him without mercy. It is the strangers that execute the law. The tribesmen try to avoid these executions as they discredit the market.⁴ At Berbera any one from the interior or the coast who by his conduct does serious injury to trade must pay the death penalty. Still, as such an execution occasions reprisals, it is avoided as far as possible.⁵

The fairs of ancient Ireland were regulated by strict rules, any breach of which was punished with death.⁶

In ancient Greece,⁷ in ancient Norwegian and Danish law,⁸ and in the France and Germany of the Middle Ages⁹ a breach of the special peace of the market was dealt with more severely than was a breach of the common law.

In Mexico he who stole in the market was punished with death;¹⁰ and he who was suspected of selling stolen goods, if he could not tell from whom he had received them, was condemned to death.¹¹

As we have already indicated, there is evidence to show that, in many instances, those who had committed deeds of violence or contracted debt before coming to the market were safe from pursuit or arrest so long as it lasted and they remained within it.

Thus, among the Kabyles the avenger of blood who kills a man in the market suffers the same penalty as a common murderer,¹² and the same rule seems to have been observed at Berbera.¹³ There, too, the trader who brought stolen goods to the market could not be proceeded against.¹⁴ Those who resorted to the fairs of the Middle Ages were safe from prosecution or arrest for crimes committed or debts incurred beyond their bounds,¹⁵ and enjoyed privileges, and were allowed relaxations

of the common law which attracted not only the merchant but those in search of pleasure.¹

10. Administration and execution of the law of the market.—It has been observed² that, where the market lies within the territory of a tribe, its law is administered and executed in part by those who resort to it and in part by officials appointed by the tribe of the district. Where, however, it is held within the territory of a king, chief, or feudal lord,³ it is his officers that act as police, and, in some instances, as judges.

In the Kabyle markets, e.g., an official—the chief of the market, who belongs to the leading family of the tribe which owns it—sees to the preservation of the peace, escorts those who fear attacks on the road, summarily expels the quarrelsome, and fines those who create disturbance.⁴ He is concerned only with offences which affect the public, while civil and commercial disputes are referred to a marabout of the tribe.⁵ At the same time, it is the strangers in the market that execute its law by stoning the delinquent.⁶ Again, in the Berbera market, there is no supreme authority to whom the enforcement of the law is entrusted. Its execution is in the hands of the market chiefs. An assembly of those belonging to the district is sole judge in disputes; but the disputants need not abide by its decision. If they ignore it, they must leave the market.⁷

But where the market lies within the territory of a king, he or his officer sees to the maintenance of order.⁸

Thus, at a fair on the Lukalla, within the country of the Kalosh, the chief kept watch in his greatest pomp with half a dozen guards, in order that no dispute might disturb its peace. His companions were all well-known by the broad axe which they carried on their shoulders.⁹ Among the Baganda a chief appointed by the king performs similar duties;¹⁰ and these are discharged at Waluku by the king's collectors,¹¹ and among the Gallas by the local headman.¹²

At Maiduguri—the largest market of Bornu—there is a market king who settles disputes between buyers and sellers; and the women choose a market queen for their protection, through whom they transact all their business.¹³

This last instance shows that, while, in some cases, the duties of the officers of the market are confined to the preservation of the peace,¹⁴ they are, in many others, of a much more varied character.

Among the Waschambala the superintendent of the markets collects the dues and attends to matters of police.¹⁵ At Waluku the king's collectors are the general arbiters of disputes;¹⁷ and throughout the country of the Gallas, on the western Abyssinian plateau, the market is held under the superintendence of the local headman, who decides all questions arising out of broken contracts.¹⁸ At Whydah the chief constable of the market attends to its cleanliness;¹⁹ and a high officer named Conagongla sees that the strings of beads which serve as money are composed of the proper number. Those which are deficient he confiscates for the king's benefit and for his own.²⁰ Among the Gallas the duties of direction of the market are exercised by an important official who is entrusted with the conduct of foreign trade and the supervision of the exchequer.²¹ In the Congo markets there is, in most cases, a chief of the market, perhaps an old fetish-man, who regulates all disputes, and fines both the litigants so heavily that all are chary of invoking his assistance.²² At Kanó the judge of the market sits all day to try disputes

arising in the course of trade;¹ and in the Loango markets an official is charged with seeing that no deceptions are practised in the trade between natives and Europeans.³

The quality of articles brought to the market is, in general, a matter of consideration only when disputes arise.

The milk brought to the market of Jakoba, however, is daily subjected to examination;³ and in Morocco an officer is appointed to inspect the provisions offered for sale.⁴ The must constantly attend the markets and see that purchasers are not overcharged; and, in view of the plenty or scarcity of the goods exposed, he must fix the prices.⁵ At Kanó the shaikh of the market fixes the prices;⁶ and among the Bangala the price is fixed by the chiefs with reference to a standard.⁷ At Mecca and Jidda a public officer fixes a maximum price to all victualling traders.⁸ In some of the markets in Hawaii the chiefs regulated the prices;⁹ and in ancient Mexico they were fixed by the superintendents of the market.¹⁰ In China the officer placed over the market was charged not only with the maintenance of order, but with the supervision of weights and measures, and with the administration of justice in more important cases.¹¹ The Greek ἀγοράνομος appear to have exercised similar functions in regard to the preservation of the peace and the use of weights and measures. They also fixed the hours of the market, and regulated its conduct generally.¹² The Roman *adile* preserved order by means of his officers, and imposed fines upon the peace-breakers. He allotted their positions to the traders, and saw to the accuracy of weights and measures. To assure the *bona fides* of transactions within the markets was his special care, both by exposing frauds and by rejecting articles which were unfit for sale.¹³ In the market of Tenochtitlan ten or twelve judges sat in a house on the market-place to deal with cases as they arose and to see to the punishment of delinquents. There were also officers who went among the people, saw what was bought and sold, and broke any false measures which they found in use.¹⁴ It was the duty of these officers to fix the prices and to prevent frauds.¹⁵

11. Market dues and their collection.—In some markets—e.g., at Silindong—dues are not exacted.¹⁶ Among the Hausa, while dues are levied, entrance into the town is free to the market people.¹⁷ At Eetcho men can enter the market and trade without charge, but every woman must pay ten cowries to the government.¹⁸

When trade took place in the temple of the sun, the priest collected dues on behalf of the divinity.¹⁹

At a fair on the Lukalla, in Kashama's country, each district whose representatives were present must make a gift to the prince. Kashama, who performed a series of dances in the market, after each dance received their contributions from the market-women, who danced as they paid.²⁰ In the Bomma markets the king grants his protection and collects the dues;²¹ and in the horse-market of Fez,²² and at the market of Rabat,²³ an officer levies a small percentage on behalf of the government. At Adamaua,²⁴ and in Hawaii,²⁵ king's collectors are present in the markets; and in those of Usambara the superintendent (*mgelu*) takes a double handful of the market-women's pro-

visions for the king, and levies a contribution for himself.¹ Among the Baganda a chief appointed by the king collects a tax upon every sale;² and at Quimpanissa the people pay a tax on every article of food exposed for sale.³ In the Loango markets the chief of police sees to the payment of the dues;⁴ and at Kanó the shahk of the market lets out the stalls at so much a month, the rent forming a part of the governor's revenue.⁵ In China there are special market-dues, which are collected by a special officer.⁶ In ancient Greece the *ἀγοραῖοι* collected dues, which were applied in the first instance to the needs of the market;⁷ and in the markets of Imperial Rome, and especially in those of the Middle Ages, a fully developed system of taxation obtained.⁸ In the Mexican markets a fixed tribute was paid to the emperor, in return for which he granted his protection against thieves.⁹

In ancient India the king was entitled to market dues, which varied, according to circumstances, from a twentieth to a fourth of the value of the goods.¹⁰ The frequenter of the Baluba market at Kasseo must pay three cowries to the chief, whatever the value of his goods may be;¹¹ and in the Boné market every person who brought articles for sale had to hand over one of each kind.¹² In the Arabi districts the dues amount to one-twentieth of the value of the goods brought to market;¹³ at Nyangwé to a tenth or a sixth.¹⁴ Those who expose goods in the Whydah market pay very heavy dues to the king of Dahomey,¹⁵ while in the Hawaiian markets two-thirds of the proceeds of whatever the natives sold was demanded by the chief.¹⁶

12. The arrangements of the market-place.—Among the Lega-Gallas the markets are held only if the weather permits; for the climate is variable, and the market-places are wholly without shelter.¹⁷ In the markets of Madagascar there are neither shops nor booths, the articles for sale being set out upon mats.¹⁸ The markets on the Lualaba are held at uninhabited places, except at Nyangwé, where there are houses for traders and huts for slaves and porters.¹⁹ When the caravans arrive at Berbera from the interior, booths and dwellings are erected; and, within a week, on what was previously a desert spot several hundred huts are ready for the strangers coming thither over sea.²⁰ At Sennár the traders transact their business protected by temporary erections of boughs and mats;²¹ and at Guzulu the wares are exposed in tents and shelters of boughs, where stranger merchants are entertained and housed,²² while in some of the Sumatran markets huts are provided, where stranger merchants can display their merchandise, and pass the night for a mere trifle.²³

At Maidugari, the largest market in Bornu, lines of sheds and stalls cover an extensive area;²⁴ similar erections are found in the markets at Tusiwa and Katsena;²⁵ and Passarge²⁶ says of the markets in Adamaua that they contain numerous flat-roofed huts, which form a long street.

At Kinsay (Hang-Chau) the markets were held in great squares surrounded by shops, where all kinds of crafts were carried on and goods sold²⁷—a description which recalls to us the accounts of the markets of ancient Mexico.²⁸

In many markets the position assigned to the different traders depends on the nature of their wares,²⁹ the result being that, where those wares are traded in by one only of the sexes, a specific portion of the market is allotted to each sex.³⁰

¹ Lang, p. 285 f. Similarly, at the market of Bobo Dioulassou, a man carrying a gris-gris staff, accompanied by a drummer and a crowd of urchins, sets down his staff before each merchant ceremoniously, and, unopposed, helps himself, by means of a small calabash holding about a litre, from the merchant's calabash (Binger, i. 871).

In the markets of ancient Mexico each class of merchandise had its appointed place,¹ the more cumbrous kinds being stored in the neighbouring streets, or in floats on the canals;² in those of the Middle Ages what determined the trader's position was not only the character of his goods, but his nationality; and, in some cases, the latter was the sole determinant.³

13. Modes of bargaining in the market.—One of the most characteristic practices of the primitive trader is that of transacting business by means of a third person. Dall⁴ tells us that the Aleuts never trade with one another directly; and we have suggested that some light is thrown upon the origin of this method by the instance of the exercise of the silent trade reported by Lander.⁵ It is said that, among the natives of Australia, children are made *ngia-ngiampe* in order that they may act as the agents of their respective tribes in the business of barter;⁶ and many cases may be cited in which the man who takes a stranger under his protection not only acts as his host, but assists him in buying and selling, and is generally responsible for his conduct.⁷

At Berbera each stranger must choose a protector (*abbān*). He dare not trade without him, and must pay him one per cent on the value of every article which he brings into the market. The *abbān* is his broker; he protects him against the extortions of the natives, and settles all disputes in which he may have become involved.⁸ A similar account is given of the part played by the host at Dioulassou.⁹ In Nigeria, whenever an article changes hands, the seller pays a commission to a third party, who is supposed to have facilitated the purchase.¹⁰

In the markets of many Asiatic countries a curious practice prevails by which traders, when bargaining in the presence of others from whom they wish to conceal their business, drive and conclude their bargains by touching the points of each other's fingers under a shawl without a word being spoken. It has been found in use at Mecca,¹¹ at Calicut,¹² among the Somali,¹³ at Jidda,¹⁴ at Pegu,¹⁵ in Malacca,¹⁶ in Mongolia,¹⁷ and elsewhere.¹⁸

Torquemada¹⁹ notes a curious practice which prevailed among the Indian women in the markets of ancient Mexico. They exchanged their wares without a word being spoken. The one party held out the article of which she wished to dispose; and the other, taking it in her hand, made signs that it was not a fair equivalent for what she proposed to give in exchange. If the first party refused to add anything, she ran the risk of losing her customer; if she added what was demanded, the bargain was concluded.

14. Methods of securing attendance at the market; its place in public and social life.—In some of the Congo countries it is penal for a woman to go to her farm on a market day.²⁰ To the desire to induce the stranger to come to market Heeren²¹ ascribes certain Lydian and Babylonian regulations.

²⁰ Bentley, i. 400. According to the ancient laws of India, in ancient Mexico, and during the Middle Ages, the market was the only place where it was permissible to sell movables. He who sold outside of it was regarded as an illicit trader, and he who bought from him as his accomplice (Lasch, p. 778; Torquemada, xiv. 16; Huvelin, p. 457 f.).

²¹ Heeren, *Hist. Res. into the Politics, Intercourse, and Trade of the Principal Nations of Antiquity*, i. 105 f., ii. 199.

tions regarding the relations of foreigners with the women of the country; and we may assign to a like origin such customs as the temporary marriages of Central Asia, and similar usages there and elsewhere.¹

In the Batta markets gaming, cock-fighting, and, in some cases, boat-racing form special attractions.² At the fair of Ukätz transactions intertribal and communal were adjusted, truces were declared, evil-doers were proclaimed, and tribute was brought in. It was there that betrothals were arranged by parents, who brought their daughters with them, that poets produced their verses, and that great men, ambitious of reputation, sought to gain it by exercising a profuse hospitality.³

In Ireland the *aenach*, or fair, was 'an assembly of the people of every grade without distinction: it was the most common kind of large public meeting, and its main object was the celebration of games, athletic exercises, sports, and pastimes of all kinds.'⁴ The most important of the *aenachs* were those of Tallinn, Tlachtga, and Ushnagh.⁵ The people of Leinster held a provincial *aenach* at Carman, or Wexford, once every three years, which began on 1st August and ended on the 6th.⁶ 'Professors of every art, both the noble and the base arts, and non-professionals were there selling and exhibiting their compositions and their professional works to kings: and the rewards were given for every [work of] art that was just or lawful to be sold or exhibited or listened to.'⁷ New laws were promulgated, old laws were rehearsed, peace was proclaimed. There was music, recitation of poetry, feats of arms, athletic sports, horse-racing, and juggling.⁸

In Madagascar the market is a place of public resort, and it

is there that the public announcements of the sovereign are made.¹ In the Kabyle market feasts and fairs and all matters that affect the community are proclaimed. It is the place of news, gossip, and friendly intercourse, of plans, and of plots.² The Papuan markets last all day, and are enlivened with feasting and dances;³ and similar amusements accompany some of the Eskimo markets.⁴ Those who resort to the Congo markets go not only to buy and sell, but to meet friends, to drink *malafou* and enjoy a gossip with them, to settle thorny questions, to hold palavers, to arrange disputes between clans and villages, to decide on war and peace, to bargain about the purchase of a wife, to describe slaves lost or stolen, and to give publicity to transactions such as the release of hostages or prisoners of war, or the payment of the price of blood. It is there that the man who is robbed gives information of the robbery, and that the creditor, if he cannot get payment, proclaims the infamy of the debtor. It is there, too, that ordeals are administered and criminals executed. Under the trees in its vicinity the drinkers of palm-wine, the politician, and the news-monger hold rendezvous.⁵

MARRIAGE (Introductory and Primitive).—Marriage has two main functions: it is the means adopted by human society for regulating the relations between the sexes; and it furnishes the mechanism by means of which the relation of a child to the community is determined. Owing to the preponderant importance which has been attached to the former function, the more strictly social functions of marriage have been largely overshadowed by its moral aspect, and it has not been sufficiently recognized that the function of marriage as the regulator of social relations may be of the most definite kind where the institution is of a very lax and indefinite order when regarded from the moral standpoint of civilized man.

The institution of marriage may be regarded as

the central feature of all forms of human society with which we are acquainted. It stands in an especially close relation to the family—using this term for the group consisting of parents and children. This social group rests absolutely on the institution of marriage. Where marriage is monogamous, the group formed by the family will consist of the consorts and their children; where marriage is polygynous, it will consist of a man, his wives, and their children; while in polyandry, the family will consist of a woman, her husbands, and her children by those husbands or assigned to those husbands by social convention.

The institution of marriage also underlies the extended family, this term meaning the social group consisting of all persons related to one another either by consanguinity or by those social conventions which so often take its place (see art. KIN, KINSHIP). It is the marriages of the members of the extended family that immediately determine the limits and functions of this mode of social grouping.

The relation of the clan and other similar social groups to marriage is less simple. While marriage is the foundation of the family, it is possible that the clan-organization has grown out of a state of society in which individual marriage did not exist; but, whether this has been so or not, the clan-organization as it now exists is intimately related to marriage, this institution being the means by which descent, inheritance of property, succession to rank, and other social differentiations are regulated.

1. Regulation of marriage.—In all forms of

¹ Ellis, *Hist. of Madagascar*, i. 382 f.

human society there are definite rules regulating whom the members of the community may and may not marry. These rules are of many different kinds, but they all fall under one or other of two main forms: regulation by kinship or genealogical relationship; and regulation by some form of social mechanism, consisting of clans or similar social groups. The rules may also be distinguished according as they prohibit or enjoin certain unions.

Among all those peoples who have the family as their main form of social grouping marriage is regulated solely by kinship, and the rules regulating marriage consist exclusively of prohibitions, forming the 'table of prohibited kindred and affinities.' Peoples whose social system is founded mainly on the clan or other similar mode of grouping do not, however, regulate their marriages solely by this mechanism, but this kind of regulation, in all cases of which we have any exact knowledge, is combined with the regulation of marriage by kinship, the two modes of regulation co-existing, and supplementing one another. Further, this double mode of regulation does not consist entirely of prohibitions, but, side by side with rules of prohibition, there are often definite rules which enjoin marriage with certain relatives.

The regulation of marriage associated with modes of social grouping assumes certain definite forms for which there are well-established terms, such as exogamy, endogamy, and hypergamy.

2. **Exogamy and endogamy.**—Much confusion has been produced in the use of these terms through the mistaken idea that the processes which they denote are opposed to one another, this being chiefly due to an error on the part of McLennan, who was the first to draw attention to the practice of exogamy. According to this writer, exogamy is a custom in which a person has to marry outside his tribe. There are a few cases on record, though even about these we need far more exact information than we possess, in which it seems that people have to marry outside their tribe or other similar social group, but in the vast majority of the cases for which the term 'exogamy' is used the exogamous social group is not the tribe, but that subdivision of the tribe for which the term 'clan' is generally employed. When we say that a community possesses the clan-organization, we mean that it is divided into a number of groups, the members of each of which must marry outside their own group. If they must marry into some other group of their own community, we have to do with the practice of endogamy, the community as a whole being exogamous, while the clan within the community is exogamous. From this it will follow that exogamy and endogamy are not antithetical processes, but, where both exist, supplement one another.

Endogamy in this sense is a relatively infrequent practice, being most fully developed in the caste system of India, in which the caste is the endogamous group and the *gotra* (*q.v.*) or other corresponding sub-group the 'exogamous unit' (see art. CASTE). The social system of the Todas is another pure case of the division of endogamous social groups into exogamous clans. In other parts of the world obligatory endogamy is rare. There are many people who are isolated from their neighbours, either by physical or, still more frequently, by social conditions, such as constant warfare, who habitually marry within their own community, but their case differs fundamentally from that of the Hindu or Toda in that there is no definite prohibition of marriage within the community, and, if the opportunity arises, such marriages meet with no opposition. Even in Europe there are cases in which marriage within the village or other social group is so habitual and departure

from this custom meets with such social reprobation that we come very near to true endogamy. It would seem that this tendency to endogamy is especially pronounced where the people of the village follow one occupation, and this association of endogamy with occupation is not only characteristic of the caste system of India, but is also found in one of the exceptional examples of obligatory endogamy, which occurs in Africa in the case of the smiths, who often form a social group kept separate, by having to marry within their own body, from the rest of the community to which they belong. It is noteworthy also that there is a definite tendency towards the association of endogamy and occupation in the cases of priesthood and royalty, and in some cases marriage within these classes is so strictly enjoined that it amounts to a form of endogamy.

The practice of exogamy occurs in many forms according to the nature of the social system of which it forms part. If the community is totemic, the exogamous social group will be the totemic clan. If the community is organized on a social or territorial base, the exogamous unit will be the village, the hamlet, or the quarter of a town. If the grouping rests on a belief in common descent, the exogamous group may take its name from the ancestor, this mode of organization differing from regulation by kinship in that the common ancestor is remote, and in some cases mythical or fictitious. In one frequent form of exogamy the whole community consists of two moieties, the men of one moiety marrying women of the other. The rule that two people with the same family name may not marry, which is found in China, may be regarded as another variety of exogamy. In Australia this mode of organization is modified so as to produce a complicated system consisting of social groups known as matrimonial classes.

3. **Australian matrimonial classes.**—These form a special variety of exogamous system in which a person has not only to marry outside his own class, but has to marry into another specified group. In one form, known as the four-class system, each moiety is composed of two sections, the marriages of members of one section of one moiety being limited to one section of the other. This system is associated with a peculiar mode of descent in which a child does not belong to the class of either father or mother, but to the other section of the moiety of one or other. In another form, known as the eight-class system, each of the four classes is composed of two sections, in which descent follows the same kind of rules as in the four-class system, but of a more complicated kind. This form of social organization has until recently been supposed to be unique, but A. R. Brown has shown¹ that it is nothing more than a systematization of the regulation of marriage by kinship which is generally associated with exogamous systems. In Melanesia there are probably similar groupings, though of a less definite kind than in Australia.

4. **Hypergamy.**—This name has been given to a peculiar form of the regulation of marriage, only known to occur in India, in which a woman must marry a man of a caste or sub-caste higher than her own. Where this custom is found, men and women of the same caste or sub-caste are sometimes also allowed to marry, but there is the strictest prohibition of the marriage of a woman with a man of a caste lower than her own.

5. **Regulation of marriage by kinship.**—Among peoples whose social system is based specially on the family and the nature of whose system of relationship shows that this mode of social organization has been of long duration, marriage is

¹ J. R. A. I. xliii. [1913] 143 ff.

regulated exclusively by genealogical relationship. Marriages with certain classes of relatives are forbidden and those with other classes allowed, while other marriages may not be strictly prohibited, though looked upon with more or less disfavour by the community, the chief example of this difference of attitude occurring in the case of first cousins. We do not know, however, of any such people among whom marriages with certain relatives are obligatory, or even so habitual as to stamp their presence on the nomenclature of relationship.

The regulation of marriage solely by relationship is not limited to peoples whose system of relationship is based on the family, but occurs also among many people who follow the classificatory system of relationship. It is found in many parts of Africa and America; it is characteristic of Polynesia, and occurs in some parts of Melanesia; while, as already mentioned, the matrimonial classes of Australia are only a specialized form of this mode of regulation. Among all these peoples, however, the results of this type of regulation differ widely from those already considered in that the restrictions apply to the very wide circle of relatives involved in the use of the classificatory system. Among such peoples we have not to do with the prohibition of marriage merely between brother and sister or between first cousins, but also between those whom we should call second and third cousins, or even more remote relatives. Sometimes the rule forbids marriage with a person with whom any kind of genealogical connexion, apart from relation by marriage, can be traced. More frequently the prohibition does not take this extreme form, but there are rules limiting the prohibition to certain classes of genealogical relationship, a frequent form of such limitation being the exclusion from the prohibition of those cases in which cousins are descended from persons of different sexes. Thus, among many peoples the marriage of the children of two brothers or of two sisters is strictly prohibited, but not only is the marriage of cousins who are the children of a brother and sister allowed, but, as will appear shortly, these relatives may be the natural consorts of one another. The people who thus regulate marriage exclusively by relationship have lost the clan-organization which their use of the classificatory system shows them to have once possessed. Even those who still possess this form of social organization do not rely solely upon it for the regulation of marriage, but marriages with many relatives are prohibited outside the circle of the exogamous group. Sometimes this prohibition takes the form that a man must not only seek a wife out of his own clan, but must avoid the clans of both father and mother, and perhaps the clans of all the grandparents. More often, however, the prohibitions rest more directly upon kinship, and do not involve all the members of the clans with which the man is related. Many gradations occur between people who regulate marriage solely by kinship and others among whom marriage is chiefly regulated by the clan-mechanism, but we know no people who have been carefully investigated and have been found to be wholly devoid of the mode of regulation by kinship.

6. *Marriage with relatives.*—Among many peoples, and especially among those who use the classificatory system of relationship, the regulation of marriage by kinship is not confined to prohibitions, but there are often definite regulations which make marriage with certain relatives the orthodox unions, and even in those cases in which such marriages occur but are not especially frequent the influence which they have had upon the nomenclature of relationship shows that they must once have been habitual. The influence upon

systems of relationship is so definite that it is possible to infer from their nature the existence of forms of marriage in the past which are no longer in vogue, thus affording evidence which makes it possible to trace the past history of marriage.

(a) *Parent and child.*—We know of no people who allow marriage between mother and son. In many places, especially in Africa, a man may marry one of his father's wives, but in these cases his own mother is definitely excluded. Marriage between father and daughter is said to occur occasionally, though it is probable that in such cases the marriage is not that of a man with his own daughter, but with one whom he calls daughter in the classificatory sense. The marriage of a man with his brother's daughter would be a union of this kind, and such marriages certainly take place in some parts of Melanesia and in Australia.

(b) *Brother and sister.*—The case in which we have the most definite evidence for this form of marriage is that of royal families. Examples of the marriage of brother and sister are known from history in the royal families of Egypt and Persia, and occurred also among the Incas of Peru. In recent times the marriage of brother and sister is, or has been, the custom in Siam, Burma, Ceylon, Uganda, and the Hawaiian Islands. In the last case the highest kind of chief was one whose father and mother were own brother and sister, who were themselves the offspring of a similar union. In this case certainly, and probably in the others, this form of marriage is definitely forbidden to those of other than royal or chiefly rank, and the practice is due to the belief in the virtue of royal blood and the desire to keep this blood as pure as possible.

Marriage between brother and sister has occasionally been recorded as the general custom of a people. There are well-established cases where marriage is allowed between half-brother and half-sister, usually where they are the children of one father by different mothers, more rarely by one mother and different fathers. No other cases are well authenticated, and some records of the marriage of brother and sister, such as the case of the Veddas, are now known to be mistaken. In general, not only is this form of marriage prohibited, but its prohibition forms the central and most definite feature of the moral code; and this applies to the marriage not merely of own brother and sister, but of those relatives in the widest classificatory sense.

It has been supposed by Morgan and others that the marriage of brother and sister was once general among mankind, and that it formed a stage in the history of the institution of marriage, but this opinion is chiefly based on misinterpretation of the evidence. Thus, avoidance between brother and sister (see *KIN, KINSHIP, III. 2*) has been held to show the former presence of sexual relations between these relatives. This is probably correct; but in Melanesia, from which region some of our best examples of this form of avoidance come, the custom is almost certainly a relatively recent practice due to external influence.¹ In all cases where marriage or sexual relations are allowed between brother and sister, they are probably of late occurrence, due either to relaxation of morality, or to the working of special ideas, such as that of the virtue inherent in royal blood.

(c) *Cousins.*—It is necessary to distinguish here between the marriage of cousins in general and the marriage of those cousins, usually known as cross-cousins, who are descended from persons of different sex. The marriage of cousins in general is sometimes allowed and sometimes prohibited, this prohibition being a necessary consequence of the

¹ Rivers, *History of Melanesian Society*, Cambridge, 1914, II. 158.

classing of all or some cousins with brothers and sisters in different forms of the classificatory system.

The marriage of cousins is frequent among Muhammadans, usually with the daughter of the father's brother, and here, as in other cases in which this form of marriage occurs sporadically, the motive is the desire to keep property within the family.

The most frequent form of marriage of cousins is that which takes place between cross-cousins, namely, cousins who are the children of brother and sister. In many places this marriage is not merely allowed, but is the orthodox union, and is so habitual that it determines the form of the system of relationship and gives a special character to the whole social system. All the peoples who are known to practise this form of marriage use the classificatory system of relationship; but usually the marriage is not between cross-cousins in the wide classificatory sense, but between the children of own brother and sister. In some communities these relatives are regarded as husband and wife without the need of any ceremony or other social arrangement, and still more frequently they apply to one another the terms used between husband and wife, even when they are not actually married to one another.

In the most frequent form of this union a man marries the daughter either of his mother's brother or of his father's sister, but occasionally his choice is limited to one or other of these relatives, the case which occurs the more frequently being that he may marry the daughter of his mother's brother but not of his father's sister. This form of marriage occurs among a few peoples of Australia, in several parts of Melanesia, including Fiji, and in India, especially in the south of the peninsula, though it was probably once more widely distributed.¹ It is also found among the Haida and a few other peoples of N. America, but has not yet been recorded from S. America. In Africa it has recently been found by Mrs. R. F. A. Hoernle among the Hottentots.

This type of marriage has usually been regarded as a secondary consequence of the dual organization of society, and has probably arisen in most, if not in all, cases out of this form of social organization. In Melanesia it has probably had as its immediate antecedent marriage with the father's sister or with the wife of the mother's brother, but elsewhere it seems to be actuated by the desire to keep property within the family.² In some parts of Australia the form taken by the matrimonial classes involves the marriage of second cousins, but we do not know how far such marriages occur between true second cousins or between more distant relatives. In some parts of the New Hebrides it is the custom to marry certain relatives whom we should class as first cousins once removed. Thus, a man may marry the daughter of his father's sister's son or daughter, the daughter of his mother's brother's daughter, or the daughter of his mother's mother's brother. One of these forms of marriage is especially frequent, viz. that with the daughter's daughter of the father's sister.

(d) *Uncle and niece*.—In general, marriage between these relatives is prohibited, but occasionally a man is allowed to marry his brother's daughter, and this marriage would seem to have sometimes been so habitual as to have influenced the system of relationship. This marriage occurs in northern Australia and in some parts of Melanesia. It has also been recorded elsewhere, and is allowed in some parts of Europe. Several peoples of S.

India permit a man to marry his sister's daughter. In some cases it is only the daughter of an elder sister who may be married.

Another marriage which may be included under this heading is one occurring in Melanesia, in which a man marries the wife of his sister's son, or in which he and his sister's son have their wives in common.

(e) *Aunt and nephew*.—Marriage with the father's sister occurs sporadically in certain parts of Melanesia, and is a regular practice among some of the Déné peoples of N. America, and marriage with the mother's sister is said to occur among the Ossetes of the Caucasus. Marriage with the wife or widow of the mother's brother is still practised in many parts of Melanesia, and is shown by the nomenclature of relationship to have once been a common practice. This form of marriage also occurs among some of the Bantu peoples of Africa, and many systems of relationship of N. America have features which would be its natural result.

(f) *Grandparent and grandchild*.—In Pentecost Island in the New Hebrides it is, or has been, the custom to marry the daughter's daughter of the brother; and this marriage with one who, through the classificatory system, has the status of a granddaughter has imprinted itself so deeply on the nomenclature of relationship that it must once have been the habitual custom of the people. This form of marriage has also been recorded among the Dieri of Central Australia.

A form of marriage similar to that just described, in that a man marries a woman two generations below his own, occurs in Ambrim, adjacent to Pentecost Island. In this island a man marries the daughter of his sister's son. Still more widely distributed is marriage with the wife or widow of the father's father. The occurrence of this form of marriage was first inferred from the nature of the terminology of relationship in Fiji and in Bougainville Island in the Solomons, but the present writer has since found it in vogue in several islands of the New Hebrides, not only with some wife of the father's father, but with the actual grandmother.

We do not at present know of marriage between grandparents and grandchildren outside of Australasia, but there are features of some African systems of relationship which suggest its occurrence at present or in the past.

7. *Polygamy*.—The forms of marriage so far described are characterized by the social status of the partners to the union. The varieties now to be considered arise out of the number of the persons who enter into union. The term at the head of this section is most conveniently used as a generic term to include all such cases other than monogamy. Its different forms are polygyny, in which one man marries more than one woman; polyandry, in which one woman marries more than one man; and communal marriage, in which more than one man marries more than one woman.

8. *Polygyny*.—Though this form of marriage exists, or has existed, in every part of the world, it is very rarely, if ever, practised by all members of the community, but is the special privilege of the powerful and wealthy. Polygyny can be universal only among a people which obtains women by capture or some other means from outside its own community. Sometimes the practice is limited to chiefs, sometimes, where large payments for a wife are in vogue, it is only the wealthy who can marry more than one wife. Sometimes polygyny is the privilege of those who have shown their superiority to the rest of their community in some way, as in Eddystone Island in the Solomons, where a second wife is allowed to men who have taken ten heads in warfare.

¹ J.R.A.S. 1907, p. 611.

² O. H.B. Tout, *British North America*, London, 1907, p. 145; F. J. Mahony, *Man*, xiv. (1914) p. 194.

Polygynous unions differ considerably in the degree of social differentiation accompanying the union. The different wives may live together in one household, or each may have her own establishment. Sometimes one wife is superior to the rest, and her children differ from those of other wives in social status—a condition which passes insensibly into the distinction between marriage and concubinage (see below, § 11). Sometimes there are definite rules regulating the behaviour of the husband to the different wives.

The continent in which polygyny has reached its highest degree of development is Africa, in many parts of which the practice is so frequent and has so impressed itself upon the social organization that it has influenced the nomenclature of relationship, and special terms are used to distinguish from one another the children by the different wives of a polygynous marriage. Other regions where polygyny is well established are Australia and parts of Melanesia, where the polygyny forms part of an organized system of monopoly of the young women by the old men of the community.

It is sometimes the custom in polygyny that the wives shall be sisters, a man who marries a woman having the right to take her sisters also as they reach marriageable age.

9. **Polyandry.**—This custom is far less frequent than polygyny. At the present time its chief home is in India and its neighbourhood, and it also occurs in a definite form in the Marquesas Islands and among the Bahima and Baziba, Bantu peoples of Africa. In ancient times it has been recorded among the Arabs, Britons, Picts, and Guanches, but our information about these and many of the recently-recorded cases is not sufficient to show whether the condition was one of true polyandry or a variety of sexual communism. Even in India there is a distinct tendency for polyandry to be associated with polygyny, thus producing one form of communal marriage. Two varieties of polyandry are generally recognized, in one of which husbands are brothers, while in the other they are not necessarily related to one another. Following McLennan, these two forms are often called Tibetan and Nair (Nayar) respectively, but are better distinguished as fraternal and non-fraternal.

Both among the Todas and in Tibet and neighbouring regions, where polyandry exists in its purest form, it is of the fraternal variety. Usually the eldest son of a family marries, and, as his brothers grow up, they share his wife with him. Even if one of the younger brothers takes a wife among the Todas, she becomes also the wife of the other brothers. It is doubtful whether the recorded cases of non-fraternal polyandry should be regarded as polyandry at all. Among the Nayars, who furnished McLennan with his pattern of this form of polyandry, a girl goes through a form of marriage with a man, but then or later consorts with a number of men who need not be related to one another. It is a question, however, whether these men should not be regarded as *cicisbeis* rather than husbands—a point difficult to decide, since the purely matrilineal institutions of the people make the fact of fatherhood of little social importance.

A variety of polyandry which may be distinguished is one which occurs among several peoples of India, in which a young boy marries a wife who consorts with the boy's father or maternal uncle or some other man. The wife's offspring are counted as the children of the boy-husband, and, when the boy reaches adult age, he will consort with the wife either of one of these children or of some other boy. The motive of the custom is said

to be that the boy shall have a son to take him out of *Put* (hell). A similar practice has been recorded elsewhere, as among the Ostiaks and Ossetes. In Melanesia a man and his sister's son might share a wife or wives in common, but this was almost certainly part of a system of communal marriage, and it is probable that this is also the true nature of some or all of the other cases of this variety of polyandry. The polyandry of the Marquesas is peculiar in that the husbands are of different social status, one husband belonging to a more influential section of the community than the other.

We know very little of the social mechanism by means of which the status of the children is determined in cases of polyandry. In several cases it has been recorded that the children are assigned to the different husbands in order of age, but it is certainly not true of the Todas, who were once credited with this practice. Among this people there is no need for any special ascription of the children to the different husbands when these are brothers, owing to their common habitation and their common possession of property. It is only when the husbands are not brothers that the necessity arises, and then fatherhood is determined by means of a ceremony at the seventh month of pregnancy, the man who performs this ceremony becoming the father of the child for all social purposes.

We know little or nothing of the causes which have led to polyandry. Among the Todas and in the Marquesas Islands, and possibly elsewhere, polyandry is associated with female infanticide, and it has been supposed that the polyandry is a result of the scarcity of women so produced. It has also been supposed that polyandry has been the result of inequality in the proportion of the sexes, due to scarcity of the food-supply, this either producing a small proportion of female births owing to physiological causes or leading to the practice of infanticide.

It is noteworthy that the only definite example of polyandry recorded in Africa should occur among a pastoral people whose culture possesses several features closely resembling that of the Todas.

10. **Communal or group-marriage.**—The question whether this form of marriage exists has been the subject of a lively controversy between different schools of sociologists for many years. If we define this type of marriage as a union of more than one man with more than one woman, no one doubts that cases occur which conform to the definition. This form of union is found among the Todas, for instance, but there it seems to have arisen as a combination of polygyny with polyandry. It is when we pass from such cases to those in which large groups of men are held to be the husbands of large groups of women that doubt arises.

The solution of the problem turns largely on the sense in which we use the term 'marriage.' If this word be employed for relations between the sexes, there is no question that group-marriage does not merely exist, but is a widely distributed practice. If, on the other hand, marriage is regarded essentially as an institution by which the social status of children is determined, we are met by our very imperfect knowledge of the exact nature of the recorded cases from this point of view; and another difficulty is that of drawing the line between wife and concubine, between husband and *cicisbeis*.

The recorded case which seems most to deserve the name of group-marriage is that of the Ngara-bana (Urabunna) of Central Australia. It is stated that, among this people, no man has exclusive rights over any woman, and that we have

not to do with a confusion between wife and concubine appears from comparison with an adjoining people, the Dieri. The Dieri have a definite term for individual marriage, viz. *tippa-malku*; this exists side by side with the *pirrauru* relationship, which is certainly one in which a group of men and a group of women have the right to sexual relations with one another. The Ngarabana have consorts called *piraungaru*, who evidently correspond with the *pirrauru* of the Dieri, and the relations between the Ngarabana men and women who call one another *nupa* would, therefore, seem to correspond with the *tippa-malku* union of the Dieri, except that they are group-relationships, while the *tippa-malku* union occurs between individuals. The *tippa-malku* marriage, however, is associated with the custom of lending a wife, while men other than the husband have marital rights as part of the marriage ceremony. If the *tippa-malku* union is regarded as true marriage, it is difficult to withhold this name from the union between *nupa* which seems to correspond with it among the Ngarabana. In order to reach a positive decision on the matter, however, we should like to be more fully informed about the exact social relations which exist between children and the male partners in the different kinds of union.

In some parts of Melanesia there is an association of definite individual marriage with the occurrence of sexual relations between the group of men formed by the husband's brothers and the group of women formed by the wife's sisters. Since these groups consist of brothers and sisters in the classificatory sense, they may be of considerable size. This case is, now at any rate, confined to relations between the sexes, and it seems, therefore, better not to regard this as a form of group-marriage, but to speak of sexual communism associated with individual marriage.

Those cases may be similarly regarded in which all the members of a conventional brotherhood possess marital rights over the wives of other fellows. The most definite case of this kind of which we know is that recorded by C. G. Seligmann¹ among the Massim of New Guinea, in which all the members of a brotherhood who called one another *eriam* have marital rights over the wives of the *eriam*.

11. Concubinage and cisisbeism.—Reference has already been made to the difficulty of distinguishing these conditions from marriage. The most convenient use of the word 'concubine' would be to denote a woman with whom sexual relations are permitted, although the union does not involve fatherhood if there should be offspring. Similarly, the term cisisbeo would be most conveniently used of the male partner in a similar union. If the terms were used in this sense, the *pirrauru* and *piraungaru* of the Dieri and Ngarabana would be concubines or cisisbei. The distinction would be especially applicable in such a case as that of the Todas, whose *mokkthodvaiol* would be distinguished as cisisbei from the husbands proper, there being the important difference between the two that the *mokkthodvaiol* partnership is not subject to the law of endogamy which regulates the polyandrous marriage. The *mokkthodvaiol* also never obtains the status of father to his partner's children except in those rare cases in which, being of the same endogamous group as an expectant mother whose husband is dead or missing, he is called upon to perform the ceremony which determines fatherhood.

The difficulty in using the term 'concubine' in the sense thus proposed is that in some of the cases,

¹ *Melanesians of British New Guinea*, Cambridge, 1910, p. 478.

such as those of the OT, in which the use of the term is fixed, concubinage carries with it the social relation of fatherhood, sometimes even with full rights of inheritance and succession (cf. art. CONCUBINAGE [Introductory]).

12. Marriage and sexual relations.—In this article marriage has been considered chiefly as a social institution by means of which the relations between parents and children become part of an organized social system. People among whom marriage is a social institution of the most definite kind may vary greatly in their attitude towards the sexual relations of married persons. All gradations can be found between peoples who regard any sexual relations other than those between husband and wife as a heinous offence and those who allow very great freedom in this respect. Of all the cases of which we have any knowledge, however, the extra-marital relations of married persons are subject to definite restrictions, the clue to the nature of these restrictions resting upon the conception of a wife as the personal property of her husband. Thus many peoples who will kill or make war upon the offender, if a wife is found to have transgressed, will nevertheless freely allow others access to their wives if their consent is asked, or will offer no objection if relations with other men form part of the saturnalia or other occasions when relaxation of the ordinary moral rules is allowed.

The chief modes of departure from marital chastity are exchange of wives, which is especially a feature of Australian society, and lending wives to guests, which occurs in many parts of the world. Allowing the use of a wife in return for money or other kind of compensation is more rare, and is often only a feature of the relaxation of morality which follows contact with external influence.

13. Sexual relations before marriage.—Peoples differ greatly in their attitude towards sexual relations before marriage. In general, pre-nuptial freedom is allowed to men, but great divergencies are found in the views held about female chastity before marriage. Among many people the pre-marital chastity of the wife is so highly valued that it may lead to such a practice as infibulation (cf. *ERE* iii. 668*, 669*), and the testing of chastity may form an important part of the marriage ceremony, the failure of this test leading to annulment of the marriage or depriving the relatives of the woman of the bride-price or other benefits which they would otherwise obtain from the marriage.

Among other peoples freedom of sexual relations before marriage is regarded as a normal occurrence, and there may even be an organized system of payments for such relations, or prostitution in some form may be regarded as a regular preliminary to marriage, and those who have been successful in this career may be especially sought as brides. In other cases sexual relations before marriage may take place more or less freely, though they are not openly condoned. Among many peoples such sexual relations are allowed so long as they do not result in offspring, and often, as in many parts of Europe, the occurrence of pregnancy forms the usual preliminary to, and occasion for, marriage.

In addition to the forms of marriage dependent upon the social status of husband and wife and the numbers of partners who enter into union, other varieties can be distinguished according to the place of residence of the married persons, and the age at which the union takes place.

14. Patrilocal and matrilocal marriage.—These are terms respectively for cases in which the wife goes to live with her husband, and the husband goes to live at the home of his wife, the usual consequence being that in the one case the children

will belong to the locality of the father, and in the other to that of the mother. These two varieties of marriage have often been distinguished, especially by writers on Indian sociology, by means of the Sinhalese words *deega* and *beena*, but the above terms, first proposed by N. W. Thomas, are now coming into general use. Intermediate cases between the patrilocal and matrilocal forms occur in which the man goes to live at his wife's home for a time, the case being closely related to that mode of obtaining a wife in which a man has, for a period of months or years, to serve the parents of the woman he hopes to obtain as a wife (cf. § 19).

Sometimes, as in the island of Tikopia, the visit to the wife's home is of so short a duration that it is probably only a survival in ceremony of a former condition of matrilocal marriage. Still another condition is that which occurs among the Arabs of the Anglo-Egyptian Sūdān, in which the wife returns to the home of her parents in order to give birth to her children.

15. Infant marriage.—It is necessary to distinguish between infant marriage and infant betrothal, though the line between the two is often indefinite. Children are often promised as husbands or wives when very young or even before they are born, but it is only when ceremonies are performed or transactions carried through which are of the same nature as those accompanying the marriage of adults that we ought to speak of infant marriage.

Even in this limited sense, infant marriage is a very widely distributed practice. It is especially prominent in India, where its combination with the prohibition of re-marriage of widows makes it a very important feature of social life. Infant marriage occurs as an established practice in Australia and Melanesia, but here, as in other parts of the world, the process is often one of betrothal rather than of marriage. Sometimes a girl married in infancy goes at once to live with her husband's people; in other cases she continues to live with her own parents until she is of age for the marriage to be consummated.

Infant marriage has probably had two chief causes. It is a means of promoting the chastity of the young, adopted by peoples who attach importance to chastity before marriage, and this is especially the case when the girl goes to live with her husband's parents, who are thus able to watch over their son's wife. It may also be the result of any social condition which makes it difficult to obtain a wife, such as scarcity of women due to infanticide or natural causes, or monopoly of women by one section of the community. A lowering of the age of marriage for these reasons only accentuates the difficulty in obtaining a wife, and the lowering of age thus tends to be progressive, producing, in course of time, the marriages in extreme infancy which are found among some peoples (cf. art. CHILD MARRIAGE [in India]).

16. Arrangement of marriage.—In the very rare cases in which the choice of a consort is absolutely free the arrangement of marriage is a simple matter, and the same is true of the condition which seems to occupy the other end of the scale, in which the marriage of a person is pre-determined by the social rules of the community, as in those cases in which a man has to marry a certain relative. Even, however, in cases in which the choice is largely free, it is often the custom to make use of an intermediary, or the transactions connected with the marriage are arranged by the relatives or friends of the partners in the proposed union.

An important difference in the nature of the process of courtship turns upon whether the initiative comes from man or woman. Among many

peoples proposals of marriage should come from the women.

The part played by other persons in the arrangement of marriage largely turns upon the extent to which relatives and friends take part in the pecuniary transactions which so often accompany marriage; but in many communities the consent of certain relatives is necessary, quite apart from this. Among those peoples whose social system is based on the family it is the consent of the parents that is chiefly needed. Among other peoples the place of the parents in this respect may be taken by some other relative, such as the mother's brother or the father's sister. In some parts of Melanesia the consent of the father's sister is essential. She usually chooses a wife for her nephew, and has the power of vetoing his marriage if he should choose for himself.

17. Marriage by purchase.—In most parts of the world marriage is accompanied by pecuniary transactions. In some cases payments are made by the husband or his relatives to the relatives of the woman, this payment being usually known as the bride-price. In other cases payments are made by the relatives of the bride, these being usually known as a dowry. In other cases again there are complicated transactions in which payments pass between the two parties, but often these are chiefly of a ceremonial nature, either existing alone or, more frequently, accompanying the transference of the bride-price or dowry.

Sometimes the payments made for a wife or husband may be so large as to form a definite impediment to marriage. They tend to raise the age of marriage, or may even prevent some members of the community from marrying at all. In some cases, however, in which the payments seem to be very large the common ownership of property distributes the payments over a large circle, making them more practicable than would be the case if they had to be given by an individual person. Sometimes the payments are made in different stages which may correspond with betrothal and marriage, and sometimes they do not cease at marriage, but continue for some time afterwards, the birth of each child of the union being an occasion for them.

Among peoples who follow the custom of marrying certain relatives it sometimes happens that the payment for a wife is made only in those cases in which a man marries some other woman.

The most frequent mode of marriage by purchase takes the form of the bride-price; but in India, and in some parts of Europe, the dowry or payment to the husband is the more usual custom.

18. Marriage by exchange.—The most definite case of this mode of contracting marriage is that in which a man gives his sister to the brother of his bride, and, since this custom usually occurs among peoples who use the classificatory system of relationship, it may lead to the exchange of women between groups of considerable size. The motive usually assigned for this form of marriage by those who practise it is that it does away with the necessity of paying for a wife; but there is some reason to suppose that in some cases the practice may have arisen out of, or be otherwise associated with, the cross-cousin marriage.

19. Marriage by service.—This kind of marriage, which has become well known through its occurrence in the OT, is probably not very common, and, as already mentioned (§ 14), passes insensibly into the matrilocal form of marriage.

20. Marriage by elopement.—Among many peoples elopement is so frequent and is so little objected to by the community that it may be regarded as a regular mode of contracting marriage. In some cases it would appear to be the result of

restrictions upon marriage which have developed to such an extent as to have become irksome to the community. In the absence of any social mechanism for the abrogation of these restrictions it has become the custom to connive at their infraction by taking a lenient view of elopement. In Australia and some parts of Melanesia where elopement is frequent it may be the secondary consequence of the monopoly of women by the old men. In other cases it may be a means of escape from the obstacles to marriage due to the bride-price.

21. Marriage by capture.—This form of marriage has aroused great interest in consequence of the idea of McLennan that, at one period of the history of human society, it was the normal mode of obtaining a wife. The capture of wives is known to occur, and the marriage ceremonial of many parts of the world includes either a definite conflict for the possession of the bride or features which may be interpreted as survivals of this process. It is very doubtful, however, whether any people habitually obtain wives from without their tribe, though the Khonds of India are said to do so, and it is probable that the conflicts of wedding ceremonial are derived from other social processes, such as the custom of marrying relatives, which gave certain persons a vested interest in the women of their own community. The vogue of the cross-cousin marriage in southern India makes it probable that a conflict which takes place between the husband and his wife's cousin in some parts of Malabar is a survival of that form of marriage in which the cousin had a proscriptive right to the bride.

It is probable that many of the other customs which have been regarded as survivals of the capture of women from hostile tribes are rather the results of a social condition in which it was the custom that women should become the wives of certain members of their own community.

22. Trial marriage.—Unions to which this term has been applied have been recorded among many peoples, but many, if not most, of these cases should be regarded as trials before marriage rather than as examples of marriage in the sense in which the term is used in this article. Temporary unions are especially frequent where marriage is contracted with little or no ceremonial, and these cases shade off insensibly into trials before marriage on the one hand and into ease and frequency of divorce on the other. A union should be called a trial marriage only if there is a definite contract or ceremony entered upon with the condition that the union shall be annulled if it is unfruitful or if the parties to it wish to separate after a certain period.

23. Social functions of relatives by marriage.—Marriage brings the partners to it into definite social relations with large groups of persons in whom they had previously no special interest. Among some peoples, and especially among those who use the classificatory system of relationship, these social functions may take very definite and well-established forms. Prominent among these is the custom of avoidance (see KIN, KINSHIP, III. 9) between a married person and his or her parents-in-law. The restrictions on conduct are usually most pronounced in the case of a man and his wife's mother, and the avoidance in this case may be so strict that the two are not allowed to see one another or to be in the same house or even in the same village. A more frequent form of avoidance is that a man may not speak to his mother-in-law, or may not speak to her familiarly, and

mode of conduct often accompanies the relationship of a man to his wife's father, but usually the avoidance is less strict, and the avoidance between a woman and her husband's parents is also, in general, less rigid than that between her husband and her parents. In some places certainly, and probably everywhere, these customs of avoidance are definitely associated with the idea of the likelihood of sexual relations between those who avoid one another, but the occurrence of similar customs of avoidance between persons of the same sex shows that this is not the only explanation.

Similar customs of avoidance also occur between brothers- and sisters-in-law, using these terms in the classificatory sense; but they are usually less strict, and often limited to prohibition of the use of the personal name or of familiar conversation. Often these customs are combined with certain duties on the part of these relatives towards one another—duties which may be summed up as those of mutual helpfulness. This is especially the case with the relationship of brother-in-law. Sometimes the duty of helping one another goes so far that a man may use any of the property of his brother-in-law. Sometimes the men must defend one another in case of danger, while the presence of the relatives on different sides may put an end to a fight. Still another duty sometimes assigned to these relatives is that one must dig the grave or take the leading part in the funeral ceremonies of the other.

This combination of customs of avoidance with the obligation of mutual helpfulness may possibly be explained as having grown out of the relations which arise when marriages habitually take place between hostile peoples, or they may be the result of the marriages which form part of the process of fusion of two peoples.

24. Marriage ceremonial.—The rites accompanying marriage vary greatly in duration and complexity among different peoples. Sometimes they are so fragmentary that they can hardly be said to exist, while in other cases the ceremonial may consist of rites of the most diverse and elaborate kinds, prolonged over weeks or months. In the lower forms of culture the ceremonial of marriage is, in general, scanty, especially where it is the custom to marry relatives. Its greatest complexity, on the other hand, is reached in India, south-eastern Asia, and the Malay Archipelago, the elaboration in the last region being almost certainly the result of Hindu influence. It is possible to distinguish certain main varieties of ceremonial. Putting on one side feasting and adornment as the expression of aesthetic motives natural to any important event in social life, we find a number of ceremonies which are connected with the economic side of marriage. Such is the transmission of objects from the friends of one partner to those of the other which form the bride-price or dowry. In some parts of the world, as in Melanesia, the transactions of this kind are numerous and complicated and form nearly the whole of the ceremonial. Sometimes, however, these transactions have aspects which suggest a religious character, especially in the customs of exchange which are so prominent in the ceremonies of Polynesia, Melanesia, and some N. American peoples.

Another group of ceremonies which may have a motive chiefly economic is the conflicts and other features which are probably indications of interference with vested interests affected by the marriage.

to show the superior status of one or other partner to the union. Thus the superiority of the bridegroom may be symbolized by presenting him with a whip or by his boxing the bride's ears, and possibly tying the *tali* in India and the use of the wedding ring of our own ceremony may have had a similar meaning. Elsewhere, as in Morocco, the bride may perform various acts, such as riding a pack-saddle, which are designed to give her power over her husband.

Similar to these are the many forms of rite in which bride and bridegroom eat together or march round a fire. Other rites, such as that of pouring rice or wheat on the head of the bride, probably have as their motive the desire to promote the fertility of the union, or to ensure an abundance of food for the household.

Another large group of rites seems to be connected with the idea that some danger is attendant upon entrance into the marriage state. It may be that rites of this kind at marriage form part of a general custom of performing ceremonies at any transition from one period of life to another—the 'rites de passage' of A. van Gennep.¹ Another motive may be the idea of the danger accompanying sexual intercourse to which so great an effect has been ascribed by Crawley.²

Among features dependent on ideas of this kind may be mentioned the prolonged period which often has to elapse before consummation of the marriage is allowed, and the frequent customs according to which husband and wife are not allowed to see one another before a certain stage in the ceremonial. The many rites of purification, the assumption of new garments, and such disguises as dressing in the clothes of the opposite sex may also be of this order. It is probable that some rites of marriage are designed to impart to others the spiritual sanctity which is supposed to attach to newly-married persons.

Many of the motives for ceremonial so far considered are of the kind usually supposed to underlie magic. Other features are definitely religious in that they involve specific appeal to some higher power. Such are definite rites of sacrifice and prayer, while the practice of divination to discover whether the higher powers are propitious also falls under this head.

Among most people of rude culture no part is taken by any person who can be regarded as a priest, but, as definite religious motives come to actuate the ritual, its performance tends to pass more and more into the hands of a class of persons especially set aside for the performance of this and other religious functions.

25. Marriage to inanimate objects.—In several parts of India it is the custom, under certain circumstances, that persons shall go through ceremonial marriages with such objects as a tree, a bunch of flowers, a dagger, a sword, or an arrow. One occasion for this kind of marriage is the entrance of a dancing-girl upon her career, the motive being apparently that, though the future occupation of the girl will render a husband superfluous, she shall, nevertheless, be married.

Another motive for this form of marriage is the belief in the unluckiness of certain numbers. Thus, to counteract the belief that a second marriage is unlucky, a widower may marry an inanimate object in order that his succeeding union with a woman shall be his third marriage. It is probable, also, that marriage to a tree may, in some cases, especially where this forms a part of the ordinary marriage ceremonial, depend upon a belief in the influence of the tree upon the offspring, possibly in the future reincarnation of an

ancestor represented by, or whose representative is present in, the tree.

26. Marriage after death.—In some parts of India the body of a girl who dies unmarried is the subject of marriage rites, while the marriage of dead bachelors seems to have been a feature of ancient Aryan culture (*ERE* ii. 22). The Aryan practice seems to have been connected with the custom of killing the wife on the death of her husband, and to have had as its motive the desire to provide the man with a wife in the life after death. We do not know the motive for the modern Indian practice.

27. Widowhood.—In some parts of the world the re-marriage of widows is absolutely prohibited, and in others widows normally become the wives of certain relatives, while intermediate cases occur in which their marriage is allowed, but is not subject to any special rules. Among many peoples, especially in the case of chiefs and more influential members of the community, wives are killed as part of the funeral ceremonies of their husbands, and there is reason to suppose that there is a connexion between this practice and the total prohibition of re-marriage, particularly as the latter practice is often found in the neighbourhood of places where the killing of wives on the death of the husband is or has been practised. Two places where the association occurs are India and the Solomon Islands, and the connexion of the two practices is supported in the latter locality by the fact that widows undergo a period of seclusion after death, with features suggesting that the seclusion is intended to represent a ceremonial death. It would seem that the prohibition of re-marriage is adopted when the more extreme measure has been given up.

Several cases in which a widow normally marries certain relatives have already been mentioned. Sometimes, especially in Africa, a son takes his father's widow, excluding his own mother. Elsewhere a widow may be married by the sister's son, or the son's son, of the deceased husband; but the most widely distributed form of union of this kind is that known as the levirate, in which a wife is taken by the brother of the deceased husband.

28. The levirate.—The best known example of this practice is that recorded in the OT, in which the custom is limited to the case in which the dead husband has no children, the motive of the marriage being to raise up seed for the dead brother. The term is now used for any case in which a man marries his deceased brother's wife, and in most cases the Biblical limitation and motives are not present. The practice may be based on the idea that a wife is property to be taken by the brother with other goods, or it may form part of the duty of guardianship over the children of the brother and be designed to prevent the management of the children's property passing into the hands of a stranger whom the widow might otherwise marry.

In India, and in some parts of Melanesia, the practice of the levirate is subject to the limitation that the widow of a man may be married only by his younger brother, a man having no right over his younger brother's wife. It is not easy to see how this limitation can arise out of the motives for the practice already mentioned. It was supposed by McLennan that the levirate is a survival of polyandry, and it is possible that in these Indian and Melanesian cases the practice is derived from either polyandry or communal marriage, the limitation being connected with some social functions of the relationship between elder and younger brother of which at present we have no knowledge.

Though the OT motive does not wholly account for the custom of the levirate, it shows itself in

¹ *Rites de passage*, Paris, 1909.

² *The Mystic Rose*, London, 1902.

other forms among many peoples. In many parts of Africa a child born to a widow even many years after the death of her husband is held to be the child of that husband, and the Dinkas of the Anglo-Egyptian Sudan have a custom according to which a widow without male offspring who is beyond the age of child-birth will purchase a girl and pay a man to beget children by this girl for her dead husband. Again, where there is a need for male offspring, especially to perform religious rites, a man without sons may call on his brother or some other man to beget children by his wife.

29. Re-marriage of widowers.—We know of no people who prohibit the re-marriage of widowers, and the chief point of interest in this subject is the difference of attitude towards marrying with the deceased wife's sister. It has already been mentioned that in polygynous unions it is often the custom to marry sisters, and among people who follow this custom and many others the wife's sister is the natural spouse of a widower. Other peoples prohibit this form of union. Among many of these peoples the wife's sister is regarded as a sister, a conventional relationship often shown in terminology, and the prohibition of marriage is definitely connected with this idea. It is an expression of the general reprobation of marriage between persons who stand in the relationship of brother and sister, even when this relationship has come about through some social convention, and when the use of the term is only metaphorical.

30. History of marriage.—Widely different views on this topic are at present current. On the one side are those who regard monogamy as the original state from which the other forms of marriage have developed; on the other are those who believe that monogamy has come into existence by a gradual process of evolution from an original condition of complete promiscuity through an intermediate stage of group-marriage. Lewis Morgan, who has been the chief advocate of an original state of promiscuity, based his opinion on evidence which we now know to be fallacious, and at present not only do we have no knowledge of any promiscuous people, but there is also no valid evidence that a condition of general promiscuity ever existed in the past.

The problem of group-marriage stands on a different footing. Whether the communistic unions of different parts of the world be regarded as marriage or not, there is no question that such unions exist, and there is much reason to believe that they have been more general in the past than they are at the present time. The nature of the classificatory system of relationship is most naturally explained by its origin in communistic conditions. Even if this view be accepted, however, it does not commit us to the position that this condition was once universal among mankind. It is possible that only some of the main varieties of mankind have been communistic. Still less does it follow that sexual communism was the primitive condition of mankind. No people now in existence can be regarded as primitive, or even as a sure representative of primitive conditions. Even if it be accepted that sexual communism was once widely distributed or even universal, it would remain possible, if not probable, that it is not a primitive condition, but only represents a stage in the evolution of human society. If, as there is much reason to believe, mankind originally lived in small groups, perhaps consisting only of parents and children, the original state would have been monogamy, and, if so, the wide prevalence of communistic forms of marriage must be ascribed to some factors which came into action as the social group increased in size. Even if the classificatory system be founded in communistic conditions, it has features, such

as the clear recognition of generations, which are most naturally explained by its growth out of a still earlier condition in which the unions between the sexes were monogamous, or were restricted to such small groups of persons as to approximate to that condition.

MARRIAGE (Celtic).—1. Gaul.—Polygamy does not seem to have been customary in Gaul. In the only passage that we have on the subject (Caesar, *de Bell. Gall.* vi. 19) the plural *uxores* is certainly due to the plural *virī*. At the time of Gaul's last struggle against the Romans every Gaul bound himself by a sacred oath neither to enter his house again nor to see his children, relatives, or wife (*uxorem*, vii. 66) until he had ridden twice through the enemy's lines. We know that, as in other places, the wife (*uxor*) brought a dowry, but the husband also added an equal amount taken from his own property.

On the death of either husband or wife, the survivor received both portions, along with the revenues accumulated after marriage (vi. 19). Marriage was often employed as a means of securing political alliances; thus Orgetorix gave his daughter to Dumnorix; and the latter had his mother wedded to a noble of the Bituriges, and married his sister and other female relatives into other cities (i. 3, 9, 18). The wife's position, then, was very much superior to that of a slave. Plutarch relates that, before the Gauls had crossed the Alps, the women reconciled the opposing parties after a terrible civil war, and ever afterwards the Celts continued to admit their wives to their council when deliberating on peace and war, and to let the disputes with their allies be ruled by their wives' judgment. An agreement was made, later, between Hannibal and the Celts that, if the Celts had any grievance against the Carthaginians, the Carthaginian generals would judge, and, if the Carthaginians had any complaints against the Celts, the case would be judged by the wives of the Celts (*de Mul. Virt.* 6; cf. Polyænus, vii. 50). The numerous stories handed down to us by the ancients about the women of the Celts—Chiomara (Polyb. xxii. 21), Camma (Plut. *de Mul. Virt.* 20), Eponina (Tac. *Hist.* iv. 67), Gyptis (Athen. xiii. 38; Justin, xliii. 3)—seem to prove that the Celtic wife was not the passive being that the wife has remained among most barbarous peoples. Caesar, who often gives her the title of *materfamilias*, relates nevertheless that, when a *paterfamilias* of high birth was about to die, his relations assembled, and, if there was any suspicion in connexion with his death, they cross-examined his wife like a slave; if any delinquency was proved, they put her to death by fire and all kinds of torments. But there is really nothing more in this than the exercise of the power

of life and death which the *paterfamilias* had over his wife as well as his children (vi. 19).

2. **Ancient Britain and Ireland.**—Among the ancient Britons the position of woman was quite different. The women were the common possession of ten or twelve husbands, especially of brothers, or of fathers and their sons; but the children born from these unions belonged to the man who had married the woman first (Cæsar, *de Bell. Gall.* v. 14). Women were common property also in Caledonia (Dio Cass. lxxvi. 12; cf. lxii. 6). In Ireland, it is stated, it was quite a natural thing for men to have intercourse with the wives of other men, with their mothers, or their sisters (Strabo, iv. v. 4; cf. Jerome, in *Jovin.* ii. 7), but we find a much more advanced social state among the Irish and Britons described in the ancient epics and the collections of laws and customs.

3. **Mediæval Ireland.**—In Ireland, although the wife might bring all her own personal belongings (*tinól*) with her, it was the husband first of all who provided a dowry (*tinnsce*) for his wife. This dowry consisted of metals (gold, silver, copper, brass), clothing, or cattle; sometimes it consisted in some condition to be fulfilled by the future husband. In fact, marriage was generally a sort of sale, for the laws stipulate that the wife's father has a right to the whole dowry for the first year, to two-thirds the second year, half the third year, and so on, his share decreasing until the twenty-first year, when the debt is cancelled; during all this time the wife has control of what remains of her dowry each year. As a rule, marriages were celebrated by preference on the first days of August, at the time of the Fair of Tailteinn, or in the month of November. Polygamy seems to have been practised, perhaps as an exception, a little before the Christian era. In any case, if it was very uncommon to have several wives of the free class, a king often had one or more concubines of a servile class in addition to his lawful wife (*cétmuintir*, 'first wife'). Kinship ties were not always an obstacle to marriage: Lugaid, king of Ireland, married his mother; and a king of Leinster had his two sisters as wives.

The rights of the woman after marriage depended largely on her personal status in the community. In cases of separation for serious offence or by mutual consent, the wife received either the part of her dowry that was left her or what she brought on her marriage-day; in dividing the property, all that she had acquired by work and manufactured articles was taken into account, and the very smallest details were controlled by law.

4. **Mediæval Wales and Brittany.**—The laws of Wales show in their archaic parts a similar social state. The woman brought with her a dowry (*agweddy*) equal to half of what her brother would have (*gwaddol*), and articles for her own use (*argyfreu*); she received from her husband a present proportionate to her position and payable on the morning after the consummation of the marriage (*cowyll*). The conditions of separation depended on how long the union had lasted. If it had continued for a period of seven years all but three days, the belongings were divided equally between the couple; but, if the wife left her husband before this time, and without good reason, she had no right to anything beyond her *cowyll*. Polygamy was forbidden. Fosterage seems to have been less wide-spread than in Ireland.

The Britons who emigrated from Great Britain to Armorica in the 9th cent. called the dowry given by the husband to the wife *enepruvert*, 'face-price.' It was often property in land. Cf. also artt. CHILDREN (Celtic), ETHICS AND MORALITY (Celtic), FOSTERAGE, II. 5-7.

MARRIAGE (Christian).—1. The Christian ideal.—The NT does not profess to set forth any new law or theory of marriage. Our Lord's answer to the Pharisees who questioned Him on the subject of divorce (Mt 19³, Mk 10²) implies that the perfect ideal of marriage is sufficiently declared in the passage in Genesis which professes to record the original institution of the holy estate of matrimony (Gn 2^{18ff.}). The teaching and legislation of the Christian Church on this subject may, therefore, from one point of view, be regarded as a series of attempts to define more clearly and fully what is implied in the words of the original institution, and to enforce in practice the careful observance of the principles therein involved.

It is, accordingly, not strange that the subject of marriage occupies a comparatively small space in the teachings of the NT, and is for the most part confined to general rules as to the behaviour of married people such as might very well have found a place in the teaching of any heathen philosopher.

In the Gospels we have no direct reference to marriage, with the exception of our Lord's deliverances on the subject of divorce, which probably represent sayings uttered on different occasions, but which are, at any rate, all to the same purport: divorce is in itself sinful and inconsistent with the original divine institution of marriage. In the Epistles we have a number of practical exhortations in which the duties of married persons are clearly declared. The supremacy of the husband as the head of the wife is recognized, and the duty of wifely obedience declared. Mutual love and consideration are urged with considerable insight, while the perfect unity of husband and wife as 'one flesh' is duly emphasized.¹

The NT, in fact, deals with marriage as an established social institution as it deals with other established institutions, laying down broad general principles of conduct, and demanding faithfulness and uprightness in the discharge of all recognized duties.

It was not necessary for the first Christian teachers to condemn polygamy, for in both the Græco-Roman and the Jewish world in their time monogamy was the universal rule. Polygamy is not expressly forbidden in the OT, nor was it uncommon in ancient Israel; but the Jewish teachers of the post-Exilic period had come to recognize that it was not consistent with the spirit of the original institution, which plainly demands the union of one man and one woman in marriage. Extra-matrimonial connexions might not be seriously condemned in the Gentile world, but, for the begetting of legitimate children, it was the rule that there should be only one wife to one husband. While it is safe to say, however, that monogamy is assumed throughout the NT, there is perhaps only one passage which a lover of proof texts could quote as distinctly forbidding polygamy, viz. 1 Co 7² 'Let each man have his own wife, and let each woman have her own husband.'

Yet, although the NT does not profess to put forth any new laws on the subject, it is most true that the religion of the gospel has done inestimable service, not only in restoring and preserving preci-

¹ The passages of the NT dealing directly with marriage are Mt 5²⁷ 19³⁻¹², Mk 10²⁻¹², Lk 16¹⁸, Mt 22²⁶⁻³⁰, Mk 12¹⁹⁻²⁶ Lk 20²⁷⁻³⁶ Ro 7¹⁻⁴, 1 Co 6¹⁶⁻¹⁸ 7^{passim}, Eph 5^{22ff.}, Col 3^{18ff.}, 1 Ti 2^{11ff.} 5⁹⁻¹⁸, He 13⁴, 1 P 3¹⁻⁴.

ous principles which were being forgotten in an age of luxury and grievous moral laxity, but also in changing profoundly men's ideas of the marriage-relation and of its duties and responsibilities. This result is the direct outcome of the teaching of the NT.

(1) The spirit and teaching of the NT tend to put the mutual love of husband and wife in the foremost place. Marriage has been described as a provision for the propagation of the race and the proper bringing up of children. The NT recognizes the importance of the Christian household and the rightful education of Christian children, but does not describe this as the main object of marriage. Again, marriage has been regarded as a provision for the satisfaction of a natural desire and a restraint upon unbridled indulgence. St. Paul acknowledges that marriage serves this purpose, but does not give it any great prominence (1 Co 7²²). According to the book of Genesis, marriage was instituted, in the first instance, to satisfy the need of man's social nature. Because it was 'not good that the man should be alone,' because companionship with his fellows was necessary for the perfect development of his nature, marriage was instituted to provide him with the closest and most intimate form of companionship. Thus the words, 'The twain shall become one flesh,' imply much more than a merely carnal relationship—a thought which is instructively developed by St. Paul in Eph 5²².

(2) It is not too much to say that our whole conception of the marriage-relation has been changed, and changed for the better, by the high and honourable position accorded to women in the NT, and the general improvement in the status of woman which has been brought about under Christian influence, and which has not yet, perhaps, reached its final goal. A system in which 'there can be no male and female' (Gal 3²⁸) so far as all blessings, privileges, and responsibilities are concerned, under which husband and wife are taught to remember that they are 'joint-heirs of the grace of life' (1 P 3⁷), must of necessity tend to elevate, and, if it may be so expressed, to equalize, the marriage-relation.

When St. Paul compares the marriage-bond to the union between Christ and the Church, he is, no doubt, making use of a very familiar idea frequently expressed by the OT prophets, and applying it to the Christian community. It is easy to see, however, that the substitution of Christ—our brother—for the awful Jahweh of the OT makes all the difference in the world, *the* essential difference, in fact, between the old world conception and that of the Christian Church. The ancient Romans had a high ideal of the sanctity of married life—an ideal which, as the very bitterness of the satirists proves, was not wholly lost in the terrible immorality of the times when Christianity made its appearance. Nevertheless, among Jews and Romans alike, as also, to a considerable extent, among the Greeks, the relation of the wife to the husband was, to all intents and purposes, that of a slave to her master. Under the gospel the superiority of the husband is more that of the parent to the child or, rather, of a protecting brother to a sister. It is sometimes asserted that the terms in which the supremacy of the husband and the duties of obedience and reverence on the wife's part are put forth in the NT are too strong to be in harmony with our ideas to-day, and that we have, in fact, passed beyond the point of view of the NT. If so, this very advance is the natural and necessary outcome of the gospel just as truly as the abolition of slavery—another social institution which is nowhere directly condemned in the NT. It may be argued on rational grounds that

the natural characteristics of the sexes must involve a certain superiority and controlling power on the man's side in the nuptial relation; but such questions cannot be decided by the mere appeal to isolated texts of the Bible.

(3) The union of the sexes has been purified, and the happiness of the married relation secured, by the absolute prohibition of every kind of extra-matrimonial connexion. Such connexions were regarded with absolute indifference by the Greeks, and, in consequence, the temporary connexion with the *étralpa*, or courtesan, came to be much more highly valued than the legitimate marriage, to the manifest injury of the home life and the status of the lawful wife. By the Romans, it may be said, such connexions, though not so lightly regarded as among the Greeks, were, on the whole, regarded with contemptuous indifference. Although the case was different, so far as the Jewish law was concerned, we cannot doubt that the Jews would be much influenced by the prevailing tone of thought in the Gentile world and would imbibe something of the very lax principles of morality current in their day. All such connexions are emphatically condemned in the NT, and it is expressly taught that the physical connexion of itself involves the obligation of the marriage-bond (see 1 Co 6⁹).

(4) The gospel emphatically condemned divorce as essentially sinful. In ancient Rome divorce was regarded as in some sense dishonourable, and therefore undesirable. For five hundred and twenty years it was boasted that divorce was unknown in Rome (Val. Max. ii. 1), and the very bitterness with which the satirists denounce the laxity of their time in this matter shows that the old idea has not yet been wholly lost. Nevertheless, it is only too evident that, in the time of luxury and advanced civilization in which the gospel was first preached, divorce was coming to be looked upon with the utmost indifference as a commonplace fact in ordinary social life.

The Jews had no doubt as to the lawfulness of divorce (cf. art. 'Divorce,' in *JE* iv. [1903] 624-628), and it is probable that Mt 19⁹ most truly represents the form of their question to our Lord. They desired to have His opinion, not on the question of the lawfulness of divorce, but as to the causes for which divorce might be legitimately instituted. Our Lord's answer declares the essential sinfulness of divorce as inconsistent with the original institution of marriage.

(5) The teaching of St. Paul about marriage as the symbol or analogue of the mystical union of Christ with His Church (Eph 5²²⁻³⁴) has had a profound effect on Christian thought, elevating and purifying the conception of marriage. Marriage for the Christian is something more than the ordinary social institution; it is, above everything else, 'a holy estate.' Man and wife are no longer twain, but one flesh. This, as has already been pointed out, implies more than a merely physical union. How much more? It may be said that it implies a perfect union of love and affection, and entire community of aims and interests, as also of worldly possessions, and a perfect mutual understanding. This positivist explanation may perhaps seem sufficient to the modern mind; but it is easy to see that the comparison with the spiritual union between Christ and the Church might, to Hellenic readers, very naturally suggest something more, something in the nature of a metaphysical basis for the union of aims, affections, and interests. This basis may be conceived as a sort of mystic, or, possibly, psycho-physical bond, uniting the two spirits so as to form a kind of single personality. It is quite conceivable—we may even say that it is probable—that some such idea was in the

mind of the Apostle. The idea may not seem altogether absurd to a modern metaphysician; but, if it should seem inconceivable, we are not bound to defend the infallibility of St. Paul's metaphysics, and may be quite satisfied with the simple, positive, and practical view of the union.

It is, however, necessary to bear in mind that this idea of a mystic or psycho-physical bond formed in matrimony is, essentially, that sacramental view of marriage which was authoritatively defined in the Middle Ages, which is still the accepted doctrine of the Roman and Eastern churches, and which has had important practical consequences for Christian thought and Christian life.¹

2. **Marriage rites and ceremonies.**—The history of the rites and ceremonies accompanying marriage belongs properly to the sphere of the Christian antiquarian; but, inasmuch as those rites and ceremonies have been the subject of mystical interpretation on the part of Christian theologians, and have thus acquired a certain religious significance, a brief notice of them may well find a place in the present article.

Marriage-celebrations in all times and in all countries have been either essentially religious functions or, at all events, accompanied by religious rites and ceremonies. The solemnization of marriage by a religious ceremony is, therefore, no new thing peculiar to the Christian Church. In fact, there is not a single feature in the marriage-services of the Christian communities that cannot be traced back to the *sponsalia*, or to the nuptial ceremonies, of the Roman Empire. On the other hand, the form of our Christian services, the ministerial benediction, and the clear expression of Christian doctrine in prayers and exhortations have helped to preserve a living sense of the peculiar sanctity of marriage as taught in the NT.

Marriage is, in the first place, an affair of the family. In the earliest period the Christian congregation regarded itself as a spiritual family, and the life and concerns of every member of the congregation were of intimate interest to the whole body. No member of the congregation ought to enter upon so important a step as the contract of matrimony without the advice and approval of the whole congregation. This is implied in the words of Ignatius:

πρέπει δὲ τοῖς γαμοῦσι καὶ ταῖς γαμουμέναις² μετὰ γνώμης τοῦ ἐπισκόπου τῆν ἐνορίαν ποιεῖσθαι, ἵνα δὲ γάμος ᾗ κατὰ κύριον καὶ μὴ κατ' ἐπιθυμίαν (Ep. ad Polycarp. v.).

It is inconceivable, therefore, that the celebration of marriage should not have been accompanied from the very first with suitable acts of Christian worship, or that the accustomed marriage-rites should not have been celebrated as a solemn religious function. With the expansion of the Church and the consequent weakening of the close bond of social union between members of the same congregation, the necessity for ecclesiastical sanction for marriage would be less strongly felt, and marriages might be contracted without any formal benediction.

The testimony of the Fathers, from the middle of the 3rd cent. onwards, shows that what we should now describe as civil marriages were not unknown, perhaps were not uncommon, but at the same time were strongly discountenanced by the Church. It is evident that the general feeling in the Church was very much the same as it is to-day. While a religious ceremony was not required as a condition of Christian communion, it was felt that the right and proper course was for all Christian

people marrying honourably to seek the benediction of the Church upon their union.¹

From the 5th cent. onwards there can be little doubt that the celebration of marriage with ecclesiastical benediction was the almost universal custom. The inference which has sometimes been drawn from the fact that about A.D. 802 Charlemagne prohibited marriage without benediction (*Capit. vii. 363*) and that so late as A.D. 900 Leo the Philosopher issued a similar edict (*Novel. 89*), that purely civil marriages were very common up to the end of the 8th or 9th cent., is not borne out by anything that we know of those ages.

Nevertheless, marriage without benediction, though thus condemned by the civil law, was, if otherwise unobjectionable, regarded as valid in the Church up to the time of the Council of Trent. That Council (A.D. 1563, sess. xxiv.) decreed that henceforth no marriage should be considered valid unless celebrated by a priest in the presence of at least two other witnesses. The decree, indeed, clearly expresses the principle that the ceremony is not of the essence of the sacrament, the matter of which remains, as before, the consent of the parties; but it claims the right on the part of the Church to regulate the conditions under which a valid marriage can be celebrated. The decree holds good only in those countries in which the decrees of the Council have been published.

In the Eastern Churches the Confession of Peter Mogilas of Kieff (A.D. 1640), in which the priestly benediction, the accustomed formularies, and the invocation of the Holy Spirit are declared to be essentials of marriage, is regarded as authoritative.

The marriage-ceremonies in use all over the Christian world for hundreds of years past contain elements derived from two sources, viz. the *sponsalia*, the ancient ceremony of betrothal, and the *nuptiae*, or marriage-ceremony proper. The solemn troth-plight, the joining of hands, and the giving and receiving of a ring or rings with certain gifts of money—the *arrhae*, pledge of the dowry—were the principal features of the betrothal ceremony. The veiling of the bride, the crowning of the bride and bridegroom, the formal handing over of the bride by her parent or guardian to the care of the bridegroom, the solemn declaration of the completion of the contract, and the bringing home of the bride in triumphal procession to her future home were the accustomed nuptial ceremonies. The priestly benediction may perhaps be considered as the distinctively Christian addition to the ancient ceremonies, yet even this may have been simply a special sanctification of the ancient congratulations of the family; it is even possible that in the Christian service there was some attempt to recall the ancient *confarreatio*, which had by Christian times become practically obsolete, but which, with its accompaniment of sacrifice and solemn benedictions, was the only form recognized by Roman law for the celebration of an absolutely indissoluble marriage. The reference to the demand for ten witnesses in St. Ambrose² would naturally suggest the *confarreatio*. Old customs are often preserved in an imperfect fashion even when they have become obsolete (see MARRIAGE [Roman]).

¹ The following passages may be referred to as bearing out the view here presented: Clem. Alex. *Pæd.* iii. 11, *Strom.* iv. 20; Tert. *ad Uxor.* ii. 9, *de Pudic.* 4 (this passage is worth quoting in full: 'Ideo penes nos, occultae quoque coniunctiones, id est non prius apud ecclesiam professae, iuxta moechiam et fornicationem iudicari periclitantur. Nec inde consertae obtentu matrimonii crimen eludant'); Ambrose, *Ep.* xix. 7, condemning mixed marriages with unbelievers, which the Church censured, but could not wholly prevent in the earlier centuries; Synesius, bishop of Ptolemais, *Ep.* ex.; Basil, *Ep.* xvii., canon 69, etc.

² Nam si inter decem testes contractis sponsalibus, nuptiis consummatis, quaevis femina viro coniuncta mortali non sine magno periculo perpetrat adulterium' (*de Lapsu virginis consecratae*, v.). This passage may, of course, simply refer to the old Roman custom by way of example.

¹ Whenever the sacramental idea is referred to in this article, it may be taken that the idea herein explained is meant.

² J. B. Lightfoot prefers *γαμουσας*.

There is no express evidence that the veiling of the bride formed part of the Roman ceremonies of betrothal; it seems rather to have been confined to the nuptials proper. In Tertullian's time, however, it was a betrothal ceremony amongst Christians, the bride continuing to wear the betrothal veil from the time of the betrothal to the wedding-day (Tert. *de Virg. velandis*, xi.).

A passage in Tertullian would seem to imply that the giving of a ring, though a harmless heathen custom, was not practised by Christians in his day (*de Idolol.* xvi.). This may have been the case with some of the stricter or more old-fashioned Christians, but the universal custom of the Church from the 4th cent. onwards would seem to show that the giving of the ring had always been generally practised.

The crowning of the bride and bridegroom was condemned by Tertullian as implying acknowledgment of heathen deities. Yet it continued to be commonly practised in the Western Church long after his day. In the Eastern Church it prevails to the present day, and is regarded as the most important part of the marriage-ceremony, marriage in the East being often described as 'the crowning.'

That *sponsalia* and actual nuptials were still regarded as distinct ceremonies, between which an interval of time might elapse, up to the middle of the 9th cent., is evident from the letter of Pope Nicholas I. to the Bulgarians (A.D. 865 [*PL* cxix. 980]), in which he treats of the marriage customs of the Western Church. It is, however, most probable that from much earlier times the two ceremonies had been generally combined in practice. Formal *sponsalia* were not required by Roman law, and were frequently omitted. In such cases it would be natural that the giving of the ring, the troth-plight, and other espousal ceremonies would take place at the actual marriage. The Anglican custom of celebrating the first part of the marriage-service in the body of the Church, while the concluding prayers and benediction are said at the altar, is a vestige of the ancient distinction between espousals and marriages.

3. Asceticism and marriage.—The idea that there is something necessarily impure and degrading in the union of the sexes in marriage, or that, at all events, marriage must be regarded as a somewhat grudging concession to human weakness, finds no place in the teaching of the NT. Notwithstanding the strict inculcation of the general principle of self-denial, there is nothing to suggest that the celibate or virgin state is in any way higher or holier than the estate of marriage. There is just one passage, in the Apocalypse of John (14¹), which, however interpreted, seems to imply a preference for the virgin state; otherwise the NT gives no support to the doctrine. If St. Paul prefers the unmarried state, it is on purely utilitarian grounds, because of the greater freedom from worldly cares enjoyed by the unmarried. If we may accept the Pastoral Epistles as his, or as expressing his mind, the Apostle thought it most desirable that younger widows should contract a second marriage. Yet, inasmuch as what we may call ascetic ideas were widely prevalent, not only among the Essenes (*q.v.*) in Judaism, but in certain circles in the heathen world, it is very likely that such ideas were to some extent prevalent in the Church from the very first. The awful prevalence of vice and immorality, the consequent demand for a resolute fight against those 'fleshly lusts which war against the soul,' and a sense of the strength of sensual desires and impulses would naturally create a feeling of repulsion against all forms of indulgence, even the most innocent, in those newly aroused to a desire for a new and higher life. It is not surprising, therefore, that from the middle of

the 3rd cent. the ascetic view should have taken a firm hold on the Christian Church and should have speedily become the predominant and, in fact, universally accepted view. The rise of monasticism and the admiration aroused by the devotion of the monastics and also, from the middle of the 4th cent., the intensified worldliness of the now fashionable Church would naturally foster the growth of the ascetic ideal. The command, 'Love not the world' (1 Jn 2¹⁵), had to find some new interpretation when the world was no longer a professedly heathen world, but a community of nominal Christians. The doctrine of the earlier Gnostics, Basilidians, Saturninians, Encratites, etc., and of the Manichæans, of the essential sinfulness of conjugal union was, of course, formally condemned, but in the extravagant laudations of virginity in the writings of St. Jerome, and even the more moderate utterances of St. Augustine, the disparagement of the married state sometimes approaches very closely to the views of those heretics. Throughout the Middle Ages the doctrine of the superiority of the virgin state firmly held its ground, and led to many extravagances. But the teaching of the NT and the constant witness of the Church served at all events as a safeguard against the worst results of the disparagement of marriage.

It was not until the Reformation of the 16th cent. that any serious attempt was made to vindicate the claims of healthy home life and happy marriage to a position of equality with the virgin state. In Luther's eyes all monastic vows were essentially sinful (*de Votis monasticis*, 1521), and, in general, the Reformers maintained a similar position. The question of the superiority of virginity became an essential point of controversy between the Roman Catholics and their opponents, and the Council of Trent (sess. 24, can. x.) condemned with anathema the doctrine of the equality of the married state with, or its superiority over, the state of celibacy.¹

The objection to second marriages, which were discouraged by the Church and absolutely forbidden by the Montanists, was one result of the ascetic spirit. This we should now regard as a mere harmless eccentricity of no serious importance in the history of Christian thought; but it is far otherwise with another result of the ascetic movement—the enforcement of the celibacy of the clergy.

It is significant that it was in the course of the 3rd cent. that the question of the propriety of clerical marriage seems first to have become prominent. Hitherto the clergy, like other Christian men, might be married or not, according to their discretion. Those who held the essential superiority of the celibate life would naturally consider that the clergy, as especially belonging to the class of holy persons, should be unmarried. At all events, in the 3rd cent. it came to be recognized that, as each man should 'abide in that calling wherein he was called' (1 Co 7²⁰), the clergy should not contract marriage after their ordination. Decisions to this effect are found in the canons of some local synods, though the Council of Ancyra (A.D. 314) made an exception in the case of deacons, who, before ordination, should inform the bishop if they intend to marry. From this position it was a natural step to the view that after ordination clerics should cease to maintain conjugal relations with their wives—a view which could scarcely have been put forth except by a council of celibates. The Council of Elvira (Illiberis; A.D. 305) laid down this rule under penalty of deprivation. The ecumenical Council

¹ In some of his Homilies—e.g. *Hebreus*, serm. 4, in *Seraphim*, serm. 1—Chrysostom strongly asserts the equal blessedness of the married state. Jovinian, the opponent of St. Jerome, was a warm advocate of the same view, but the general consensus of Christian opinion was on the other side.

of Nicæa (A.D. 325) was restrained from passing a similar ordinance only by the emphatic protest of the Martyr Confessor Paphnutius, who pleaded earnestly in favour of the perfect sanctity of married life. From the close of the 4th cent. the principle that the clergy ought to be celibates was universally adopted in theory in the Western Church. Pope Siricius (A.D. 385) in his *Epistle to Himerius* (PL xiii. 1132 ff.), described by H. H. Milman¹ as 'the first authentic Decretal, the first letter of the Bishop of Rome, which became a law to the Western Church,' absolutely interdicted the marriage of the clergy. Nevertheless, all through the Middle Ages, despite the zealous efforts of men like Boniface I., St. Gregory the Great, St. Anselm, and St. Dunstan, despite papal edicts and decrees of councils, the marriage of the clergy continued to exist in every part of Europe. It was regarded in general with indifference, sometimes with approval, by the laity, and was zealously contended for as a right by the secular clergy. Even after the vigorous crusade of Hildebrand (1020-85), the 'scandal,' as it was considered, of 'clerical concubinage' maintained its existence here and there, though it was probably never after Hildebrand's time regarded with the same indifference as before.

In the Eastern Church the rule of celibacy has never been imposed on the inferior clergy. By the 6th Council of Constantinople (in Trullo; A.D. 680) the marriage of clerics after ordination was forbidden, but for those married before ordination, with the exception of the bishops, the continuance of conjugal relations was permitted; the wife of a bishop was compelled either to become a deaconess or to retire into a convent. For all practical purposes this remains the rule of the Eastern Churches to the present day, except that marriage is not merely permissible but compulsory for the parish priest, who must, however, be married before ordination. The bishops are chosen from the ranks of the monastics, so that no parish priest can look forward to promotion to the highest position in his Church.

4. Ecclesiastical law and Church discipline.—The Christian Church from the very beginning was constituted as an organized society or, at all events, as a closely connected congeries of societies claiming as a right and duty to exercise moral supervision and discipline over individual members. Church law and ecclesiastical jurisdiction are, then, no late outgrowth or corruption of primitive Christianity, but trace their origin to the earliest time, and even to the days of the Apostles. It was inevitable that in the Apostolic Age such questions connected with marriage should arise as would be considered suitable for the judgment of the community. In 1 Co 7 we have an interesting example of such questions and of the apostolic method of dealing with them. The saying of Ignatius as to the necessity of submitting a proposed marriage-contract for the approval of the bishop has already been quoted.

Nor is it at all surprising that matters connected with marriage should have, from the Apostolic Age until now, occupied an important place in ecclesiastical legislation. From the civil side, marriage is regarded as a legal contract which must be regulated for practical purposes by the State. From the Christian point of view, marriage is a holy estate which the Church may claim to regulate in the highest interests of religion and morality. Experience shows that there must ever be a possibility of conflict between the two juris-

dictions, and that, consequently, difficulties in practice may often result.

¹ *Allae sunt leges Caesarum, aliae Christi; aliud Papianus aliud Paulus noster praecepit* (Jerome, *Ep.* lxxvii. 3).

But, while in theory it is very simple to say that the Christian must at all events give the 'leges Christi' the first place in his obedience, in practice he may often find himself confronted with the question whether a law or supposed law of the Church must really be received as a divine ordinance. So long as the Church was a small and unimportant body in the heathen world, it did not much matter whether its regulations for the discipline of its members came into conflict with generally received opinions or not, and, as a general rule, in the earlier centuries Christians were content to abide by the rulings of their ecclesiastical authorities, though even then we have reason to believe that Church censures were sometimes defied or evaded when Christians wished to avail themselves of some legal right in opposition to the rule of the community. The case of mixed marriages with Jews or pagans, which often took place despite the ecclesiastical prohibitions, is an example in point.

In the Middle Ages the matter was settled by allowing marriage, for Christians at all events, to become entirely an affair of the Church. Much laxity of observance might prevail, and the lawless men of the mediæval period might often flout the wholesome restraints of the law; the princes of the Frankish, Teutonic, and other new nations might decline to abandon their ancient right to have a plurality of wives; but, none the less, it was fully recognized that the Church's jurisdiction in such matters ought to be respected as supreme. It is in the modern period, since the Reformation, that the question of the two jurisdictions and the proper relations of the one to the other has come into prominence and has given occasion to many practical difficulties arising from the conflict of two different ideals. The Reformers vindicated the claims of the State and of the civil magistrate as against the extravagant claims of the mediæval Church, holding that the laws of the Christian State must be regarded as Christian laws and must be obeyed, and that no law-abiding citizen should be subjected to Church censure or other social inconvenience for neglecting some ecclesiastical ordinance, so long as he did nothing illegal or dishonourable. It was, of course, understood that no law contrary to the teaching of the gospel should be obeyed. The Roman Catholic party, on the other hand, while in general admitting the duty of obedience to the law of the State, held that it was the province of the Church to define what should or should not be considered lawful in the matter of marriage. Both parties would agree that the object of all marriage laws should be to safeguard purity and morality, and would probably admit that the Church had no right to impose anything in opposition to the law of the State, unless it were in some sort necessary for that object; but the Reformers would by no means concede to their opponents that it was for the Church to impose any regulations which it pleased, whether in conformity with the laws of the State or not. The two questions which in modern times have given occasion to most difficulty have been the question of divorce and the question of the conditions of valid matrimony.

(a) *Divorce*.—Divorce, in the strict and proper acceptance of the term, means the complete rupture of the marriage-bond, the persons divorced being left free to marry again. Canonists and theologians, however, frequently apply the term to what is more properly called 'separation' or, when sanctioned by legal process, 'judicial separa-

¹ *Hist. of Latin Christianity*, London, 1872, i. 97; see also A. P. Stanley, *Lectures on the Hist. of the Eastern Church*, do. 1881, lect. i. and v.; H. O. Romanoff, *Rites and Customs of the Greco-Russian Church*, do. 1888; Photius, *Nomocanon*, Paris, 1615.

tion,' in which the *vinculum* is not supposed to be broken and re-marriage is, therefore, not permissible. The latter is described as *divortium a mensa et thoro*, in contradistinction to the more complete *divortium a vinculo matrimonii*.

It has been universally admitted that adultery and, perhaps, some other grave offences justify the separation of man and wife. Such separation is, indeed, contrary to the high Christian ideal of marriage; but under the new dispensation, as under the old, it is necessary for the hardness of men's hearts in this imperfect world to make provision for occasional failures to attain the perfect ideal. But, while this is the case with regard to separation, there has been considerable difference of opinion on the more difficult question of divorce in the proper sense of the word. The broad general principle is that divorce is something which ought not to be, that it ought not even to be thought of as a possibility by Christian people. But is the broad general principle to be regarded as a law binding universally and unconditionally? If any exceptions are to be allowed, in what cases do they apply? Should man and woman stand on the same footing as regards the right to claim divorce? Should any difference be made between cases where both partners are professing Christians and those in which one is an unbeliever or a heretic? These and similar questions have from century to century occupied the attention of Christian teachers and legislators.

The teaching of our Lord on this subject, as it has come down to us, is found in four passages in the Synoptic Gospels, viz. Mt 5³¹⁻², 19³⁻⁹, Mk 10²⁻¹², and Lk 16¹⁸. In Mark and Luke the prohibition of divorce and re-marriage is absolute and unqualified; in Matthew the qualifications 'saving for the cause of fornication,' 'except for fornication',¹ are added. Roman Catholic divines and those Anglicans who adopt the stricter view maintain that, as each Gospel must be taken in and by itself as authoritative, the passage in Mark must be accepted as the decisive rule for Christians, while the qualified statement in Matthew must be understood as merely giving sanction to separation '*a mensa et thoro*' in case of adultery.

On the other hand, it is contended that the ordinary rules of exegesis require us to interpret the unqualified statements in Mark and Luke by the fuller and more balanced statement in Matthew, so that we must not take each Gospel as an independent entity, but must compare one with another to ascertain what Christ really taught. Moreover, it is contended that, when He spoke about divorce, our Lord must have had in mind the complete severance of the marriage-bond, since that was the only meaning His hearers could possibly attach to the word. It is pointed out that the sayings in Mark and Luke are simply ordinary examples of the method of the great Prophet, who was accustomed to set forth broad principles in an absolute and sometimes an extreme form, leaving it to His people to apply His teachings with all the necessary qualifications in the manner of legislation to their individual cases and needs. That this principle has always been recognized in the interpretation of the Sermon on the Mount without in the least detracting from the supreme value of that great utterance cannot well be denied. Our Lord as teacher was a prophet rather than a legislator. Hence it is maintained that the passage in Matthew may be taken as a fuller expression of the Lord's mind than the briefer passages in the other Gospels, that we have His express sanction for divorce in case of adultery, with consequent permission to marry again in the case of the innocent partner. It is not, of course,

¹ *παρεκτός λόγου πορνείας* (532); *μὴ ἐπὶ πορνείᾳ* (109).

denied that, if the bond is broken, it is broken alike for both partners, but, as the guilty partner is, or has been, living in notorious sin, and can give no evidence of repentance except by abstaining altogether from marriage, such guilty partner must necessarily be refused the Church's benediction in the case of re-marriage. The latter principle has been invariably and universally accepted.

Although it is evident that adultery affects the marriage relation more closely than any other offence, yet it may fairly be said that there are other things which may make married life so intolerable, and the perfect ideal union so impossible, that, if divorce or separation be allowed at all, the grounds for such separation ought not in reason to be confined to the one offence of adultery. This difficulty was met by many of the Fathers by showing, on good Scriptural authority, that idolatry, covetousness, unnatural offences, etc., might rightly be classed under the heading of spiritual adultery. There is probably no more than a formal difference between this and the argument which appeals most forcibly to modern minds—that there are offences which make married life so intolerable that there can be no restoration of affection, that, where the tie of affection has been absolutely destroyed, the real *vinculum* has been ruptured, and that, therefore, such offences may rightly be put in the same category as conjugal infidelity in the strict sense of the word.²

The passages in the Synoptic Gospels have been treated as they stand in the NT without any reference to the results of modern criticism; it will be generally admitted that such treatment is justified in dealing with ethical or doctrinal questions. It must, however, be acknowledged that the recent higher criticism of the Synoptic Gospels has thrown a new light upon the matter and, to a certain extent, strengthened the case of those who condemn divorce absolutely. A large and increasing number of competent critics are of opinion that the qualification, 'except for the cause of fornication,' formed no part of our Lord's teaching (e.g., A. B. Bruce, H. Weiss, H. H. Wendt, P. W. Schmiedel, B. W. Bacon, C. G. Montefiore), and that He forbade divorce simply and absolutely. The four passages are reduced to two. The passage Lk 16¹⁸, probably derived from the source Q, may be regarded as the original and genuine form which has been edited by the first Evangelist in Mt 5³². It is quite evident that Mt 19³⁻⁹ and Mk 10²⁻¹² are but slightly different versions of the same conversation, while everything goes to show that the form in Mark is the original (see W. C. Allen, *ICC*, 'St. Matthew,'³ Edinburgh, 1912, *ad loc.*).²

If the modern critical view is generally accepted, it will, no doubt, be admitted that the case of those who absolutely condemn divorce will be somewhat strengthened, but it is not likely that the existing state of opinion on the whole will be very much affected. The acceptance of the critical view will simply bring into greater prominence the fact that questions of this kind have never really been decided on grounds either of exegesis or of authority pure and simple, but that our interpretation of our Lord's teaching has always been guided by moral and theological considerations. The saving clauses, *παρεκτός λόγου πορνείας* and *μὴ ἐπὶ πορνείᾳ*, may be admitted to be early notes of interpretation added by the Church—a reminiscence, perhaps, of instruction actually received from the Lord—but those

¹ Augustine frequently expressed the idea of the wider interpretation of 'fornication.' 'Si infidelitas fornicatio est, et idololatria infidelitas, et avaritia idololatria, non est dubitandum avaritiam fornicationem esse' (*de Serm. Domini*, i. xvi. 46). See also several passages to the same effect in the *de Conjugiis adulterinis*. In the *Retractationes* Augustine expresses doubt as to the legitimacy of this exegesis (i. 19). Passages from Hermas and Origen in which the idea is expressed are also cited (cf. Bingham, *Antiq.* xiii. v. 2).

² W. C. Allen, though holding the critical view, yet protests, in letters to *The Guardian* (lxv. [1910] 920, 985, 1684 f., 1782), against making use of critical results to decide dogmatic questions, and justifies the use of the NT as received by the Church. J. Kéble, in his pamphlet, 'An argument for not proceeding immediately to repeal the laws which treat the nuptial bond as indissoluble' (Oxford, 1857), attempted to defend the stricter view on the ground that the passages in Matthew were meant only for the Jews of Christ's own time, and were not to apply to Christians, for whom the absolute prohibitions were intended. This view does not seem to have met with much approval, and is not now advanced.

who plead for the right of divorce will still maintain that the interpretation was fully justified and quite on a level with many of our other interpretations of the Sermon on the Mount.

The only other passage in the NT where the subject of divorce is directly treated is 1 Co 7, where St. Paul appeals to our Lord's authority, repeating the general prohibition of divorce. There is nothing, however, to indicate that, when he speaks of a separation between wife and husband, he has the special case of conjugal infidelity before his mind. The presumption is rather the other way, and it would seem as if he were merely thinking of the case of separation for what we should describe as incompatibility of temper. The chief interest of this chapter centres in the rules and regulations laid down by the Apostle with reference to matters about which he could not appeal to any direct utterances of the Lord Jesus.

In the first place, he recognizes the possibility of separation 'a mensa et thoro' (v. 11); if husband and wife are separated for any reason, they are to remain single or become reconciled to each other. Even though he were not actually considering the case of separation for conjugal infidelity, we may feel sure that, if he had done so, the Apostle would have approved of the counsel given in the *Shepherd* of Hermas.

The Jewish husband who divorced his wife was forbidden by the law to take her back; but it is characteristic of the gospel to give prominence to the possibility of repentance; and so Hermas charges the husband who has put away his unfaithful wife to remain unmarried (ὁ δὲ τὴν μετάνοιαν) so that the sinner might have an opportunity for repentance with consequent restoration (*Mand.* iv. 1).

In the second place, St. Paul deals with the case of a marriage between a Christian and an unbeliever—Jew or heathen. If it is desired that the union should continue, well and good; if not (v. 15), a brother or sister is not under bondage in such a case, and, if the unbeliever dissolves the connexion, the Christian is free. This must be taken to mean free to marry again (cf. Ro 7¹² for the use of the terms 'freedom' and 'bondage'). This passage was expressly cited in later times as the authority for the canon law of the Roman Church, which permits divorce by mutual consent in cases of mixed marriages between Christians and unbelievers (see Innocent III., *Decretales Gregorii*, iv. 19, 'de Divortiiis,' ch. 7).

The canon law of the Roman Catholic Church unqualifiedly forbids divorce 'a vinculo matrimonii,' if both parties at the time of marriage had been baptized Christians. In the Eastern Churches, on the contrary, divorce is permitted, not only for adultery, but also for other serious causes, as, e.g., high treason, designs by either party on the life of the other, insanity, leprosy, etc.; but no one is permitted to obtain a divorce more than once. In East and West alike, in the earlier period, and more especially after the ascetic movement became popular—i.e. after the middle of the 3rd cent.—the Fathers were strong in their denunciations of re-marriage, even in the case of an innocent partner. In some cases such unions were made the subject of ecclesiastical censure and at least temporary excommunication. Yet, while the civil laws permitted re-marriage, it is evident that all the eloquence of the Fathers could not entirely prevent it, and it is probable that the average lay opinion did not generally approve of the excessive rigidity of what we may call the ecclesiastical view. The Eastern Church, however, has, from the time of the removal of the seat of empire to Constantinople, been at all times more dependent on the civil power, and, as a natural consequence, more subject to the influence of lay opinion, than the Church of the West, where the power of the ecclesiastical authorities was more unfettered.

In the matter in hand this difference is very well illustrated in the 5th cent. by the moderation of the views of St. Basil, who refused to condemn re-marriage absolutely, though he could not approve of it, and of Lactantius, as compared with the Western teachers of the same period. Yet even up to the 12th cent., when the present canon law of the Roman Church was finally formulated, it is evident, from a careful study of the various decrees of synods and councils, that it was not possible in practice to enforce strictly the principle of the absolute indissolubility of marriage.

Re-marriage in certain cases is permitted implicitly or explicitly by the following Councils: Elvira (Illiberis, c. 305), Vannes (465), Agde (506), Orleans (533), Compiègne (756), and Bourges (1031); to these we may add the testimony of the *Penitential* of Theodore of Canterbury, drawn up for the guidance of the churches under his control, which in some respects perhaps goes to an extreme in making allowances for the weakness of human nature, but in which very considerable liberty is allowed in the matter of re-marriage.

Civil legislation from the time of Constantine to Justinian bears witness, indeed, to the growth of Christian influence in the attempts made to limit the grounds for divorce and, in general, to make divorce more difficult. Nevertheless, the law permitting divorce by mutual consent remained in force until the time of Justinian, while the grounds on which it might be obtained were numerous enough. Under the legislation of Theodosius the Second and Valentinian a wife might divorce her husband for (1) treason, (2) adultery, (3) homicide, (4) poisoning, (5) violating sepulchres, (6) forgery, (7) stealing from a church, (8) robbery, (9) cattle-stealing, (10) attempts on her life, (11) introducing immoral women into the house, and (12) common assault. A husband might divorce his wife for any of the above causes, and also for (13) dining with men not relatives without her husband's permission, (14) going from home at night without permission or reasonable cause, and (15) frequenting circus or theatre without permission; to which Justinian added (16) procuring abortion, and (17) mixed bathing.

It was very natural that the Reformers in the 16th cent. should call in question the rigid mediæval views on the subject of divorce, regarding them as an outcome of the claims of the ecclesiastical authorities to supreme jurisdiction, and as inspired by the spirit of asceticism. The Protestant and Reforming divines held that divorce with the permission of re-marriage was justified in the case of adultery and, generally speaking, of cruelty or prolonged desertion. In the 16th and 17th centuries the same view was generally expressed by Anglican teachers, even by those who, like J. Cosin and H. Hammond, are generally considered as belonging to the High school in theology.

The Reformers rejected the sacramental theory of marriage, and held that the words 'the twain shall become one flesh' signified no more than a very comprehensible union based on common interests and mutual affections. The doctrine that marriage could be dissolved only by death, since husband and wife could no more cease to be husband and wife than brother and sister to be brother and sister, seemed to them to be the natural outcome of the sacramental doctrine. This is not, indeed, wholly true; for it is quite possible to hold the sacramental view, or something very like the sacramental view, and yet to believe that grievous sin may rupture the mystic bond as really and completely as death itself. Still it is evident that rejection of the sacramental theory makes it easier to reject the strict doctrine of indissolubility.

In the next place, the Reformers maintained

that, since separation 'a mensa et thoro' was permitted, it was more conducive to morality and more in accordance with the teaching of 1 Co 7⁹ that an innocent partner should be allowed the right of re-marriage than that temptations to a life of sin should be multiplied. Further, they pointed out that the strict enforcement of the canon law forbidding divorce had not succeeded in putting an end to the evil; that in the later period the multiplication of grounds on which marriage might be declared null and void *ab initio*, implying the consequent dissolution of perfectly honourable unions, had really made divorce easier and more common than before, and had become a grave scandal and the source of much immorality. Finally, with their profound reverence for the Scriptures of the OT, it was natural that the Reformers should urge that divorce could not in every case be morally wrong, since, if it were, it could never have been allowed by God under any circumstances. This last argument was put forward by John Milton with much power and eloquence in his *Doctrine and Discipline of Divorce* (1643). Probably no Christian writer has ever gone so far as Milton in advocating the utmost liberty for Christian men—he does not concede the liberty to women—in this matter. He is, indeed, willing to admit that 'what God has joined together man may not put asunder,' but he will by no means allow that a mere marriage contract or ceremony, though entered upon freely by mutual consent and duly consummated, must necessarily constitute such a joining together. Marriage is indissoluble only when there is complete and perfect unity of heart and soul between the partners. It may be safely said that the absurdities to which Milton's doctrines would lead if pushed to their logical conclusions are a sufficient refutation, nor does this work of his seem to have had much effect on English thought in his own or any succeeding age.

In most Roman Catholic countries civil legislation has conformed to the ecclesiastical ruling of the Council of Trent, and divorce has been forbidden. In Austria, however, it is permitted to those who are not members of the Roman Catholic Church. France is an exception. The *Code Napoléon* (1804–10) restricted the unlimited licence which had been permitted in the earlier years of the Revolution, but allowed divorce on various grounds, including 'mutual consent.' With the restoration of the monarchy (1816), the older law was again adopted and divorce was forbidden. It was not until 1884 that the provisions of the *Code Napoléon* were revived, with certain modifications, serious injuries or cruelty being admitted as sufficient cause, but divorce by mutual consent being forbidden.

In America the laws vary from one State to another. In S. Carolina and Maryland, originally Roman Catholic States, divorce is not permitted; in New York it is granted only on the ground of adultery; while in Maine and Dakota it may be granted on almost any pretext.

If the Report of the Commission appointed by Edward VI. (*Reformatio legum ecclesiasticarum*) had resulted in legislation, it is probable that the opinions of Cranmer, Bucer, and Peter Martyr in favour of divorce would have become part of the law both of the English Church and of the English State. With the king's death, however, the prospect of any alteration of the old law passed away. The Commission appointed to report on the case of the Marquis of Northampton, who, having obtained a separation under the ecclesiastical courts, desired to marry again, allowed the second marriage; but, as the marriage had already taken place while the Commission was sitting, its decision cannot be

considered as absolutely unbiased. The Marquis, however, was advised to have his second marriage legalized by special Act of Parliament, and an Act to that effect was passed in 1548, but was repealed when Queen Mary came to the throne. This case is important, as it may be said to have ruled English practice until the passing of the Divorce Act of 1857. The canons of 1604 (can. 107) confirmed the authority of the ecclesiastical court to grant judicial separation, but only on condition that a definite pledge was given by the parties not to contract a second marriage. Divorce proper with privilege of re-marriage could be obtained only by special Act of Parliament. Between the time of the Reformation and the passing of the Divorce Act 317 cases had been dealt with by Act of Parliament in England and 146 in Scotland.

The Act of 1857 abolished the jurisdiction of the ecclesiastical courts in matrimonial cases, and established a civil court for the purpose. In England and Scotland divorce can now be obtained through the court without special legislation, but the law does not apply to Ireland, where an Act of Parliament is still necessary. In Scotland a wife may obtain a divorce on the ground of adultery alone, but in England cruelty or other serious offence on the husband's part must be proved in addition. In both countries a wife may be divorced on the ground of adultery alone.

In 1909 a Royal Commission was appointed to consider the whole question of the laws relating to divorce and separation. The Commission, after very careful investigations, extending over two years, published their report in Nov. 1912. No attempt has as yet been made, however—up to the middle of 1915—to give effect to their recommendations by way of legislation. On two points the commissioners were unanimous: if divorce is to be allowed, the method of procedure should be cheapened by the institution of special courts, so that the divorce should be made, not easy for any class, but as easy for the poor as for the rich; secondly, men and women should be placed on an equal footing, a wife being allowed to divorce her husband on the ground of adultery alone. The majority of the commissioners were in favour of extending the grounds on which divorce might be granted so as to cover cases of wilful desertion for at least three years, cruelty, incurable insanity after five years' confinement, and imprisonment under commuted death sentence; but a strong minority protested against this proposal, and claimed that divorce should be granted only in case of adultery.

The resolutions of the Lambeth Conference of 1888, in which this difficult practical question was fully discussed, may fairly be taken as representing the authoritative ruling of the Anglican Church as a whole at the present time.

(1) Inasmuch as Our Lord's words expressly forbid divorce except in the case of fornication or adultery, the Christian Church cannot recognize divorce in any other than the excepted case, or give any sanction to the marriage of any person who has been divorced contrary to this law during the life of the other party.

(2) That in no case, during the lifetime of the innocent party in the case of a divorce for fornication or adultery, should the guilty party be regarded as a fit recipient of the blessing of the Church on marriage.

(3) That, recognizing the fact that there has always been a difference of opinion in the Church on the question whether Our Lord meant to forbid marriage to the innocent party in a divorce for adultery, the Conference recommends that the clergy should not be instructed to refuse the sacraments and other privileges of the Church to those who under civil sanction are thus married. These resolutions were reaffirmed by the Conference of 1908, with an addition to the effect that 'when an innocent person has by means of a court of law divorced a spouse for adultery, and desires to enter into another contract of marriage, it is undesirable that such a contract should receive the blessing of the Church.'

The increase of wealth and luxury, and the growth of a spirit of self-indulgence so characteristic of the present age, together with the widely spread

intellectual unrest, tend to encourage the demands for a wider extension of the facilities for divorce. Impatience of old-fashioned restraints and a certain loosening of old-established bonds are the natural characteristics of an age like ours. The deepened sense of the supreme importance of the spiritual union and companionship in marriage which Christianity has fostered makes the bond more irksome than ever where such union is supposed not to be ideal. Those who realize how much the stability and sanctity of home life depend on the unbroken firmness of the marriage-tie, and who recognize that the frequency of divorce must have a degrading effect upon individual character as well as on society in general, naturally regard with some anxiety the tendency in the present day to make divorce easier and more common. It is undoubtedly necessary for the Christian Church to make resolute protest against this tendency. It is, however, certain that the effects of nineteen centuries of Christian influence can never be wholly shaken off. We shall never again be able to regard divorce with the same easy indifference with which it was commonly regarded in the 1st cent. of our era. Christian influence will make itself felt on behalf of the Christian view of marriage, not in the modern world in the way of conciliar decrees and authoritative edicts, but by the weight of Christian public opinion guided by the principles of the NT.

(b) *Conditions of valid marriage.*—(1) *Equality of rank or condition* between the contracting parties, though required by Roman law, has never been regarded as essential in the Christian Church, however desirable in itself.

In Imperial times connexions were sometimes formed between slaves and free women, such connexions, though officially described as concubinage, being regarded as perfectly honourable and moral. It is not improbable that in the Christian Church, with the close relations of brotherhood prevailing between all classes and the excess of the number of free-born women over that of free-born men, such connexions would be by no means uncommon—the fact that they were socially recognized as creditable would, of course, have considerable weight. Some references which have come down to us seem to show that this was the case, and that such connexions were regarded by the Church as essentially marriages.

'Si quis habens uxorem fidelis concubinam habeat, non communicet. Ceterum qui non habet uxorem et pro uxore concubinam habet, a communione non repellatur tantum ut unus mulieris aut uxoris aut concubinae, ut ei placuerit, sit conjunctione contentus' (1st Council of Toledo [c. 400], can. 17). 'Christiani non dicam plurimas sed nec duas simul habere licitum est, nisi unam tantum aut uxorem aut certo loco uxoris sit conjux deest concubinam' (Isidore, *ap. Gratian, Dist. 4*, quoted by Natalis Alexander, *Hist. Eccles.*, Lucca, 1734, i. 29).

(2) The question of *mixed marriages* between Christians and non-Christians was, as might have been expected, one of the earliest practical problems with which the Church was called upon to deal. It formed the subject of one of the queries proposed to St. Paul by his Corinthian converts. The Apostle's reply is clear enough so far as marriages contracted before conversion are concerned. A Christian ought to continue such a union so long as the unbelieving partner is willing that it should be so. The children born of such a marriage were holy, i.e. rightful subjects for Christian baptism. If the unbeliever decided to dissolve the union, 'the brother or the sister is not under bondage in such cases'—which must mean that the Christian would be at liberty to contract another marriage (see, for St. Paul's use of terms 'bondage' and 'freedom,' Ro 7²⁵). In 1 Co 7²⁹ the Apostle declares that a Christian is at liberty to contract marriage 'only in the Lord.' The general principles laid down in this chapter have always been regarded as the primary authority on this matter, though

there has been much controversy as to the practical application, and even as to the exact meaning, of his teaching. Do the words 'only in the Lord' mean that any marriage contracted between one already a Christian and an unbeliever is unlawful? Does 'in the Lord' mean only with a fellow-Christian, and, if so, must the words of St. Paul be taken as a positive command or merely as a counsel of prudence? On these questions St. Augustine expresses himself with some doubt and hesitation, but his opinion on the whole may be taken as expressing the general view of the Church in the preceding centuries. Mixed marriages with unbelievers were discouraged, and even declared, though with some hesitation, to be unlawful for Christians; yet such marriages could not be wholly prevented, nor was any penalty attached to them in the first three centuries, so far as appears. The Council of Elvira affords the earliest example of a specific penalty (five years' penance) being attached to such unions. From the beginning of the 6th cent. the decrees of councils are more numerous and more distinct, while the penalties are in general much more severe.

The civil law supported the ecclesiastical judgments, the Theodosian Code making such wedlock a capital offence. In the Middle Ages the question of the exact interpretation of the Apostle's permission to converts to separate from unbelievers was the subject of much controversy, the chief question being whether the separation should be the deliberate act of the unbeliever, or whether any circumstances making it impossible for the believer to remain 'sine contumelia creatoris' might not justify the separation. The question was decided, on the whole, in the broader sense, by Innocent III. (*de Divortio*, 1198).

In early times marriage with heretics and schismatics was generally brought under the same condemnation as marriage with Jews or pagans. It is now, however, generally recognized both in the Eastern and in Roman Catholic communions that all marriages duly celebrated between baptized persons are valid and indissoluble, though in the case where one of the parties is a heretic or schismatic the other may be subjected to censure or penalty. Where the decrees of the Council of Trent have been published, however, this ruling does not free those contracting mixed marriages from considerable inconvenience, inasmuch as 'due celebration' is defined to be celebration in the presence of a priest in a Roman Catholic place of worship, the man being further obliged to guarantee that children born of the marriage shall be brought up in the Roman Catholic faith. Marriage otherwise celebrated is declared to be null and void. The publication of these decrees, for all practical purposes, in these countries by Pope Pius X. in the well known 'Ne temere' decree (1907) has given rise to much controversy. Roman Catholic divines defend the decrees on the ground that the Church has a right to make any regulations she pleases as to the conditions on which she shall recognize marriages, and that it is desirable to prevent mixed marriages as far as possible, and is, further, the duty of the Church to take care that the children of marriages blessed by her shall be brought up in the faith. Their opponents urge that it is inevitable that mixed marriages will sometimes occur in a large mixed community; that, when this is so, and a marriage is lawfully performed, the Church has no right to cast a slur on respectable persons who have, admittedly, been guilty of no immoral conduct; that to insist on a religious ceremony to which one party may object is to put undue pressure upon conscience, while to demand a pledge for the education in a particular way of children to be born is to override the law of the land and the

natural rights of parents, and that such interference is unjustifiable.¹

(3) *Kindred and affinity*.—It was a common complaint with the Reformers and those who sympathized with them that the multiplication of grounds of prohibition of marriage, the custom of papal dispensations in doubtful cases or cases of illegality, and the facility with which decrees of nullity of marriage could be obtained had created much uncertainty in the matter of marriage-relations and had been the source of grave scandals. This is forcibly expressed in the statute of Henry VIII. for the regulation of marriages (1533-34):

'Many persons, after long continuance together in matrimony without any allegation of either of the parties or any other at their marriage why the same matrimony should not be good, had been divorced contrary to God's law on the pretext of pre-contract or by reason of other prohibition than God's law permitteth. Marriages have been brought into such uncertainty thereby that no marriage could be so surely knit or bounden but it should lie in either of the parties' power to prove a pre-contract, a kindred and alliance, or a carnal knowledge to defeat the same.'

In the Roman Catholic Church three kinds of relationship are laid down as impediments to valid marriage, viz. blood-relationship or consanguinity, affinity or connexion by marriage, and spiritual affinity, as, e.g., the connexion between godparent and godchild, or between two persons who are godparents to the same child. In the Eastern Church the system is even more elaborate, and the grounds of prohibition more numerous than in the Western, while at the same time the custom of dispensation commonly practised in the West since the 8th cent. is unknown in the Eastern Church. In the East two brothers are not allowed to marry two sisters, and, in general, marriage between the members of two families debar the members of either from marriage with members of the other within the prescribed limits.

A different method of describing relationships prevails in the two branches of the Church. In the East uncle and nephew are related in the third degree, first cousins in the fourth, and so on; marriage is forbidden within the seventh degree of kindred or affinity, natural or spiritual. In the West first cousins are related in the second degree, second cousins in the fourth, and so on, marriage being forbidden—since the Lateran Council (1215)—within the fourth degree. This is in practice almost the same as the Eastern rule. The Lateran Council, however, abolished all prohibitions on the score of affinity within the second degree according to the Western reckoning. No trace of these somewhat burdensome restrictions is to be found before the 5th century. In the earlier centuries Christians would be familiar both with the Levitical Law of Holiness (=Lv 18) and with the ordinary Roman law, which were, to all intents and purposes, to the same effect—marriage being forbidden within the second degree according to the Western reckoning. It goes without saying that their marriages would be regulated according to the provisions of those codes.

The only question in connexion with this subject of prohibited degrees which excites interest or gives occasion to serious controversy at the present time is the much-vexed question of marriage with a deceased wife's sister. Such marriages have long been legal and customary in America, in the British colonies, and in several European countries. In England they were not unknown prior to 1835, though condemned by the canon law of the English Church. Such marriages were held by the civil courts to be perfectly valid and unim-

peachable in law, unless voided by special legal process undertaken during the lifetime of the parties; but Lord Lyndhurst's Act in 1835 declared all such marriages within the prohibited degrees absolutely illegal. After many futile attempts, and in face of very strong opposition, an Act legalizing marriage with a deceased wife's sister in the United Kingdom was passed in 1908. A saving clause permits clergymen who have a conscientious objection to refuse to celebrate such marriages, but in the case of *Bannister v. Thompson*, in which proceedings were taken against a clergyman for refusing the Holy Communion to persons so married, it was decided that the clergy may not refuse the sacraments to persons legally married though within the prohibited degrees. Meanwhile the table of affinities in the Anglican Prayer-Book remains the law of the Church, and, in strictness, it would seem that the clergy are prohibited from celebrating a marriage between a widower and his deceased wife's sister, even if they do not feel themselves bound by the famous canons of 1604 to hold that such marriages are 'incestuous and unlawful and altogether null and void' (can. 99). The logical course might seem to be to revise the table of kindred and affinity, but to this a very influential body in the Anglican Church is strongly opposed. Those who object to these marriages do not now, as a general rule, claim that they are expressly prohibited in Lv 18, though attempts more or less ingenious have been made to prove that they are. It is held, however, that the general principle that near affinity is a bar to marriage is laid down in the Law of Holiness, that a greater number of cases of affinity than of consanguinity are cited in Lv 18, and that the case of the deceased wife's sister is so exactly parallel to that of marriage with a husband's brother that the same principle may be held to stand good. Further, it is said that the reference to the sin of the Canaanites (Lv 18²⁷) shows that the prohibitions are regarded as matters of universal moral obligation and not national enactments applicable only to the Israelites. Again, it is maintained that the healthy moral sentiment which makes us regard with loathing and repulsion such unions as those between brother and sister and uncle and niece should also prevail between those who are brought into such close relations of affection as brothers and sisters by marriage. The same sentiment ought to prevail, and anything which may tend to destroy it must be regarded as morally injurious and degrading. Those who hold the sacramental view of a mystic spiritual bond formed in marriage urge that this bond creates as close a relationship between a man and the members of his wife's family as exists between blood-relations. Finally, it is pointed out that marriage with a deceased wife's sister has been expressly forbidden by the Church, at all events since the 4th century. It is most inadvisable, therefore, it is said, to tamper with so long established a custom or, indeed, with any well-established custom in connexion with so delicate a subject as the marriage-relation. Such are the main arguments by which marriage with a deceased wife's sister may be opposed. It is now worth while to consider the arguments which have been brought forward on the other side.

It is very doubtful, it is urged, whether the Levitical law relating to a different state of civilization and specially intended for the people of Israel can be regarded as a moral law binding on Christians; but, even if it be accepted as such, not only is there no express prohibition of marriage with a deceased wife's sister, but, on the contrary, it is implied that such marriage is perfectly lawful (v. 16). The Jews have never regarded such

¹ On the subject of mixed marriage in general see Decrees of Councils: Iliberis (305), Arles (314), Laodicea (c. 341), Agde (506), Orleans (593). See also *Cod. Theod.* iii., xvi.; *Decretum of Gratian*, c. 1-17, C. xxviii. q. 1 (A.D. 1139-42); Innocent III., *de Partis questionibus*, c. 1200; Augustine, *de Fide et operibus*, xix.

unions as forbidden, nor were they forbidden by the ancient Roman law. The very fact that an apostolic canon (date probably late in the 3rd cent.) forbids such marriages to the clergy shows that they were not generally regarded at that time as unlawful *per se*.

No injury has resulted, it is held, either to married life or to the general tone of social morality from the permission of such marriages in America and in the British colonies. It is evident from experience that such marriages are in very many cases desired, and in large centres of population among the poorer classes it is absolutely necessary as a safeguard to morality that they should be permitted. It is denied that any feeling of repulsion similar to that inspired by incestuous connexions exists, or ought to exist, in the case of one's wife's near relations. Affinity ought, in certain cases, to be a bar to marriage, but the true ground of prohibition in this case is what is known as *respectus parentelæ*. The marriage of a man with his step-daughter or with his nephew's widow is shocking to the moral sense because of the more or less paternal relationship involved in the connexion. According to old Eastern ideas, this relationship would also prevail between a woman and her deceased husband's brother, now become the head of the house. That marriage with a deceased husband's brother was not regarded with moral repulsion, in itself, is shown by the fact that it was commanded in the case of a man dying without children. There is no reason, therefore, for thinking that any other principle than that of the *respectus parentelæ* governs the prohibitions of marriage within certain degrees of affinity in Leviticus, while, in the evident total absence of any sense of repulsion against such unions among the majority of modern civilized people, no reason can be given why they should be forbidden. It is further urged that, even if the sacramental theory of marriage be accepted, since the mystic bond is dissolved by death, it may be fairly held that the connexions formed are no longer binding. That a great distinction is made between marriage with a deceased wife's sister and marriage with those closely connected by blood is evident from the fact that the Roman Church freely and frequently grants dispensations for the former, notwithstanding her high sacramental belief.

Some Anglicans, while not prepared to condemn marriage with a deceased wife's sister as absolutely wrong or immoral, yet consider it so undesirable that at least it should not receive the blessing of the Church by a marriage ceremony. Such an attitude has in most periods been taken up with regard to objectionable, but not absolutely forbidden, marriages. As pointed out above, it is the position taken by the Lambeth Conference with reference to the re-marriage of the innocent partner in a divorce case. It has, however, been said that such an attitude is not logical, and is at the same time unjust to Christian people. The majority of Christians have come to regard the nuptial benediction as almost, if not altogether, an essential of marriage and the right of every Christian. If members of the Church are committing no moral offence, they may reasonably claim the blessing of the Church upon their union; if they are entitled to receive the sacraments, it is held that it is unjust to cast such a slur upon them as is implied in a refusal to hallow their union.

5. Conclusion. — Poets and story-tellers have made the love and courtship which lead up to marriage a matter of such all-absorbing interest that married life itself may well seem, by comparison, to be utterly dull, prosaic, and uninteresting. At the same time, divines and canonists

have generally directed attention to the sterner aspect of the matter, dwelling exclusively on restraints and prohibitions, and scanning with watchful suspicion every form of natural indulgence. Nevertheless, the Scriptural ideal of marriage has maintained its hold in the Christian world and has been a mighty influence for the sanctification of family life and the development of character.

From one point of view, marriage is a restraint—a healthy restriction imposed on unbridled licence and excessive indulgence; it brings with it duties and responsibilities which must tax our powers and energies to the utmost and call for the continued exercise of patience and self-denial. It is well that, in a matter of so much importance, so intimately connected with our social and moral welfare, the restraints and responsibilities should be clearly defined and earnestly enforced. But there is another point of view which is, after all, the higher and truer. In this, perhaps more clearly than in any other connexion, we are taught by the gospel that restraints are imposed and self-denial demanded, not for their own sakes, but as a means to truer and more abiding blessedness. Holy matrimony has been divinely instituted for man's good, and to be a source of blessing. In happy married life man is to find his truest and most lasting happiness, and to reach the fullest perfection of which his nature is capable.

W. M. FOLEY.

MARRIAGE (Egyptian).—Amid the abundance of documents from ancient Egypt there is singularly little to enlighten us on this subject. No representation of the ceremonial or festivities of marriage has been recognized among tomb or temple scenes; the scenes of the divine marriage of Ammon with the queen mother at Luxor and Deir el-Bahri can hardly be quoted for illustrating the human rite. Written contracts of marriage are first found in the XXVIth dyn. (c. 600 B.C.), and first became common in the Ptolemaic period; and, notwithstanding the multitudes of relatives recorded in tombs and on stelæ, it is difficult to ascertain what degrees of consanguinity and how many wives were permitted or usual.

To secure hereditary rights in a community with matriarchal tendencies and where women held property, close endogamy might often be convenient. This would especially be the case with the Pharaohs, who claimed the distinction of divine descent, and to them would be permitted acts which could hardly be allowed to their sub-

jects. A genealogical statement regarding the prince Nefermaat at the end of the IIIrd dyn., literally interpreted, would seem to show that he was the offspring of the union of King Seneferu with his eldest daughter (K. Sethe, in *ZA* i. [1912] 57), but a more probable interpretation of the same genealogy is given in Erman's *Aegypten*, p. 227, and by H. Sottas, in *REg* xiv. [1914] 150, making him grandson of Seneferu and son of his eldest daughter. There is plenty of evidence that later Pharaohs married their sisters or half-sisters (cf. Erman, p. 221); a case of a less exalted person doing so in the XXIIInd dyn. (9th cent. B.C.) is noted by J. H. Breasted (*Ancient Records of Egypt*, Chicago, 1906-07, iv. 388). In the XXIst dyn. two marriages of uncle and niece in one family are pointed out by A. H. Gardiner (*ZA* xlviii. [1910] 50). The Ptolemys followed the precedent of the Pharaohs. In the Roman age marriage of half-sisters and full sisters occurred commonly in the families of cultivators of the soil and artisans (K. Wessely, *Karanis und Soknopaiou Nesos*, Vienna, 1902, p. 23; J. Nietzold, *Die Ehe in Ägypten zur ptolemäisch-römischen Zeit*, Leipzig, 1903, p. 12; the evidence there quoted comes from the Greek papyri of the Fayyum or Arsinoite nome, but A. S. Hunt assures the present writer that there is similar evidence also from Oxyrhynchus). The divine example of Osiris and Isis may have had special force at that period. In the First Story of Sethon Khamwese (Ptolemaic period), the ancient Pharaoh's argument about his son Neferkephah and his daughter Ahure seems to be that it would be impolitic, when there were only two children in the royal family, to risk the succession by marrying them together. His preference, following a family custom, would be to marry them to a son and a daughter of two of his generals in order to enlarge his family. At a banquet he questioned Ahure, and was won over by her wishes to the other plan; thereupon he commanded his chief steward to take the princess to her brother's house that same night with all necessary things; Pharaoh's whole household gave her presents, and Neferkephah made a 'good day' and entertained them all on the marriage eve. This is the only account that we possess of an Egyptian betrothal or marriage that is not of the fairy-tale order, and it is noticeable that there is no mention in it of the writing of a contract, perhaps because this marriage was an affair within the family.

Marriage was no doubt entered on soon after puberty and the circumcision of the male, though evidence here is lacking. Müller (*Liebespoesie*, p. 3, note 5) quotes an instance at the end of the Ptolemaic period of the wife of a priest being married at twelve and a half years of age. Some of the ancient Egyptian stories offer examples of love-matches, but parents or guardians would naturally have had the first word in the disposal of young people.

Although several wives may be recorded on a man's tomb, there are few clear cases of more than one living at the same time except in the large *harims* of royal wives and concubines (cf. Erman, p. 219). For all these questions see CIRCUMCISION (Egyptian), FAMILY (Egyptian), CONCUBINAGE, vol. iii. p. 311, CHILDREN (Egyptian); also ADULTERY (Egyptian), ETHICS AND MORALITY (Egyptian), vol. v. p. 481 f., § 9 f. Divorce is provided for in the late contracts mentioned above, sometimes on behalf of the man, sometimes of the woman, and writings of divorce are known (see LAW [Egyptian]). Of the treatment of widows nothing is known beyond that their defenceless state made them objects of help and pity to the just and charitable.

F. LL. GRIFFITH.

MARRIAGE (Greek). — I. General. — The Greeks, as a rule, seem to have entered upon marriage from religious or prudential motives rather than on sentimental grounds. The generation of children¹ was, in fact, the recognized main end of marriage, with which went also the desire to obtain a capable housekeeper.² This utilitarian motive lies at the root of that long conversation of Socrates and Ischomachos on household management which, as reported by Xenophon, is our most illuminating evidence on Greek married life in the 5th and 4th centuries B.C. (see esp. *Ec.* vii. 19 f.). The purely physical significance of marriage in relation to the State itself found, doubtless, its strongest and most logical recognition in Sparta, where wives were taken simply *ἐπὶ τὸ τῆς τεκνώσεως ἔργον* (Plut. *Comp. Lyc. cum Numa*, iv. 77), and their interchange for this object was both permitted and encouraged.³ Yet even in Athens, as a result of the development of city life, in which women could not take any direct part (cf. the oft-quoted words ascribed to Pericles [Thuc. ii. 45]), marriage lost the delicate and romantic bloom which belongs to it in the Homeric poems.⁴ Indeed the average Athenian woman must have been too ignorant to have been a helpmeet for her husband, intellectually or spiritually, at least in any but the lowest class of society. It would, however, be a mistake to regard the exaggerations of the comic poets, or the *chroniques scandaleuses* of the orators, as complete and faithful reflexions of the ideals and facts of the social life of their time. Nor, again, is it possible to deduce the precise degree of affection, respect, or influence actually enjoyed within the precincts of the home by the Athenian wife, from the regulations of the legal system of which she appears to be the passive victim. That the position of women and the conditions of married life in historical Greece exhibit a considerable variation, apparently for the worse, from the state of things depicted in the Epic is undeniable, however it may be explained; but it is an error to contrast the idealizations of Homer with the crudities of Attic law. The actual content of life, then as now, was just what the man and wife chose to make it.

Monogamy was the Hellenic rule, as among the Egyptians (Herod. ii. 92). Examples to the contrary, however, are not lacking; e.g., in Sparta King Anaxandrides kept a double establishment (Herod. v. 40).⁵ It is doubtless true enough that no definite law of Athens nor reference to any law asserting the principle can be adduced, and, on the other hand, that cases of bigamy occurred in Athens as elsewhere; but neither of these facts justifies the statement that Attic law simply took no account of polygamy one way or another.⁶

¹ *ἐπὶ παῖδων γνησίῳ σπέρμῳ, ἢ ἀρότῳ*, betrothal formula given in Clem. Alex. *Strom.* ii. 23; cf. Menander, *Perik.* 435: *ταύτην γνησίῳ παῖδων ἐπ' ἀρότῳ σοὶ δίδωμι*.

² Cf. the naïve confession in Dem. ix. 122: *τὰς μὲν γὰρ ἐταίρας ἡδονὴν ἐνεκ' ἔχομεν, τὰς δὲ παλλακὰς τῆς καθ' ἡμέραν θεραπείας τοῦ σώματος, τὰς δὲ γυναῖκας τοῦ παιδοποιεῖσθαι γνησίου καὶ τῶν ἐνδον φύλακα πιστὴν ἔχειν*. See also Aristotle, *Eth.* Nic. viii. 12. 7: *οἱ δ' ἀνδρῶν οὐ μόνον τῆς τεκνοποιίας χάριν συνικοῦνται, ἀλλὰ καὶ τῶν εἰς τὸν βίον*.

³ Xen. *Rep. Lac.* i. 8: *εἰ δὲ τις αὖ γυναικὶ μὲν συνοικεῖν μὴ βούλοιντο, τέκνον δὲ ἀξιολόγων ἐπιθρονοῖ, καὶ τοῦτο νόμον ἐποιήσεν, ἥτινα εὐτεκεν καὶ γενναῖον ὄρεται, πείσαντα τὸν ἔχοντα, ἐκ ταύτης τεκνοποιεῖσθαι*.

⁴ Cf. the description of a perfect marriage, put into the mouth of Odysseus, in *Od.* vi. 132-135.

⁵ In Herod. vi. 61, *Ἀρίστων βασιλεύοντι ἐν Σπάρτῃ καὶ γυναικας δύο παῖδες οὐκ ἐγένοντο*, the brevity of the expression leaves it uncertain whether Ariston had two wives at once. In vi. 63 he divorces the second, to marry a third—from which, perhaps, he may be allowed the benefit of the doubt (cf. E. Meyer, *Gesch. des Altertums*, Stuttgart, 1884-1901, ii. § 50 A). But the feature of Sparta was rather practical polyandry (*Pol.* xii. 6).

⁶ Cf. Hruza, *Polygamie und Pellikat*, p. 31: 'Das attische

That concubinage existed at Athens to a considerable extent cannot be doubted, owing to the influx of free women and their men-folk from the rest of Greece. Lysias mentions a law which authorizes an injured husband to slay with impunity an adulterer caught *flagrante delicto*, whether it be with his wife or with his concubine, though the latter are 'less valuable' than wives (Lys. i. 81: καὶ ἐπὶ ταῖς παλλακαῖς ταῖς ἐλάττωτος ἀξίας τὴν αὐτὴν δίκην ἐπέθηκε). So also in a law of Drakon quoted by Dem. xxiii. 58: ἡ ἐπὶ παλλακῇ ἢ ἐν ἐπ' ἐλευθέρους παῖσιν ἔχη. These passages must cover free foreign women, from which class, as well as from that of slaves and freedwomen, the majority of παλλακαὶ at Athens doubtless came. It is clear, however, from Is. iii. 89, ἐπεὶ καὶ οἱ ἐπὶ παλλακίᾳ διδόντες τὰς αὐτῶν πάντες πρότερον διωμολογοῦνται περὶ τῶν δοθησομένων ταῖς παλλακαῖς, and from other passages that native Athenian women (πολιτίδες, ἀσται) also sometimes became εἰσάται and παλλακαί. No special laws touching the case of these and giving them privileges over foreign women living ἐν παλλακίᾳ with Athenian citizens can be produced. Hence the hypothesis¹ of the existence at Athens of a status of 'legitimate concubinage,' in which an Athenian citizen, already lawfully married, contracted another union with another Athenian woman, who was, like the wife, formally betrothed (ἐγγυητή) by her κύριος, her children being therefore legitimate, but who nevertheless was not a wife, falls to the ground, as being simply the assertion of legalized bigamy.

Here also should be mentioned Müller's theory²—that after the failure of the Sicilian expedition, probably in 411 B.C., changes were introduced into the Athenian marriage law with a view to increasing the number of citizens. His theory is that another form of union (*Nebenehe*) was set up by the side of regular marriage. Marriage in the proper sense could be contracted only with an Athenian woman, but the new legislation permitted a man to take, in addition to his Athenian wife, a partner who was neither γυνὴ nor παλλαγή—a secondary wife, who had, in fact, no specific title. This *Nebenfrau*, or secondary wife, might be either an Athenian or a foreign woman; her children were citizens, but νόθοι, not being admitted to their father's *φρατρία*. If the father left no children by his real wife, these νόθοι had full rights of inheritance, but had a claim only to νόθεια, a prescribed fraction of his estate, if he left legitimate issue by the real wife. This institution was abolished on the restoration of the democracy in 403 B.C.

2. Permissible marriages.—It was illegal for an Athenian citizen to marry a foreigner, the alien wife or husband being liable to be sold into slavery (law in Dem. lix. 16, dating perhaps only from the time of Pericles, 451 B.C. [cf. Plut. *Per.* 37], and revived in 403 B.C.). Such marriage, however, was legal if Athenian citizenship had been bestowed on the individual, or if he or she belonged to a community to which the Athenian assembly had granted rights of intermarriage (ἐπιγαμία); but, in spite of the law and its penalties, Athenians not infrequently did contract such marriages and smuggle their issue into their *φρατρία*. Legally, the issue of such marriages were illegitimate (νόθοι), like the issue of ἀνέγγυνοι.³

Forbidden degrees were few, the practical working of the laws of inheritance and adoption (*q.v.*) being to encourage marriage between near relatives, and even to enforce it. Marriage of cousins was common (cf. Dem. xliii. 74); union of uncle and niece was possible (cf. Lys. xxxii. 4; Is. iii. 74),⁴ and even of aunt and nephew (case of Demosthenes, father of the orator, betrothing on his death-bed his prospective widow to his nephew [Dem. xxvii. 5]). A man might marry his half-sister by the same father, but seemingly not by the same mother.⁵ Recht hat die Polygamie gewiss nicht ausdrücklich verboten, aber wahrscheinlich auch nicht geradezu erlaubt. Das Gesetz enthielt keine Bestimmung, und damit war der Willkür der Bürger freier Raum gegeben. The law of Charondas of Thurii, inflicting loss of political rights on a man who gave his children a stepmother (Diod. xii. 12, 14), clearly implies universal monogamy (cf. Hruza, p. 56).

¹ See Buermann, 'Drei Studien,' etc. (=Jahrbücher für cl. Philol., 1877-78, Supplementband ix. pp. 578 f., 638 f.); cf. R. Zimmermann, *De nothorum Atheniensium conditione*, Berlin, 1886.

² O. Müller, 'Untersuchungen,' etc. (=Jahrbücher für cl. Philol., 1899, Supplementband xxv. p. 667 f.); cf. Wyse, *The Speeches of Isaeus*, p. 280.

³ Pollux, iii. 21: γνήσιος μὲν δὲ ἐκ γυναικὸς ἀστέης καὶ γαμετῆς . . . νόθος δὲ ἐκ ἐξένης ἢ παλλακίδος.

⁴ At Sparta King Anaxandrides had his niece to wife (Herod. v. 39).

⁵ Cf. Dem. lvii. 20: ἀδελφὴν γὰρ δὲ πάππος οὐμὸς ἐγγυην οὐχ ὁμομητρίαν, Paus. i. vii. 1: ὁ Πτολεμαῖος Ἀρσινόης ἀδελφῆς ἀμφότεραθεν ἐρασθεὶς ἐγγυην αὐτῇ, Μακεδόσιν οὐδαμῶς ποῖον νομιζόμενα, Διγυμνῶσι μάλιστα ὧν ἔρχεν, Plut. *Them.* 32: Μητροπολιτικὴν ἐκ τῆς ἐπιγαμίας γενομένην Ἀρχέτολος δὲ ἀδελφός, οὐκ ὧν ὁμομητρίος, ἐγγυην. Marriage of full brothers and sisters was, however, not outside the range of Greek ideas;

There were, it seems, no other prohibited degrees of affinity, except between individuals in the direct line of descent or ascent (cf. Plat. *Laws*, 838); there is, however, some indication that law and public opinion were not in accord in this matter (Aristoph. *Frogs*, 1081).

It follows from the above that even considerable disparity of age cannot have been generally regarded as an obstacle to marriage. The elder Demosthenes arranged that his five-year-old daughter should marry his nephew ὅταν ἡλικίαν ἔχῃ, explained as signifying in ten years' time (Dem. xxvii. 5). The wife of Ischomachos was not fifteen years old at the time of her marriage (Xen. *Oec.* vii. 5). The relatively early age at which girls became nubile in the climate of Greece is to be remembered.¹ The Gortynian Code pronounces a girl nubile at twelve years of age; in Athens the lower limit was perhaps fourteen.² The husband must at least have passed his *δοκιμασία*, i.e., he must be turned eighteen. It seems to have been the rule that the husband should be a good deal senior to the wife; and this was approved by the philosophers.³ Inequality of social position was felt to be a more serious obstacle to marriage than mere disparity in age; but neither this sentiment itself nor the consequences of its violation are specially Athenian (cf. Aristoph. *Clouds*, 41 f.; Aesch. *Prom. Vinct.* 890: τὸ κηδεύσαι καθ' ἐαυτὸν ἀριστοτελεῖ μακρῶ). The point lay in the fact that, in historical times, a wife brought a dowry with her, which sometimes had the effect of making her the dominant partner in the household.

3. Choice of wife.—In the selection of a partner neither bridegroom nor bride had much voice; the respective parents arranged the match—often with the aid of a match-maker (*προμηστρία*). Moreover, the Athenian bridegroom had little opportunity of making his bride's acquaintance, or even of seeing her, before marriage, unless she was a near relative, owing to the strict conventions under which Athenian women in general lived—more strict, apparently, than those which obtained in the rest of Greece⁴ (see art. *FAMILY* [Greek]).

4. Betrothal.—By Attic law betrothal (ἐγγύησις)⁵ was the indispensable condition of valid marriage, except in the case of an 'heiress' (ἐπικληρος), who was, of course, claimed before the Archon by the next-of-kin (cf. Is. vi. 14: ἡ ἐγγυηθεῖσαν κατὰ τὸν νόμον ἢ ἐπιδικασθεῖσαν; see art. *INHERITANCE* [Greek]). Failing the formal ceremony of ἐγγύησις, illegitimacy attached to the issue of the marriage. It was simply a contract made between the suitor (or his father or guardian) and the person who as κύριος had legal authority over the woman, viz. her father, full brother, paternal grandfather, or

cf. *Od.* x. 51. (sons and daughters of Aiolos)—on which a schol. remarks: ἀρχαῖον ἔθος τὸ συνοικεῖν ἀδελφούς. καὶ δὲ Ζεὺς ἀδελφῇ οὐστὴ συνοικεῖ τῇ Ἥρᾳ. Cf. also Paus. iv. ii. 3. According to Phil. *Jud. de Spec. Leg.* ii. 778, the Spartan law just reversed the Athenian. See Plat. *Rep.* v. 461 B, and H. Richards, in *CLR* iv. [1890] 6; Hruza, *Polygamie und Fellikie*, p. 159 f.

¹ Soranus, *παθ. γυν.* iv. 20: τὸ δὲ ἐμνην ἐπιφαινεῖται τὸ πρῶτον περὶ τὸ τεσσαρεσθόδετον ἔτος κατὰ τὸ πλείστον ὅτε καὶ τὸ ἡβᾶν καὶ τὸ διηκοῦσθαι τοὺς μαστούς.

² Deduced from F. Blass's restoration of Aristotle, *Ath. Pol.* lvi. 7: μισθοὶ δὲ καὶ τοὺς οἴκους τῶν ὀρφανῶν καὶ τῶν ἐπικληρῶν, ὡς ἂν τις τετραπαρακιδεῖται γένετα. For the early age at which girls were married at Troezen, see Arist. *Pol.* 1385a, with W. L. Newman's note (*The Politics of Aristotle*, iii. [Oxford, 1902] 464).

³ Cf. Ar. *Pol.* 1385a: διὰ τὰς μὲν ἀρμόττει περὶ τὴν τὸν δικαιοκλίβκα ἐπὶν ἡλικίαν συγγυηθῆναι, τοὺς δ' ἐπὶ τὰς τριάκοντα ἐν τοσούτῳ γὰρ ἀμείζουσιν τε τοὺς σώμασι σὺν εὐεῖς ἔσται, καὶ πρὸς τὴν πάλαν τῆς τεκνοποιίας συγκαταβήσεται τοὺς χρόνους εὐκαίρως. Sometimes, however, the husband was very young (cf. Dem. xi. 4: συνίβη γὰρ μοι δεσπέντος τοῦ πατρὸς δικαιοκιδεῖται γῆμαι). Hesiod (*Works and Days*, 685 f.) recommends a man to marry at about 30, the woman at 18 or 19. Plato, *Rep.* v. 460 E, says: ἀρ' οὐν σοὶ ἡμῶνδε μέτριος χρόνος ἀκμῆς τὰ εἰκόσιν ἐτη γυναικί, ἀνδρὶ δὲ τὰ τριάκοντα; cf. Solon, fr. 14.

⁴ Hence the curious expression in Xen. *Oec.* vii. 10: ἐπεὶ ᾗδ μοι χειροσθῆς ἦν καὶ ἐπερὶ δαίμονα, 'after she was accustomed to my hand, that is, was tamed,' used by Ischomachos of his girl-wife.

⁵ The form ἐγγύησις is used by Isaeus only in iii. 58: τὴν μαρτυρίαν περὶ τῆς ἐγγυησεως τῆς γυναικὸς. Elsewhere he uses the form ἐγγύη (and so Dem. xvi. 18; Plat. *Laws*, 774 E; Hyper. iii. (v.) 16). But modern writers have in general agreed to use the form ἐγγύησις in reference to betrothal, and so restrict the form ἐγγύη to signify 'pledge' or 'surety,' which is, in fact, its ordinary significance. The verb ἐγγυᾶν is used of the κύριος of the woman, ἐγγυάζει (mid.) of the suitor, and ἐγγυάζεται (pass.) of the woman; but the last use is not common, its place being taken by periphrases with the noun ἐγγύη or the adj. ἐγγυητή (Wyse, on Isaeus, iii. 4).

legally constituted guardian.¹ It was essentially a family ceremony (although regulated by law)² at which, besides the principals, relatives and other witnesses were present, in numbers corresponding to the social distinction of the parties (cf. Is. iii. 18: ὁ μὲν γὰρ ἐγγυῶν μέλλων εἰς τὸν τριτά- λαντον οἶκον, ὡς φησι, τὴν ἀδελφὴν, διαπραττόμενος τηλικαῦτα ἕνα μάρτυρα παρῆναι αὐτῷ προσποιήσας). Nothing, however, is said in any passage as to the presence of the woman, which certainly was not legally necessary, any more than her consent to the match; in point of law she was simply the object of a purely business arrangement or barter between her κύριος and the suitor. Of the formalities necessary or usual we know nothing. Herodotus, in his account of the wooing of Agariste of Sicyon, seems to preserve in part the verbal formula of the Athenian marriage-contract in the 5th cent. B.C.³ It is strange that there is no allusion to any written record of the contract, at any rate at Athens, where, indeed, there was much laxity in this regard; but it is hard to believe that the proceedings were purely oral—more especially as it was at the ἐγγύσις that the dowry agreed upon was actually paid, or agreements entered into as to its future payment.⁴

It should be clear from the above that the use of the term 'betrothal' as a rendering of the Greek term ἐγγύσις (ἐγγύς) is simply by way of analogy and in default of a more appropriate word. For the essentials of a modern betrothal, namely (1) free consent of the woman, and (2) that the act takes place between the two individuals who so declare their will and intention, without any necessary intervention of third parties, are entirely lacking in the Athenian ceremony. The origin of the latter lies in the primitive marriage by purchase, and Athenian law did as a matter of fact select this primitive element, namely, the formal validity of the compact preparatory to the surrender (ἐκδοσις) of the woman, rather than the formalities of the consequent nuptials, as decisive in regard to the all-important question as to the legitimacy of the offspring. It does not appear that the wedding ceremonies and home-bringing of the bride had actually any legal significance, except as the natural and public consequences of the formal private contract; and, just because these were the natural and normally inevitable consequences, Athenian jury-courts, so far as our knowledge goes, were never called upon to decide at what precise moment the status of marriage became actual, or what was the precise juristic significance of the γάμος in which the suitor asserted the rights bestowed upon him by virtue of the marriage contract (ἐγγύσις).⁵

The question, therefore, which has been debated,⁶ as to whether ἐγγύσις was an act of betrothal or affiancing preceding marriage, or was not rather the beginning of the married state itself—the first and most important of the ceremonies of the wedding-day, and actually constitutive of marriage *per se*—seems to receive its solution through purely

historical considerations. Primarily and originally, the ceremony of ἐγγύσις was a literal putting of the woman by her κύριος into the hands of the suitor for price paid, the interval between the striking of the bargain and exercise of conjugal rights (γάμος) being filled by the leading home of the newly-purchased bride. This home-leading, being that part of the entire transaction which was of a striking and necessarily public character, came to possess ever increasing social significance, while at the same time it was the moment at which religion intervened to invest the ceremonies with its own special solemnities, whether of a prophylactic or of a prognostic sort. The whole mass of ceremonial, of infinite variety, and of very various degrees of consciously realized import, which constitutes the actual procedure of marriage, in its social and non-juristic sense, interesting and important as it is for the student of anthropology, can be given here only in barest outline.

5. Wedding ceremonies.—The Greek γάμος was essentially a religious ceremony (τέλος),¹ covering the deportation of the bride from her parents' house into that of her husband. The month Γαμηλιών (Jan.-Feb.) was generally selected, and Greek custom seems to have prescribed in general the winter season as proper for marriage; and the speculations of the philosophers were in accord (cf. Arist. Pol. iv. (vii.) 14=1335a: τοῖς δὲ περὶ τῆς ὥρας χρόνους ὡς οἱ πολλοὶ χρόνται καλῶς καὶ νῦν, ὁρίσαντες χειμῶνος τὴν συναυλίαν ποιεῖσθαι ταύτην). The bride dedicated to various deities (θεοὶ γαμήλιοι) her girlish toys and other gifts, and more especially her maiden tresses, now shorn (Pollux, iii. 38, says that before marriage girls offered their hair to Hera, Artemis, and the Fates; cf. Hesych. s.v. γάμων ἔθνη).² The most important pre-nuptial ceremony was that of the bath (λουτρὸν νυμφικόν);³ at Athens the water must be fetched from the Kalirrhoe (Thuc. ii. 15), tall water-jars of peculiar shape (λουτροφόροι) being used for the purpose—which it was also the custom to set up on the tomb of those dying before marriage.⁴

The order of the details of the nuptial ceremonies is not certainly known, and doubtless varied according to the locality. A feast was given in the house of the father of the bride, thus securing publicity of the event, for the guests were really witnesses (Dem. xxx. 21; Is. viii. 18).⁵ Associated with this was the unveiling of the bride (the ἀνακαλυπτήρια).

¹ Cf. Pollux, iii. 38: καὶ τέλος ὁ γάμος ἐκαλεῖτο· καὶ τέλει οἱ γεγαμηκότες διὰ τοῦτο καὶ Ἡρα τέλειαι, ἡ ζυγία. The Danaids, who, in pseudo-Plato, *Asiarch.* 578 E, are ἀτελεῖς, are τῶν οὐ μεμνημένων in Paus. x. xxxi. 9. The sacrifice preliminary to a wedding was called προτέλεια, and the first night was the νύξ μυστική. Cf. J. E. Harrison, 'The Meaning of the Word τέλεσι', in *CR* xxviii. [1914] 361.

² Cf. Paus. ii. xxiii. 1: ἐκαστὴ παρθένος πλόκαμον ἀποκείρεται οἱ [sc. Hippolytos] πρὸ γάμου, κειραμένη δὲ ἀνέθηκεν ἐς τὸν ναὸν φέρονσα, at Troezen; i. xliii. 4: καθέστηκε δὲ ταῖς κόραις χοὰς πρὸς τὸ τῆς ἱερῆς μνήμα προσφέρειν πρὸ γάμου καὶ ἀπάρχεσθαι τῶν τριχῶν, at Megara; he compares the Delian custom (for which cf. Herod. iv. 34); ii. xxxiii. 1: κατεστήσατο δὲ καὶ ταῖς Τροιζηνίων παρθένοις ἀνατίθειναι πρὸ γάμου τὴν ζώνην τῇ Ἀθηνῇ τῇ Ἀπαυρούρῃ. See J. G. Frazer, *Pausanias's Desor. of Greece*, London, 1898, iii. 279 f. For the dedication of the girdle (ζώνη, or μίτρα) to Aphrodite, see Theocrit. xxvii. 65; Mosch. ii. 73.

³ In Troas the bride bathed in the river, saying λαβὲ μου, Σκάμανδρε, τὴν παρθενίαν (Aeschines, *Epist.* 16). See M. P. Nilsson, *Griechische Feste*, Leipzig, 1906, p. 366 f. We must be content here with bare reference to the strange survival, apparently, of pre-nuptial defecation, in the island of Naxos, to which allusion is made in the opening lines of the recently discovered frag. of the *Aitia* of Callimachos (*Oxyrh.* Pap. vii. [1910] 15 f.: ᾗδ' καὶ κοῦρε παρθένος σὺνάσαστο | τέθεικον ὡς ἐκλέγετο προνύμφιον ὑπὸν ἰαῦσαι | ἄρσενι τὴν τάλιν παιδί σὺν ἀμφίβαλει) about which much literature has gathered; see A. Puech, *REG* xxiii. [1910] 255 f.; D. R. Stuart, *Class. Philol.*, Chicago, vi. [1911] 302 f.; C. Bonner, *ib.* 402 f.; K. Kuiper, *REG* xxv. [1912] 318 f.

⁴ Cf. Dem. xlv. 13: τελευτᾷ τὸν βίον . . . ἀγάμος ὅν τι τούτου σημαίον; λυτροφόρος ἐφέστηκεν ἐπὶ τῷ τοῦ Ἀρχιάδου τάφῳ (see also § 30); P. Wolters, 'Rotfigürige Lytrophoros', in *Mitth. arch. Inst. Ath.* xvi. [1891] 371 f.

⁵ Cf. the story of the unfortunate affair of Orgilao at Delphi given in Plutarch, *Res. gerend. praec.* 32; cf. Arist. Pol. vii. (v.) 4=1303b.

¹ Cf. law quoted in Dem. xli. 18: Ἦν ἂν ἐγγύσις ἐπὶ δικαίους δάμαρτα εἶναι ἢ πατὴρ ἢ ἀδελφὸς ὑποπτήρ ἢ πάππος ὁ πρὸς πατρός, ἐκ ταύτης εἶναι παῖδας γνησίους.

² Cf. Hyper. iii. (v.) 16: ἀλλὰ μὴν οὐκ ἀπέχρησε τῷ νομοθέτῃ τὸ ἐγγυῆσθαι τὴν γυναῖκα ὑπὸ τοῦ πατρὸς ἢ τοῦ ἀδελφοῦ, ἀλλ' ἐγράψε διαρρήθην ἐν τῷ νόμῳ, κτλ.; Dem. xli. 18: σκέψασθε τοῖνυν καὶ τοὺς νόμους, παρ' ὧν κεινέουσι τὰς ἐγγύας ποιεῖσθαι, κτλ.

³ Herod. vi. 130: τῷ δὲ Ἀλκμήωνος Μεγακλῆϊ ἐγγυῶ παῖδα τὴν ἐμὴν Ἀγαρίστην νόμοις τοῖσι Ἀθηναίων. φαμένον δὲ ἐγγυᾶσθαι Μεγακλῆος ἐκεῖνο ὁ γάμος κλεισθένει.

⁴ Dem. xli. 6: μάρτυρας παρῆναι τοὺς παραγενομένους, ὅτ' ἦγγυα μοι Πολύεικτος τὴν θυγατέρα ἐπὶ τετταράκοντα μναῖς. In the island of Myconos, in Macedonian times, public record was made of the amount of the dowry. See Inscr. 817 in W. Dittenberger, *Syll.*², Leipzig, 1898-1901, where the entries are of the type Σώστρατος τῆς θυγατέρας Σάνθης ἐγγυῆσεν Ἐπαρχίδει καὶ προῖκα ἔδωκε χίλις καὶ τριακοσίας δραχμας . . . ἀργυρίου δὲ προσέθηκεν ἑκατὸν δραχμας, ἐσθὴν δὲ τετυμμένην διακοσίαν δραχμῶν. See R. Dareste, B. Haussoullier, and T. Reinach, *Recueil des inscr. jurid. grecques*, I. [Paris, 1895] 48 f.

⁵ Yet ἐγγύσις as such did not give either party an action for specific fulfilment (in spite of the assertion to the contrary by Partsch, *Griechisches Bürgerrecht*, p. 49, relying upon Aelian, *Var. Hist.* vi. 4). Action for breach of promise of marriage was unknown in Athens. But, if the dowry had been paid, the κύριος of the woman could recover it with interest (Dem. xxvii. 17).

⁶ Especially by Ilruza, who sums up his position (*Ehebeogr. nach alt. Rechte*, p. 40) thus: 'Sie (ἐγγύσις) ist kein bloß prätorischer Akt, wie die Sponsalien, sondern die Ehebegründung selbst. Wäre die ἐγγύσις nur ein Verlöbniß, so müßte später noch die Ehe durch einen besonderen Akt begründet werden. Davon ist aber nichts überliefert.'

The procession accompanying the bride *ἐφ' ἀμύξης* to her new home took place in the evening, by torchlight, the Hymenaios song being meanwhile sung to the piping of flutes (see the description of the scene on the Shield of Achilles in *Il.* xviii. 491 f.). The bride was introduced to the hearth amid showers of dates, figs, and other sweetmeats (*καταχύσματα*).¹

In Sparta a survival of the primitive capture of the bride lay in the custom of the bridegroom taking his bride from her mother's arms with simulated violence (*Plut. Lyc.* 15; *Dion. Hal.* ii. 80). For other survivals see M. P. Nilsson, 'Die Grundlagen des spartanischen Lebens,' in *Klio*, xii. [1912] 308 f.; E. Kessler, *Plutarchs Leben des Lykurgos*, Berlin, 1910.

6. **Bride-price.**—In primitive times, remarks Aristotle, men bought their wives (*Pol.* ii. 8 = 1268b; cf. *Plato, Laws*, 841 D). The Epic contains frequent mention of the bride-price (*ἔδνα*), normally calculated in oxen, paid by the suitor to the bride's father. It must sometimes have happened, even in very early times, and under a general system of marriage by purchase, that a father must give something to boot with his daughter in order to secure the desired son-in-law. The economic factor, the relation between population and food-supply, may have contributed largely to establish the custom of dower in place of the bride-price. In historical times, at any rate, the bride-price has been wholly replaced by the dowry given to and with the girl by her parents.

The Epic contains evidence of the transition stages. Of Andromache it is said that Hector took her from her father's house, 'having given bride-price untold' (*Il.* xxii. 472).² Of the slain Iphidamas it is said that he fell 'far from his bride, of whom he had known no joy, and much had he given for her' (*Il.* xi. 242 f.). he saw no return for his expenditure of 100 kine). In order to appease Achilles, Agamemnon offers to let him have a daughter of his free (*Il.* ix. 146 f.)—nay, more, to give a present with her (*ἔγὼ δ' ἐπὶ μέλαια δώσω | πολλὰ μάλ', ὅσσ' οὐπω τις ἔβ' ἐπέδωκε θυγατρί*);³ cf. *Od.* vii. 314, xx. 342.

Ultimately the *ἔδνα* come to be a dowry given by her parents to the bride—perhaps through a transition stage in which the bride-price received from the suitor was used wholly or in part to equip the bride and to furnish the feast.⁴ In the *Odyssey* the two systems are both found; e.g., in *Od.* ii. 53, 'Ἰκαρίον, ὃς κ' αὐτὸς ἑδνύσατο θυγάττᾳ, the meaning is 'gave for the bride-price' (cf. *Od.* xvi. 77, 391 f., xix. 529); but in *Od.* i. 277 f. = *Od.* ii. 196 f., οἱ δὲ γάμον τεύξουσιν καὶ ἀρνύνουσιν ἔδνα | πολλὰ μάλ', ὅσσα δοῖκε φίλῳ ἐπὶ παῖδας ἑσέσθαι, a dowry given by the parents is meant, just as by Pindar and Euripides *ἔδνον* is used as equivalent to *φερνή*.⁵

7. **The dowry.**—In historical times, in Athens, the marriage settlement or dowry (*προίξ, φερνή*) was almost a criterion of honourable marriage as distinguished from concubinage; for the freedom of divorce allowed by Athenian law to the husband made the position of a portionless wife very precarious (cf. *Is.* iii. 28: *κἂν ἀργύριον πολλῶ μᾶλλον ὁ ἐγγυῶν διωμολογήσατο ἔχειν αὐτὸν ἐπὶ τῇ γυναίκῃ, ἢ αὐτὴ ἐπ' ἐκείνῳ γένοντο ῥαδίως ἀπαλλάττεσθαι, ὅπρῳε βούλοιντο*).

¹ The marriage was followed by some ceremony or act for which the technical and fixed phrase was *γαμηλίαν ὑπὲρ τῆς γυναίκος τοῖς φράτεσσιν εἰσφέρειν* (cf. *Is.* iii. 79, viii. 18; *Dem.* iv. 48). This has been variously interpreted by both ancients and moderns as an introduction or enrolment of the wife among the members of her husband's *φρατρία*, or as a banquet, sacrifice, or donation (see Wyse, *Isaeus*, p. 363).

² Cf. *Il.* xvi. 178, 190; *Od.* xi. 282. It is clear from *Od.* xv. 387 that the *ἔδνα* were given to the parents, not to the bride. Hence is explained the term used in *Il.* xviii. 593, *παρθένου ἀλφεσίβοιαν*, 'realizing a high price in oxen' (see G. Murray, *Rites of the Greek Epic*, Oxford, 1911, p. 135 f.). In *Od.* viii. 318 f. there is talk of getting the price of a 'bad bargain' refunded. In *Il.* xiii. 386 Othryoneus receives Cassandra *ἀνὰ δῶνον*, but gives service in war in lieu of bride-price.

³ Leaf in his note on this passage prefers to see in it an example of an intermediate stage, in which the *ἔδνα* are given by the suitor to the bride herself, and may be increased by gifts from her parents, the word *μέλαια* being the technical term for such additional gifts (cf. *Il.* xxii. 51). The example quoted from *Od.* vi. 159 as an illustration of this intermediate stage ('loading thee with gifts') is not in point, the meaning being 'prevail over other suitors with offers,' i.e. to the parents of the girl.

⁴ Such a transition stage would enable us to explain the difficult expression in *Il.* xiii. 382: (*συνάμειβα*) *ἀμφὶ γάμῳ, ἐπεὶ οὐ τοὶ δῶνται κακοὶ εἶναι, where δῶνται* is by Leaf translated 'match-makers,' 'marriage-brokers,' or (Lang, Leaf, and Myers, tr., London, 1889) 'exactors of gifts of wooing.' It means 'one who makes a profit out of the *ἔδνα*.'

⁵ See on this development P. Cauer, *Grundfragen der Homer-kritik*, Leipzig, 1909, p. 286 f.

τῆς γυναίκος). Instances, indeed, are found where no settlement was made; in the lower classes the amount must always have been trivial. Moreover, no legal obligation to provide a dowry can be proved for the father,¹ just as for brothers also the obligation to dower sisters suitably and not suffer them to grow old unmarried was moral, not legal (*Lys.* xiii. 45).²

The dowry did not become the husband's property, but he enjoyed the usufruct;³ he was generally required to mortgage real estate as security (*ἀποτίμημα*) for its eventual repayment.⁴ If the capital sum was not to be paid at once, either because the woman's *κύριος* had not enough ready money or because her husband could not give adequate security for the whole sum, interest upon the outstanding balance was paid to the husband according to agreement (*Dem.* xli. 6; *Inscr. jurid. grecques*, i. 133 f.). All these arrangements were made before witnesses (cf. *Dem.* xxx. 9, 21), but were not put in documentary form before an official and published, as at Myconos and Tenos; at Athens the permanent stone record of the mortgage was deemed sufficient safeguard of the rights of the parties. Naturally all this implied the necessity of keeping clearly distinct the property of husband and wife (cf. *Dem.* xlvii. 57, liii. 28); neither Athens nor, so far as our knowledge goes, the rest of Greece knows community of property between husband and wife, in spite of the recommendations of philosophers.⁵ It is clear that the Athenian dowry system, which was probably that of Greece in general, tended to maintain the connexion of the wife with her father's family; the wife did not, as in early Rome, become once for all a member of her husband's family (*Dion. Hal.* ii. 25).

(a) **Amount of dowry.**—According to Plutarch,⁶ a law of Solon limited the size of dowries at Athens; but this, if ever enforced, was certainly obsolete in the 4th cent. B.C., and was, in fact, virtually abrogated by the law fixing the minimum amount to be settled on a poor *ἐπίκλητος* by her next-of-kin—a law which equally passed as Solonian (*Dem.* xliii. 54). Hipponicus, the richest Athenian of his time, gave his daughter ten talents on her marriage with Alcibiades (*Plut. Alc.* 8). The father of Demosthenes the orator, with a property estimated at fourteen talents, gave a dowry of two talents (*Dem.* xxvii. 5). The orators contain mention of dowries ranging from ten *mina* to more than 100 *mina*. Athenian mortgage-pillars, set upon property pledged as security for the repayment of dowries, show sums ranging from 300 to 4500 *drachmae* (6000 *drachmae*, or 60 *mina*=1 talent); but it is not certain, under the circumstances, that these sums constitute the whole dowry. The register from Myconos (3rd cent. B.C.) shows amounts varying from 700 *drachmae* to 14,000 *drachmae* (*Inscr. jurid. grecques*, i. 48; Dittenberger, *Syll.* 2, 817). The widow of the rich banker Pasion received three talents (*Dem.* xiv. 28, 35:

¹ A father might settle a dowry on his daughter by will (*Lys.* xxxii. 6), but was not obliged to make this provision; falling which, a daughter had no legal claim on his estate. The Code of Gortyn is more liberal, giving daughters a legal claim to one-half of a brother's share, in lieu of a dowry—an already portioned daughter having no further claim. That is to say, at Gortyn there was legal obligation to dower. Ephoros, as quoted by Strabo, p. 482, *φερνή δ' ἔστιν, ἢν ἀδελφοὶ δοῦν, τὸ ἡμισυ τῆς τοῦ ἀδελφοῦ μερίδος*, attributes the Gortynian rule to Crete generally, and may be correct in so doing.

² The nearest male relative of a poor *ἐπίκλητος* or *θῆττα* was under legal obligation either to marry her himself or to portion her on a scale fixed by law (*Is.* i. 39; law in *Dem.* xliii. 54). Contempt of the law was possibly construed as *κάκωσις ἐπὶ κλήρῳ*, involving partial *ἀτιμία*.

³ Hence Euripides makes Medea complain that women have to buy a husband (*Med.* 230 f.).

⁴ Harpocr. xxx. 15: *εἰσθεσάν δὲ οἱ τότε, εἰ γυναῖκα γαμουμένη δίδουν οἱ προσήκοιτες, αἰτεῖν παρὰ τοῦ ἀνδρὸς ὥστερ' ἐνέχυρον τῆς προκίβης ἔξινον, ὅταν οἰκίαν ἢ χωρίον*. A mortgage-stone (*ἄπος*) was set up on the pledged property, with an inscription of the following type: 'Ὅρος χωρίου καὶ οἰκίας ἀποτίμημα προκίβης Πυθοστράτης Μενάλοιο Ἀνακλυσίου xxx (i.e. 3000 *drachmae*; see E. S. Roberts and E. A. Gardner, *Introduct. to Greek Epigraphy*, pt. ii., *The Inscr. of Attica*, Cambridge, 1905, p. 497; Dittenberger, *Syll.* 2, 818).

⁵ Cf. *Plut. Praec. conj.* 20.

⁶ *Plut. Sol.* 20. See the explanation given by G. Glotz, *La Solidarité de la famille dans le droit criminel en Grèce*, Paris, 1904, p. 320 f. *Plato, in Laws*, 743 C, lays down the principle *γαμουῖντα δὲ καὶ ἐκδιδόντα μὴ ὅν δίδοναι μὴν δεχέσθαι προίκα τὸ παράπαν μὴδ' ἄντιον* (cf. 774 D). The νόμος περὶ τῆς προίκα (*Dem.* xi. 19) has not been preserved.

προστίθει προίκα ὅσην οὐδὲς τῶν ἐν τῇ πόλει φαίνεται; cf. Menander, *Περικυρημένη*, *Οἰκὸς*, Pap. ii. 211, line 40, where the father promises three talents dowry, to the lover's great content. Apparently there was at Athens no law on the subject, but in other places it was found necessary to fix a legal maximum in order to prevent extravagant dowries; e.g., at Massalia the maximum was fixed at 100 χρυσοί, with an additional five χρυσοί for clothes, and five for ornaments (Strabo, p. 181). The aim of the Gortynian Code, in fixing a daughter's share in her father's estate, was probably rather to curtail dowries than to extend women's rights. The general tendency in the 4th cent., at any rate, was to give large dowries; and this in Sparta, as Aristotle remarks, was in part responsible for the concentration of property in the hands of women and their preponderant influence in the State (Arist. *Pol.* ii. 9=1270a: ἐστὶ δὲ καὶ τῶν γυναικῶν σχεδὸν τῆς πάσης χώρας τῶν πέντε μερίων τὰ δύο, τῶν ἑπικλητῶν πολλῶν γινομένων, καὶ διὰ τὸ προίκας δίδοναι μεγάλας; cf. Plut. *Agis*, 4, 7).

(b) *Refund of dowry*.—In Athens the dowry usually consisted of a sum of money, rarely of real estate (cf. Plut. *Aristid.* 27).¹ The bride's trousseau, however, was in some cases valued and expressly reckoned in the dowry, so that its equivalent was recoverable from the husband—otherwise it was held to be a free gift of the *κύριος*, and was not recoverable (cf. Is. iii. 35, viii. 8; see note in Wyse, p. 314).

Whilst the union continued, the dowry could not be withdrawn; but, upon dissolution of marriage on the initiative of either party² or by mutual agreement, it must be refunded to the woman's *κύριος*. It is usually held, however, that in case of the wife's adultery restitution was not enforceable upon her repudiation; but there is no sufficient evidence of this exception.³ The principles observed are: (1) rupture of union *inter vivos* compels restitution of the dowry, the existence of issue being immaterial; and (2) rupture by death of either party compels restitution, if there is no issue; if there is issue, the children benefit, except when the widow (mother) exercises her option of going back with her dowry to her father's house. Thus the dowry follows the wife, or goes to her children.⁴

The Code of Gortyn shows that there, as at Athens, the wife's dowry was not merged in the family estate, and it was forbidden to the husband to sell or mortgage her property; for in case of dissolution of marriage the wife returned to her own family, taking with her her dowry, together with half the increase thereof, and half the fruits of her own labour, as well as five *staters* if the husband was to blame for the separation. On the other hand, the interests of the husband's family were protected by the provision that he might not make any larger donation than 100 *staters* to his wife, nor might a son make a larger gift to his mother—the intention being the same in both cases, namely, to prevent absorption of the husband's estate by the wife, for all such gifts belonged to her absolutely. If her husband predeceased her, she might, if she chose to remarry, take her own property out of his estate into that of her second husband; the existence of issue was only so far material that, if there were children, she was limited to taking her dowry and such donation as her husband might have made within the legal limit aforesaid, and in the presence of three adult male witnesses. If there were no children, she might take, in addition to her dowry, half the fruits of her own labour, and half the produce in the house—the balance going to her dead husband's heirs-at-law. If she did not wish to remarry, her property remained in her own hands until she died, and then it was divided among her children; she enjoyed, therefore, a more independent position than the Athenian widow, whose property, in similar circum-

stances, passed into the hands of the eldest son as soon as he came of age.

Under the Gortynian Code, if the wife died before her husband, having had no children, her next-of-kin was entitled to recover her dowry, with the half of its fruits and half of the work of her hands; but, if the widower was left with children, he had the management and use of his dead wife's property until he died or remarried, in which cases it went to her children.⁵

8. *Dissolution of marriage*.—Dissolution of marriage in Athens was easily effected. The husband's power of repudiation was unfettered by any legal conditions or formalities. He simply sent the woman, with her dowry, back to her father's house. A prudent man would, as usual, summon witnesses, but need not do so (Lys. xiv. 28). When the wife sought a separation, she must lodge with the Archon τὸ τῆς ἀπολείψεως γράμμα (Plut. *Alc.* 8; Andoc. iv. 14: ἀπολείπειν, ἐλθεῖσαν πρὸς τὸν ἀρχοντα κατὰ τὸν νόμον); but nothing is known of the procedure. Against a wife proved guilty of adultery the husband was compelled by law to use his right of repudiation, condonation of the offence being visited with *ἀτιμία* (Dem. lix. 87). On the other hand, it is certain that adultery of the husband gave the wife no legal right of divorce,⁶ and it is probable that it was not generally regarded as sufficient ground of separation.⁷ It is evident that the possession of a dowry must have been a strong protection to the wife against a husband's caprice, and in many households must have made her virtually mistress of the situation.

Two special features call for remark in this connexion. It was competent for husband and wife to agree to a mutual dissolution of marriage in order that another more congenial union might be made. Thus Pericles so parted from his wife with her consent, to take Aspasia (Plut. *Per.* 24).⁸ Again, the operation of the laws respecting heiresses (*ἐπικληροί*) often, according to Is. iii. 64, severed husband and wife (see INHERITANCE [Greek], vol. vii. p. 304). The latter occasion of dissolution of marriage differs from the first-mentioned in that it came about as the result of an application to a court of law by the next-of-kin as claimant (*ἐπιδίκασις*). In all other cases there is no sufficient evidence that any public legal procedure was in use, for even the wife's application to the Archon does not seem to have been more than an application or formal notice to him *in camera*. It is doubtful whether the *δίκη ἀπολείψεως* and the *δίκη ἀποπέμψεως*, which are said to have been available for husband and wife respectively, as if a sort of suit for restitution of conjugal rights, are not mere figments.⁹

¹ For comparison of the Gortynian regulations with the later regulations in the East ('jenem spätgriechischen Stadtrecht, welches man heute fälschlich als syrisches Rechtsbuch diagnostiziert,' p. 240) see Mittels, p. 230 ff.

² Athenian sentiment on this matter was very far removed from the position of Arist. *CE.* i. 4=1344a: ὡς περὶ κέρειν καὶ ἀφ' ἐστίας ἡμέτερον ὡς ἡκιστα δεῖ ἀδικεῖν ἀδικία δὲ ἀνδρὸς αἱ θύραε συνουσταὶ γυνόμεναί; cf. *Pol.* iv. (vii.) 16=1355b; Plato, *Lysis*, 784 E. 'Dass die Ehe dem Manne keine Treupflicht auferlege, gehört zu den Grundmerkmalen der antiken Ehe gegenüber unseren Anschauungen und Rechtseinrichtungen' (Hruza, p. 20).

³ According to Herod. v. 39, at Sparta barrenness was good ground for divorce, at any rate for the royal house; cf. vi. 61.

⁴ Other examples: Dem. xxxvi. 28 f.; Is. ii. 6 f., 9: κάκειν τὸ μὲν πρῶτον οὐδ' ἠρέσχετο αὐτοῦ λέγοντος, προδόντος δὲ τοῦ χρόνου μόλις ἐπέσθη καὶ οὕτως ἐκδίδωμεν αὐτῇ; cf. the case of Protomachos who, becoming entitled to a rich heiress, persuaded his wife to agree to a dissolution and fresh marriage (Dem. lvii. 41). In Thuri, according to Diod. xii. 18, freedom of divorce was limited by a law forbidding the person to whom the divorce was due to marry one younger than the original partner.

⁵ The *δίκη προίκας* or *δίκη σίτου*, suits brought by the woman's *κύριος* for the restitution of her dowry or payment of interest thereon, protected the woman's interests in respect of aliment. From this it follows that a woman who married without a dowry was in practically the same position as a *παλλακή*, and had no protection whatever against a husband's caprice short of actual violence to her person.

¹ Cf. Dittenberger, *Syll.* 3, 826: Ἐγγυθὸς τῆς Κλεορόστου θυγατρὸς προίτ' τὸ χωρίον (inscr. from Syros).

² Dem. lix. 52: κατὰ τὸν νόμον δε καλεῖται εἰς ἀποπέμψην τὴν γυναικα, ἀποδιδόναι τὴν προίκα, εἰς δὲ μὴ, ἀφ' ἀνεία ὁβολοῖς τοκοφορεῖν καὶ σίτον εἰς ἀδελφὸν εἶναι δικάσασθαι ὑπὲρ τῆς γυναικὸς τῷ κυρίῳ, i.e., alimony at the rate of 18 per cent interest upon the dowry was recoverable from a recalcitrant husband (cf. Is. iii. 3, 35, ii. 9).

³ Certainly not to be proved for Athens in the 4th cent. B.C., by inference from the Ephesian inscr. of the 2nd cent. (Dittenberger, *Syll.* 2, 510. 00): ἡ γήμνητος καὶ διαλυθεῖσας μὴ ἀποδεύσασθαι τὰς θένους οὐδας ἀποδοῦσα κατὰ τὸν νόμον—even if that will prove anything at all (see T. Thalheim, *Lehrbuch der griech. Rechtsaltertümer* 4, Freiburg i. B., 1896, p. 133).

⁴ Cf. L. Mitteis, *Reichsrecht und Volksrecht in den hell. Prov. des röm. Kaiserreichs*, Leipzig, 1891, p. 232: 'Die vom Vater bestellte Mitgift enthält eine Erbbündung der Tochter'; cf. Plato, *Lysis*, xi. 923 D, E: ὅτε δ' ἂν τῶν νύκτων ὑπάρχον οἶκος ᾗ, μὴ μένειν τούτῳ τῶν χρημάτων, θυγατρὶ τε μάλιστα ἢ μὲν δὲ ἐγγεγνημένος ὡς ἀνὴρ ἐσόμενος ἢ, μὴ μένειν ἢ δ' ἂν μὴ μένει.

9. Widows.—The Athenian regulations concerning widows were as follows. If there were no children, born or adopted, the widow must return with her dowry to her father's house; she must, as a rule, if of suitable age, marry again in accordance with the wishes of her dead husband or those of her *kúrios* (Is. viii. 8). If there were children, she might remain in her husband's house, where she passed under the authority of her children's guardian, if they were still minors, and under that of her eldest son when he came of age—her dowry becoming the property of her children, subject to her right to support (Dem. xlii. 27, xli. 20). She might, however, return with her dowry to her father's house, and be given again in marriage (Dem. xl. 6 f.). The same option was open to her if, on her husband's death, she declared herself pregnant (Dem. xliii. 75), in which case it was the Archon's duty to protect her interests (Arist. *Ath. Pol.* 56. 7). It is clear that here again the existence of the dowry secured on mortgage put the final decision completely into the hands of the widow and her *kúrios*.

10. Marriage law in the papyri.—In Egypt, under the Ptolemys, Hellenic legal ideas and principles came in contact with those of another, in some respects more highly developed, type; later, both were influenced by the legal conceptions and practices of the Romans. In the Papyri we have, therefore, to distinguish between the enchorial marriage, in which the parties are Egyptians, and the Hellenic marriage, the regulations concerning which are partly derived from the older Greek law and partly developed under the influence of native models.

The technical term for marriage in the Papyri is *γάμος* or *συνοικισμός*. Dissolution of marriage (and probably therefore entry upon marriage) is no longer a purely private act, but requires the lodging of an *ἀπογραφὴ* before an official (cf. what was required of the women in Athens, Dem. xxx. 17, 26; Is. iii. 78: *πρὸς τοῦτον ἀρχοντα ἢ ἐγγυνητὴν γυνὴ ἀπέλινε τὸν ἄνδρα ἢ τὸν οἶκον αὐτοῦ*, as well as the intervention of *ἱεροθύται*).¹ The precise relation between the religious element thus imported into the transaction and the civil element represented by the *ἀπογραφὴ* and the marriage contract itself is by no means clear as yet.

The extant marriage-contracts exhibit, when taken together, the following elements. (1) Statement of the giving or receiving of the woman in marriage; e.g., Mittels-Wilcken, *Grundzüge*, ii. 317, n. 233: *λαμβάνει Ἡρακλείδης Δημητρίαν Κόαν γυναῖκα ἡγουμένη παρὰ τοῦ πατρὸς*, as in the older Greek law (cf. Is. ix. 27: *ὅτε γὰρ ἐλάβαντο Θεόφραστος ὁ ἐμὸς πατὴρ τὴν ἐμὴν μητέρα παρὰ Ἱεροκλέους*).² (2) Acknowledgment of receipt of the *φερόν* brought by the woman. (3) Mutual marital obligations; the husband promised to support the wife and to treat her properly (*μη εὐβρίσειν μηδὲ κακοχεῖν*), and engaged not to repudiate her (*μη ἐκβάλειν*) or to be unfaithful (*μη εἰσαγαγεῖν ἄλλην γυναῖκα μηδὲ παλαιὰν μηδὲ τεκνοποιεῖσθαι ἐξ ἄλλης γυναῖκος*); on her side the woman promised to remain at home day and night (*μηδὲ ἀφήμερον μηδὲ ἀποκοινοῦν γενέσθαι*), to be faithful (*μηδὲ ἄλλω ἀνδρὶ συνεῖναι*), and to look after their joint interests in the household (*μηδὲ φθείρειν τὸν κοινὸν οἶκον*). (4) The sanction of the mutual obligations; the husband guilty of breach of his promises must repay forthwith (*παραχρῆμα*) the dowry with addition of half its amount (*τὴν φερόν ἡμιόλιον*); the wife so guilty lost her dowry entirely. Apparently the ordinary courts settled disputes so arising. (5) Divorce on the man's side (*ἀποπομπή*) was tantamount to breach of his promise *μη ἐκβάλλειν*, and rendered him liable to the aforesaid penalty; separation on the woman's part (*ἀπαλλαγὴ*) was not regarded as breach of promise, but provision was made for repayment of the dowry within a stated time. That is to say, the husband had entirely lost that unfettered power of repudiation, under condition of simply refunding the dowry, which belonged to him under the older Hellenic law. On the other hand, the dowry retained here also the overwhelming importance which it had in Hellas.³ Here also it was, if not a definite sum of money, valued and expressed as

such, and the husband was liable only for refund of that stated amount—the principle being, as at Athens, that the wife's dowry should neither increase nor diminish (cf. the Code of Gortyn); from which it follows that the management of the dowry must have been in the hands of the husband, as was the case at Athens.

W. J. WOODHOUSE.

MARRIAGE (Hindu).—I. General characteristics.—The earlier Vedic texts, which may be said to cover the period down to the end of the 6th cent. B.C., present with practical uniformity the same account of the condition of marriage among the Hindu tribes whose life they depict. Among these tribes marriage was a union of man and woman, for all practical purposes indissoluble save by death, and normally monogamic except among the highest strata of the population. Marriages were contracted between persons of full age, and often by mutual consent; while there are clear traces of the payment of a bride-price for a wife, there is also proof of the giving of dowries by fathers or brothers in order to secure the marriage of daughters or sisters. Traces of marriage by capture are scanty and confined to the warrior class.

The position of the wife in these conditions of society was one of security and dignity. She was, indeed, under the complete control of her husband, though we do not know to what extent of personal restraint his power extended. But she was the mistress (*patnī*) of the household, as her husband was the master (*pati*). In the marriage-hymn of the *Rigveda* (x. lxxxv. 46) she is told to exercise authority over her father-in-law, and her husband's brothers and unmarried sisters. The case contemplated seems to be one in which the eldest son of a family marries at a time when his father, through decrepitude, has ceased to exercise full control over the family, and when, therefore, the wife of the eldest son becomes the mistress of the joint family. This is not inconsistent with the respect elsewhere mentioned as due from a daughter-in-law to her father-in-law, which doubtless applies to the case in which the father is still able to control his son and to exercise the rightful authority of the head of the house. The wife was also a participator in the sacred rites performed by her husband; but in this regard a certain deterioration of her position can be traced in the Vedic period, doubtless as the result of the growing importance of the priestly class and the rule that women could not be priests. This regulation seems to have been due to the view that women were impure as compared with men, and the same idea may have been at the root of the practice, which is first in the *Satapatha Brāhmaṇa* (i. 1. 1. 1), requiring a woman to eat after her husband.

¹ For these see W. Otto, *Priester und Tempel im hellenistischen Ägypten*, 2 vols., Leipzig, 1908, i. 163 f., ii. 295 f.

² A curious exception in *Pap. Gies.* ii. 8 (*ἐξέδοτο τανύην Ὀλυμπιάς . . . γυναῖκα γεμετήν*), in which the woman, of Macedonian origin, gives herself away in marriage, may be a survival of native Macedonian law, which in this respect, therefore, must have resembled that of the Lydians, of whom Herodotus remarks with surprise that the women give themselves in marriage (i. 98: *ἐκιδόσαν δὲ αὐταὶ αὐτοῖς*—besides collecting their own dowries *σώματι ἑργάζεσθαι*).

³ Mittels-Wilcken, ii. 1. 219: 'Im Gerippe dieser Urkunden bildet die *φερόν* das Rückgrat, an welches alle anderen Bestimmungen sich nur anlehnen.'

that marriages were not allowed between *यैव*—probably a reference to the castes which were certainly in existence by 300 B.C. The Buddhist texts¹ yield the same result, but they recognize that the king might marry where he would and make his son by any wife his heir-apparent. Manu still recognizes mixed marriages subject to the rule of hypergamy, but the later *Smṛtis* tend to rule them out as objectionable. The modern rule is strict against mixed marriages, confining the possibility of marriage to the modern castes; but the date when this practice finally prevailed is unknown, as even late texts repeat the permission for such marriages sanctioned by the older authorities, and the Kulin Brāhman of Bengal still avail themselves of this now pecuniarily very valuable privilege.

Simultaneously with the growth of the prohibition of marriage within the caste were developed restrictions on marriage within the family. In one hymn in the *Rigveda* (x. 10) the marriage of brother and sister is expressly treated as improper, and there is no reason to suppose that this was an innovation, as suggested by Weber.² No other restriction is alluded to, and the *Satapatha Brāhmaṇa* expressly refers (i. viii. 3. 6) to marriage as permitted in the third or fourth generation, the former being the rule, according to the commentator, among the Kāṇvas, the latter among the Sauriṣṭras, while the Dākṣiṇyās, or people of the south, permitted marriage with the son of the father's sister or daughter of the mother's brother, but not, apparently, with the son of the father's brother or the daughter of the mother's sister. The *Gṛhyasūtras* and the *Dharmasūtras* in effect agree in prescribing that marriage should not take place between a man and a woman of the same *gotra* (q.v.) as his father, or a *sapinda* of his mother, and these terms extended at least to all relatives within five degrees on the mother's and seven on the father's side. Later texts add to the restrictions by extending the prohibitions in the case of the mother, and by forbidding unions with the daughter of a spiritual teacher or pupil. At the same time, concessions are made to local customs, and the practice of marriage of cousins in S. India is recognized by Baudhāyana (i. ii. 3). But the practice of marrying outside the *gotra*, a term of wide extension and indefinite sense, but covering all those of the same family name, is recorded by al-Bīrūnī,³ and is the general rule at the present day throughout India—at any rate, among all the higher castes. The chief exceptions are found in S. India, where some tribes practise the opposite rule of endogamy.

In Rājputāna, among the Rājputs who claim to be descendants of the old warrior class, exogamy is closely connected in their history with the practice of marriage by capture; but there is no sufficient evidence for the view⁴ that the development of the custom generally was connected with marriage by capture.

Of much less importance are the restrictions arising from the feeling that the eldest son and the eldest daughter should be married before the younger sons and daughters, a breach of this rule being merely a ground for a penance, and not a fatal bar to the validity of the marriage. The rule is, however, very old, being found in the *Yajurveda* (*Maṭirāyaṇi Samhitā*, iv. i. 9), and recognized throughout the later literature. In the south members of Brāhman castes adopt the practice of a mock marriage of the elder brother with a

branch of a tree in order to avoid the evil result of a breach of this rule by a younger brother.

The bride should be a virgin, and the importance of this rule lies in the fact that it renders the re-marriage of widows difficult. In the *Rigveda* (vi. xlix. 8) there is some indication¹ that a woman might re-marry if her husband had disappeared and could not be found or heard of, and in the *Atharvaveda* (ix. v. 27 f.) mention is made of a spell to secure that a woman married twice may be united in the next world with her second, not her first, husband. The reference here may be to re-marriage in the case of an absent husband or one who had lost caste. The doctrine of Manu is that a woman should never be re-married, and that the marriage formulæ are intended only for maidens, but he admits one exception in the case of a woman whose husband dies before the completion of the marriage. Other authorities permit re-marriage in the case where a husband has disappeared, is dead, has entered a monastic order, is impotent, or has been expelled from his caste; but the authorities differ widely as to the length and condition of absence which entitle a woman to re-marriage. The son of a widow who has re-married (*paumarbhava*) is ranked by Manu and other authorities only among the second six of the twelve kinds of son admitted by Hindu law. But the dislike of re-marriage was one which developed gradually; the actual reprobation of such a son first occurs in Brhaspati (xxv. 41), and the forbidding of the re-marriage of a widow occurs only in the *Ādipurāṇa* and later works. The objections to such marriages in modern India are very strong among those castes which lay most stress on child-marriage, and, despite the legalizing of them by Act XV. of 1856, and efforts of social reformers, they are still disapproved by the higher castes.

In the case of a man, while impotence was recognized as a ground on which the wife might contract a new marriage, the marriage was not in itself null, and even mental derangement was not regarded as justifying re-marriage on the part of the wife.

4. Polygamy.—The practice of polygamy among the Vedic Indians is abundantly proved by direct references in the *Rigveda* and other texts, though in the main monogamy is recognized as normal. In the case of the king four wives are expressly mentioned—the *mahisī*, the first wedded, the *parivṛtī*, or discarded (apparently one who bore no son), the *vāvātā*, or favourite, and the *pālāgālī*, who is explained as the daughter of one of the court officials. The *mahisī* seems to have been the wife proper, though the others were evidently not mere concubines. In the *Arthasāstra*, the *Smṛtis*, and the epic the rule is laid down that a man may have wives from his own caste and each of those below his, either including or excluding the *Sūdra*, and in such cases the wife of the same caste was the wife *par excellence* (*dharma-patnī*), with whom the husband performed his religious duties. The heroes and Brāhman of the epic are frequently represented as having several wives, but one of them always ranks first, and, similarly, later in inscriptions one wife only is often mentioned with her husband. The rule of precedence among wives according to caste and, within the caste, to date of marriage might, however, be overridden by the husband, who could degrade a wife from her position as chief wife; in that case he was required to make her a present equivalent to that made to the new wife whom he was marrying. The modern rule permits the husband to contract as many marriages as he wishes without any need for justification or consent on the part of his existing wives.

⁴ See S. S. S. II. 165.

⁵ See S. S. S. II. 165 and S. S. S. p. 63.

In addition to wives proper, the *Smṛtis* recognize the existence of concubines (*dāsī*, *dhayisya*), who were distinguished from wives by not being married in due form, and who could not in any case become their husband's heirs. They were, however, entitled to maintenance by his brothers as his heirs on his death, and intercourse with one of them was regarded as adultery. Similarly, at the present day the keeping of concubines by wealthy Hindus is a recognized usage.

The *Smṛtis* show some preference throughout for monogamy. Apastamba (II. xi. 12) expressly disapproves the re-marriage of a man who has a wife living, and other authorities restrict the right to become the heir of a husband to the chief wife, who is the surviving half of her husband. In all religious observances the husband is to act with his chief wife only, and marriage is treated by Manu (ix. 101) as a pledge of mutual fidelity between husband and wife.

5. Polyandry.—While polygamy is recognized in the Vedic period, though chiefly among kings and important Brāhmins, there is no clear trace of polyandry, all the passages adduced from the Rgveda (X. lxxxv. 37 f.) and the Atharvaveda (XIV. i. 44, 52, 61, ii. 14, 17) admitting of more probable explanations. On the other hand, the heroes of the epic, the five Pāṇḍavas, are represented as marrying Draupadī and having her as wife in common—a fact which is elaborately explained and defended in the epic. This form of polyandry is recognized by Brhaspati (xxvii. 20) as practised in the south, and by Apastamba (II. xxvii. 2) as an antiquated use. At the present day polyandry is still found among Brāhmins, Rājputs, and Śūdras alike in Kumaon, where children are shared by the brothers as by the Pāṇḍavas, and among hill tribes in the Panjāb, where the children are divided among the brothers. The reasons given for the practice are poverty and the desire to avoid division of property. Among the Jāts of the Panjāb the wife of the eldest brother has to serve often as the wife of the younger brothers also, and the practice is common in the case of the Himalayan tribes. The custom also prevails in the south among the Nairs of the Kanara country and the Todas of the Nilgiris. The modern evidence comes mainly from Tibetan and Dravidian tribes, and there is no indication that the practice was ever widely spread among tribes of Aryan culture.

6. Divorce.—The characteristic quality of a Hindu marriage was that it was a union for life; in striking contrast to the Dravidian and Tibeto-Burman usages, marriages among Hindus were seldom broken by divorce. In the *Smṛti* literature,¹ however, cases are recognized in which divorce in the form of the contracting of a new marriage by the wife during her husband's lifetime is allowed, and the occasions for divorce (*tyāga*), i.e. abandoning a wife and leaving her without maintenance on the part of the husband, are set out. The abandonment of a faithful wife counts as a serious crime, which must be expiated by a severe penance, and which may involve expulsion from caste. Adultery affords a ground for divorce, and might in certain cases be punished with death, but, according to other authorities, it could be expiated by severe penances. Any serious offence against a husband might, according to Yājñavalkya (i. 72), be a ground of divorce, and Nārada (xii. 92, 93) gives as offences justifying such treatment attempts to murder, wasting property, or the procuring of abortion. In modern Hindu law divorce depends on local custom and, where allowed, is permitted only for adultery, but divorces

are very common among all Dravidian tribes, which also allow freely re-marriage of wives in the case of the disappearance, long-continued absence, impotence, or loss of caste of their husbands.

7. Position of widows.—In the funeral rites of the Rgveda the widow of the dead man is represented (X. xviii. 7 f.) as lying beside him on the pyre and as being summoned to leave the dead in order to be united with his brother, apparently as a bride. The passage clearly shows that the wife was not to be burned with the dead, but it unmistakably suggests the existence of an older custom to this effect, and the Atharvaveda (XVIII. iii. 1) refers to this as an old practice.² It was evidently not approved by the Brāhmins of the Vedic age, for it is not mentioned in the *sūtras*, and appears first in the late *Vaikhāṇasa Gṛhyasūtra* (vii. 2) and in interpolated passages of the *Viṣṇu Smṛti* (xxv. 14, xx. 39). The later *Smṛtis* approve it, but not without occasional dissent. In the epics it plays little part,³ though one of Pāṇḍu's wives insisted on being burned with her husband (*Mahābhārata*, I. cxxv. 31); but in the later romances and historical works it is often mentioned, and as early as A.D. 509–510 an inscription is found to celebrate a *sati*. Forbidden in British India in 1829, it was observed in 1839 in the Panjāb at the death of Ranjit Singh, and in 1877 at that of the Mahārāja of Nepāl. The primitive character of the rite is shown by the fact that often other attendants perished with the queen or queens when the dead man was a prince. Normally the wife was burned with the dead man; if he died away from home, she might be burned alone (*anumarāṇa*), but the burning of a pregnant widow or one with a young child was forbidden, and the practice was normally more or less voluntary, except in the case of royal families, where reasons of policy doubtless reinforced considerations of religion in favour of burning.

In many cases death was doubtless regarded as preferable to the fate of a widow, whom the *Smṛtis* and modern usage, despite the efforts of reformers, condemn to a life of fasting, devotions to her dead husband, pilgrimages, and abstinence from any form of luxury, such as the use of a bed, ornaments, etc. If she had grown-up sons, she fell under their control; if not, under that of her husband's kin, who were bound to maintain her so long as she remained faithful to her late husband. The later texts also recognize her right to be heir to her husband, but only on condition that she remained unmarried—a disability which is not altered by Act XV. of 1856. The harshness of the rule is better realized when it is remembered that the practice of child-marriages enormously increases the number of widows.

In the Rgveda it seems to have been the practice for the wife of the dead man to be taken in marriage by his brother, whether or not the latter had a wife already. This, the natural interpretation of the funeral hymn (X. xviii. 8; cf. also xl. 2), is borne out by the fact that the modern usage in the Panjāb,⁴ which has preserved much of ancient practice, is for a man to marry his brother's widow, with the result that many men have two wives. In the *sūtras*, however, this practice is whittled down to the permission given to the brother of the dead or, if there is no brother, a near kinsman to beget a son with the widow in order to continue the race of the dead man. Such a son, when of age, would inherit his father's property, which, until then, would be managed by his mother or by his real father, to

¹ A. Hillebrandt, *ZDMG* xl. (1886) 719, explains these passages quite differently; but his view can hardly be correct.

³ Cf. Brhaspati, xxvii. 20, ii. 51; *Arthashastra*, III. iv. 58.

⁴ The *Kautilya Arthashastra* (possibly 4th cent. B.C.) goes far in allowing divorce (II. ii. 59, iii. 59).

whose estate also he might in certain cases succeed. By an extension of the principle the texts allow an impotent or ill man to appoint another during his life to beget a son for him, and in the epic the right to act in these cases is frequently recognized as specially appropriate for Brāhmins. But the general tendency of the later *Smṛtis* is more and more against the practice, which was subjected to increasing restrictions or absolutely forbidden, and in modern times the practice of appointment (*niyoga*) has been replaced by the more primitive form of actual marriage with a brother's widow.¹

8. Marriage and morality.—Though fidelity on the part of both parties to a marriage was doubtless an ideal, there is abundant evidence throughout the literature that infidelity on the part of the husband was neither rare nor considered worthy of moral censure. In the case of the wife there is no doubt that in the *Smṛti* literature and in modern usage adultery is regarded as a serious offence which may in certain cases be punished by death. Some of the Vedic passages (*Taittiriya Samhitā*, v. vi. 8. 3; *Maitrāyaṇī Samhitā*, III. iv. 7) cited as showing tolerance of adultery are susceptible of other interpretations, but there remain the facts that a special ritual at the *Varuṇapraghāsa* is clearly intended to remove the ill-effects of adultery (*Maitrāyaṇī Samhitā*, I. x. 11; *Satapatha Brāhmaṇa*, II. v. 2. 20), that the *Bṛhadāranyaka Upaniṣad* (vi. iv. 11) contains a spell to expiate adultery with the wife of a Brāhman, and that the *Bhāradvāja Gṛhyasūtra* (ii. 28) advises a husband how to proceed in the case of going on a journey if he desires his wife to have lovers in his absence. The romances and fable literature frequently allude to cases of infidelity, and the *Arthasāstra* and the *Smṛtis* recognize as one kind of son the *gūḍhotpanna*, or secretly born, an illegitimate son who can, nevertheless, succeed to the property of his mother's lawful husband. Baudhāyana (II. iii. 34) and Āpastamba (II. xiii. 7) preserve a saying of a sage to the mythical king Janaka, referring to a time when the virtue of married women was lightly estimated, and the *Mahābhārata* refers (I. cxxii. 4 ff.) to a time when wives were used in common, a practice terminated by Śvetaketu. The lack of chastity of the women of the East is recorded by Bṛhaspati (ii. 30). Too much stress must not, however, be laid on these notices; the reference to the Eastern women may be an allusion to the loose marital relations in Tibet, and the references to the lax morality of previous times are made for the purpose of proving that the recognition of illegitimate sons then accorded was antiquated at the time of the texts.

9. Marriage and property.—The widow of the dead man, according to the *Nirukta* (iii. 4) and Baudhāyana (II. iii. 44-46), was denied the power of becoming an heir. Gautama (xxviii. 21 f.) mentions her in the list of heirs, but points out the alternative of the adoption of the practice of *niyoga* for providing the son in whose absence alone could the mother be heir. In Viṣṇu (xvii. 4) and Yājñavalkya (ii. 135) is first found the express mention of the widow as the next heir in the absence of male issue. But the extent of the right thus obtained is expressly limited by the texts: the widow could not give away, or mortgage, or sell the property thus inherited; she held it for her enjoyment for life, subject to continued chastity and to her not contracting a second marriage, but she held it under the control of her husband's kindred and with the limitation that it should return to them on her death.² If there were several widows, the chief wife seems to have

been entitled alone to succeed as heir, but on her fell the duty of maintaining the other wives—a rule which is not recognized in modern Hindu law, where all the wives have an equal right of succession.

Distinct from the property obtained by inheritance was the *strīdhana* of the wife, which is mentioned by Gautama, but first described in detail in the *Arthasāstra* (III. ii. 59) and by Viṣṇu (xvii. 18). It included any presents from parents, sons, brothers, or kinsmen, the marriage gifts, the bride-price when given by her father to her, and the fine paid by her husband in the case where she was degraded from her position as chief wife in favour of another. This property fell on her death to her daughters, if she had any; if not, apparently to her sons, who, according to some authorities, shared it with their sisters in any event; and, in the case of failure of all issue, to her husband only if she had been married according to one of the four superior forms of marriage; otherwise it went to her father. In some cases the unmarried daughter was preferred to the married in heirship to her mother. In the later *Kātyāyana Smṛti* (xx. 80 ff.) are found elaborate rules as to the power of a woman over her *strīdhana*. She was at liberty to dispose in any way of presents from living relatives, even if consisting of immovables; her husband could not use them without her consent. She was also entitled to receive from her sons any property promised by their father and not paid to her, while gifts to wives were encouraged, if not exceeding 2000 *paṇas* or consisting of immovables. On her death her property went back, in so far as it consisted of gifts from relatives, to those relatives; the rest went to any unmarried daughter, or, failing such, to her sons and married daughters, while, if she left no children, her property passed to her parents if she were married in one of the lower forms of marriage, and any landed property went to her brothers. The later texts and the commentators develop in much detail the doctrine of *strīdhana*, and the *Mitākṣarā* (a commentary on Yājñavalkya) argues that all property which women receive in any way falls under that head, and must obey the special laws of devolution of *strīdhana* proper. This is contrary to the earlier evidence, which expressly differentiates between *strīdhana* in the narrow sense and property inherited from a husband, earned by a woman's own exertions, or given by strangers, over which she can exercise power of disposal only with her husband's consent.

LITERATURE.—In addition to many notices scattered throughout the literature, the Hindu marriage of the end of the Vedic period and in the classical period is dealt with in the *Dharma-sūtras* and in the *Smṛtis* with their commentaries, and in comprehensive treatises based on the *Smṛtis*. Of the *sūtra* texts, those of Āpastamba, Gautama, Vasistha, and Baudhāyana have been translated by G. Bühler (*SBE* II. 2 [1897] and xiv. [1882]). The *Smṛti* of Manu has also been translated by Bühler (*ib.* xxv. [1886]), and those of Viṣṇu, Nārada, and Bṛhaspati by J. Jolly (*ib.* vii. [1900] and xxxiii. [1889]). Yājñavalkya has been translated by A. Stenzler, Berlin, 1849. Of these Manu is the oldest, Yājñavalkya may be dated in the 4th cent. A.D., Nārada about A.D. 500, and Bṛhaspati about 600. Somewhat earlier than Bṛhaspati is Kātyāyana. Of the later texts the *Mitākṣarā* of Viṣṇuśeṣvara (c. A.D. 1100) is the most important, as having become authoritative throughout India except in Bengal. Of modern works, for the Vedic period the most important are: A. Weber, *Indische Studien*, Berlin and Leipzig, 1849-54, v. and x.; B. Delbrück, 'Die indogermanischen Verwandtschaftsnamen,' in *ASG* xxv. [1889] 381-606; H. Zimmer, *Altindisches Leben*, Berlin, 1879; and A. A. Macdonell and A. E. Keith, *Vedic Index*, London, 1912. For the epic a full account is contained in E. W. Hopkins, art. in *JOS* xiii. [1889], and much material is also given by R. Schmidt, *Beiträge zur ind. Erotik*, Leipzig, 1902. The rules of the law-books and the modern law are dealt with in R. West and G. Bühler, *Digest of Hindu Law*, Bombay, 1884, and in J. D. Mayne, *Hindu Law and Usage*, Madras, 1888, and a summary of the whole subject with full citations and references to the literature is given by J. Jolly, in *Recht und Sitte*, Strassburg, 1896 (= *GIAP* II. 8).

A. BERRIEDALE KEITH.

MARRIAGE (Iranian).—1. Zoroastrian.—According to the sacred texts of Zoroastrianism, marriage is divinely favoured (*Vendidad*, iv. 47; cf. artt. ASCETICISM [Persian], FAMILY [Persian]). The second happiest place in the world is that in which a righteous man sets up his household (*Vend.* iii. 2). In the *Gāthās* the pair who wed are urged to strive to live a life of righteousness and to help one another in good deeds (*Ys.* liii. 5).

Since marriage is regarded as almost a religious duty, Zoroastrians hold it a meritorious act to help their co-religionists to enter the wedded state, and such assistance may even serve to atone for sin (*Vend.* iv. 44, xiv. 15). It is by no means unusual, therefore, for Parsis to enjoin by will or by a trust that a certain amount of their wealth be expended in aiding poor brides to marry, and certain institutions, as the Parsi Pañchayat of Bombay, have special funds for this purpose.

The Parsi community in India has provided so many vicissitudes that it is difficult to determine which of the various marriage customs alluded to were originally Zoroastrian, although it appears to be practically certain that the customs of the Parsis portion comes under this category. The strictly religious beginning of the *Āšvīrād*, the house category. At the very ceremony, the officiant, or blessing known as the ceremony is 'according to the law and custom of the Mazdayasnian religion' as the priest declares that the ceremony is 'according to the law and custom of womanhood in the religion.'

According to the *Ys.* ix. 5, the Avesta, both manhood and womanhood were attained at the age of 15 (cf. *Pand-nāmah* *Ys.* viii. 13 f., xiv. 17; *Vend.* xiv. 15; 3, 17; *Ys.* iii. 19). Since in the Avesta we find the pair praying for suitable husbands (*Ys.* ix. 5, 8), it would appear that child marriage was not practised. The ritual recited at the marriage ceremony, bidding the pair to express their consent after 'truthful consideration,' points in the same direction. The present Parsi Marriage Act enjoins the age of 21 for males and 18 for females; if the contracting pair are below that age, the marriage certificate must be signed by their parents.

The marriage ceremony is preceded by several other rites. When the match is arranged, an auspicious day is fixed for the betrothal, such as the day of new moon, or the first (Hormuzd) or twentieth (Bahram) day of the Parsi month. At times, especially in Mofussil (provincial) towns, the parties consult Hindu astrologers, who name one or more auspicious days for the betrothal, marriage, etc. The match is usually arranged by the parents, with the consent of their children; but often, at the present time, the contracting parties make their own choice with the approval of their parents. Mutual friends of the two families generally carry messages and bring about the match—a course recommended by the *Pand-nāmah-ī-Āšvīrād-ī-Māraspandān* (xlii.) and attested in the *Sāh-nāmah* (tr. A. G. and E. Warner, London, 1905 ff., i. 177 ff., ii. 125, 86-88) by the marriages of the three sons of Farīdūn with the daughters of the king of Yemen, of Rustam with Tahmīnah, and of Kāūs with Sūdābah. Until recently professional match-makers were not unknown, and they still exercise a certain amount of activity.

On the day of betrothal¹ the women of the groom's family visit the house of the bride and present silver coins to her, and the groom receives a similar present from the women of the bride's family. The older term for this ceremony, now called *adrāvūn*, was *nām pādūn*, 'to name' (from Pers. *nāmzād shudan*), since after the

¹ Geiger, *Ostiran. Kultur*, p. 241, sees in this passage an allusion to the custom of asking the hand of the bride from her parent or guardian (cf. also *Vend.* xv. 9).

² A considerable time might elapse between betrothal and marriage (*Vend.* xv. 9; cf. Geiger, p. 242).

betrothal the bride receives prayers for her welfare in religious recitals, though, by some misinterpretation, name of the groom, even place. An unbetrothed girl was said to be 'un-named' (*nā kardshah*). Betrothal is regarded as a solemn *paschul* ceremony. Betrothal is regarded as a man's (*Vān, rāza*, or 'pledge of the magnitude of the *Rivāy* Bar. *nd.* iv. 2, 4, 9, 15), being considered by the preparis, to mean a promise of marriage. At part of the time the priests do not take an active part in the betrothal, except in Mofussil towns, where two priests—one for each family—formally ask the parents that the bride and groom respectively be given in marriage to each other. The priests took part in the *nāmzād* (betrothal) at Surat in the middle of the 18th cent. (Anquetil du Perron, *Zend-Avesta*, Paris, 1771, ii. 557 f.), when the two families met, and the groom's family priest, after prayer, placed the hand of one of the contracting parties in that of the other.

The betrothal is followed by the *Divō*, when a lamp (*divō*) is lit early in the morning, and the women of the two families interchange visits and gifts. This day is regarded as more important than the betrothal proper, because on it the dresses and wedding rings are usually presented. The *Divō* is followed by the *Ādarni*, when the dowry given by the bride's father is presented to the groom's family. Presents are exchanged, chiefly from the bride's family, on several other days between betrothal and marriage.

An auspicious day, such as the day of new or full moon, is fixed for the marriage as for the betrothal. Tuesday and Wednesday are inauspicious.

In some families the astrologer's services are engaged before the marriage also. When matches are being arranged by mutual friends, the horoscopes of the intending bride and groom are submitted to him, to find whether the stars predict harmony between the pair. If this is not to be the case, the projected match is broken off.

In the morning or afternoon of the marriage day the bride and groom take a sacred bath—a custom which is mentioned in the *Sāh-nāmah* (ed. T. Macan, Calcutta, 1829, p. 1579), where Bahram Gūr takes his Indian wife to the fire temple for that purpose. The religious portion of the wedding is usually performed shortly after sunset, perhaps to symbolize that, just as day and night unite and blend, so the wedded pair should be united in weal and woe.

The marriage is generally celebrated with much pomp, as was the case in ancient Iran, as recorded in the *Dinkart* (ed. P. B. Sanjana, Bombay, 1874 ff., ii. 97). The groom, wearing a white ceremonial robe and holding a shawl in his hand, sits among friends and relatives of his own sex in the compound. Around his neck he has a garland of flowers, and on his forehead is a vertical line of red pigment (*kunkun*). In colour this is held by some to represent in India an earlier custom of the sacrifice of animal life, and in shape to symbolize the brilliant, fructifying sun, whereas the round *kunkun* of the bride is supposed to be a symbol of the moon, which absorbs the rays of the sun.

A short time before the marriage, a procession, headed by the officiating priests, and often by a band of music, goes to the house of the bride, where the ceremony generally takes place. The men seat themselves in the compound, and the women in the house. At the door, the side posts of which—like those of the groom's house—are

¹ In early times it was apparently more customary for the groom to give presents. The sum of 2000 silver dirhams and 2 gold dinars, mentioned in the *Āšvīrād*, seems to have been the average sum which a groom of moderate means was expected to provide for his bride. On the *Āšvīrād*, with Pahlavi, Fārsi, and Skt. text and tr., see Shapurji Kavaji, *Āshvīrād, Zarathushtra and his Contemporaries in the Rigveda*, Bombay, 1913, pp. 77-80.

6. **Marriage of adulterers.**—A man and woman, either of whom has been divorced or sentenced to be divorced on account of adultery with the other, may not marry—a prohibition which has existed since the time of the Taiho-ryo. Social disapproval of such union is very severe; and, even when the husband or wife forgives and consents, the prohibition is binding and cannot be evaded, so that those found thus married are separated by law.

7. **Marriage of relatives.**—Marriage between near relatives in direct and collateral lines is forbidden for the sake of health and protection from degeneracy. The marriage of cousins, or of a widow or widower with a brother or sister of the deceased, is not prohibited; and such marriages are not rare.

8. **Relation of husband and wife.**—In olden times the rights of a husband were very far-reaching, and a wife who obeyed her husband absolutely was considered virtuous. Men were held in high regard, while women were not. Lately the position of woman has improved, but even yet, when a wife makes a contract, she has to get her husband's consent in many cases, and the wife's property is always under the supervision of her husband while they are married. In Japan a woman's private property is very limited; and those who possess property in addition to their dresses and ornaments are very few; for, according to the law of succession, all property is inherited by the eldest son, and only in the case of disinheritance or of there being no son by marriage or adoption can the woman inherit in regular succession. Thus, as a rule, the wife has no property, but is dependent upon her husband for support. Some change, therefore, must be made in the law of succession if the position of woman is to be materially raised.

9. **Engagement and ceremony of marriage.**—The customs as well as the laws of marriage in Japan have passed through a series of changes. In ancient times marriage by sale and marriage by capture were common; but from the time of the Taiho-ryo customs gradually became more refined. There is in Japan, however, no custom of direct personal engagement or of previous personal acquaintanceship. Such things would be regarded as disgraceful by all Japanese above the middle class, for a formal marriage is always arranged by a match-maker who renders service to the parties and parents. When consent is given and the engagement made, gifts are exchanged, and a marriage-contract is considered to have taken place. Then, upon an auspicious day, the wedding ceremony is performed, usually at the home of the bridegroom at night. The marriage intermediary, escorting the bride in her best attire, takes his seat at an appointed place, and the bride and bridegroom drink wine, exchanging cups nine times. This constitutes the entire ceremony, after which the bride and bridegroom are introduced to relatives and friends at a wedding dinner. No religious or legal form is required, except that, by the present civil code, notification must be made to a registrar in order that the marriage may be officially sanctioned. With the coming of Christianity marriages are increasingly performed in churches; and recently the custom has arisen of holding services at Shintō shrines. The law, however, requires no religious sanction, as it is only a civil marriage that is officially recognized.

10. **Divorce.**—Before the promulgation of the present civil code (1896-98), divorce, or, rather, repudiation, was very easily secured at the husband's will. No legal procedure was necessary beyond the husband's writ with his signature, but the law fixed seven causes, one of which must exist in order to make the repudium effective.

Thus the power of the husband was somewhat curtailed; but only the husband could repudiate. The present code recognizes two forms of divorce: by mutual consent, and by judicial decree. The former requires only the mutual consent of the parties, while the latter requires an act of the court upon the contested request of one of the parties. This form of legal divorce must be for some one of certain causes recognized by law, and becomes operative only after judicial judgment has been given. Statistics for 1908 show the total number of marriages to have been 8,583,168 and of divorces 60,376, i.e. about 7 divorces out of 1000 marriages. Only judicial divorces, however, are given in statistics, and by far the greater number are by mutual consent.

11. **Judicial separation.**—This system does not exist in Japan.

12. **KOREA.**—In Korea marriage is according to the old custom. Early marriage prevails, and government control has had but little effect, though upon several occasions laws have been issued, even setting the age for marriage at 20 for men and 16 for women. It is usual for a girl of 12 or 13 years to marry a boy of 10 or less. Wives are usually a few years older than their husbands. Second marriage is not prohibited, but is considered a disgrace by most; and those above the middle class never re-marry. Arrangements for marriage are made by fathers, grandfathers, or elder brothers and relatives in authority; and the wishes of those who are to be married are not taken into account. The ceremony is performed at the home of the bride, and it is not necessary to notify a civil officer. Only the husband can divorce, and the wife has no way of refusal. There is no system of divorce by consent, but by the new law, since annexation, a way has been opened for a wife to seek divorce. The number of marriages made in 1912 was 121,993, and that of divorces only 9058.

T. NAKAJIMA.

MARRIAGE (Jewish).—'Every man is bound to marry a wife in order to beget children, and he who fails of this duty is as one who sheds blood; diminishes the image [of God], and causes the Divine Presence (*shekhinah*) to depart from Israel'—thus runs the rule in the Code of Qaro (*Shulhan Arukh, Eihen ha'ezek*, i. 1). It is based on ancient Rabbinic (Tannaitic) prescription (*Y'bhāmōth*, 63b, 64a), itself inferred from well-known Biblical texts (esp. Gn 9th combined with following verse), and it is emphasized by the somewhat later apophthegms: 'Whoever has no wife rests without blessing'; such a one 'is not called a man' (*ib.* 62b). Marriage was the means by which the human race imprinted on the generations the divine image; it, with the consequent domestic felicity, was the expression of true manhood. It was the basis of the social order, and thus its regulation was, in Rabbinic opinion, one of the chief differences between Jewish and primitive systems (cf. Maimonides, *Ishūth*, i.). The social obligation was strengthened by Messianic hopes; 'the son of David—i.e. the Messiah—will not come until all souls stored up for earthly life have been born' (*Y'bh.* 62a). Though the purpose of marriage was the begetting of children, other aspects of marital life were fully appreciated (see art. **FAMILY (Jewish)**); and cf. the quotations in M. Mielziner, *The Jewish Law of Marriage and Divorce*, New York, 1901, p. 18 f.; I. Abrahams, *Jewish Life in the Middle Ages*,

London, 1896, p. 114). Very profound is the Rabbinic view that man's *yēser* is in this instance the cause of good; but for his passions man would not build a house, nor marry a wife, nor beget children (*Genesis Rabbā*, ch. ix.). Man, in Rabbinic theology, is impelled by two *yēser*s ('impulses,' 'inclinations'), one good and one evil, both of which are to be used in turning him to the love of God (*Sifv* on Dt 6⁵, *Mishnāh Brākhōth*, ix. 5). The bodily passions are not in themselves evil (cf. F. C. Porter, 'Yezer Hara,' in Yale Bicentenary vol. of *Biblical and Semitic Studies*, New York, 1901, pp. 91-156, and M. Lazarus, *Ethics of Judaism*, Eng. tr., Philadelphia, 1901, ii. 79 ff.); Torah was the means by which the control of passion and its direction into holy ends were effected (cf. Maimonides, *Guide of the Perplexed*, iii. 33). The Rabbinic theory of marital intercourse is summed up ideally and, in a sense, mystically in the saying: 'Three are associated in every human being: God, father, and mother' (*Qiddushin*, 30b).

With regard to the authority of parents in arranging the marriages of their children while minors see *ERE* v. 742^a. When the parties were adult, the consent of parents was not necessary to make a marriage valid (Maimonides, *Ishūth*, vii.), but, as Mielziner adds,

'In consequence of the high respect and veneration, however, in which father and mother have ever been held among Israelites, the cases of contracting marriages without the parents' consent fortunately belong to the rarest exceptions' (p. 69).

Early marriages, arranged by the parents, were long considered a valuable aid to morals. The legal age for valid marriage was the age of puberty, but the usual age of the bridegroom in Talmudic times was 18 to 20 (S. Krauss, *Talmudische Archäologie*, Leipzig, 1910-11, ii. 28). A Jewish court would often put pressure on a man over 20 to compel him to take a wife (*Ebhen hā'ezér*, i. 2), but such pressure was not applied in the case of students, while (as the gloss *ad loc.* points out) in modern times all attempts at compulsory marriages have become obsolete. Curiously enough, no rule is stated with regard to the age of the bride. Girls were treated as marriageable from the beginning of their thirteenth year, and at various times very youthful marriages have prevailed (see Abrahams, ch. ix.). In recent times, while, on the whole, Jews probably marry at a somewhat earlier age than the general population, assimilation in social customs is modifying differences (statistics in *JE* viii. 339). The general impression prevails that Jews more frequently than others marry their cousins. Inter-marriage between Jews and Christians has increased (statistics in *JE* vi. 612). No section of Jewish opinion favours marriages between parties who are not of the same religion, the difficulties of the education of the children and the disturbance of the home harmony being felt to offer strong objections. There is no bar, however, to the religious solemnization of a marriage with full Jewish rites in the case of proselytes to the synagogue.

The Biblical 'degrees' were maintained in later Jewish law, with certain extensions (*Yebh*. 21; Maimonides, *Ishūth*, i. 6; Mielziner, p. 37), the latter being partly theoretical prolongations of lineal ascendants and descendants; but in one case a 'new degree homogeneous to the Biblical was added'; for, 'while the Mosaic Law [Lv 18¹⁴] expressly forbids only the father's brother's wife, the Talmudic Law adds also the mother's brother's wife, and, besides, the father's uterine brother's wife' (Mielziner, p. 38). The Karaites (see *ERE* vii. 663^a) imposed still further rigours on the marriage law.

The general question of the relation between Jewish marriages and the civil law of England is

historically and legally considered in the monograph of H. S. Q. Henriques, *Jewish Marriages and English Law*, London, 1909. It may in general be said that, while orthodox Jews maintain some disabilities not upheld by the law of the land, no Jews permit marriages which, though allowed by Jewish law, are forbidden by the civil law. Thus, though marriage with a deceased wife's sister is valid in Jewish law, such a marriage was never solemnized in England while English law disallowed it. So, too, though by Jewish law a man may marry his niece (though a woman may not marry her nephew), no such marriage would be performed by Jewish rites, since English law forbids such a union. But, where the Jewish law is more severe than the English, the severity is in most cases maintained, though the tendency in Jewish liberal organizations is toward equalizing Jewish custom with civil conditions. The orthodox Jews do not permit a *kōhen*—i.e. one tracing descent from the ancient priestly family—to wed a divorced woman; nor would the re-marriage of a divorced person be solemnized by the orthodox synagogue unless a divorce had also been obtained from a *Beth Din* (Jewish ecclesiastical court). On the other hand, the levirate marriage, which was no longer in general use (though a few instances are recorded) at the beginning of the Christian era (the Sadducean question in Mt 22²³ was probably theoretical), has now lost all vogue (*Ebhen hā'ezér*, clxv., and commentaries; *JE* vi. 171). In the case of a childless widow the brother-in-law goes through the ceremony of *hāltsah* (Dt 25⁷⁻¹⁰), which frees her to marry a stranger (Mielziner, p. 54 f.; *JE* vi. 170 f., where the rite is illustrated). On the levirate marriage see, further, I. Mattuck, in *Studies in Jewish Literature*, Berlin, 1913, p. 210; on marriages between uncle and niece, S. Krauss, *ib.* p. 165.

Except for rare cases in countries where Muhammadan law prevails, monogamy is enforced by both law and custom among Jews, although neither Bible nor Talmud formally forbids polygamy (for the Talmudic evidence see Krauss, ii. 27). Only in the case of the levirate marriage did the Pentateuch actually ordain a second marriage, and, as has been mentioned above, the levirate marriage fell into disuse. That monogamy was the Biblical ideal is shown by Gn 2²⁴, Pr 31³⁰⁻³¹, and the whole tendency of the Song of Songs (cf. A. Harper, *Song of Solomon*, Cambridge, 1902, p. xxxiv); and the same conclusion must be drawn from the prophetic imagery in which marriage typifies the relation between the one God and the unique people Israel. Polygamy survived among the Jews into the Christian era (see references in *JE* viii. 658), but monogamy was then and thereafter the general rule. The difficulty was that, as the end of marriage was the begetting of children, childless marriages were no fulfilment of that end, and in case of the wife's sterility the older authorities were divided in view as to the relative advisability of insisting on divorce or of permitting a second simultaneous marriage (on this and several other questions of Jewish marriage and divorce, see the writer's evidence before the Divorce Commission); but by the beginning of the 11th cent. monogamy was made the binding and absolute rule for all western Jews (Abrahams, ch. vii.).

The ancient and mediæval preliminaries to marriage have, in modern times, lost much of their old significance. Betrothal (*ērusin* or *qiddushin*) in Rabbinic law was not a mere agreement or contract for a future marriage (*nissu'in*); though not involving the actual privileges or responsibilities of the married state, betrothal was so far the initiation of marriage that it could be terminated only by death or divorce.

'Faithlessness on the part of the betrothed female was treated as adultery. Without having been formally divorced, she could not enter a marriage contract with another person; if entered upon it was void' (Mielziner, p. 77; on the status of the betrothed woman in the 1st and 2nd centuries A.D., cf. A. Büchler, in *Festschrift zu Israel Lewy's 70ten Geburtstag*, Breslau, 1911, p. 110).

Since the 16th cent. the two ceremonies of betrothal and marriage have been performed on the same day, though in Talmudic times a year might intervene between them (*Mishnāh*, *Qiddushin*, v. 2). The legal betrothal was always preceded by an 'engagement' (*shiddukhin*), and this 'engagement' gradually replaced the older betrothal. Often a professional match-maker (*shādkhān*) was employed in the Middle Ages, and the custom is still in some vogue (Abrahams, p. 170 f.). The ceremonies of marriage now include the older betrothal and marriage rites. The essence of the marriage ceremony is the presentation by the bridegroom to the bride, in the presence of two witnesses, of an object of value, and the recital of the formula: 'Be thou consecrated unto me by this [ring] according to the law of Moses and Israel.' The marriage rite was and is invalid without the bride's consent—her consent is formally stated in the *k'thūbhāh* (see below); but, until recent times, she took a passive part in the ceremony, the formula being spoken by the man only. In some orthodox and in most liberal synagogues the bride's part is now more active. For the validity of a marriage the presence of a Rabbi is not essential, but such presence is usual, and so are other ceremonies: the use of a ring and a canopy (*huppah*), the breaking of a glass, the recital of the *k'thūbhāh*, and the repetition of the 'Seven Benedictions.'

The ring, now so usual in Jewish weddings, is not mentioned in the Talmud, but was introduced in the Gaonic age (A. Harkavy, *T'shūbhōth hagg'onim*, Berlin, 1887, § 65), perhaps in the 7th century. The ring replaced the older gift of money or of an article of value; it must not contain gems (Abrahams, p. 183), and need not be of gold. Possibly the use of the ring was derived from Rome, just as the objection to marriages between Passover and Pentecost corresponds to the Roman prohibition of marriages in May (J. Landsberger, in *Jüd. Zeitschrift für Wissensch. und Leben*, vii. [1869] 81). In the Middle Ages Friday was a favourite day for Jewish marriages, though the Talmud objected to such a choice. Wednesday was also a common day for virgins, and Thursday for widows. In modern times there are no restrictions as to days of the week, except that marriages are not celebrated on Sabbaths or festivals. In the orthodox synagogues marriages are still not performed (except on specified dates) between Passover and Pentecost, nor on certain anniversaries of a mournful nature. During the marriage ceremony the ring is put on the forefinger of the bride's right hand; she afterwards removes it and places it on the customary finger of the left hand. Marriages are now frequently celebrated in the synagogue, though there is no loss of validity if the ceremony occurs elsewhere, as is widely the custom in America. The whole problem as to the place where Jewish marriages may be celebrated is treated by L. Löw in his *Gesammelte Schriften*, where many other Jewish marriage questions, historical, social, and legal, are also discussed (iii. Szegedin, 1893, pp. 13-334).

The bride and bridegroom usually stand under a *huppah*, or 'canopy,' during the marriage ceremony; the rite has been abrogated in some of the modern Jewish congregations. Originally the *huppah* was the marriage chamber, into which the bridal pair were conducted after a procession; but it is now merely symbolical, and consists of four upright posts covered by an awning of silk

or tapestry (for details see Abrahams, p. 193; for illustrations, *JE* vi. 504 ff.). A regular preliminary of the ceremony is the signing by the bridegroom of the *k'thūbhāh* (lit. 'writing'), or marriage contract (for the ordinary wording see Mielziner, p. 87), which sets forth the amount payable to the wife in case of the husband's death or the wife's divorce, and in olden times often rehearsed the wife's dowry, in respect of which, as of the husband's settlement, the *k'thūbhāh* conferred on her an inalienable claim on her husband's property. The wife had considerable rights over her own property (see Mielziner, p. 104 f.), and the *k'thūbhāh* protected those rights, and also formed a potent restraint against rash divorces. Mielziner's statement (p. 89) that the *k'thūbhāh* is 'now almost entirely dispensed with,' refers only to certain American and other reform congregations; it is still retained in most Jewish marriages, though it has little legal significance in many countries. The *k'thūbhāh* is ancient, being perhaps referred to in *To 7th*; it is certainly as old as the beginning of the 1st cent. B.C. (*K'thūbhōth*, 82b; Abrahams, p. 207, note 2; E. N. Adler, in *JE* vii. 474; for the earliest instance of the terms of the wife's jointure the reader may refer to L. Ginzberg, *Geonica*, New York, 1909, ii. 72). In Oriental lands the *k'thūbhāh* often included a solemn undertaking by the bridegroom to observe strictly the law of monogamy (see Abrahams, p. 120, and the document published by him in *Jews' College Jubilee Volume*, London, 1906, p. 101).

Of the many marriage customs which have prevailed in Jewish marriages one deserves special mention. The bridegroom breaks a glass, but the meaning of the rite is uncertain. Some have seen in it a symbolical allusion to the close of the ante-nuptial condition, but 'the most acceptable theory is that the custom arose from . . . a desire to keep even men's joys tempered by more serious thoughts, and on the other hand from the never-forgotten memory of the mourning for Zion' (see *Annotated Edition of the Authorised Daily Prayer Book*, London, 1914, p. cxxvii). The memory of Zion is frequently recalled in the Jewish wedding hymns and songs (on which see Abrahams, p. 188 f., and 'Hebrew Love Songs,' in *Book of Delight*, Philadelphia, 1912, p. 184 ff.). The same phenomenon is seen in the 'Seven Benedictions' cited below, where *Jer 33rd* is effectively used. As regards the *memento mori* idea the following incident is recorded in the Talmud (*B'rākhōth*, 30b):

'When the son of Rābbīnā was married, the father saw that the Rabbin present were in an uproarious mood, so he took a costly vase of white crystal worth 400 zuzim and broke it before them to curb their spirits.'

On the other hand, joyousness is the predominant note of Jewish weddings—a joyousness hallowed by the principle that the participation in such functions is a religious duty. The dowering of poor brides was an act of sanctified loving-kindness (*Shabbath*, 127a); and the assistance at wedding festivals was an element in pious life (*P'sāktm*, 49a). Lyric praises of the bride were so regular a habit that we find quaint discussions as to the terms to be used in the eulogies (*K'thūbhōth*, 17a). On the subject of other wedding customs, both Oriental and Western, see Abrahams, chs. ix. and x.; *JE* viii. 340 ff.; Krauss, ii. 37; W. Rosenau, *Jewish Ceremonial Institutions and Customs*, Baltimore, 1912, ch. xi.

Most characteristic of the Jewish marriage ceremony are the Seven Benedictions, which are already quoted in the Talmud (*K'thūbhōth*, 8). First comes the benediction over wine (on the use of wine in Jewish ceremonial see *Annotated Prayer Book*, p. cxxxix); then follows the praise of God as the creator of all things to His glory; after this

eulogy of the creator of all comes the praise of Him as creator of man; and next the benedictions pass to the creation of woman, the memory of Zion, the bridal joy, and the hope of Israel's restoration. The current text is as follows (*Annotated Prayer Book*, p. 299):

'Blessed art thou, O Lord our God, King of the universe, who createst the fruit of the vine.

Blessed art thou, O Lord our God, King of the universe, who hast created all things to thy glory.

Blessed art thou, O Lord our God, King of the universe, Creator of man.

Blessed art thou, O Lord our God, King of the universe, who hast made man in thine image, after thy likeness, and hast prepared unto him, out of his very self, a perpetual fabric.

Blessed art thou, O Lord, Creator of man.
May she who was barren (Zion) be exceeding glad and exult, when her children are gathered within her in joy. Blessed art thou, O Lord, who makest Zion joyful through her children.

O make these loved companions greatly to rejoice, even as of old thou didst gladden thy creature in the garden of Eden. Blessed art thou, O Lord, who makest bridegroom and bride to rejoice.

Blessed art thou, O Lord our God, King of the universe, who hast created joy and gladness, bridegroom and bride, mirth and exultation, pleasure and delight, love, brotherhood, peace and fellowship. Soon may there be heard in the cities of Judah, and in the streets of Jerusalem, the voice of joy and gladness, the voice of the bridegroom and the voice of the bride, the jubilant voice of bridegrooms from their canopies, and of youths from their feasts of song. Blessed art thou, O Lord, who makest the bridegroom to rejoice with the bride.'

Thus the married state is brought into relation with the story of creation and with Israel's Messianic hopes. The Seven Benedictions, which were recited during the grace at the wedding banquet as well as during the wedding ceremony, cover the whole of Israel's history. The popular maxim, 'Marriages are made in heaven,' was accepted as a commonplace truth by the Rabbis (Abrahams, *Book of Delight*, p. 172 ff.). The reverence for the wife was shown by the husband's recital every Friday eve of the eulogy of the virtuous woman from the last chapter of Proverbs. In many other ways the sanctity of wedded life was symbolized, both in its human aspects and as a type of perfect harmony with the divine scheme of creation.

LITERATURE.—This is cited in the course of the article.

I. ABRAHAMS.

MARRIAGE (Roman).—It is a comparatively easy task to describe the Roman idea and practice of marriage, if we confine our description to historical times; for there the evidence is fairly complete, and the state of society familiar to us. But the subject is complicated by its antiquities; and these cannot be wholly omitted, for they are interesting to a student of marriage systems, and they reflect the earlier conditions of Roman society from which the later practice descended. We shall begin, then, with these antiquities, and so clear away the main difficulties, which, however, cannot be fully explained in the present state of our knowledge.

1. **Pre-historic.**—There is some evidence, in the form of survivals in later procedure, that marriage by capture existed among the ancestors of the Latin race; but at what stage, whether among the people of the *terremare* in N. Italy or still further back, we cannot tell. The simulated rape of the bride at the *deductio* (see below), the parting of her hair with a spear, possibly the lifting her over the threshold of her husband's house, taken together with the legend of the rape of the Sabine women, may well suggest capture. True, each scrap of evidence may, if taken separately, be explained otherwise, but it must be allowed that the cumulative evidence is strong. On the other hand, capture implies exogamy, of which there was no trace in historical Rome; marriage was originally within the limits of the *gens* (Marquardt, *Privatalterthümer*, p. 29, notes 1 and 2); if, therefore, marriage by capture is to be assumed as an original practice of the race, it must have been so before the development of the *gens* as a social

institution. But, if this early form of marriage is not provable for the Roman people, it is highly probable that the later form of marriage by purchase existed among them at one time, leaving its traces in the later *coemptio*, which, as we shall see, was a simulated transference of the bride by purchase from the *potestas* of her father to the 'hand' (*manus*) of her husband (for the possible connexion of the *dos* with marriage by purchase see Westermarck, *MI* ii. 384 ff.).

2. **Early forms of marriage: confarreatio, coemptio, and usus.**—In early Roman society we find three distinct forms or rules by which marriage could be effected. As to the historical interpretation of these there is endless dispute, but the object and conception of marriage as an institution are clear enough. The object of a *iustum matrimonium*, such as was the result of all of these methods, was beyond doubt to produce children capable of keeping up the religion (*sacra*) of the family, and also of serving the State in war and peace. Children of *concubitus*, i.e. cohabitation without marriage, were not so capable; they could not be Roman citizens, and could not represent either family or State in any capacity. The word which covered all legitimate forms of union was *connubium*; as Ulpian says, in the clearest exposition that we have of the subject (v. i. 2), '*iustum matrimonium est si inter eos qui nuptias contrahunt connubium sit.*' *Connubium*, or *ius connubii*, is thus the right of contracting true or legal marriage, and belonged, as Gaius tells us (i. 56), to Roman citizens only, to Latins and foreigners only when it had been granted by the State. And, as marriage in this true sense meant the transference of the bride from one definite legal and religious position to another, from the *sacra* of one family to those of another (see FAMILY (Roman)), and from the *potestas* of one *paterfamilias* to the *manus* of another, it is obvious that the process was one of the utmost gravity both for the families concerned and for the State. The sense of this grave importance is best seen in what, rightly or wrongly, is generally believed to have been the oldest form of patrician marriage, which was applicable only to patrician families throughout Roman history—*confarreatio* or *farreum*, so named from the sacred cake of *far* (the old Italian wheat) used sacramentally in the rite.

Confarreatio stood alone as needing the presence of the Pontifex Maximus and the Flamen Dialis, the former, no doubt, representing in the Republican age the Rex of an earlier time (see Fowler, *Religious Experience of the Roman People*, London, 1911, p. 271), and the Flamen representing Juppiter, the deity of good faith in all alliances. When the preliminaries had been adjusted (*sponsalia, auspicia*, etc. [see below]) which were common to all *iusta matrimonia*, a cake of *far* was offered to Juppiter Farreus, and sacramentally shared by bride and bridegroom, in the presence of the Pontifex Maximus, the Flamen Dialis, and ten other witnesses. This number ten has given rise to much conjecture; but it is so common throughout Roman procedure that there need be no special significance in it (in Livy, xxxvii. 3, it apparently has a religious meaning, and so perhaps in *confarreatio*). A victim also was offered (to what deity is uncertain), the skin of which was stretched over two seats, on which the bride and bridegroom had to sit (for these and other details see Gaius, i. 112; Serv. *ad Æn.* iv. 103, 374, *Georg.* i. 31; Dion. Hal. ii. 25). The priests, it must be noted, do not perform the service, but witness it, giving this rite a peculiar solemnity which our authorities do not explain, probably because they did not understand it. Modern scholars and students of Roman law have usually thought of it as the real original form of marriage

in the Roman State, which must be imagined as consisting entirely of patrician families; it survived into historical times only as a means of supplying persons duly qualified to fill the old priesthoods descended from that patrician State, viz. the Rex Sacrorum and the three Flamines maiores, Dialis, Martialis, and Quirinalis (see Gaius, i. 112). Of late, however, it has been suggested (by Cug, *Institutions juridiques*, p. 215 ff., followed by Launspach, *State and Family in Early Rome*, p. 159 ff.) that it came into use only when the old custom of marrying within the *gens* was broken through, when the religious difficulty of transferring a bride from one *gens* to another called for special religious interference by the State. There is something to be said for this; but to the present writer it seems hardly sufficient to account for the sacramental character of the rite and the use of the skin of the victim. No ancient author says that this was the only form of patrician marriage; if it had been so, the Rex and the Flamines must have been constantly in requisition for weddings, more often than would be consistent with their other duties. But it is possible that *confarreatio* may have been a very special religious form, originating in the marriage of the Rex only, or in families forming an inner circle of aristocracy, from which the Rex might be chosen, and which would be likely or willing to supply children qualified to become *camilli patrum et matrum* in the service of the State (Serv. ad *Georg.* i. 31). It must be remembered that the patrician State itself had a history, and did not come into existence full-blown; the *confarreatio* probably represents an early form of it, but not exactly that which we have been accustomed to imagine.

There were two other ancient methods of transferring a bride from one family to another, from the *potestas* of her father to the *manus* of her husband; but it is to be noticed that neither of these was, strictly speaking, a marriage ceremony, and it is to be assumed that, when they were used, the real marriage rite was that described below under marriages which did not produce *conventio in manum*. In other words, the true marriage rite was, except in *confarreatio*, distinct from the act which transferred the bride from the *potestas* of her father to the *manus* of her husband, or to that of his father, if he were a *filiusfamilias* in the *potestas* of his father. Thus *coemptio*, the form by which, in the presence of five witnesses and a *libripens* (a form which could be used for other purposes besides marriage), the bride was made over to the *manus* of her husband by a symbolic purchase (Gaius, i. 113), looks as if it were a legal addition devised for some particular purpose, perhaps to enable the ordinary patrician family, which did not seek to produce children capable of filling the highest religious offices, to obtain by a single act the same legal results as in *confarreatio*. This is, indeed, a mere guess, and one among many, into which it is not necessary to go in this article.

The other method which produced *conventio in manum* took a whole year to complete the process; if a duly qualified pair lived together for an entire year without a break, *manus* followed of necessity by *praescriptio*; but by the XII Tables it was possible for the bride to escape this result by absenting herself yearly for three nights from her husband's house, by which means, in legal language, the *ususcapio* would be barred (Gaius, i. 111). It is not unlikely that this was really the oldest form by which the husband could acquire *manus*, and the one most commonly in use. *Confarreatio* and *coemptio* both presuppose the existence of the law and religion of the State in full development, but *usus* may go much further back. *Usus* and *coemptio* are, however, alike in this, that they have

a private and not a public character, and do not need the presence of priest or magistrate; it was easy, therefore, to pass them on to non-patricians, plebeians or Latins, when these attained *connubium*; but this could not be so with *confarreatio*, if, as we have assumed, the main object of the latter was at all times to produce children capable of holding the exclusively patrician religious offices.

In these three methods of marriage the union was accompanied by *manus*, though in the case of *usus* not till after a year had elapsed. *Usus*, indeed, shows us plainly that the Roman of early times did not think of marriage and *manus* as inseparable: for the bride must have been properly married under *usus*, if her children were to be Roman citizens, though for a year at least she was not under *manus*. We must also remember that, if the husband were not *sui iuris*, but a *filiusfamilias* under the *potestas* of his father, as must constantly have happened, the wife passed under the *manus*, not of her husband, but of his father. Quite early marriage and *manus* became separable both in thought and in fact; under the XII Tables, as we have seen, the wife was given the option of escaping a change of *manus* altogether, and this may be taken as proving that a tendency in this direction had shown itself much earlier. After that time, mainly, no doubt, from reasons of convenience connected with the family property, marriage without *manus* came to be almost universal. *Usus* died out altogether (Gaius, i. 111); *coemptio* survived as a legal expedient in certain cases (e.g., *CIL* vi. 1527—the *Laudatio Turiae*, line 14); and *confarreatio* became so irksome that its bonds had to be relaxed by Augustus in order to get a supply of candidates for the old patrician priesthoods (Gaius, i. 136; Tac. *Ann.* iii. 71, iv. 16; Sueton. *Aug.* 31). Yet marriage long continued to be as complete and binding a union as before, and we now have to see what made it so, by briefly examining the process as we know it in historical times.

3. The historic period.—(a) *Conditions of marriage*.—The necessary conditions of marriage were: (1) the families of both parties must possess the *ius connubii* (as explained above); (2) the parties must not be within the prohibited degrees of relationship (*cognatio*). Originally no *cognati* could marry who were within the seventh degree of relationship; i.e., second cousins could not marry; this was, no doubt, a survival from a period in which families of three generations lived together under the same roof, and were therefore, by a well-known psychological law, unsuited for intermarriage (see E. Westermarck, *Hist. of Human Marriage*, London, 1894, p. 320 ff.). Traces of such large households are not wanting in Roman history (Val. Max. iv. iv. 8; Plut. *Crassus*, i., and *Cato the Elder*, xxiv.). But these strict rules were gradually relaxed, and from the time of the Punic wars it seems to have been possible for first cousins to marry (see Marquardt, *Privatalterthümer*, p. 30, note). When the Emperor Claudius married his brother's daughter, he had to obtain a decree of the Senate for the purpose, and this licence, which was afterwards repealed, was not generally approved (Tac. *Ann.* xii. 6; Gaius, i. 62). (3) The consent of the parents was absolutely necessary, but not that of the parties themselves, who were often betrothed by their parents at a very early age; e.g., Cicero betrothed his daughter when she was only ten years old (Fowler, *Social Life*, p. 140 f.). This was a survival of a practice still common in many parts of the world, where the maintenance of the family is a matter of supreme importance, and no time is to be lost in securing that children shall not remain unmarried. The betrothal (*sponsalia*), however, at Rome was a promise rather than a legal contract, and might be broken by

consent if there was a strong dislike on the part of either boy or girl (see, however, Serv. Sulpicius, in Aul. Gell. iv. 4). The early betrothal serves to show us that the idea at the root of marriage was that of service to family and State, i.e. the procreation of children capable of such service, and that love and romance lay wholly outside it. Steady affection there might be and often was (Fowler, *Social Life*, pp. 141, 159 ff.); but the modern idea of passion with marriage as its consummation, which too often subsides and ends in divorce, was unknown at Rome. (4) As a last condition, we must note that bride and bridegroom must be of proper age, i.e., they must have reached the age of puberty and laid aside the *toga praetexta* of childhood; this might happen at different ages, according to natural development, but the minimum age was 12 for a girl and 14 for a boy.

(b) *Ritual*.—If all these conditions were fulfilled, a day was fixed for the marriage which must be one of good omen; as with us, May was an unlucky month for this purpose, and so was the early part of June, while certain other *dies religiosi* were to be avoided (Fowler, *Rel. Exper.*, p. 38 ff.). At earliest dawn, according to ancient usage both public and private, the auspices were taken by the flight of birds; but by Cicero's time this seems to have dropped out, and the examination of the *exta* of a victim took its place, as a preliminary to the first step in the procedure, which was the declaration of consent by the parties, usually but not necessarily recorded on *tabulae nuptiales*. Then the bride assumed the wedding dress, viz. the *flammeum*, or hood of red or yellow, and the *tunica recta* with a woollen girdle fastened with the *nodus herculeus*; this knot, we learn from Pliny (*HN* xxviii. 63), was also used for binding up wounds, and we may therefore suppose that it was a charm against various kinds of evil (cf., however, *EKE* vii. 749*). Her hair was parted into four separate locks with a spear-head (*hasta calibaris*), which may have been a survival from pre-historic marriage by capture; and under the *flammeum* she carried a bunch of herbs picked by her own hand (Festus, s.v. 'Corolla' [p. 56, Lindsay]). She was then ready for the actual marriage rite, which, as will now be seen, was a matter not only of secular contract, but of religious usage; it is occasionally called a *sacrum*, as in Lucan, *Phars.* ii. 350 (of the marriage of Cato): 'sacrisque deos admittite testes.'

(1) The first act of the ceremony was the *dextrarum iunctio*, a symbolic act of union, in which, under the guidance of a *pronuba*, who must be a matron only once married, the bride placed her right hand in the right hand of the bridegroom (Festus, p. 242 [p. 282, ed. Lindsay]). This act, and the sacrifice which seems to have followed, are represented on many monuments, of which accounts will be found in A. Roszbach, *Römische Hochzeits- und Ehedenkmalen*, Leipzig, 1871, *passim*; these are, however, all of very late date, and not easy to interpret. The *dextrarum iunctio* took place, so far as we can discern, either in the bride's house before the hearth or in front of some temple (Nonius, 531); but what temple this was we do not know, nor is it clear to what deity sacrifice was offered. On the monuments we see both cow and pig, which suggest Juno and Tellus (Varro, *de Re Rust.* II. iv. 9, refers to the pig as an Etruscan marriage victim). Possibly Tellus was the usual deity in early times (Fowler, *Rel. Exper.*, pp. 121, 138), and Juno later on; but Vergil combines the two in *En.* iv. 166. When the sacrifice had been offered by the pair, the persons present shouted 'Feliciter' by way of good omen, and the wedding-meal followed, and lasted till evening.

(2) The next act was the *eductio*, in which the bride was conducted to her new home—a beautiful

ceremony, exquisitely described by Catullus in his 61st poem. She was taken, as it were by force, from the arms of her mother, and led in procession to the house of her husband by three boys, sons of living parents (*patrimi et matrimi*), pure and of good omen, one of whom carried a torch of white-thorn, while the other two held her by the hands; flute-players and torch-bearers went before, the mysterious and unexplained cry 'Talasae' was raised, and nuts were thrown to the youthful lookers-on. When the bride reached the house, she smeared the doorposts with oil and fat (of wolf or pig), and tied a thread of wool around them; probably these old customs were originally charms to avert evil (for wool see J. Pley, 'De Lanæ in antiquorum ritibus usu,' in *RVV* xl. ii. [Giessen, 1911] 82). She was then lifted over the threshold, perhaps as a last sign of simulated reluctance to be thus transplanted, and was received in her new home.

(3) This reception, the third act in the procedure, is obscure in its detail, but the general meaning is plain. It was called 'reception into community of fire and water' ('aqua et igne accipere'), i.e. into partnership in these necessities of human existence (E. Samter, *Familienfeste der Griechen und Römer*, Berlin, 1901, p. 18 ff.). We are also told that she brought with her three coins (*asses*), one of which she gave to her husband, one she laid on the hearth, and the third she threw down at the nearest *compitum* ('crossways' [Nonius, p. 852, Lindsay]). Here she seems to be making an offering to the genius of her husband, to the spirit of the hearth-fire, and to the Lar of the family's land allotment, who dwelt in a *sacellum* at the *compitum* (see Fowler, *Rel. Exper.*, p. 77). She was now in the *atrium*, at the end of which, opposite the door, the *lectus genialis* had been made ready. The morrow would find her a *materfamilias* sitting among her maids in that *atrium* or in the more private apartments behind it.

To help maintain the establishment which the marriage was to set up, she brought with her a *dos*, or dowry, which in strict law became the property of the husband (for modifications of this rule see art. 'Dos,' in Smith's *Dict. of Gr. and Rom. Antiquities*). As Cuij well puts it (p. 231), her position of dignity in the house, and her title of *domina* as mistress of its slaves, would have been impaired if she entered it with empty hands and lived at the expense of her husband. The *dos* was also the means of securing to the children born of the marriage succession to their mother's property as well as to the *patrimonium* of the father.

The ritual which we have been examining plainly indicates that the Roman bride was to hold a much nobler position in the household than the Greek wife (see MARRIAGE [Greek]). She shared with her husband all the duties of the family, religious and secular; she lived in the *atrium*, and was never shut away in a woman's chamber. She took her meals with her husband; in all practical matters she was consulted, and only on questions political or intellectual was she expected to be silent.

When she went out arrayed in the graceful *stola matronalis*, she was treated with respect, and the passers-by made way for her; but it is characteristic of her position that she did not as a rule leave the house without the knowledge of her husband, or without an escort (Fowler, *Social Life*, p. 144).

The character induced and expressed by such a position is exemplified in the legendary Volumnia of the story of Coriolanus, in Cornelia the mother of the Gracchi, in Caesar's mother Julia, and, among many others, in the perfect lady whose courage, good sense, and domestic virtues live for ever on the marble of the *Laudatio Turis* (CIL vi. 1527; Fowler, *Social Life*, p. 159 f.).

4. *Divorce*.—No doubt towards the end of the

Republic the type of womanly virtue just described was growing rare, owing to the gradual break-up of the old type of family life—the result of a moral degeneracy which even Augustus was unable effectually to check. This downward tendency is best seen in the history of divorce. Marriage by *confarreatio* had been practically indissoluble; we hear of *diffarreatio*, but it is said (Plut. *Quæst. Rom.* 50) to have been so awful a rite that we assume that it was used only for penal purposes. But the other forms of marriage, not being of the same mystical or sacramental character, did not present the same difficulty, and the legal formula of divorce is as old as the XII Tables, and therefore probably earlier than the 5th cent. B.C. ('claves adimere or exigere' [Cic. *Phil.* ii. 28; cf. above, p. 122^a]). By the 2nd cent. marriage was becoming unpopular in high social circles, and divorce was becoming common (Fowler, *Social Life*, p. 147 ff.). In the Ciceronian age it was extraordinarily frequent; almost all the well-known ladies of that period were divorced at least once. Pompey, though a man of excellent character, was married five times, Cæsar four times, Cicero three times, and under the Empire the virtuous Pliny the Younger also three times. There was no difficulty in the operation of divorce; it was purely a private matter, and either party could send the other notice of it without any given reason or any complaint of misconduct. No remedy was found for a disorder so universal; and to the looseness of the marriage-tie, and the corresponding disregard of what had once been the chief object of marriage, must be ascribed in part at least the degeneracy of Rome and Italy in the first three centuries of the Empire (L. Friedländer, *Sittengeschichte Roms*, Leipzig, 1901, Eng. tr., London, 1908–13, i. 242 f.).

LITERATURE.—A. Rossbach, *Untersuchungen über die römische Ehe*, Stuttgart, 1853 (still the standard work); O. Karlowa, *Die Formen der röm. Ehe und Manus*, Bonn, 1868; art. Marquardt, *Privatalterthümer der Römer*, Leipzig, 1888, p. 27 f.; A. de Marchi, *Il culto privato di Roma antica*, i. (Milan, 1896) 146 ff.; E. Cug, *Institutions juridiques des Romains*, Paris, 1891, p. 204 ff.; C. W. L. Launspach, *State and Family in Early Rome*, London, 1908, ch. x.; W. Warde Fowler, *Social Life at Rome in the Age of Cicero*, do. 1908, ch. v. The most complete ancient authority is Gaius, i. 108 ff.

W. WARDE FOWLER.

MARRIAGE (Semitic).—Students of social evolution seem justified in holding that the family of primitive man was an intermediate development between those of the highest animals and the lowest living men. In the lowest known human societies the form of marriage is usually a temporary monogamy.¹ This temporary monogamy has been accompanied among most early men by a greater or less degree of sexual irregularity, and has varied according to economic circumstances and the bent of the people. So far as can be ascertained from the existing evidence, it underwent some interesting variations among the primitive Semites.

1. **Primitive Semitic.**—Among many savage or semi-savage peoples it is customary to allow unmarried girls complete sexual liberty. In such communities it might in time easily come to be thought that a woman who had exercised such liberty was more likely to bear children than one who had not. There is reason to believe that something like this prevailed among the primitive Semites, and that superstitious value attached to this exercise of liberty, for in many widely-scattered portions of the Semitic world it became a sacred duty for women to sacrifice their virtue by one or more acts of free love. It was thus, apparently,

¹ See E. Westermarck, *Hist. of Human Marriage*, London, 1894, pp. 147, 50; F. H. Giddings, *Principles of Sociology*, New York, 1893, pp. 264, 266.

that the temporary *hierodouloi* originated (see *HIERODOULOI* [Semitic and Egyptian], vol. vi. p. 672 f.). Besides the existence of *hierodouloi* among the Semites, both temporary and permanent, there is also evidence of much sexual irregularity among them.

It is the working hypothesis of most Semitic scholars to-day that Arabia was the cradle-land of the Semitic people. Naturally, the peculiar desert and oasis environment of the Arabian peninsula left its impress on the Semitic family life. In the oases dates and fruit were raised, and some sustenance for the flocks was produced, but it was necessary to lead the flocks into the desert in search of pasture. Whether, however, men lived in an oasis or wandered from place to place, women would always be needed to perform the duties of the household and the camp, that the men might be free to fight, either in defence or for plunder. There are two reasons for believing that the women were for the most part the sisters and mothers of the men, whether the clan was resident in one fertile spot or was nomadic: (1) Semitic marriage was notoriously temporary, and (2) kinship was reckoned through the mother.

That marriage was, on the whole, temporary seems probable from the frequency of divorce in Semitic lands, especially among the Arabs and Abyssinians (see below). The researches of W. Robertson Smith established as well as the evidence will permit that among the early Semites kinship was reckoned through the mother.¹ The reasons for this view are as follows. (1) The well-known Biblical phrase for relationship is 'bone of my bone and flesh of my flesh.' 'Flesh' (*bāsar*) is explained in Lv 25⁴⁹ by the general word for 'clan.' The Arabs attach great importance to a bond created by eating together; we must suppose, therefore, that the bond between those of the same womb and nurtured at the same breast would be more nearly of the same 'clan' and the same 'flesh' than any others. (2) The word *rahim*, 'womb,' is the most general word for kinship, and points to a primitive kinship through the mother. (3) The custom called *aqāyah*, by which a child is consecrated to the god of his father's tribe, cannot have been primitive, but must have sprung up in a state of transition to ensure the counting of the offspring to the father's side of the house. (4) Cases occur in the historical period in which a boy when grown attaches himself to his mother's tribe. The poet Zuhair is a case in point, and the Arabic antiquarians appear to have known that such cases were not uncommon. (5) The fear that sons would choose their mother's clansmen who were wealthy to marry within their own kin. (6) Kinship between a man and his maternal uncle is still considered closer than that between a man and his paternal uncle. (7) Joseph's sons born of his Egyptian wife were not regarded as members of Israel's clan until formally adopted by him (Gn 48¹⁶). (8) Tamar might legally have been the wife of her half-brother Amnon, the relation being on the father's side (2 S 13¹⁸). Such unions were known in Judah as late as the time of Ezekiel (Ezk 22¹¹). Tabnith, king of Sidon, married his father's daughter,² and such marriages were known in Mecca. Since the marriage of those really regarded as brothers and sisters was abhorrent to the Semites, kinship must in these cases have been counted through the mother. (9) In the Arabic genealogical tables metronymic groups are still found. (10) In Aramaic inscriptions found at Hegra metronymic clans appear.³ To this evidence may be added a few items gathered by other scholars. Nöldeke noted that among the Mandæans a man is described

¹ *Kinship and Marriage in Early Arabia*, p. 175 ff.; cf. also Barton, *Semitic Origins*, p. 51 f.

³ *Id.* n. i. 198, 209.

as the son of his mother, which indicates that kinship was reckoned through the mother.¹ F. E. Peiser pointed out that among the Babylonians a man could, if he chose, join the kindred of his wife, which is a relic of the same custom.² Wellhausen has observed that in the Pentateuch J counts descent through the mother, while P reckons it through the father.³ Among some primitive peoples kinship is counted through the mother because they are ignorant of the part of the father in reproduction;⁴ among others, as, e.g., the Nairs of the Malabar coast, it is reckoned through the mother because a system of polyandry prevails. The wife has several husbands, no one of whom lives with her, but all of whom visit her occasionally, and it is not known which one of them may be the father of a child.⁵ Which of these causes led to the Semitic system of female kinship? We have no evidence to show that the Semites were so ignorant of the processes of reproduction that paternity was unknown to them. On the other hand, there is considerable evidence indicating that at one time a type of polyandry somewhat similar to that of the Nairs prevailed among the early Semites.

In three of the *Mu'allagāt* poems there are specific statements that the women whom the poets visited only occasionally were members of other clans, and that they often visited them at personal risk,⁶ on account of the strained relations of the clans. The marriages of Samson (Jg 14, 16) were of this nature. Such marriages were often terminated by the migration of the tribes in different directions.⁷ Ammianus Marcellinus was, no doubt, speaking of this type of marriage when he said that among the Arabs the bride presents her husband with a spear and a tent, and, if she chooses, withdraws after a certain day.⁸ In this type of marriage kinship would necessarily be reckoned through the mother, and the fact that such alliances prevailed would be sufficient to account for the early Semitic custom of female kinship.

Such marriage conditions, while compelling the women to live with their brothers and sons rather than with their husbands, left them comparatively free from the masculine domination to which they were subjected after the rise of polygamy. Something of this freedom still survives in Arabia in parts of the peninsula like Oman and Hasa, which are not so dominated by Islam as the rest of it.⁹

The type of marriage which seems to have prevailed, at least in part, was a combination of polyandry and polygamy. Just as a woman might receive successive husbands, so the husbands also might have several wives in different clans. On the whole, however, the more numerous partners would seem to have been enjoyed by the women, for the practice of putting girl babies to death prevailed down to the time of Muhammad (see Qur'an, xvi. 61, lxxxi. 8), so that women must have been fewer than men. Marriages of this early Semitic form were not always exogamous, for Imr-al-Qais boasts in his *Mu'allagāt* that he followed one day the women of his tribe and spent a day in their company, and the Unaizah with whom he afterwards rode and whose fruit he boasts he repeatedly tasted was the daughter of his uncle.¹⁰ In like manner Lailah, the woman celebrated in the poem

of 'Amr b. Kulthūm, was 'Amr's kinswoman.¹¹ Whether the marriages which occurred within the tribe were more permanent than the alliances which were made in other clans cannot be determined, but one would naturally suppose that they were. Out of these general conditions there developed a type of temporary marriage for a specified time—three nights or more—called *mut'ah* marriage, which continued till the time of Muhammad.¹²

Another type of polyandry, that called Tibetan, because first studied in Tibet, was the form of marriage in vogue at one time in the southern part of Arabia. In this form of marriage a whole family of brothers possess one wife in common. The most important witness to this type of marriage is Strabo, who says, in describing Arabia Felix:

'All the kindred have property in common, the eldest being lord; all have one wife, and it is first come first served, the man who enters to her leaving at the door the stick which it is customary for every one to carry; but the night she spends with the eldest. Hence all are brothers of all; they also have conjugal intercourse with mothers; an adulterer is punished with death; an adulterer is a man of another stock.'¹³

The reference to conjugal intercourse with mothers is probably not to be taken literally, but it is to be explained by Qur'an, iv. 26, where it appears that men had married wives of their fathers.¹⁴ In other respects the passage describes all the features of Tibetan polyandry. Its existence in that part of Arabia is also attested by epigraphic evidence.¹⁵

W. Robertson Smith collected considerable evidence to show that this type of polyandry was also known in N. Arabia.¹⁶ His points are:

(1) Bukhārī relates that two men made a covenant of brotherhood, which resulted in their sharing goods and wives—a fact which seems to betray a survival of a custom of fraternal polyandry. (2) In Arabic *kannah* means the wife of a son or brother, but is used also to denote one's own wife; in Hebrew *kallāh* means both betrothed and daughter-in-law, while in Syriac *kalāthā* means both bride and daughter-in-law. These facts can be most easily explained as remnants of fraternal polyandry. (3) The Arabic law that a man has the first right to the hand of his cousin, and the fact which the fourth *surah* and its attendant traditions attest, that, if a man died and left only female children, the father's male relatives inherited the property and married his daughters, are regarded as the results of a previously existing condition of fraternal polyandry. (4) The Qur'an (iv. 23 ff.) forbids men to inherit women against their will, and forbids them to take their stepmothers in marriage 'except what is past.' This is regarded as evidence that down to the time of Muhammad these attendant circumstances of polyandry had continued, and that the Prophet did not dare to annul existing unions, though he forbade such marriages in future.

Wellhausen,¹⁷ F. Buhl,¹⁸ I. Benzinger,¹⁹ and Barton²⁰ have also held that the existence of the levirate marriages in Israel was an outgrowth of fraternal polyandry. This has been contested by C. N. Stærcke²¹ and Westermarck,²² but their arguments appear inconclusive. It is difficult to explain why one should ever have thought of counting the seed of one brother as that of one who had died, if there had not been a previous state of polyandry in which all brothers shared in the offspring. The levirate was known in Arabia,²³ in Abyssinia,²⁴ and in Israel.²⁵

It would seem that fraternal polyandry of the Tibetan type may have been an intermediate stage between the less well regulated polyandry of an

earlier time and the patriarchal form of marriage, which generally was prevailing at the time of Muhammad. W. R. Smith so regarded it. But, be this as it may, by the time of Muhammad there had come into vogue in Arabia a type of marriage in which the husband was practically the owner (*ba'al*) of the wife, and which is, consequently, known as *ba'al* marriage. In this type of marriage children belonged, of course, to the father's clan. Smith attributed the origin of the *ba'al* marriage to wars and to the consequent custom of marriage by capture. Marriages of this type might be either monogamous or polygamous, according to the caprice or the wealth of the husband. In much earlier times they had become the custom among the other Semites, who had migrated to lands more fertile than Arabia.

What form of marriage ceremony the early Semites had is largely a matter of conjecture. The type of marriages of which the early poets boast was probably without ceremony. A simple affinity or agreement between the parties sufficed.¹ This must often have been the case also with the later *mutah* marriages. After a marriage of this kind was recognized by the clan of the bride, a feast was celebrated for a week, during which there was much jollity of a type suited to the rough character of the civilization (see Jg 14st). As marriage became more permanent, somewhat similar festivals became the rule and have persisted in all parts of the Semitic world.

2. *Babylonian and Assyrian*.—There is little direct evidence of marriage and the position of women in Babylonia earlier than the time of Hammurabi (c. 2000 B.C.), though it is certain that the regulations embodied in his Code of laws are for the most part only the expression of customs that had then been of long duration.

The most conspicuous instance of the position of a married woman of the earlier time is that of Barnamtarra, wife of Lugalanda, Patesi of Lagash about 2325 B.C. From an archive of tablets discovered at Telloh, which contained the pay-rolls of the attendants of her palace, memoranda of her gifts to temples and festivals,² and even a record of her accouchement,³ it appears that she held a position in Lagash analogous to that of a queen in a modern European country. One cannot say that her husband had no other consorts, but it is certain that her position and importance were shared by no others. Her freedom and prominence in the eyes of the public have few parallels in Babylonian history, and are in striking contrast to the insignificance of the women in the *harem* of Assurbanipal (668-626 B.C.), into which many princesses went, never to be heard of again.⁴ Sammuramat, the wife of Adad-nirari IV. (810-782 B.C.), was prominent enough to be described as 'lady of the palace and its mistress.'⁵ She is the nearest Mesopotamian parallel to Barnamtarra. In the light of later Babylonian laws, however, it is probable that Barnamtarra was the only wife of Lugalanda, and that he was, at least in theory, a monogamist. If this was true of the ruler, it would be true for most of the men of his kingdom.

For the period of the first dynasty of Babylon (2123-1924 B.C.) the Code of Hammurabi affords an authoritative source of information on marriage. The Code contains this regulation: 'If a man

takes a wife and does not execute contracts for her, that woman is no wife' (§ 128). This is proof that in Babylonia marriage had passed from the less formal stage of early Semitic life, and had, in consequence of long legal development, become a matter of record. The marriage ceremony was incomplete without the signing of contracts. The law did not recognize anything like our modern 'common law' marriage. One reason for this was that the bride usually brought a dowry from her father's house, which the law safeguarded for her and her children. The husband also generally gave a bride-price to his father-in-law, which, upon certain conditions, reverted to him (§§ 138 f., 162-164). As Babylonian law dealt much in the evidence of written contracts, these were regarded as necessary to a legal marriage. The terms of the marriage, according to the Code, bore somewhat more heavily upon the woman than upon the man. True, if a man was caught defiling the wife of another, both he and she suffered capital punishment (§ 129); if he forced the betrothed of another, he was put to death and the woman went free (§ 130); but a woman, if only slanderously suspected of infidelity, was required to purge herself by the ordeal of throwing herself into the sacred river. The man, on the other hand, might have children by a concubine and suffer only the inconvenience of rearing the children (§ 137). If a man was taken captive, and there were means in his house to support his wife, she must remain true to him; if means were lacking, she was free to marry another (§ 133 f.). If she contracted such a marriage and bore children to her new husband and her former husband afterward gained his freedom and returned, she was bound to return to him, but the second husband retained his children (§ 135). If the husband's absence was due to desertion of his city, he had no claim on his wife on his return, if she had remarried (§ 136).

The Code assumes that marriages shall be monogamous, although it imposes on the father the duty of raising the children of his concubines. Nevertheless, it recognizes that in the case of women who had served as sacred servants in the temple (see *HIERODOULOI* [Semitic and Egyptian]), and had married late and were, accordingly, unlikely to bear children, and also in the case of wives who through sickness were rendered barren, he may take another (§§ 145-149). If the second wife is taken because of the chronic illness of the first, the first may, if she wishes, take her dowry and return to her father's house (§ 149). Slave concubinage was frequently practised, but a female slave who had borne her master children could not be sold (§§ 146 f., 171).

According to the Code, a man might divorce his wife, if he wished, but in that case he must make certain specified monetary settlements, which varied according to whether the wife had or had not borne him children (§ 137 f.). A woman might take the initiative in a divorce. If she did so, her husband could, if he wished, divorce her without alimony (§ 141). If the wife complained of ill-treatment, the life of the family was subjected to investigation. If her claim proved true, she could take her marriage portion and return to her father's house; if untrue, she was to be thrown into the river (§ 142 f.).

In the marriage contracts of the time of the 1st dynasty it appears that greater privileges of divorce were sometimes secured to the bride than the Code would have granted her. *E.g.*, a priest married, and his contract provided that, if he divorced his wife, he must return her dowry, and pay a half-*mana* as alimony.¹ Another contract, which seems to equalize the penalties for

divorce, provides that, if the husband divorces the wife, he shall be driven out to the oxen of the palace; if she divorces him, she shall be driven to the carriage-house of the palace.¹ Another contract provides for a divorce on the part of the man by payment of the usual alimony; on the part of the wife, on pain of having her hair cut off and being sold for money.² The latter was a less severe penalty than being thrown into the river. In general, however, the penalties for initiating divorce imposed upon the wife in the marriage contracts are as severe as those of the Code, though not always identical. In one case the wife is to be thrown from a tower;³ in another, impaled.⁴ Nevertheless, the penalty most often imposed is that mentioned in the Code.⁵ One marriage, concerning which two documents bear witness,⁶ records the wedding of two sisters by one man, but provides that the older shall be the chief wife, and that the other shall perform for her certain specified duties.

From the Neo-Babylonian and Persian periods several marriage contracts have come down to us.⁷ The stipulations in them as to bride-price and dowry are in general the same as in those of the time of the Ist dynasty, but the conditions on which the parties may separate are generally omitted from the contracts of that period, although divorce did then occur.⁸ In most of the marriage contracts the man acts for himself and arranges with the parents of the bride, though, if the husband is a minor, the parents make the arrangement for him. The bridegroom enjoyed in this respect more liberty of action than the bride. In Babylonia, as in the ceremony of the English Church, she had to be 'given away.'

We have no knowledge of ancient Babylonian marriage ceremonies further than that before marriage every woman had to act once as a temporary *hierodoulos* (see *HIERODOULOI* [Semitic and Egyptian], vol. vi. p. 674^a).

3. Hebrew.—In the story of Samson there are, as noted above, some faint traces of that early Semitic type of marriage in which the wife belonged to a hostile clan, lived with her people, and was visited by her husband for longer or shorter periods. The stories of the Patriarchs reflect various phases of matrimonial development. The marriage of Jacob to the daughters of Laban indicates a type of marriage in which the husband resides in the wife's clan and the children are counted to her family, for Laban says: 'The daughters are my daughters, and the sons are my sons' (Gn 31⁴⁸). Then Jacob broke away, and the children were counted to his stock. This narrative forms a transition from one system of kinship to the other. A number of survivals of the two matriarchal types of marriage just mentioned are found in the narratives of the OT; Shechem, e.g., consented to circumcision to render himself acceptable to the clan of his proposed wife (Gn 34¹⁰). A number of instances also occur in which a son inherits his father's concubines: Ishbosheth regarded Saul's concubine as his own, and resented Abner's taking her (2 S 3⁷); Solomon for the same reason regarded Adonijah's desire to marry Abishag as treason (1 K 2²²; cf. v. 15); Reuben was denounced for endeavouring to anticipate the inheritance of

his father's concubine during his parent's lifetime (Gn 35²²). As noted above (§ 1), these are survivals of Semitic polyandrous marriages. Another survival was the levirate—a custom which required a brother to take the widow of a deceased brother and count the first fruit of the union as the child of the deceased (Dt 25⁵, Gn 38⁷⁻¹¹, Ru 3, 4). The influence of these early forms of marriage is also seen in the great liberty enjoyed by women of the early period (see 1 S 25¹⁸, 2 K 4²²). In the stories of Abraham and Jacob the type of marriage is also reflected in which slave concubines may be given by a wife to a husband, for the sake of obtaining an offspring which the wife is unable to bear (see *Code of Hammurabi*, §§ 144, 146). The general type of marriage of which we have evidence in the Hebrew writings was, however, *ba'al* marriage, the regular Hebrew word for husband being *ba'al*, and that for a married woman *be'ulah*, which means 'owned,' 'possessed.' Another evidence of this conception of marriage may be seen in Ex 20¹⁷, where the wife is counted among a man's possessions. Among the poor, marriages were probably often monogamous, but there was no sentiment against polygamy, and it was often practised by the rich and powerful, as the large *harims* of David and Solomon abundantly show. Dt 21¹⁵ presupposes that a man will also often have two wives. The law of Ex 21⁷⁻¹¹ takes it for granted that female slaves will become the concubines either of their owner or of his sons. A similar assumption underlies Dt 21¹⁰⁻¹⁴.

The list of the degrees of kinship in which marriage was prohibited in Lv 18, 20, and Dt 27 belongs to the period of Judaism, which began with the Babylonian Exile. At no period were young people allowed to arrange matrimonial affairs for themselves; such arrangements were made by the parents (cf. Gn 21²¹ 24³ 28¹ 34⁴ and Jg 14³). Down to about 650 B.C. a man could divorce his wife without any formalities whatever (see Hos 3⁸ and 2 S 3¹⁴). This liberty was somewhat modified by the Deuteronomic Code, which provides (24¹) that, if a man wishes to divorce a wife, he must give her a written statement to that effect. It permits him to issue the divorce for any cause; she need only 'have found no favour in his eyes.' Apparently this law was designed to make divorce less easy than in earlier times, when no written statement was necessary; for, in an age when writing was not a usual accomplishment, it was quite an undertaking to get the document composed. In Judaism, however, this provision was held to justify frequent divorces.

The law of Deuteronomy permitted only the man to initiate divorce; it granted to the woman no corresponding power. It represents, no doubt, the usual custom among the Hebrews. One instance, however, is known in which a Hebrew bride secured by her marriage contract a similar liberty. Among the Jewish papyri discovered at Elephantine in Egypt a marriage contract was found, which contains this passage:

'If to-morrow or any later day Miphtahyah shall stand up in the congregation and say, "I divorce As-Hor, my husband," the price of divorce shall be on her head. . . . If to-morrow or any later time As-Hor shall stand up in the congregation and say, "I divorce my wife, Miphtahyah," her marriage settlement shall be forfeited,"¹ etc.

Whether other Jewish women at Elephantine were accustomed to gain this liberty by contract, or whether there were special reasons why it was secured to Miphtahyah, we do not know, but in any event it is a significant modification of the OT status of women in such matters.

The Deuteronomic law defined two cases in which a man was for ever powerless to divorce a wife: if he had falsely charged his bride with not

being a virgin, and if he had been forced to marry a woman whom he had violated (Dt 22^{19f.} 28^{f.}).

The penalties for adultery bore more heavily on the woman than on the man, the only cases where they were equal being when the crime was committed with the wife or betrothed of another; then both the man and the woman were to be stoned (Dt 22²²⁻²⁷). The point of view was that adultery with a married woman was an offence against her husband's property (cf. art. ADULTERY [Semitic]). The wife was accordingly compelled to be faithful, but no similar fidelity was exacted of him. So long as he did not violate the honour of those who were really or prospectively the wives of others, he was not punished, except that, if he violated a maiden, he might be compelled to take her as an additional wife. The penalty imposed on a wife or a betrothed maiden for adultery seems in the earlier time to have been burning (Gn 38²⁴), but was later changed to stoning (Dt 22^{19f.} 23^{f.}). If a woman was simply suspected of adultery, she was tried by ordeal (Nu 5¹¹⁻³¹). As the ordeal consisted, however, in drinking water into which holy dust from the sanctuary floor had been thrown, it must generally have resulted in the release of the accused woman. The frequent denunciation of adultery on the part of the prophets would indicate that the penalties were not well enforced and that it was of frequent occurrence (2 S 11 and Hos 3 afford specific instances in which the penalty was not enforced).

4. Arabian. — The early Arabian marriage customs have been sufficiently treated above (§ 1); it remains to note how these customs were affected by Islām. By the time of the Prophet *ba'al* marriage had apparently become the normal type, and polygamy prevailed among the rich. The husband had full power over the wife and could enforce his authority by beating her (Qur'an, iv. 38). Some survivals of customs which belonged to the earlier time were, as noted above, condemned by the Prophet (iv. 26). Before the time of Muhammad no limit had been set to the number of wives a man might possess. In the interest of moderation, Muhammad ordained that legal wives should be not more than four, but that a man might also enjoy as concubines as many slaves as he was able to possess (iv. 3, 29). The Prophet himself was allowed as many as he wished (xxxiii. 49). Marriage with one's mother, daughters, sisters, paternal and maternal aunts, nieces, mother-in-law, step-daughters, and daughters-in-law was prohibited (iv. 27). Marriages with foreign women were permitted, if the women were believers (ix. 10). Adultery was a crime for a woman, but apparently not for a man. Before the time of the Prophet an adulteress had been literally immured,¹ but Muhammad changed this to imprisonment in the house of the wronged husband (iv. 19). A slave girl was to receive half the penalty of the married woman (iv. 30). Divorce of a wife, as among the Hebrews, was possible to the husband at will. Before the time of Muhammad, the formula of divorce consisted of this sentence, which the husband pronounced to the wife: 'Thou art to me as my mother's back!' After this had been pronounced over her, it was considered as unnatural to approach her as it was to approach a real mother,² and so it was regarded as wrong to re-marry a divorced wife. Muhammad called this 'backing away' from wives (lviii. 2). He declared, however, that the utterance of this formula did not constitute a real relationship, and so permitted a man to marry a wife whom he had divorced (xxxiii. 4). A man might not divorce a woman who was pregnant, or who was nursing a child (lxv. 4, 6), but apart from this

condition a man and wife who did not agree might separate at any time (iv. 129), though liberal alimony was enjoined (iv. 24). It is assumed (xxxiii. 48) that men will frequently divorce their wives for mere whims after marriage, even before consubial relations have been established. Liberty of divorce has been freely exercised by the faithful both in ancient and in modern times.³ Thus 'Alī, the son-in-law of the Prophet, married, including all that he married and divorced, more than two hundred women. Sometimes he included as many as four wives in one contract, and he would divorce four at one time and marry four others in their stead.⁴ A certain Mughairah b. Sha'abah is said to have married eighty women in the course of his life,⁵ and Muhammad al-Tayib, a dyer of Baghdad († 423 A.H.), is said to have married in all more than nine hundred women.⁶ Palgrave relates that the Sultan of Qatar in E. Arabia married a new wife every month or fortnight, who was then divorced and placed on a pension.⁷ C. M. Doughty tells how Zaid, his host, a petty shaikh, not only permitted his wife to be courted by another Arab, but offered to divorce her so that Doughty could marry her.⁸

Naturally a woman could not marry so many men, because she had not the right of divorce, and because she could have only one husband at a time; some of them, nevertheless, managed to have a surprising number. A certain Umm Kharijah of Yemen is said to have had upwards of forty husbands, and her son Kharijah did not know which one was his father.⁹

In parts of Arabia certain old marriage customs still survive in spite of Islām. Thus in Sunan and among the 'Asir in S. Arabia marriage for a definite term still exists,¹⁰ and a man who has a permanent wife may also take a temporary one. In Sunan the agreement is witnessed before the *qāḍī*, and so has the sanction of Islām. At the expiration of the contract, the couple may separate without the formality of a divorce; if they continue to live together, a new contract is necessary. Such marriages are still practised in Mecca at the time of the pilgrimage.¹¹ Marriage ceremonies among the Arabs vary greatly according to circumstances. Sometimes they consist of a feast,¹² sometimes of a civil contract before the *qāḍī*,¹³ and sometimes there is no ceremony at all. The much married woman Umm Kharijah, mentioned above, is said to have reduced the contract to very simple terms. A man approached her and said to her, 'Betrothed?' and she replied, 'Married!' and was from that moment his lawful wife.¹⁴

5. Abyssinian. — Abyssinia is Christian, though its form of Christianity is the result of an arrested development. Marriages celebrated by the Church assume something of the permanent character of marriage in other Christian countries. Such marriages are solemnized by a priest, and the contracting parties partake of the Holy Communion. A candidate for holy orders is compelled to marry once, as in the Greek Church, but he cannot divorce his wife, and, if she dies, he may not marry again; one matrimonial venture alone is permitted to him.¹⁵ Among the people religious marriages are not popular. All travellers agree that the Abyssinians prefer to be married by civil contract, as these

marriages may be dissolved at the desire of either party to the contract. This liberty is freely exercised. Wives are changed at will, by mutual agreement, a man divorcing his own and marrying the wife divorced by another.¹ Divorces do not necessarily dissolve friendly relations between those who separate; Parkyns visited a man whose divorced wife and her children lived in the same compound with him and his new wife and family.² It frequently happens that those who have been divorced and have each married others divorce their second spouses and are again reunited. If the separating couple have children, the children are divided. The eldest son falls to the mother, the eldest daughter to the father; if there is only one son, he goes with the mother; and, similarly, one daughter goes with the father; if the remaining children are unequal in number, they are divided by lot.³

In addition to these irregularities, there is also much concubinage in Abyssinia, as in other Semitic countries. The levirate exists there, and its compulsion operates not only when a brother dies, but when, as so often happens in African wars, he is emasculated, so as to be incapable of begetting children.⁴

These peculiarities of Abyssinian matrimonial life are clearly a survival from early Semitic conditions, and Christianity has never been able to eradicate them.

When a man desires to marry a girl, he applies directly to her parents or nearest relatives; when their consent is obtained, and the dower arranged, the affair is considered settled, the girl being given no voice in the matter. Civil marriages are celebrated by feasts much as in other Semitic lands, the bridegroom and his friends feasting by themselves, and the bride and her friends by themselves. After a day of festivity, the bride is carried to the house of her husband, and the marriage is accomplished. This formality is observed no matter how many times the bride may have been married before.

GEORGE A. BARTON.

MARRIAGE (Slavic).—As early as the pagan period the family life of the Slavs was regulated by legal marriages, which were concluded in a solemn manner. Like other nations, the ancient Slavs had two forms of marriage: marriage by capture of a girl belonging to another family or tribe, and marriage by purchase. In the Christian period only the latter was sanctioned by the Church as a more civilized and noble form of marriage, whereas marriage by capture was prohibited and gradually disappeared. Nevertheless, a series of traditions and observances which visibly reflect traces of the old form of marriage by capture is

¹ See Hotten, *Abyssinia and its People*, pp. 41, 45 f., 50; Winstanley, *A Visit to Abyssinia*, ii. 73 f.; Bent, p. 31 f.; and Wyld, *Modern Abyssinia*, pp. 161, 254.

³ Hotten, p. 41.

⁴ Letourneau, p. 285.

preserved in the wedding ceremony. To these customs belongs, e.g., that of stopping the bridegroom on his way to the house of his bride and that of shutting the door before the bridegroom and hiding the bride; and here may also be mentioned the habit of presenting a false bride to the bridegroom. In S. Russia the wedding-guests engage in symbolical fights, which may rightly be deemed a survival of the ancient marriage by capture. The companions of the bridegroom violently attack the house where the bride lives, while her kinsfolk defend it and repel the aggressors, but at last the two parties put an end to the hostilities and restore harmony by a peaceful negotiation. The Southern Slavs (the Yugoslavs) have preserved the custom of marriage by capture to the present time, and, where this form of marriage has died away, symbolical traditions have taken its place.

The wedding ceremonies celebrated by the different Slavic nations vary widely, but it is possible to discover in them some fundamental traits which are common to all Slavs, and which may be regarded as a survival of ancient times, while their antiquity is also confirmed by their accordance with the chief type of Indo-European wedding ceremony, as reconstructed by H. Hirt and O. Schrader.¹ Among all the Slavic peoples the first preliminaries to the ceremony proper are the 'wooing' and the marriage contract. The deputies of the bridegroom (*druška*, *svat*, *starosta*, *djever*, etc.) negotiate with the bride's father concerning the conditions of the marriage and arrange the precise date for the wedding ceremony. The ceremony begins with the crowning of the bride with a wreath variously arranged and more or less ornate; the bride and the bridegroom shake hands as a mark of their mutual consent, and pass three times round the table or the hearth. Thus the nuptial knot is formally tied, and the pair give each other various presents of symbolical meaning (rings, apples, wedding-shirts, etc.). Afterwards the bride is veiled and conducted in solemn procession to the house of the bridegroom, where a hearty reception is given her, and bread and honey are distributed among the guests, who cast upon the bride various fruits, such as corn, millet, peas, nuts, hops, rice (nowadays sweets), etc., to express their wish that she may bear many children. A similar meaning underlies the custom practised by some Slavic peoples of placing a child in the bride's lap when she arrives at her new home. It is customary, when she reaches the door of the bridegroom's house, to carry her over the threshold and to place her upon a fur, the hair of which is turned upwards. One of the most significant gifts which the wedding-guests bring to the couple is a cock and a black hen. In S. Russia the bride throws such a hen under the hearth, probably as a sacrifice for the domestic genii. A very important place in the wedding pastry is occupied by a large wheat cake, decorated with eggs, flowers, ribbons, and sweets, which is cut in pieces at the wedding feast and distributed among the guests. To the symbolic nuptial ceremonies belong, further, the untwisting or cutting of the bride's plaits and the covering of her hair with a cap-like scarf. There was a rule among the Slavs—which is still, for the most part, observed—which obliged unmarried women, for the sake of distinction, to wear their hair in long, loose plaits, while married women wore a cap. The bride's entrance upon the status of a married woman was symbolized by the ceremony just mentioned, which was performed in a closed room by the women present. Then the bride used to unloose the shoes of her bridegroom

¹ H. Hirt, *Indogermanen*, pp. 436-447; O. Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, pp. 352-362, *Sprachvergleichung und Urgesch.*, ii. 318-322, 333-335.

to show her submission (sometimes she even received symbolical blows), and, after being clothed in new garments by the women and the 'best man,' she went to bed with her husband in the presence of the witnesses. After the nuptial night purification was performed in a clear stream or at a well; later on, this procedure was reduced to a mere sprinkling with water.

Besides these chief and almost fundamental ceremonies, the various Slavic peoples have other customs connected with the popular wedding, the details of which cannot be described at full length in this article. It is interesting, however, to notice that for a long time the people attached far greater importance to these domestic wedding ceremonies than to the rites prescribed by the Church. Historical documents testify that, even in the 16th and 17th centuries, not only the common people but also the more cultured classes regarded the ecclesiastical ceremony as a purely religious act without any legal significance. A marriage became legal only after the precise performance of all prescribed observances inherited from the ancestors and consecrated by the family tradition; and this conviction is still to be found among some of the Slavic nations.

J. MACHAL.

MARTINEAU.—James Martineau (1805-1900) was born in Norwich, April 21, 1805, the fourth son and seventh child of Thomas Martineau, a manufacturer of bombazine. Of Huguenot ancestry, he was also descended through his father's mother from John Meadows, one of the ejected ministers of 1662. After four years at the Norwich Grammar School he was placed under the care of Dr. Lant Carpenter at Bristol (1819-21), to whom he owed his 'spiritual rebirth.' His teacher was a pioneer in education, and combined instruction in the elements of science as well as psychology and moral philosophy with classical and mathematical training. Thus equipped, he was placed in machine-works at Derby, but relinquished his apprenticeship after a year (partly under the shock of a bereavement which 'turned him from an engineer into an evangelist' [speech at Nottingham, 1876; Carpenter, *James Martineau*, p. 24]), and in 1822 he entered Manchester College, York, as a student for the ministry. He had been brought up in the Unitarian theology of Priestley, and embraced his necessitarian pantheism with ardour, though at Bristol he had read Wilberforce and Hannah More, and was not without occasional misgivings concerning the freedom of the will. On the completion of his College course he took charge of Dr. Carpenter's school for a year (1827-28), and, after a short period of ministerial service in Dublin (1828-32), terminated through his refusal of the endowment known as the Regium Donum, he began his longest pastorate in Liverpool (1832-57). In 1840 he undertook the additional duty of Professor of Philosophy and Political Economy in Manchester New College, on its return from York to the city of its foundation. During the erection of the Hope St. Church by his congregation (1848-49) he spent fifteen months with his family in Germany, returning to resume his ministry. The transference of the College to London led to his settlement there in 1857, and from 1859 he also ministered in Little Portland St. Chapel till 1872, when a threatened failure of health led to his retirement. In the meantime he had succeeded to

the Principalship of the College in 1869, which he held till June 1885.

For more than fifty years he had been actively engaged in literary work of many kinds. To the religious denomination of his birth and education he gave unstinted service, and his was the chief influence in transforming its fundamental theological conceptions, while in the wider field of philosophy he was the powerful antagonist of the empiricism and utilitarianism of the Mills, the monism of Spinoza, scientific materialism, and the agnostic philosophy of Spencer.

The Unitarians of Martineau's youth followed the tradition of Locke. Accepting the NT as the final authority in Christian doctrine, they recognized Jesus Christ as the Messiah, whose teachings were authenticated by miracles. To this interpretation Martineau remained faithful till after 1832. But further study of the Gospels confronted him with the predictions which implied the return of Jesus in the lifetime of His disciples to judge the world, and this begot an investigation into the significance of revelation which led him to declare in his first work, *The Rationale of Religious Inquiry* (1836), that 'no seeming inspiration can establish anything contrary to reason, that the last appeal in all researches into religious truth must be the judgments of the human mind' (p. 125). To work out this principle was to be one of the main occupations of his life. He followed the progress of German critical study; he was familiar with Paulus and Strauss; he adopted the general results of the Tübingen school, and became their earliest and most accomplished English exponent ('The Creed and Heresies of Early Christianity,' *Westminster Review*, 1853). By 1845 he had abandoned the apostolic authorship of the Fourth Gospel, and in the third edition of the *Rationale* (1845) he ceased to demand belief in the gospel miracles as essential for the Christian name. In the *Prospective Review* (1845-54) and its successor, the *National Review* (1855-64), he secured an organ for his theological and philosophical essays, while others not less brilliant appeared in the *Westminster*. Indefatigable in study, a constant teacher of the young, he devoted long courses of lectures to the exposition of the NT and the history of Christian doctrines, and in his last large treatise, *The Seat of Authority in Religion* (1890), he returned to his earliest theme. He re-examined the claims of the Roman Catholic Church, the infallibility of the Bible, and the historical significance of Christianity, and presented Jesus no longer as the Jewish Messiah, but as the 'prince of Saints,' revealing the highest possibilities of the soul. Looking back at ninety (1895), he wrote to William Knight:

'The substitution of Religion at first-hand, straight out of the immediate interaction between the soul and God, for religion at second-hand, fetched, by copying, out of anonymous traditions of the Eastern Mediterranean eighteen centuries ago, has been the really directing, though hardly conscious aim of my responsible years of life' (Carpenter, p. 540).

Martineau thus remained to the last a Unitarian in his interpretation of the Deity, and a Christian in his allegiance to Jesus Christ. But his position was often misunderstood, partly because of his sympathy with many aspects of traditional devotion, and partly because of his steadfast refusal to belong to a Unitarian Church. This was due to the discovery of the real nature of the foundation on which the majority of chapels occupied by Unitarians were held. Some of these had been founded in the 17th cent., others in the 18th, by the English Presbyterians, who, under the leadership of Baxter, had stood for 'catholicism against all parties,' and repudiated creeds of 'human imposition.' In dedicating their chapels 'for the worship of God by Protestant Dissenters' (sometimes specified as Presbyterians, sometimes as

Independents, sometimes as both together), they deliberately rejected all limiting doctrinal names. By slow processes of Scripture study many ministers and congregations gradually became Unitarian in theology. Attention was at length called to this issue, and a suit was instituted against the trustees of a charity in York founded by Lady Hewley, whose husband, Sir John Hewley (M.P. for York in the reign of Charles II.), had been a warm supporter of the Presbyterians. The decision (December 1833), which displaced the Unitarian trustees, was at once seen to imperil the tenure of all the chapels of similar foundation; and after long litigation the existing worshippers were secured in possession only by the Dissenters' Chapels Act (1844). The controversy had a life-long effect on Martineau's views of the true basis of Church union. To the association of individuals for the promotion of Unitarian teaching he remained constant all his life. But he could not accept a theological name as a condition for religious fellowship. It was inevitably exclusive instead of catholic; it seemed to involve treachery to his spiritual ancestors; it barred the way to those very possibilities of change which had been the secret of the Unitarian advance. Deeply conscious of indebtedness to various schools of religious life, Martineau endeavoured (1868) to form a Free Christian Union, which was joined by representative men of every British Church, but was disbanded two years later. Subsequently he worked out a scheme for 'the National Church as a Federal Union' (*CE* li. [1887] 408 ff.), which proposed to abolish the Act of Uniformity, to release the Church of England from State control, and associate it with the other communions in a United English Christian Church. The plan aroused considerable academic interest, but the Bill in which it was embodied was never actually laid before Parliament.

From the time of his settlement in Liverpool, Martineau had been continuously engaged in teaching and writing, and his intercourse with the young was a prominent cause of the changed view of the moral consciousness which led to the reconstruction of his philosophy. Trained in the pantheistic necessitarianism of Priestley, he had lived under a habitual tension of obligation without realizing its significance. Many influences now contributed to give it new meaning. Wordsworth had long been his favourite poet; Plato called forth his admiration for 'the fair and good'; Coleridge and Carlyle revealed unsuspected depths of thought and passion in human nature; Channing emphasized its freedom and dignity. In reviewing Bentham's 'Deontology' (*Monthly Repository*, 1834), while still placing the 'criterion of right' in the 'tendency of an action to promote the happiness of an agent,' he laid stress, against Bentham, on the reality and worth of the disinterested affections, and prepared the way for a wholly new set of moral values. The questions of his pupils, his persistent NT studies, and the hymns of the Wesleys opened new aspects of the inner life; and in the lecture on 'Moral Evil' in the Liverpool Controversy (1839) he formally abandoned the determinism of his youth. The change involved many modifications. He ceased to regard revelation as 'communicated truth'; it was effected through character; its organ was the conscience and the affections; its supreme historic type was seen in Christ as the image of the Father.

Reinforced by his reading of Kant, and in opposition on the one hand to the 'association' philosophy of James Mill, and on the other to the monistic schemes of Spinoza and Hegel, Martineau began to work out his new analysis of man's moral nature. The sphere of judgment was transferred

from consequences without to springs of action within. In this inner world lay a multitude of appetites and energies, which were not all of equal rank. When they were examined side by side, some revealed themselves as higher, while others fell into a lower place; and this distinction of rank was irresolvable into any other element such as order, truth, beauty, sympathy, or reason. All moral estimates, therefore, were *preferential*; there was always an alternative before the mind, and the power to recognize these diverse values lay with conscience, which pronounced this better and that worse. This view was first expounded in the *Prospective* (1845), in an essay on Whewell's 'Elements of Morality,' and led to the definition: 'Every action is *right* which, in the presence of a lower principle, follows a higher; every action is wrong which, in the presence of a higher principle, follows a lower' (*Essays*, iii. 352). The year before, during a visit to Liverpool, Mrs. Carlyle had described Martineau as 'the victim of conscience.' He was to become the greatest English moralist since Butler. Here was the witness of Deity within; here the access of the soul to divine things; here the true ground for the conception which he was afterwards to define as 'the perennial Indwelling of God in Man and in the Universe.' Alongside this view of man's ethical constitution ran an exposition of our knowledge of the external world (in a review of J. D. Morell's *Historical and Critical View of the Speculative Philosophy of Europe in the Nineteenth Century*, London, 1846, in *Prospective*, 1846): 'The act of Perception gives us simultaneous knowledge of subject and object' (p. 562). Again and again in subsequent essays Martineau vindicated this 'natural dualism' against idealism on the one hand and pantheism on the other, and vigorously defended the veracity of our faculties. But perception involved more than passive consciousness; it was evoked by resistance and the effort needed to overcome it; besides the space-relation of the I and the not-I, a cause-relation was revealed in the same antithesis. In the strenuous conviction of personality which he derived from his ethical experience, Martineau found the true meaning of cause; its seat was in the personal power of the will, and this he boldly applied to the interpretation of the surrounding scene. The 'not-self' must be comprehended personally; its varied energies were but the manifestations of one living Will. Science, by the rising doctrine of the correlation of forces, might point to their ultimate identity. Martineau entrenched himself securely in his prophetic recognition of the part played by the same energy in the constitution of human nature. The relation of the soul to God was a moral relation. Known in the conscience, He was one; the manifoldness of the world, therefore, was only the veil of a hidden unity; and the foundations of theism were thus laid on the conception of God as cause of the universe and revealer of righteousness in man.

Such was the general scheme of the philosophy of religion which Martineau worked out with rich elaboration in the next forty years. His sojourn in Germany and his renewed studies in Plato and Hegel gave him a securer hold of great ontological conceptions. He described it afterwards as 'a new intellectual birth.' But he remained faithful to the English tradition of psychological method, and slowly built up the fabric of thought on the basis of self-knowledge. Again and again he sought to construct a table of the springs of action in the order of their relative worth. This was finally embodied in the first of his three large treatises, *Types of Ethical Theory* (2 vols., 1885). After reviewing 'unpsychological theories,' transcendental (Plato), immanent (Descartes, Male-

branche, Spinoza), and physical (Comte), he expounded (vol. ii.) his own interpretation of the nature of moral authority. This involved a classification of the propensities, passions, affections, and sentiments, and an arrangement of them in a scale of values. The scheme thus wrought out of human experience was then contrasted with the hedonist ethics of the older utilitarians, and the modifications introduced by the idea of evolution. In emphasizing 'Hitches in the Evolutionary Deduction' he denied that laws of matter and motion could explain the genesis of consciousness, while the feeling of moral right and freedom involved another point of fresh departure. The section on 'Conscience developed into Social Consensus and Religion' further supplied hints which modified the stress of individualism in some of his earlier writings.

The stream of Essays had ceased for some years after the suspension of the *National Review* (1864); but an important address on *Religion as affected by Modern Materialism* (1874), suggested by John Tyndall's discourse to the British Association at Belfast, and its sequel, *Modern Materialism: its Attitude towards Theology* (1876), brought Martineau again prominently into the field of philosophical discussion. Two other addresses, *Ideal Substitutes for God* (1879) and *The Relation between Ethics and Religion* (1881), belonged to the period in which he was slowly completing the treatise modestly entitled *A Study of Religion* (2 vols., 1888). It opened with an investigation of the limits of human intelligence, a fresh defence of 'natural realism,' a plea for the objective reality of space and time, a reply to the empirical doctrine that we know nothing but phenomena, a fourth refutation of the agnosticism of Spencer. Martineau, a man, a citizen, a Christian, a divine, a moralist, and Will ruling the Universe and holding fast to the relations with mankind' (vol. i. p. 10); and the bases of theism in the doctrine of His sole causation in the natural order and of perfection in the moral order were re-established and supported with fresh illustration. The theological conceptions which had been discarded in earlier revolt against Paley were now revived on a far wider scale, and the presence of rational ends was displayed with varied scientific knowledge in the vast process of evolution. Assuming the results of his analysis of human nature in the previous treatise, Martineau then argued that the principle of obligation implied the presence within us of a moral order in which God was disclosed as transcendently holy. The intelligent Purpose and the righteous Will were then identified; the place of pain and sin under such a rule was defined; and the theodicy concluded with a refutation of pantheism and a defence of human freedom. A final book carried the argument up to 'the Life to come.'

Martineau's last word on the grounds of belief and their illustration in the NT was uttered in *The Seat of Authority in Religion* already cited, in which the origins of Christianity were expounded with remarkable force and daring (1890). The work was less technical than its predecessors, and appealed to the wide circle of those who had found invaluable help in the author's devotional writings. In the *Endeavours after the Christian Life* (2 vols., 1843-47) he had unfolded secrets of personal religion and moral experience in language often of lyrical poignancy. Successive collections of hymns (1831, 1840, 1874) testified to his deep sympathy with many types of Christian devotion. Later series of *Hours of Thought on Sacred Things* (1876, 1879) carried on the application of his thought to the varied incidents of the human lot. A small book of *Home Prayers* was issued (1891) in response to the urgency of many friends, and in four

volumes of *Essays, Reviews, and Addresses* (1890-91) he gathered up those of his detached writings which he wished to preserve. Even their wide range, over history, science, and philosophy, does not exhaust the whole scope of his productiveness, which included political economy and psychology. In the theological timidity and the ecclesiastical strife of the early Victorian era he stood forth (often alone) as the fearless advocate of the principle of religious freedom. Later years brought unsought appreciation. Gladstone designated him as 'the greatest of living thinkers'; and a younger philosopher (A. Seth Pringle-Pattison, *HJ* i. [1903] 444) aptly fixed the character of his service to his age by describing him as 'an ideal champion of the spiritual view of the world in a time of transition and intellectual insecurity.'

LITERATURE.—Besides the works already named, some of Martineau's earlier writings were collected by American friends in *Miscellanies*, Cambridge, Mass., 1852, *Studies of Christianity*, London, 1858, and *Essays Philosophical and Theological*, 2 vols., do. 1883. We may also name his *Lectures in the Liverpool Controversy* (1839), *A Study of Spinoza*, do. 1882, and *National Duties and other Sermons and Addresses*, do. 1903. See, further, A. W. Jackson, *James Martineau, a Biography and a Study*, do. 1900; J. Drummond and C. B. Upton, *The Life and Letters of James Martineau*, 2 vols., do. 1902; J. E. Carpenter, *James Martineau, Theologian and Teacher*, do. 1905.

MARTYRS.—See SAINTS AND MARTYRS.

MARY.—The following article, dealing with the cult of the Virgin Mary, starts from the scriptural and orthodox positions (1) that our Lord Jesus Christ, being the eternal Son of God, became incarnate, being conceived by the Holy Ghost and born of the Virgin Mary; and (2) that, inasmuch as He is thus God and man in two distinct natures and one person for ever, so is she, His mother, truly and properly described as Theotokos and Virgo Deipara—the Mother or Bringer-forth of Our Lord and God, who was God when He issued from her virgin womb, wearing the manhood which of her substance had been prepared for Him, which He had taken to Himself, which He carried with Him to the Cross, which He raised in spiritual glory from the tomb, which He wears for ever at the right hand of the Majesty on high. These things are part of the faith of the whole Catholic Church; they are treated here as historical facts.

Another matter which, though Scripture is silent upon it, unquestionably exercised a powerful influence on the development of the cult of the Virgin Mary, is assumed in this article in accordance with the view of overwhelmingly the larger part of Christendom, viz. her perpetual virginity: 'virgo concepit, virgo peperit, virgo permansit.' With the general question of the Invocation of Saints, and the merits or demerits of that practice, this article is not concerned.

The only questions, therefore, to be here discussed concern the implications of these facts. We shall inquire historically (1) what was inferred from them in the Apostolic and early ages of the Church as to the duty of Christians towards the Virgin Mother of the Lord; (2) when and how the wide-spread developments of her cult arose; and (3) the grounds on which these developments have been justified, or are rejected, by those who accept the facts.

I. In Holy Scripture.—Over and above the witness borne by the four Evangelists to our Lord's having a human mother (Mk 3³¹, Jn 2¹⁻⁵ 6⁴²) whose name was Mary (Mk 6³), and the direct statements of two of them (Mt 1²⁰, Lk 1²⁷⁻³⁴) that she was a pure virgin when by the power of the Holy Ghost she conceived and bore our Saviour, we have in the third Evangelist several notes expressive of the high reverence and honour due to her. St.

Luko records the angelic salutation, 'Hail, thou that art highly favoured, the Lord is with thee' (1²⁶); and the angelic assurance, 'Thou hast found favour with God' (1³⁰). He makes it plain that she was the moral, and not simply the physical, instrument of the Incarnation; he brings out her wonderful faith, believing in God's power, seeking no sign, though she gets one, and asking only what course the divine call may require her to adopt (1³⁴); his narrative evinces her conscious risking 'the reproach among men with which the poor Jews still blaspheme her Son and revile herself' (Pusey, *Eirenaicon*, ii, 25); and he records how 'Elizabeth, filled with the Holy Ghost,' saluted her, 'Blessed art thou among women, and blessed is the fruit of thy womb. And whence is this to me, that the mother of my Lord should come to me? . . . And blessed is she that believed' (1⁴²⁻⁴⁵). Mary herself, in her inspired song, while acknowledging that God is her Saviour too, expects from 'all generations' a like honour to that which Elizabeth had assigned her, and speaks of 'the great things' that God had done for her (1⁴⁸).

Yet, while the NT thus justifies the Church's instinct of loving and reverential gratitude to the Holy Mother of the Lord, and authorizes the naming of her with lofty titles, it presents us with not one instance of her influence with Christ being invoked either in her lifetime or after her departure. At Cana, when she does interpose, she is bidden wait His time; and her advice to those whom she is sure that He will help is, 'Whatsoever He saith unto you, do it' (Jn 2⁴). When, on another occasion, she 'sent unto him, calling him,' He apparently did not go, but answered, 'Whosoever shall do the will of God, the same is . . . my mother' (Mk 3³¹⁻³⁵, Lk 8²⁰). When a woman exclaimed, 'Blessed is the womb that bare thee,' He replied, 'Yea rather, blessed are they that hear the word of God, and keep it' (Lk 11²⁷⁻²⁸). He does not imply, of course, that Mary had not these graces—they were conspicuous in her; but He certainly puts the moral virtue higher than even her unique privilege. And when, from the Cross, He commends her to St. John saying, 'Behold, thy mother,' and him to her, 'Behold, thy son,' while to have her with him in 'his own home' (Jn 19²⁶⁻²⁷) was doubtless a precious legacy to the theologian apostle, yet the obvious meaning of our Saviour's words was rather that St. John should take care of her than that she should be his protectress (R. Stier, *The Words of the Lord Jesus*, Eng. tr., Edinburgh, 1855-58, vii, 467 ff., on Jn 19²⁶⁻²⁷). There is certainly no evidence in St. John or elsewhere in the NT that he, or any other, so much as thought of her being established as a mother to pity all Christians, and help them in their approach to Christ. On the other hand, to expound the passage, as some Protestant writers (even Stier, *loc. cit.*) have not hesitated to do, as an intimation that all Christ's earthly relationships—even Mary's to Him as His mother—ceased and determined by His death is to come perilously near the denial of His abiding manhood whereby, as our High Priest within the veil, He is still 'touched with the feeling of our infirmities' (He 4¹⁵). A sufficient explanation of our Lord's neither calling her here His mother nor naming either St. John or her is supplied when we take it as an instance of His considerateness: had He betrayed the relationship, those who mocked at Him would not have been slow to insult her; and the newly re-awakened courage of the disciple might have again been shaken by the utterance of their names.

The only other notices of Mary in the NT are (1) the mention of her by St. Luke (Ac 1¹⁴) in the place of honour as the first, and only one named, among the Christian women, and as still, after the Ascension, 'the mother of Jesus'; (2) the reference

to her by St. Paul (Gal 4¹) as 'a woman'—an obvious allusion to the Protevangelium (Gn 3¹⁵); and (3) St. John's taking from her experiences certain features for his prophetic portrait of the Church as the sun-clothed woman (Rev 12).

2. In the first three centuries.—The Christian literature of this period keeps in regard to Mary strictly to the lines of the NT. References to her are sparse; and these, though distinct as to her being the Virgin Mother of the Lord and therefore to be honoured, give no suggestion of aught that could be called a cult of her. Polycarp's short Epistle does not contain her name; but in his *Life* by Pionius there is this:

'He, according to the prophecy, . . . being born of an undecad and spotless virgin' (xiii.).

In the *Apology* of Aristides she is simply 'a Hebrew virgin.' Ignatius, in the short recension of his seven Epistles (here regarded as genuine), is fuller.

He tells (*ad Ephes.* xix.) how the virginity of Mary deceived the Deceiver; that 'hidden from the prince of this world were the virginity of Mary and her childbearing . . . mysteries wrought in the silence of God, now to be cried aloud'; he adores our Saviour, 'Son of Mary and Son of God'; and he insists (*ad Trall.* ix. 1.) that His birth of her demonstrates against the Docetists that His flesh is a reality and no semblance; but the correspondence between Ignatius and the Virgin is a Latin forgery, which never existed in the Greek, and is based on the saint's use of the word *χριστοφόρος*.

Justin Martyr (*Dial. cum Tryph.* c.) and Irenæus speak of her as does the Puritan Milton, as 'the second Eve.'

The knot of Eve's disobedience was loosed by the obedience of Mary; for what the Virgin Eve had bound fast through unbelief that did the Virgin Mary set free through faith' (Irenæus, *adv. Hær.* iii. xxii. 4). And again he dwells on the moral side of her part in the Incarnation: 'Mary, having a man betrothed to her and being nevertheless a virgin, by yielding obedience became the cause of salvation to herself and to the whole human race' (ib.).

If, however, we find Irenæus, in the barbarous Latin version of his works, calling Mary the 'advocate' of Eve, we shall do well to remember that his Greek had, apparently, *συνήγορος*, which implies not advocacy in our sense, but rebuke. Origen supplies one of the only two places in the Fathers where the words of our Lord from the Cross to her and to St. John have the least appearance of ascribing to her a permanent office for Christians.

'Seeing that, according to those who think soundly of her, Mary had no other son save Jesus; and that Jesus said to her, "Behold, thy son," therefore those in whom Christ lives are sons of Mary' (*in Joan.* i. 6).

But does this go further than Christ's own, 'Behold, my mother and my brethren' (Mt 12⁴⁹, Mk 3³⁴)? Both Origen and Tertullian, like Ignatius before them, draw from her motherhood of Christ arguments against Gnostic or Docetic heresy. Yet even of the Gnostics—so strong already was the Church's faith in the Virgin-birth of the Redeemer—several were constrained to admit the fact, while others, allowing that He issued from her womb, protested that He drew nothing from her substance.

If any cult of the Virgin existed in these early centuries, it is in the records of the Church's worship at the time that we should expect to find it, rather than in the treatises of divines or the apologies of the defenders of the faith. But such accounts of the Church service of the period as have come down to us exhibit precisely the same features as do the writings of the ante-Nicene Fathers. No mention of Mary's name, no reference to her, occurs in the notices of Holy Communion in the NT; nor in the liturgical thanksgiving in the 1st Epistle of St. Clement of Rome; nor in the *Didache*; nor in Justin Martyr's or Tertullian's account of the Eucharistic service. The only place where an invocation of St. Mary could come in is at the Commemoration of Martyrs and the Commemoration of the Departed; and on this all that St. Cyprian has to say is:

'Ecclesiastical discipline teaches, as the faithful know, that at the point where the martyrs are named at the altar of God, there they are not prayed for; but for others who are commemorated prayer is offered' (*Epp. i.* [*Opera*, Oxford, 1682, p. 8]).

There is no direct evidence that among 'the martyrs' the Virgin was so much as mentioned.

The one thing in these centuries that points in the direction of any cult of her in the Church is the appearance, somewhere in the 2nd cent., of an apocryphal *Evangelium Jacobi*, which was very popular and became the basis of two later works, *Liber de Infantia Mariæ et Christi Salvatoris* and *Evangelium de Nativitate Mariæ*. It is from these that the 'traditional' names of her parents, Joachim and Anna, have been derived, and the story of Mary's nurture in the Temple from her third to her twelfth year. These books, if they were not genuine, at least met a growing and significant demand, which was not checked by their condemnation as heretical in the earliest papal *index expurgatorius* attributed to Pope Gelasius (A.D. 492-496).

3. During the period of the four great councils (A.D. 325-451).—With the conversion of Constantine Christianity became fashionable, and, as Newman puts it, the spirit of the world was poured into the Church (*The Arians of the Fourth Century*, London, 1876, p. 258). The leaders of the faithful had to raise their standard against an inrush at once of pagan sensuality and of heresies born of pagan conceptions of the Godhead. It is among the latter that we find the earliest notice in Christian history of an actual worship of St. Mary. Epiphanius reckons it a heresy (*Hær. lxxix.*) that 'certain women in Thrace, Scythia, and Arabia' were in the habit of adoring the Virgin as a goddess and offering to her a certain kind of cake (*κολλυρίδια τινά*), whence he calls them 'Collyridians.' Their practice (cf. Jer 44¹⁹) and the notion underlying it were undoubtedly relics of heathenism always familiar with female deities. Epiphanius rebukes them:

'Let Mary be had in honour, but let the Lord be worshipped' (*Hær. lxxix. 9*).

'Honour to Mary' was inevitably augmented by the Church's answer (true and necessary as that answer was) to the much more formidable heresy of Arius. Arianism, stumbling at the awful mystery of the Word made flesh (Jn 1¹⁴), and chining in with the old pagan conceptions of gods older and younger, greater and less, presented to men the Eternal Son as only the first of creatures. It did not deny that Christ was born of the Virgin, but, by denying that He who issued from her womb was personally God, it lowered the greatness and the glory of her motherhood. It is not so much, however, in the interests of her dignity as for the utterance of the full truth concerning Christ that the orthodox theologians of this period are accustomed to refer to her. This holds of them all—of Cyril of Alexandria as well as of Athanasius, Basil, and the Gregorians, of Ambrose and Augustine as well as of Leo. It was in this connexion that Athanasius had spoken of her as *θεοτόκος* long before the Nestorian preacher shocked the congregation of St. Sophia by refusing her the title.

Athanasius gave it her because 'from the flesh of holy Mary the Son of God by essence and nature did proceed. . . . How can they wish to be called Christians who assert that the Word descended on a holy man as upon one of the prophets, and deny that He Himself became Man, taking the body from Mary?' (*Ep. lix. 'ad Epict.' 2*); and, again, because, 'when He was descending to us, He fashioned His body for Himself from a Virgin, thus to afford to all no small proof of His Godhead, in that He who formed this is also Maker of everything else as well' (*de Incarn. Verbi*, xviii.).¹

¹ Athanasius was anxious to secure the reality of our Lord's manhood no less than His divinity; and in support of this truth also he, like Ignatius before him, appeals to Christ's birth of Mary: 'Human then, by nature, was that which was from Mary according to the holy Scriptures, and true was the body of the Lord. True it was, since it was the same with ours. For Mary was our sister, since we are all from Adam' (*Ep. lix. 'ad Epict.' 2*).

In like manner, Gregory of Nyssa, 'Have any of ourselves dared to say "Mother of Man" of that most holy Virgin the Mother of God?' (*Ep. xix.*); and Ambrose, 'Talis decet partus Deum' (*Hymn iv. 'de Adventu Domini'* [*PL* xvi. 1474]). Cyril of Jerusalem, with equal force, uses Christ's birth of Mary as demonstrating the companion truth of His real manhood.

'Believe that [this Only-Begotten Son of God . . . was begotten of the holy Virgin by the Holy Ghost, and was made Man, not in seeming and mere show, but in truth; nor yet by passing through a channel, but truly of her made flesh. . . . If the Incarnation was a phantom, salvation is a phantom too' (*Cat. Lect. iv. 9*).

All the heresies, we may say, of this period were, in one form or another, denials of the Incarnation; they all fixed men's thoughts on the question propounded by our Lord Himself, 'What think ye of the Christ? whose son is he?' (Mt 22⁴²). It was impossible for the Church to refute any of them without speaking, as of God His Father, so of the Virgin Mary His Mother—to reply to Macedonianism, with its denial of the Godhead of the Holy Ghost who overshadowed her (Lk 1³⁵); to Apollinarianism, which, refusing to Christ a human soul, cut off from His sacred heart its thousandfold return of her love; and then to Nestorianism, which, dissolving the unity of Christ's Person, by one and the same stroke reduced the Saviour from being Himself the Word incarnate to a man in close association with the Word, and made Mary the mother only of a human infant. All these errors helped to burn in upon the mind of the Christians of that age the truth which E. B. Pusey tells us so

'startled him in his young days when first it flashed upon him that it must be true, that one of our nature, which is the last and lowest of God's rational creation was raised to a nearness to Almighty God above all the choirs of angels. . . . Yet it was self-evident, as soon as stated, that she of whom Christ deigned to take His human flesh was brought to a nearness to Himself above all created beings; that she stood single and alone in all creation or all possible creations, in that in her womb He who in His Godhead is consubstantial with the Father, deigned, as to His Human Body, to become consubstantial with her' (*Etrenicon*, ii. 24).

It is no creature-worship; it is the sense of this tremendous fact brought home to a heart inflamed with the love of the Incarnate Son that explains at once the profound solemnity of Cyril's Letter to Nestorius and the splendid eloquence of Proclus's oration on the Virgin Mother. It is not that she is the mediator (there is no hint of such a thought); it is that He is God whom she bare, whom 'she alone inexplicably housed.' Nor need we fancy (with the writer on 'Mary' in *EB*¹¹) that it was the Nicene 'solution of the Arian controversy, however correct it may have been theoretically,' that 'undoubtedly had the practical effect of relegating the God-man redeemer for ordinary minds into a far away region of "remote and awful Godhead," so that the need for a mediator to deal with the very Mediator could not fail to be felt' (*EB*¹¹ xvii. 812f.). As a matter of fact, it was the complete manhood of our Lord that the Church in the next succeeding controversies (Monophysite and Monothelite) triumphantly asserted, while at the same time carefully retaining the condemnation of Nestorianism. Indeed it has been observed that it is in the creed of Chalcedon, and not in the canons of Ephesus, that the term *θεοτόκος* occurs. With all the honour that they gave to her, the Fathers of this age never forgot that, if she ministered to our salvation by becoming, on and through her faith, the Mother of our Redeemer, it was through her faith in Him that she herself was saved. The great titles bestowed upon her by the Fathers relate to the fruits of the Incarnation.

'The flesh of the Virgin differs nothing from the flesh of sin; . . . but her body transmits it not to the Body of Christ, which she did not conceive through concupiscence' (Augustine, c. *Jul. Pelag.* v. 15).

And Pope Leo I. (in a passage still remaining in the Roman Breviary as one of the Lessons for Christmas Day) says that 'to [Christ's] birth alone the throes of human passion had not contributed.'

In entire consistency with this teaching of the great Fathers, we find that the worship of the Church in the conciliar period shows hardly a trace of any cult of the Virgin. There are indications that she was prayed for.

Thus in the Armenian Liturgy, 'We beseech thee that in this holy sacrifice remembrance be made of the mother of God the holy virgin Mary, and of John the baptist, of the proto-martyr Stephen, and of all the saints' (F. E. Brightman, *Liturgies Eastern and Western*, i. 440).

But she is not often mentioned. In the liturgy in the *Apostolic Constitutions* she is not even named; if she is referred to there at all, it is as included with others—'apostles, martyrs, virgins . . . whose names Thou knowest.' In other liturgical works of the period—e.g., the *Statutes of the Apostles* (Ethiop. c. 350)—there is no mention of any commemoration of the departed, nor is there in the Arabic and Saïdic versions of this book. The Eucharistic service in the *Testamentum Domini* gives thanks that the 'Word . . . was born of the Holy Ghost and the Virgin'; but its commemoration of the dead, 'Remember those who have fallen asleep in the faith, and grant us an inheritance with Thy saints,' names neither the Virgin nor any other saint. The *Pilgrimage of Silvia* also is silent concerning her, while the *Catechetical Lectures* (Lect. xxiii. on the Eucharistic service) of Cyril of Jerusalem, where we might have expected to find something, has only this:

'Then we commemorate also those who have fallen asleep before us, first Patriarchs, Prophets, Apostles, Martyrs, that at their intercessions God would receive our petition'—still no mention of Mary.

In the liturgy of the civil 'diocese' of Africa in the time of Augustine (A.D. 400) 'the only place where an invocation of the Virgin could have come in is in its commemoration of the saints and martyrs, but there is again no direct evidence that her name appeared' (*Ordo Rom. Primus*, App. iv.). Of Basil his latest editor says:

'Of any cultus of the Virgin, St. Basil's writings shew no trace.' Even Letter CCCLX, which bears obvious marks of spuriousness, and of proceeding from a later age, does not go beyond a recognition of the Blessed Virgin as Θεοτόκος, in which the Catholic Church is agreed, and a general invocation of the apostles, prophets, and martyrs, the Virgin not being set above these' (Blomfield Jackson, *Prolegomena to 'St. Basil, Nicene and Post-Nicene Fathers*, viii. [1895] p. lxxiii). The passage runs: 'I invoke them to supplication to God, that through them, that is through their mediation, the merciful God may be propitious to me.'

That the departed saints, now 'with Christ' (Ph 1²), do pray for us is an obvious conclusion from their perfected love; it has some sanction in the NT (Rev 6¹⁰); it is argued for on this ground by Origen (*de Orat.* 31), Eusebius (*de Martyr. Palest.* v.), and Jerome (*Ep.* lx.); and it was an easy transition to ask God that their intercessions might be heard for us; but 'Omniscience alone can hear the cry of every human heart, and Omnipotence alone can deliver everywhere,' and it was quite another thing to credit any saint, however highly exalted, with powers or prerogatives of this extent. Not so did the Fathers of the Church and the holy martyrs pray. Cardinal Newman admitted that no prayer to the blessed Virgin is to be found in the voluminous works of St. Augustine. And when, late in the 4th cent., we do find cases of direct invocation of this or that individual saint, it is in private prayer, and in regard to some more restricted matter in which that saint had been interested when on earth and might be presumed to be interested still. Of this limited sort was the prayer of Justina, mentioned with incidental approval by Gregory Nazianzen (*Orat.* xxiv. 11), 'imploping Mary the Virgin to come to the aid of a virgin in danger.' St. Mary

had already been thought of as the 'virgin of virgins'—the leader of those virgin bands to whom, next to the martyrs, the Church felt that she owed a special debt. The martyrs were her witnesses to Christian truth; her virgins the conspicuous exponents of Christian purity. Virginity, be it remembered, had been praised—though not enforced—by our Saviour Himself (Mt 19¹²), and by St. Paul (1 Co 7³⁷); under the pagan persecutions the virgin martyrs had won a twofold triumph; and when, on Constantine's conversion, pagan sensuality proved a menace no less formidable to morals than heresy to doctrine, virginity, organized into monasticism, became more and more alike the expression and the shield of this side of Christian virtue. Athanasius found the monks and virgins of Egypt of the greatest use to him in his contest with Arianism. He introduced monasticism at Rome; Ambrose and Martin carried it respectively to Cisalpine and Transalpine Gaul; through the latter, the trainer of missionaries, it spread over the Celtic West. Jerome carried it to Palestine; Basil was its protagonist through Asia Minor. Virginity and monasticism, no less than orthodoxy, turned the thoughts of the faithful very much towards St. Mary. If orthodoxy found, as we have seen, that Christ's birth of her was a witness at once of His Godhead and His manhood, so did monasticism boast of her as the crown of virgins. If orthodoxy called forth the panegyrics on Mary by Proclus and Cyril of Alexandria, the thought of her virginity led even more directly to her being regarded as a patroness.

It is while consoling the votaries of the virgin life that Augustine reminds them how 'the Birth from the one holy Virgin is the glory of all holy virgins: they, too, are mothers of Christ if they do the will of His Father' (*de Sanct. Virg.* v.).

Thus, too, Jerome:

'Therefore the virgin Christ and the Virgin Mary have dedicated in themselves the fruits of the virginity of both sexes' (*Ep.* xlviii. 'ad Pam.' 21);

and Gregory of Nyssa:

'What happened in the stainless Mary when the fulness of the Godhead which was in Christ shone out through her, that happens in every soul that leads by rule the virgin life. No longer, indeed, does the Master come with bodily presence, . . . but, spiritually, He dwells in us and brings His Father with Him' (*de Virg.* ii.).¹

4. During the mediæval period.—For the purposes of this article, this period may be dated from the extinction of the Western Empire by Odoacer (A.D. 476) to the close of the Council of Trent (1563). Throughout this period Christianity runs in an Eastern and a Western stream; but, in spite of their divergence, there took place in both a remarkable development in the cult of the Virgin. It came to a head more early in the East. There, where the chief heresies concerning the Trinity and Incarnation had arisen, and where theological speculation was more congenial to the public taste, new forms of error on these subjects were constantly springing up, and to all these the orthodox found a complete answer in the Scripture records of our Saviour's birth of a Virgin Mother. His Virgin-birth witnessed alike the reality of both His natures and the unity of His Person; it hallowed monasticism; it rebuked the impieties first of the iconoclasts and then of the Muhammadans, while the calamities which afflicted and cut short, if they did not, till A.D. 1453, destroy, the empire in the East, were at least sufficient to impress all Christians who remained, or had been, its subjects with awestruck thoughts of Christ as the Judge of men. They remembered how, in the days of His flesh, the good centurion had, unrebuked, deemed himself not worthy to come to Christ direct (Lk 7⁷), but had besought Him through the elders of the

¹ W. M. Ramsay argues that so early as the 5th cent. the honour paid to the Virgin Mary at Ephesus was the recrudescence in a baptized form of the old pagan Anatolian worship of the Virgin Mother (*Pausanias and other Studies*, p. 128).

Jews. How much more, then, might they, sin-burdened, approach Him through the prayers of His spotless Mother? The 'Theologian' among the orthodox divines (Gregory Nazianzen) had, as we have seen, approved of Justina asking her help; why might not Justinian ask her advocacy for his Christian empire, and Narses look for her direction on the field of battle, and Heraclius bear her image on his banner, and Simeon Stylites, in his post-communion thanksgiving, invoke as supplicants 'all the saints . . . and with them Thy most holy Mother, . . . receive their prayers, O Christ?' (*Euchology of Orthodox Church*, tr. G. V. Shann, Kilderminster, 1891, p. 257 f.). So strong was the current of feeling that even the great liturgies, already venerable, received interpolations to express it. In some of these we can see the process going on. Thus in the Liturgy of St. Mark (Alexandrian), though originally St. Mary was simply included in the prayer that God would give rest to all the holy dead, now she is mentioned by name, 'especially the most holy, stainless, blessed, our Lady, Mother of God, and ever-Virgin,' and the sequence of thought, which still shows that she is prayed for, is interrupted by a salutation, 'Hail, thou that art full of grace . . . because thou didst bring forth the Saviour of the world.' So in St. James, the parent of all the Syrian liturgies, she had originally simply been commemorated, but now it is added 'that we may obtain mercy through their prayers and intercessions'; and in the Anaphora there is interpolated, not only the angelic salutation, but a long quotation from Proclus's glowing panegyric (Neale and Littledale, *Liturgies*, p. 54). The alteration is very naively made in the liturgy of the Coptic Jacobites:

'To our fathers and our brethren who are fallen asleep . . . give rest, remembering all saints . . . and most chiefly . . . the holy theotokos Mary. . . . Not that we are worthy to intercede for their blessedness . . . but . . . that standing before the tribunal of thine onlybegotten Son they may in recompense intercede for our poverty and weakness' (Brightman, i. 169).

In the Armenian Liturgy St. Mary's name remains in the Great Intercession:

'We beseech thee that in this holy sacrifice remembrance be made of the mother of God the holy virgin Mary, and of John the baptist, of the protomartyr Stephen and of all the saints' (ib. p. 440). But at an earlier stage the Deacon bids the worshippers 'make the holy mother of God and all the saints' their 'intercessors with the Father' (ib. p. 415).

The two liturgies remaining in use among the orthodox Greeks are those of Chrysostom and Basil, and are more moderate.

The latter merely mentions her in the Eucharistic Thanksgiving for Christ 'born of a woman, the holy Mother of God, ever-Virgin'; and prays that God 'would unite all of us who are partakers of the one Bread . . . that we may find mercy with all Thy saints . . . especially our all-holy, immaculate, supremely blessed glorious Lady, the Mother of God, and Ever-Virgin Mary' (ib. pp. 326, 330 f.).

It is not impossible, in view of Basil's own writings, that even the last is an interpolation. The liturgy called Chrysostom's is fuller on St. Mary:

The Prayer of the Trisagion closes 'through the intercessions of the Holy Mother of God and all the Saints'; but, again, it prays for her: 'We offer to Thee this reasonable service on behalf of those who have departed in the faith . . . Apostles . . . Virgins . . . especially the most holy, undefiled, excellently laudable, glorious Lady, the Mother of God, and Ever-Virgin Mary' (ib. pp. 314, 331).

When, however, we turn to the less august and more popular of the authorized devotions of the Greek Church, we find her invoked in the most direct manner:

'O most holy Mother of God, light of my darkened soul, my hope, protection, refuge. I thank thee that thou hast enabled me to be a partaker of the . . . Body and . . . Blood of Thy dear Son. Enlighten the eyes of my heart . . . quicken me . . . give me tears of repentance and thanksgiving' (*Euchology*). In the *Book of Needs*, the 'Prayerful Canon at the Departure of a Soul' teaches the dying man to cry to her:

'Known refuge of the sinful and the low, make known to me thy mercy, O thou pure one, and set me free from the hands of demons, which come about me like dogs.'

It must be admitted that such prayers are but inferences, not unnatural, from the deliberate teaching of the latest, and henceforth the most influential in the East, of the Greek Fathers, John of Damascus, that Mary is the sovereign Lady to whom the whole creation is made subject by her Son—implying, of course, that, over and above her office in the Incarnation, she is herself, through His gift, a direct giver of help to such as may seek it at her hands. It should be added that the Feast of her (not of Christ's) Presentation in the Temple (the story is from *Protev. Jac.*) originated in the East in the 8th cent., and was not adopted in the West till the 15th. See art. IMMACULATE CONCEPTION.

The Western Church, too, was to find through many ages the practical value of monasticism, and to carry the doctrine of celibacy to further lengths than its Eastern sister. It, too, was to have experience of errors (such as the 8th cent. Adoptionism) which, disparaging the Saviour, disparaged her also. In Spain, Hungary, and the two Sicilies, as well as through the Crusades and Algerian piracy, it was to come into painful contact with Islam. In the West too, therefore, the reaction from those errors contributed its impetus to every movement in the Virgin's honour, while manifold oppressions of the poor turned them naturally to the thought of her as the Mother of Pity, and the chivalry of the knight made her the Lady of his orisons. But the development of her cult was slow in the West. In Adamnan and Bede it is hardly perceptible; in the *Life of St. Columba* she is not mentioned.

In Bede's *HE*, St. Wilfred has a vision of St. Michael telling him, 'the Lord has granted you life, through the prayers of your disciples, and the intercession of His Blessed Mother Mary of perpetual virginity' (v. 19), and the Hymn concerning St. Ethelreda sings how 'over the Virgin Mother a shining virgin band rejoices'; and how 'her honour has made many virgin blossoms to spring forth' (iv. 20).

At Rome in the pope's (8th cent.) mass on Easter-day at the Basilica of St. Mary Major, the only mentions of her are those (1) in the Great Intercession:

'Venerating the memory first of the glorious ever-Virgin Mary, Mother of the same our God and Lord Jesus Christ; and also of Thy blessed apostles and martyrs . . . and all Thy saints; by whose merits and prayers do Thou grant that in all things we may be defended by the help of Thy protection; through the same Christ, our Lord';

and (2) in the Post-Communion:

'Deliver us, O Lord . . . and at the intercession for us of the blessed and glorious and ever-Virgin Mary, the Theotokos, and of Thy blessed apostles . . . and of all saints, graciously give peace in our days . . . through our Lord . . . There is no direct invocation of her, nor prayer to her (*Ordo Rom. Primus*, App. 3);

nor, indeed, is there anything more in the Canon of the Roman Mass to the present day, though in the *Proprium Missarum de tempore* this 'collect of S. Mary' is said on all Sundays in Advent:

'God, who willedest that Thy Word should take Flesh from the womb of the Blessed Virgin Mary, grant that we who believe her to be in truth the Mother of God may by her intercessions be helped before Thee.'

But neither is this, nor the *Secreta de S. Maria*, nor the *Post-Communio de S. Maria* a prayer to her; the last was indeed adopted in the English Book of Common Prayer as the collect for the Annunciation. The confession of sins in the Mass made 'to Almighty God, to the Blessed Mary, ever-Virgin . . . and to all saints,' is held to be but a recognition of the fact taught us by St. Paul, that the whole body of the Church (from which death does not separate the saints [Ro 8³⁵]) suffers with the suffering of every member (1 Co 12²⁶); and, inasmuch as, in like manner, the honour of Christ the Head is the honour of all His members, it cannot be wrong, it is thought, to ask, as is done in the prayer 'Suscipe sancta Trinitas,' that our memorial of Christ's Passion, Resurrection, and Ascension may redound to the honour of Mary and all saints, as well as to the salvation of all for

6. The divine mask. — The shaman of N.W. America, e.g., among the Makahs, has one mask for each of his familiar spirits. When giving a séance, he puts on a mask and summons the spirit with his rattle.¹ The Eskimo shamans, in making their masks, give expression to their ideas of the spirits represented. Here is a primitive source of creative plastic art. The shaman is said to be able to see through the animal-mask to the manlike face behind.² In the ritual of ancient Mexico the priest wore a mask representing the god.³ On the other hand, priests in Nigeria may not wear or touch a mask.⁴

From a similar point of view the protégé of a guardian spirit wears a mask, when dancing, to represent that spirit and identify himself with it.⁵ The Monumbo of New Guinea wear masks representing guardian spirits, when they appeal to them for help, fair weather, and the like, among the masks being those of kangaroos, dogs, and cassowaries. The masks, when made, are fumigated in order to 'put life into them.' They are treated with respect and addressed as if they were living persons.⁶ A man wears a mask representing his totem. This practice is common in N.W. America,⁷ and the belief is that the wearer becomes the totem-animal.

The image of a god may wear a mask; the Mexicans placed on the face of certain idols masks of a human face cut off from the skull and preserved. They also used elaborate masks with pyrites for the eyes, and obsidian and turquoise mosaic in bands across the face.⁸ The image of the goddess 'Our Mother' wore a two-faced mask, and her priest donned a replica of this.⁹

7. The death-mask. — In connexion with the dead the mask has been exploited along interesting lines, assisting among other things the art of portrait sculpture. Besides the practice of embalming or otherwise preserving the heads of dead friends or enemies, several peoples have made masks of these. One such has been mentioned as placed upon the face of a Mexican idol, and there is a fine example in the Christy collection in the British Museum. In New Britain and elsewhere in Melanesia and New Guinea, such masks (skull masks) were worn in sacred dances.¹⁰ The Mexicans also placed painted masks or masks of gold or turquoise mosaic on the faces of their dead kings.¹¹ The Aleuts covered the faces of their dead with masks.¹² The meaning of the last practice is obscure, but the Aleuts think that it is intended to protect the dead against the glances of evil spirits. Their practice of wearing masks in certain religious dances, so as not to behold the idol round which they revolve and whose glance means death, may be compared.¹³ Similarly, among the Guaymis of Panama, during the initiation of young men, the women who attend upon them wear masks.¹⁴ Basuto girls at puberty wear straw masks,¹⁵ and Lilloet girls (British Columbia) wear goat-skin masks at the same period.¹⁶ In Mexico, when the king was ill, the images of the gods were masked, possibly to prevent them from drawing away his

soul.¹ Some idea of disguising a person dangerous or in danger may be connected with the practice, and here the mask is merely a veil. In Siam and Cambodia masks of gold were placed on the faces of dead kings. The Shans have the same custom, using masks of silver or gold.² These cases and the next seem to touch upon the idea of a portrait. The Egyptian mummy had an artificial face forming part of the portrait superstructure over the corpse. Death-masks proper, of gold, silver, bronze, and terra-cotta, have been found in Mesopotamia, Phœnicia, the Crimea, Italy, France, the Danube valley, and Britain.³ The most conspicuous and complete examples are supplied by Mycenæ and Rome. In the famous shaft-graves opened at Mycenæ golden masks, 'clearly portraits,' were found, corresponding to men and children. Those at least of the latter, being of thin gold leaf, 'must have been moulded with the hand on the faces of the dead.' The masks of the men were of thicker plate, and had no eye-holes. 'The hands and feet of the children were also wrapt in gold leaf.'⁴ This suggests that the informing idea was similar to that of swathing the dead, painting the face, and otherwise decorating, while protecting, the corpse. The Roman *nobiles* kept wax portrait-masks of their ancestors in the *atrium*.⁵ The dead *nobilis* lay in state for seven days, during which the embalmer (*pollinctor*) took a mould of the face, which he then cast in wax, and painted with the natural colours. The mask was placed on the dead man's face, or, in case of putrefaction, on an effigy. After the burial the mask was hung in the *atrium*, possibly fixed on a bust, and under it was a *titulus* giving the name and exploits of the man represented. These *imagines* were connected by lines, giving the genealogical succession, and termed *stemma*. The *ius imaginum* gave a man the right of having his *imago* carried in the funeral train of a descendant. The remarkable custom was that a man was followed to his tomb by all his ancestors, their masks being worn by persons as similar as possible in stature and form, riding in chariots. Marcellus was attended by six hundred of his forefathers and kin. The *imagines* were crowned with laurel on feast days. By Pliny's time the wax masks were giving way to *clipeate imagines*, i.e. medallions of metal.⁶

Since Roman times the method of securing a portrait by taking a mould of the dead man's face has been continued in the case of great personages. This is the 'death-mask' of sculpture.

8. The dramatic mask. — The secret societies of N.W. America are, in contrast with those of Melanesia and Africa, chiefly concerned with dramatic representations. Their 'masonic' privileges are important, but they exercise little authority; in fact, these societies might be described as amateur dramatic clubs, with a religious setting like that of the mediæval gilds. Frazer describes the institution as 'a religious drama' like that of ancient Greece.⁷ Various purposes other than that of entertainment are fulfilled by the performances; various, too, are the characters represented, according to the constitution of the society, whether totemic or consecrated to guardian spirits or otherwise. But the essence of their

While Kant thus saw that hylozoism meant ruin to science in so far as it involves the calculability (by an intelligence higher than ours, though strictly finite like that imagined by Laplace) of all past and future states of the world from a sufficient knowledge of the position and motion of each of its mass-points at any given moment, modern upholders of the mind-stuff hypothesis, and of Haeckel's hylozoistic or pan-psychic theory, have not been so clear-sighted. They would retain materialism, for all intents and purposes, while changing its name. Qualitative monism is, indeed, in all its forms a position of unstable equilibrium; or, to change the metaphor, it is a half-way house (for temporary lodging) between materialism and spiritualism. And, as retreat upon materialism becomes more and more impossible, as hylozoism is seen to possess greater capacity to explain actuality than the doctrine of dead and absolutely inert matter, and as, finally, life means the power to act or change according to an internal principle, while only one such principle is known to us—i.e. thought, together with feeling, desire, and will, which depend upon it—it will doubtless come to be more and more plainly seen that the implications of natural science are not materialistic but spiritualistic.

F. R. TENNANT.

MATERIALISM (Chinese).—Chinese religion and philosophy have been declared by many writers to be materialistic; one of them¹ went even so far as to regard materialism as a special creed taking rank with Confucianism, Taoism, and Buddhism. This view implies a misconception of materialism: a philosopher who does not believe in a personal God, or who assigns to a Supreme Being a substantial body, is not a materialist. Materialism assumes matter to be the only basis of reality. This is 'cosmological materialism,' to be distinguished from 'ethical materialism,' which sees the aim of life in egotism, pleasure, and sensuality. Both are to be found in China, but they are not at the root of her great religious systems, although materialistic tendencies may be found occasionally. Nobody will seriously think of imputing materialism to the Buddhist faith, which teaches that the visible world is nothing but a semblance, a vision without any reality. Taoism takes a similar view-point: there exists nothing except Tao, the Absolute, a supernatural, incomprehensible entity. But how about Confucianism, which has often been described as materialistic?

Confucius himself owned to a 'benevolent agnosticism,' declining all metaphysical speculations, but was not averse to popular beliefs and customs. To a disciple asking him about death he replied, 'While you do not know life, how can you know about death?' and on another occasion he made the remark, 'Show respect to the spirits, but keep aloof from them.'² He believed in a superior being which he called Heaven, but never used the personal name God—a fact by which he laid himself open to the charge of atheism. Probably he had no clear notion of heaven, but certainly he did not conceive it as an anthropomorphic god. Still more than Confucius himself his followers, especially the philosophers of the Sung period (12th cent. A.D.), have been denounced as materialists, but unjustly. The system of Chu Hsi, the head of this school, is a pure dualism. He recognizes two principles, matter and reason, and to the latter

even concedes priority. Out of their combination the world was evolved. Matter splits into the five elements (metal, wood, water, fire, and earth); reason is the life- and mind-producing element, which also contains the virtues (benevolence, righteousness, propriety, and knowledge).

Another kind of dualism savouring much of materialism was in vogue in ancient China, and seems to have been the starting-point of Chu Hsi's philosophy. At the earlier stages of civilization religion, philosophy, and sciences are usually not yet separated. So it was in China, where we meet with the dualistic theory of *yin* and *yang* in Confucian as well as in Taoist works. It was the first germ of a natural philosophy universally accepted by the Chinese irrespective of their religious convictions or philosophic ideas. In the commentary to the *Yi King* ascribed to Tse-sse, the grandson of Confucius (5th cent. B.C.), we read that the origin of existence is due to the cosmic dual forces *yin* and *yang*; *yang* is the bright, male, generative principle, *yin* the dark, female, and receptive power; *yang* forms the heaven, *yin* the earth. Most Chinese critics look upon these principles as material substances—an interpretation open to doubt. But we have another testimony by the Taoist writer Lieh-tse of the same time, showing that he at least considered the *yin* and the *yang* to be substances. The evolution theory, though not quite scientific, reminds us of that of modern naturalists.

'The sages of old held that the Yang and the Yin govern heaven and earth. Now, form being born out of the formless, from what do heaven and earth take their origin? It is said: There was a great evolution, a great inception, a great beginning, and a great homogeneity. During the great evolution, Vapours were still imperceptible, in the great inception Vapours originate, in the great beginning Forms appear, and during the great homogeneity Substances are produced. The pure and light matter becomes the heaven above, the turbid and heavy matter forms the earth below' (Lieh-tse, i. 27).

No divine being intervenes in the creation of the world, and yet we are not justified in calling Lieh-tse a materialist, for, notwithstanding this materialistic theory, the highest principle remains Tao, a spiritual being which alone is endowed with reality; the world with all its changes is imaginary.

At an early age the Chinese had further developed this dualistic theory of *yin* and *yang* by enlarging on the working of the five elements which were conceived as physical and as metaphysical essences as well. They were believed to predominate and vanquish one another in regular turns, thus bringing about the four seasons: in spring the element wood reigns supreme, in summer fire, in autumn metal, and in winter water; to earth there is no corresponding season. The elements have their seat in different directions: wood in the east, fire in the south, earth in the centre, metal in the west, and water in the north. They are ruled by five deities, the genii of the seasons and the four quarters.

Whereas this attempt at natural philosophy is nothing but a medley of heterogeneous, more or less fanciful, thoughts, the old dualistic theory was transformed into a consistent materialistic system by the sceptic Wang Ch'ung (1st cent. A.D.). From various utterances it would appear that he thought of *yang* as a fiery and of *yin* as a watery element. The former produced the sun, the moon, and the other stars of heaven, while from water and its sediments earth, the oceans, and the atmosphere were developed. Both fluids are in constant motion, but their movement is not governed by any intelligence or subservient to the purpose of any *spiritus rector*; it is spontaneous and regulated solely by its own inherent natural laws; heaven and earth do not act on purpose, nor are they endowed with consciousness. Wang Ch'ung rejects all anthropomorphisms which have clustered

¹ H. A. Giles, *Religions of Ancient China*.

² *Analects*, xi. 11, vi. 20.

round the idea of heaven or God. The human body is formed of the two fluids, the *yin* producing the body, and the *yang* the vital spirit and the mind. At death they again disperse, the *yang*, or heavenly fluid, returning to its original state of unconsciousness. Consequently there can be no immortality, which Chu Hsi likewise disclaims.

Wang Chung's materialism has not had any serious influence on the Chinese people, not because they had a horror of materialism, as many Westerners have, but owing to Wang Chung's bold criticisms on the national sages, Confucius and Mencius, which they have never condoned. So far as we know, Wang Chung is the only Chinese thinker who set forth a scientific system of cosmological materialism.

Already in the 4th cent. B.C. ethical materialism found an advocate in Yang Chu, the philosopher of egoism and pessimism. He maintains that in human life happiness is far exceeded by misfortune, and that this is the result of the badness of the world and of men's own doing. The practice of virtue is of no avail, because in this world the wicked thrive, and the virtuous are visited with disasters. Therefore men ought not to harass themselves in striving after unattainable or useless aims such as wealth, honour, or fame, or sacrifice themselves for others, but should enjoy their short span and be satisfied with the good that they have, for with death everything ends. In consequence of the vehement impeachments of Mencius this doctrine has never got a hold on the Chinese mind.

Both Yang Chu and Wang Chung have been long buried in oblivion, until they were redeemed from it by the congenial interest of foreign admirers.

MATERIALISM (Indian).—I. We possess several comparatively modern works which set forth the various philosophic systems of India—e.g., *Summary of all the Systems*,¹ and *Reunion of the Six Systems*.² The systems are arranged in the order of their increasing orthodoxy, from the author's point of view: the first, for which, as we shall see, materialism is a suitable name, is the worst of all, and the only one which is expressly in contradiction with the general conception of Indian philosophy and mysticism.

In more ancient sources—in the *Mahābhārata*, on the one side, and in the Buddhist scriptures, canonical or scholastic, on the other—we find data concerning this materialistic system which are scanty but generally in agreement.³

As regards the sources that would give us direct

¹ Skr. text, ed. Calcutta, 1858, and Poona, 1906; *The Sarva-darśana-saṅgraha, or Review of the different Systems of Hindu Philosophy*, by Mādhavāchārya (A.D. 1831), tr. E. B. Cowell and A. E. Gough, London, 1882; Germ. tr. (which owes much to Cowell's work, but does not mention it) in F. Deussen, *Allgemeine Geschichte der Philosophie*, i. iii. (Leipzig, 1908).

² *Saddarśanasamuchchaya*, by Haribhadra († A.D. 528), ed. L. Sual, Calcutta, 1905 (the chapter which interests us has been translated into French by L. Sual, in *Museon*, ix. [1908] 277 ff.); among the other 'modern' sources is the *Prabodhachandradāya*, xcvii. 78 (11th cent.).

³ For the *Mahābhārata* see E. W. Hopkins, *The Great Epic of India*, New York, 1901; and the works on materialism cited in the bibliography; *Bhagavad-Gītā*, xvi. 6 (tr. L. D. Barnett, Temple Classics Series, London, 1905, p. 158).

information about the materialist school only a few citations can be brought forward, and their authenticity is not certain.¹

We are not convinced that a materialistic 'school,' a 'system,' in the exact sense of the word, existed. There have been 'materialists' who have entertained some very well-defined theories, to whom the 'spiritualists,' whether Brāhmins, Buddhists, or Jains, give different names, and whose opinions are, perhaps artificially, grouped in the works of which we have spoken.

The most characteristic name is Nāstikas, literally 'deniers,' 'misbelievers,' those who say *na asti*, *oṃk śruti*.² The most famous are (a) Chārvākas (difficult to interpret; Chārvāka is said to be the founder of the sect; he is undoubtedly the demoniac ogre spoken of in the *Mahābhārata*);³ (b) Lokāyatas, 'worldly,' 'spread throughout the world' (a term which, according to T. W. Rhys Davids, denotes primarily the knowledge of nature-lore, and whose adherents are said to be the 'explainers of [the genesis of] the world'); and (c) Bārhaspatyas, 'disciples of Brhaspati' (the chaplain of the Vedic gods and the lord of wisdom).

2. In the Buddhist *Suttas* the doctrine of materialism is attributed to 'Ajita of the garment of hair,' one of the scholars and famous ascetics of the time of Buddha. He said:

'There is no such thing as alms or sacrifice or offering. There is neither fruit nor result of good and evil deeds. There is no such thing as this world or the next. There is neither father nor mother, nor beings springing into life without them. There are in the world no recluses or Brāhmins . . . who, having understood and realised, by themselves alone, both this world and the next, make their wisdom known to others. A human being is built up of the four elements. When he dies, the earthy in him returns and relapses to the earth, the fluid to the water, the heat to the fire, the windy to the air, and his faculties [= the five senses, and the mind as a sixth] pass into space [or ether]. The four bearers, on the bier as a fifth, take his dead body away; till they reach the burning-ground men utter forth eulogies, but there his bones are bleached, and his offerings end in ashes. It is a doctrine of fools, this talk of gifts. It is an empty lie, mere idle talk, when men say there is profit therein. Fools and wise alike, on the dissolution of the body, are cut off, annihilated, and after death they are not.'⁴

It will be seen (1) that these formulæ show a really authentic character. They are quite independent of Buddhism, for the Buddhists do not believe much more than Ajita in the use of sacrifice and offering. Perhaps they come from the Agnikas or Jafilas (ascetics who give burnt offerings, who have braided hair), who entered in large numbers

¹ Citations in the 'summaries' mentioned in notes 1 and 2 on previous col.; and also in the Buddhist sources (see p. 494, n. 4).

² *Maitri Upaniṣad*, Mann, *Mahābhārata*; the name originally extended to all kinds of sceptics, deniers of the Vedic gods, or of the Brāhmanic laws (see below).

³ See O. Böhtlingk and E. Roth, *Sanskrit-Wörterbuch*, Petrograd, 1855-75, ii. 997.

⁴ See Rhys Davids, *Dialogues of the Buddha*, i. (Oxford, 1899) 14, 110, 182, 166. O. Bendall (*Athenaeum*, 30th June 1900) rightly remarks that Rhys Davids is wrong in saying: 'Of the real existence of a school of philosophy that called itself by the name [Lokāyata] there is no trace.' The traces are numerous. See also art. *LOKĀYATA*.

⁵ *Dīgha Nikāya*, i. 65; *Saṃyutta Nikāya*, iii. 307; *Majjhima Nikāya*, i. 615, and also in the Sanskrit sources. This passage has often been translated. The version reproduced above is that of Rhys Davids, *Dialogues of the Buddha*, i. 78. Attention should be drawn to those of E. Burnout (*Le Lotus de la bonne loi*, Paris, 1852), P. Grimbolt (*Sept Suttas pālis*, do. 1876), and E. O. Franke (*Dīghanikāya in Auswahl übersetzt*, Göttingen, 1918). The sacred writings of the Jains contain the same evidence, and confirm the Buddhist tradition (see H. Jacobi, *Jaina Sūtras*, ii. pp. xxiii, 339, 343; *SBH* xiv. [1896]).

A more complete study would describe the opinions of Pūraṇa Kassapa, another materialist contemporary with Buddha (*Dīgha*, i. 62), who denies responsibility, and teaches what is called the 'theory of non-action': 'If with a discus with an edge sharp as a razor he should make all living creatures on the earth one heap, one mass of flesh, there would be no guilt thence resulting, no increase of guilt would ensue'; and the opinions of Makkhali, who denies liberty: 'There is no such thing as power or energy, or human strength or human vigour. . . . Beings are bent this way and that by their fate, by their individual nature,' and comes very near the well-known point of view of the *Mahābhārata*, namely, the omnipotence of fate (*datva*) and the weakness of human activity (*puruṣakāra*). It was Buddha who said that fate (*datva*) is only the sum of our former actions.

sidered as the due subordination of the working classes. The 'respectable' press, secular and religious, fulminated against Maurice, and at length the Council of King's College appointed a committee to investigate the matter. But there was nothing in the Christian Socialism of Maurice inconsistent with his duties or his position as a Divinity professor.

The attack was then shifted from charges of socialism to charges of theological heresy. In 1853 Maurice published the volume called *Theological Essays*. On most points the new book was only reiterating and expanding views previously expressed; but it made clearer the author's divergence from traditional and conventional theology, especially on the subject of eternal death. He maintained, in effect, that 'eternal' means spiritual. Knowledge of God, love, truth, and the like are eternal life. Eternal death is not a matter of time or place, but of spiritual separation from the divine. The locality and duration of future punishment were matters outside Maurice's message, and he seems to have believed that it was also outside the message of the Bible and of the Anglican formularies. The religious world felt that much of the book was fatal to what passed as Christianity, but it was expressed in such orthodox language that it was difficult to see how Maurice could be convicted of heresy. He must, therefore, be ejected from his professorship without the formulation of any specific charges. The Council of King's College refused to adopt Gladstone's suggestion that Maurice's writings should be submitted to theological experts; and they compelled him to resign. The responsibility for their decision cannot be laid on any one party in the Church. It represented the view of the High, the Low, and the Moderate. Some High Churchmen had been at first attracted by the fervid sacramentalism of Maurice; but they soon came to suspect that his meaning was something very different from theirs. At length Pusey declared that Maurice and he were not worshipping the same God. Low Churchmen were even more disgusted with books full of intensely Evangelical sentences, which were yet fundamentally opposed to their whole scheme of salvation, their doctrine of the Fall and of the Atonement, and of the doom awaiting those who did not accept the Evangelical tenets. Broad Churchmen alone protested against the expulsion, and even they were puzzled as to how one who was so much in agreement with their hostility to the prevalent doctrines of the religious world could yet enthusiastically accept much that seemed to them superstitious and out of date. Nevertheless, the Broad Churchmen stood by Maurice, though he vigorously repudiated Broad Churchmanship. The Evangelicalism of Wilberforce and Simeon and the Anglo-Catholicism of Keble and Newman were the dominant forces in the religious world. Maurice had learned much from both. But at bottom he was opposed to both powerful parties, and few were disposed to forgive this attitude, in consideration of his enthusiastic support of some at least of their cherished principles.

Time has revolutionized the situation. At present many of the best High and Low Churchmen speak with grateful reverence of Maurice, and appear to ignore the great gulf which separates his views from their own. The fervent sincerity and piety of the *Theological Essays* are unmistakable, though to most readers much of the book seems tantalizing and obscure. More popular are *The Prophets and Kings of the Old Testament* (1853) and *The Patriarchs and Lawgivers of the Old Testament* (1855). Maurice meant by revelation a literal unveiling of truth, and especially of God's character, by a direct intercourse of the divine with the human. God literally spoke to the hearts of the

old heroes, and He speaks no less directly to men's hearts in all ages. This conviction attracted Maurice especially to the Johannine books, on all five of which he wrote valuable commentaries, in which, however, he almost ignored what Higher Criticism had to say. His attitude towards the Bible was in some respects vague. Without claiming for it infallibility, he was pained by any criticism of its contents, and disposed to re-interpret rather than reject. He would not join in the outcry against Colenso and *Essays and Reviews*; but he disliked the critical spirit, and had little sympathy with plain speaking which hurt pious souls, except when it was in defence of some spiritual truth. Nevertheless, he was always ready to scandalize the religious world in cases where the traditional views seemed to him profoundly irreligious. Thus Mansel's *Bampton Lectures* (1858) practically declared that man could have no knowledge of God, except what was given him by the Bible. Such orthodox agnosticism was horrible to one who believed in a Light that lightens every man. Mansel taught, in effect, that men had no right to assume that words like 'fatherhood,' 'righteousness,' and 'justice' meant, when applied to God, all and more than what they imply in human relationships. To Maurice this seemed practically atheism; and in his book *What is Revelation?* (1859) he poured out the vials of his wrath upon the Bampton lecturer. There followed a very bitter controversy, in which Maurice for a time received little support. Gradually, however, the more spiritually-minded men of all classes rallied to his side.

Maurice's later years were spent in comparative quiet. The number of his actual disciples remained small, but his ideas spread, and the charm of his personality exercised a wide influence. It was also noticed that this mystic had proved singularly right in many of his ideas of practical reform. His Working Men's College and College for Women were imitated with more or less modification in numbers of institutions all over the country. His co-operative schemes, though unsuccessful, helped to pave the way for a great movement, conducted on less idealistic principles. Christian Socialism, under that or other names, became a great force; and meanwhile the more obnoxious features of the popular theology passed into the background, when they were not altogether dropped out of the conventional religion. Accordingly, though Maurice in books and sermons continually reiterated his old teaching, he aroused little fresh opposition. He continued to protest against popular doctrines, orthodox or liberal, but he had little to add to his old arguments. In 1866 he was appointed to the professorship of Casuistry, Moral Theology, and Moral Philosophy at Cambridge, and threw himself heartily into the duties of that position. Experts are divided as to the value of his contributions to metaphysics and to philosophy. For all departments of thought and life he claimed a theological basis, in a Father revealed in a Son through the operation of a Spirit, and witnessed to by a Catholic Church, with Bible and sacraments. Those to whom these things were either incredible or at least disconnected with philosophy and reason could regard him only as a somewhat muddle-headed mystic, however much they might reverence his character, learning, and ability.

LITERATURE.—Frederick Maurice, *The Life of Frederick Denison Maurice*, 2 vols., London, 1884, is an excellent compilation in which the editor has kept his own views and personality admirably in the background; shorter and more controversial, but adequate, biographies are given by C. F. G. Masterman (London, 1907) and W. E. Collins (do. 1902). See also T. Hughes, preface to Maurice's *Friendship of Books*, do. 1874; Leslie Stephen, art. 'Maurice,' in *DNB*, do. 1894; and the references to Maurice in J. McLeod Campbell, *Memorials*, do. 1877, and Caroline Fox, *Memories of Old Friends*, do. 1882.

J. E. SYMES.

MAY, MIDSUMMER.—Agricultural peoples throughout the world have established a ritual, more or less elaborate, about the critical periods of their common industry. This ritual, in effect, is the farmer's religion, and it may be considered the culmination of all pre-ethical animism, and its most important development prior to the great organized faiths. In the form of holiday customs its semblance survives abundantly throughout Europe, and probably not a little of its belief is latent underneath Christianity to-day.

We shall discuss its meaning below. This is perhaps less complex than has been supposed; but it is clear that the agricultural meaning is associated with the popular attitude towards the changes of the seasons, lunar and solar movements, and the growth and decay of vegetation in general. The calendar of this cult is that of the countryside, and this is even suggested by the three categories to which the terms May, midsummer, and harvest belong.

1. May.—The typical European celebration of May Day is well known. Trees, green branches, or garlands are carried round, and a King and Queen of May are appointed from among the young people. According to Mannhardt and Frazer, these objects and persons represent the tree-spirit or spirit of vegetation:

'The intention of these customs is to bring home to the village, and to each house, the blessings which the tree-spirit has in its power to bestow.'¹

They had 'originally a serious and, so to speak, sacramental significance; people really believed that the god of growth was present unseen in the bough. . . . The idea of the spirit of vegetation is blent with a personification of the season at which his powers are most strikingly manifested.'²

The custom of setting up a May Tree or May Pole has been widely spread in Europe. A typical case is that of Swabia; on the first day of May a fir-tree was brought to the village, decorated with ribbons, and set up, and the people then danced round it. It remained on the village-green till the next May Day, when a new tree took its place.³

At a later stage, at least in England, the May Pole was permanent, while in Bavaria it was renewed at arbitrary periods of three, four, or five years.

'When the meaning of the custom had been forgotten, and the May-tree was regarded simply as a centre for holiday merry-making, people saw no reason for felling a fresh tree every year and preferred to let the same tree stand permanently, only decking it with fresh flowers on May Day.'⁴

Instead of a tree or a branch, a branch decked with flowers, or simply garlands of flowers, are frequently employed. English children use two hoops of osier or hazel, crossing at right angles, and twine flowers round them; or a pole is carried with a bunch of flowers fixed on the top.⁵ In modern English folk-custom the essence of the May Pole is the long ribbons attached to the top; each of these is held by a child, and as they dance round the pole the ribbons twine round it, to be untwined when the dancers reverse.

The tree-spirit is often embodied in human form or in a living person. English children carry a doll in the garland, sometimes styled 'The Lady of the May.'⁶ In Alsace a little girl is selected to be the Little May Rose, and carries a small May Tree. The Russian Lithuanians crown the prettiest girl and address her 'O May! O May!' In Brie a boy is wrapped in leaves; he is styled 'Father May.' The 'Green George' of Carinthia and Rumania is a boy covered with green branches; at the end of the procession an effigy of him is flung into the water.⁷

Here is what Frazer terms the double or bilingual representation of the tree-spirit by a tree and doll

¹ GB³, pt. 1., *The Magic Art*, London, 1911, ii. 69.

or a living person.¹ Instances of the single representation by a living person are numerous, such as the Little Leaf Man of Thuringia, the English Jack-in-the-Green, usually a chimney-sweep, who wore a framework covered with ivy and holly, and the innumerable May Kings and May Queens.² These still, in many cases, remember to announce the coming of spring, as well as to wish the people good luck.

Often the symbolism is that of a wedded pair, king and queen, lord and lady, bridegroom and bride. Trees, Frazer notes, are sometimes married to each other.³ In some cases one party is a 'forsaken sleeper,' who is awakened by a kiss or the like. In a few cases there is an indirect representation of a marriage between the May couple.⁴ The folk-drama of the marriage of Zeus and Hera in ancient Greece may be similar to the above, and certainly that of the Queen to Dionysus was identical. According to Frazer, the principle is that marriage promotes fertility.

One aspect of these customs is that the symbolic figure is supposed to ensure fertility to women and cattle as well as to vegetation and the crops. This is brought out in German and English folk-custom. The European customs are certainly to be correlated with those of other peoples, whose definite object is to promote the growth of the young crops or of the seed. In N. Morocco, for instance, during May, or at any time in spring, the women engaged to weed fields make a doll. A villager mounted on a horse runs away with it. A regular pursuit follows, and, if a man from another village succeeds in carrying it home, the village where it was made must buy it back, usually with a feast. The doll is termed *Māta*, and is dressed up as a girl.⁵

Another element besides that of the spirit of vegetation is detected here by Westermarck.

'The doll *Māta* is obviously a personification of the wheat, its vital energy; she is regarded as the bride of the field, and the ceremony itself I have heard called "the wedding of the wheats." Considering how commonly violent movements, contests, and racing are found as rites of purification, I venture to believe that the ceremony of *Māta* is originally meant to serve a similar purpose, that it is essentially a magical means of cleaning the corn, which is added to the more realistic method employed by the women on the field. At the same time, however, there may also be an idea of distributing *baraka* over the fields by racing about with the doll. Sometimes a large wooden spoon is used for the frame of the doll.⁶

The two polar ideas of Moroccan magical belief are *l-bas*, evil magic, and *baraka*, holiness or good magic, each being a force or substance. The negative method of assisting the latter by first eliminating the former is conspicuous in Berber custom. But it would be futile to attempt to decide which method is the earlier; they are obviously complementary. A consideration to be adduced later may, however, have some significance here.

The negative aspect of agricultural ritual, viz. the imposition of tabu, has traces in European custom, especially in the prohibition of unlucky acts or times. Tabu is best exemplified, however, in lower cultures. The Dayaks of Borneo, for instance, consider the whole period of farming and all its operations to be subject to supernatural influences, while planting and harvest are especially critical times. The most elaborate tabus are imposed, and omens are constantly taken. Merriment and feasting follow the period of tabu.⁷

The Assamese prohibit a *genna* (communal tabu) at planting and harvest. The idea underlying the various restrictions is that men must not give time and attention to anything but the care of the crops.⁸

If the Christian Lent was developed out of a period of agricultural tabu, there is complete continuity between the old and new faiths.

The question of date may here be noticed. European folk-custom has a large body of similar ritual celebrated previously to and during Lent, such as the Death of the Carnival, the Burial of Shrove Tuesday, Carrying out Death, Sawing the Old Woman, followed by a dramatic advent of Spring, Summer, or Life.¹ The former generally are dated on Shrove Tuesday, sometimes at Mid-Lent, the latter sometimes follow immediately, or at a later date—the fourth Sunday in Lent, for instance—while in Russia similar ritual in both forms is celebrated in spring and at midsummer, and also on St. Peter's Day.² These dates suggest that the old agricultural calendar was altered to suit the ecclesiastical.

In the majority of these Lenten customs the tree or branch or doll or person is termed Summer or Summer-tree.

'The "customs" of bringing in the May and bringing in the Summer are essentially the same. . . . The Summer-tree must likewise be an embodiment of the tree-spirit or spirit of vegetation.'³

With regard to the representation of Death, more prominent in the 'Summer' (Lenten) ritual than in that of May Day, Frazer's view is that it is 'an embodiment of the tree-spirit or spirit of vegetation,' the Summer-tree being often a 'revivification of the effigy of Death.' The idea is 'the death and revival of the spirit of vegetation in spring.'⁴ There is also, as already noted, a natural identification of season or date with the spirit. The death is represented frequently by killing, and this may be connected with the idea of slaying the incarnate or embodied spirit while still vigorous, in order that its successor's vigour may be guaranteed.

Another feature of May ritual is the kindling of bonfires,⁵ though this is most conspicuous at Midsummer-tide.

The Beltane fires of Scotland were kindled on May Day as late as the 18th century. The traces of human sacrifices at them were particularly clear and unequivocal. The most significant example is that of the north-east of Scotland. Here the Beltane fires were lit not on the first but 'on the 2nd of May, O.S. They were called *bone-fires*. The belief was that on that evening and night the witches were abroad in all their force, casting ill on cattle and stealing cows' milk. To counteract their evil power pieces of the rowan-tree and woodbine, chiefly of rowan-tree, were placed over the byre doors, and fires were kindled by every farmer and cottar. Old thatch, or straw, or furze, or broom was piled up in a heap and set on fire a little after sunset. Some of those present kept constantly tossing up the blazing mass, and others seized portions of it on pitch-forks or poles, and ran hither and thither, holding them as high as they were able, while the younger portion, that assisted, danced round the fire or ran through the smoke, shouting, "Fire! blaze an burn the witches; fire! fire! burn the witches." In some districts a large round cake of oat or barley-meal was rolled through the ashes. When the material was burned up, the ashes were scattered far and wide, and all continued till quite dark to run through them still crying, "Fire! burn the witches."⁶

In Ireland, Sweden, and Bohemia bonfires were lighted on the first day of May; and in the last-named country the 'burning of the witches' is prominent.⁷

Bathing, washing the face with dew, and drenching effigies and mummers are common customs on May Day. The European May customs are also, among some peoples, celebrated at Whitsuntide. This date is especially marked in Russia, but also occurs in the Altmark, Bavaria, and other parts of Germany, Denmark, and Austria-Hungary. They are elsewhere celebrated at Midsummer, and on St. John's Eve or St. John's Day. One or two

¹ GB³, pt. iii., *The Dying God*, London, 1911, pp. 221 f., 232 f., 233 f., 240 f., 243 f.

⁵ GB³, pt. vii., *Balder the Beautiful*, i. 157, 159, pt. i., *The Magic Art*, ii. 36.

other dates are elsewhere found, cases apparently of arbitrary selection of a spring or summer critical day. The Swedes celebrate a minor form of the ritual on May Day, but are remarkable among European peoples for concentrating these customs upon Midsummer-tide, when May Pole, garlands, arbours, and jumping over bonfires are in great evidence.¹ It is curious that parts of Bohemia have the same date, while in Russia both Whitsun and Midsummer are celebrated similarly. The same ideas and practices are more or less equally applicable to May Day and Midsummer Day, but a Pyrenean custom suggests a special causal connexion. Here a tall tree is cut down on May Day and kept until Midsummer Eve, when it is ceremonially burned.²

Similarly there is a continuous connexion between the ritual and beliefs belonging to the whole trio of the critical periods, May, midsummer, and harvest. In Morocco the first day of summer (17th May) is the death of the earth, the first day of a new season, and the first day of harvest.³ It is quite natural that green trees and green branches should be most conspicuous on May Day, and corn sheaves and the like at harvest; the preponderance of bonfires at midsummer, however, is a curiously difficult problem, whether on the theory of the tree-spirit with its corollary of sun-charms or on that of purification and *baraka*.

2. Midsummer. — Turning now to the midsummer celebrations, we find that in Sweden May Poles are set up and decorated, and the people dance round them, and bonfires are lighted to be danced round and jumped over. In Bohemia the May Pole itself is burned.⁴

In Russia on St. John's Eve a figure of the mythical personage, Kupalo, is made of straw, and 'is dressed in woman's clothes, with a necklace and a floral crown. Then a tree is felled, and, after being decked with ribbons, is set up on some chosen spot. Near this tree, to which they give the name of Marena (Winter or Death), the straw figure is placed, together with a table, on which stand spirits and viands. Afterwards a bonfire is lit, and the young men and maidens jump over it in couples, carrying the figure with them. On the next day they strip the tree and the figure of their ornaments, and throw them both into a stream.'

In some parts of Russia the ceremony is accompanied by weeping and wailing for the destroyed effigy, or by a mock combat between those who attack and those who defend it.⁵ In Sardinia there is a ritual which seems to be a survival of the ancient Greek 'Gardens of Adonis.' The village swain proposes to a village girl early in spring. Then in May she sows in a pot a handful of corn, which is well grown by Midsummer Eve, when it is called *Erme* or *Nenneri*. On Midsummer Day the young couple go in a procession and break the pot against the church door. Feasting follows, and in some districts a bonfire is lighted, round which the people dance. A young couple who wish to be 'Sweethearts of St. John' clasp hands across the fire. The two 'gossips,' suggests Frazer, may correspond to the Lord and Lady of the May, and ultimately represent in flesh and blood the reproductive spirit of vegetation.⁶ In Morocco smouldering fires are made on Midsummer Day or the evening before.

'Men, women and children leap over them, believing that by doing so they rid themselves of the *bas* or evil, which may be clinging to them; the sick will be cured and married persons will have offspring. Nobody is hurt by the fire since there is *baraka* in it.'⁷

In the Moroccan custom the smoke is more

important than the blaze; the practical point is fumigation of men, cattle, trees, and various belongings.

It is also noteworthy that in Morocco at midsummer magic forces are supposed to be active in certain species of vegetation.¹ Fumigation by burning certain kinds of plants and the mere application of leaves and branches promote fertility, act as charms against the evil eye, and assist general well-being. There is also a custom of eating, in a quasi-sacramental manner, special foods, in which there is *baraka*.²

There is probably no corner of Europe in which it has not been the custom to kindle bonfires at Midsummer-tide. Besides the leaping through the fire, there are customs of throwing blazing disks through the air and of rolling burning wheels downhill.³ A certain sanctity, as in the need-fire ceremonies, attaches to the kindling of the fire in some instances. A frequent custom is that of making gigantic figures of wicker-work, which are paraded and then burned, these midsummer giants being apparently analogous to the May Kings in their leafy garb. There are also traces of burning animals alive.⁴

Frazer derives these customs of modern Europe, especially those of N. France, from the 'sacificial rites of the Celts of ancient Gaul,' as typified in the druidical sacrifices, and mythically in the death of Balder.⁵

Two main interpretations of these fire-rituals have been put forward. Mannhardt, originally followed by Frazer, explained them as sun-charms.⁶

At the 'great turning-point in the sun's career,' the summer solstice, primitive man 'fancied that he could help the sun in his seeming decline—could prop his falling steps and rekindle the sinking flame.'⁷

The wheel and disk are suggestive shapes. Frazer also noted the purificatory aspect of these customs.⁸ Fire is a cleanser, and is frequently used for the purpose, as in the need-fire. Westermarck emphasized this aspect.

'Their primary object in many or most cases is to serve as a protection against evil forces that are active at Midsummer.'

In the Moroccan customs cleansing by fumigation is the chief idea, although there is also the ascription of positive virtue to the smoke. Westermarck finds no evidence for the sun-charm theory.⁹ Later Frazer regarded the two views as being not mutually exclusive, but admitted the purificatory theory as being the more probable.¹⁰

Traces exist of what has been interpreted as human sacrifice by drowning on this date. Various similar customs have been interpreted as rain charms.¹¹ In Morocco, however, midsummer ceremonial bathing is connected with the idea of securing health by cleansing, and the same idea is attached to the European custom of rolling in dew.¹² Various kinds of divination, as is natural on special dates introductory of a new season (as midsummer is often regarded), are practised. Mock fights, tugs-of-war, games, and abuse of the ceremonial figure are common incidents. These have been interpreted as dramatic survivals of a ceremonial and magical representation of a struggle between good and evil influences, or designed to produce by homeopathic magic 'movement' in the weather or in the growth of the crops.¹³ Magic plants are gathered at midsummer

(see art. DEW); such are fern-bloom, fern-seed, mistletoe, and St. John's wort.¹

For the special harvest-rites see art. HARVEST.

3. Basis of agricultural rituals.—The general theory of agricultural ritual propounded by Frazer can be connected with such primitive magical rites as the Australian *intichiuma* for developing the growth of food-plants and animals. But in many European cases it seems that the main object is to purify the sphere in which the corn grows, and many rites are concerned not with a spirit of vegetation but with vaguely-imagined evils, often in the form of witches.² The burning or destruction of the tree-spirit is often a doubtful proposition. It is impossible to dogmatize on the origin and first intention of these agricultural rites, but it is necessary to bear in mind the possibility that beliefs in corn-spirits and the like, and even the magical practices themselves, may be late accretions upon some simple psychological and even utilitarian facts. There is also the sense of crisis, very strong in the primitive mind. Thus, psychic reactions in sympathy with the objects concerned might lead to dramatic, but unconscious, imitations—e.g., jumping to make the corn grow; in the same way imitative explanations might be made of such necessary processes as weed-burning. When established, these *ex post facto* explanations, magical, mythical, or theological, obviously tend to usurp precedence.

LITERATURE.—This is very extensive, but the main critical works are cited in the text. A. E. CRAWLEY.

MAYA.—*Māyā*, 'illusion, appearance,' is a term in the philosophy of the Vedānta applied to the illusion of the multiplicity of the empirical universe, produced by ignorance (*avidyā*), when in reality there is only One, the *brahman-ātman*. It is not till a somewhat late period that the word assumes the technical meaning of the cosmic illusion, although this development of its sense is not an unnatural one. The word *māyā* is not uncommon even in the Rīgveda, where it has the meanings 'supernatural power,' 'cunning,' 'mysterious will-power.' Sayana usually explains it by *prajñā*, 'mental power,' or *kapaṭa*, 'cunning,' 'guile,' 'deception.' Indra, e.g., is said to assume many forms *māyābhiḥ*, 'by magic wiles, or mysterious powers'; as the possessor of this power, he is called *māyin*.

[The use of the term in the Rīgveda has been thoroughly analyzed by A. Bergaigne (*Religion védique*, Paris, 1878-88, II. 80-88; cf. A. Hillebrandt, *Māyā*, *WZKM* xiii. [1899] 816-820). It, or such derivatives as *māyin*, *māyāvant*, is applied to the wiles of the demons conquered by Agni (v. ii. 9, etc.) and Sarasvatī (vi. lxi. 3), and especially by Indra, whether alone (i. xxxii. 4, etc.) or accompanied by Viṣṇu (vii. xix. 4). By overcoming the *māyā* of the demons Indra won the Soma (vii. xcvii. 5). Men of evil craftiness are *māyin* (i. xxxix. 2) or *dūrmāyū* (iii. xxx. 15); the sorceress uses *māyā* (vii. civ. 24); but the *māyin* cannot overcome 'the primal firm ordainments of the gods' (iii. lvi. 1). The *Asvins* conquer the *māyā* of the evil *Daśyū* (i. cxvii. 8).

On the other hand, the terms are applied to good deities. Through *māyā* Mitra and Varuṇa send rain and guard their law (v. lxiii. 8, 7); through *māyā* the sun-bird is adorned (x. cixxvii. 1). The Maruts employ it (v. lxiii. 6), and are *māyin* (v. lvi. 2), or *sumāyā* (i. lxxxviii. 1, etc.). *Māyā* is known to, or used by, *Trāṣṭr* (i. lili. 9), the *Adityas* (ii. xxvii. 16), and Varuṇa and Mitra (i. cli. 9, etc.); and it is a characteristic of Varuṇa (vi. lxviii. 14, etc.); while by it the Rbhus attained divine dignity (iii. lx. 1). It was also employed by Agni (iii. xxvii. 7) and Soma (ix. lxxxiii. 8), and in the former deity the *māyās* of the *māyins* are united (iii. xx. 3). It was a mark of the *Asvins* (v. lxxviii. 6, etc.), and even earthly sacrificers are *māyin* (ix. lxxiii. 8).

Through *māyā* Indra triumphs over the *māyin* demons (i. xi. 7, v. xxx. 6, etc.), and he 'has much *māyā*' (*gurumāyā*, vi. xviii. 12, etc.). Germs of the later development of the word are found in such passages as iii. lili. 8, where Indra 'assumes form after form, working *māyās* about his body,' and vi. lxvii. 18, where 'through *māyās* Indra goeth in many forms' (cf. also iii. xxxviii. 7). Sun and moon succeed each other in virtue of *māyā*

(x. lxxxv. 18), and *māyā* explains the double form of Pūṣan and Agni (vi. lvi. 1, x. lxxxviii. 6). Perhaps most significant of all is the passage x. liv. 2: 'When thou didst go, O Indra, waxing in body, speaking mighty things among folk, *māyā* was that which they called thy battles; neither now nor hitherto hast thou found a foe.'

In the Atharvaveda *māyā* was born from *māyā* (viii. ix. 5); it was milked from Virāḥ (on whom see Hillebrandt, *Ved. Myth.*, Breslau, 1891-1902, ii. 50-52, and Muir, *passim*), and on it the Asuras (demons) subsist (viii. x. 22). Luck in gambling is invoked by the aid of *māyā* (iv. xxxviii. 3); the black snake assumes wondrous forms (*capus*) 'by the Asura's *māyā*' (vi. lxxii. 1); sun and moon follow one another by *māyā* (vii. lxxxi. 1; cf. xiii. ii. 11); the sorceress prevails by its means (viii. iv. 24); by *māyā* the sun makes 'the two days' (i.e. day and night) of diverse form (xiii. ii. 8); through Agni the *māyās* of the Asuras are repelled (iv. xlii. 5, viii. iii. 24); yet the gods (*deva*) go about with Asura-*māyā* (iii. ix. 4).

Some idea as to the original meaning of the term *māyā* may be gained from its etymology. It has been connected with Skr. *mā*, 'to measure' (O. Böhtlingk and R. Roth, *Sanskrit-Wörterbuch*, Petrograd, 1855-75, v. 782); with Skr. *man*, 'to think' (H. Grassmann, *Wörterbuch zum R̥g-Veda*, Leipzig, 1878, col. 1084; similarly P. Persson, *Studien zur Lehre von der Wurzelveränderung und Wurzelvariation*, Upsala, 1891, p. 120; the closest cognate would be Gr. *μῆτις*, 'wisdom, cunning, craft'); with Gr. *μῑμος*, 'imitator' (G. N. Chatzidakis, *Ἀκαθάρτου Ἀργυροῦ ματα*, Athens, 1902-04, i. 280); with Lat. *mīrus*, 'wonderful' (H. Ehrlich, *Zur indogerm. Sprachgesch.*, Königsberg, 1910, p. 75). The most probable connexion, however, is with a Balto-Slavic group (with which *μῑμος* may be connected) represented by O. Bulg. *na-mayati*, 'to nod, indicate by a sign', Russ. *na-mayami*, 'I indicate by signs, deceive', ob-*mayaku*, 'deceiver', Bulg. *za-mayvam*, 'I enchant, deceive', Let. *māt*, 'to nod', *ap-māt*, 'to blind, enchant'. More distant cognates are, e.g., Bulg. *iz-mama*, 'deceit, swindle', Russ. ob-*manū*, 'deceit', Lith. *mōnai*, 'sorcery', Let. *mānīt*, 'to enchant', O. H. G. *mei*, 'falsehood' (Germ. *Mein*, 'perjury'), Little Russ. *mara*, 'phantom, dream, deception', O. Ch. Slav. *machati*, 'to swing', Russ. *makhi*, 'error', Czech *matocha*, 'ghost', Polish *matać*, 'to swindle, lie, deceive' (E. Berner, *Slav. etymolog. Wörterbuch*, Heidelberg, 1908 ff., ii. 7, 15, 17 f., 41, 25). In Avesta we have the word *māyē*, 'skillful, clever'. The basal meaning seems to be 'to move, hence' 'to change, to deceive'. LOUIS H. GRAY.]

In Upaniṣadic literature *māyā* is first found in the *Svetāsvatara Upaniṣad* (iv. 10) with the meaning 'cosmic illusion'; it is no longer applied simply to the juggler's art, but now connotes the illusion created by him. It is in the latter sense that the word is henceforth mainly used in philosophical literature. Śaṅkara, in his commentaries on the *Vedāntasūtras*, always used the word with the meaning 'illusion', and the technical term employed by him became more or less stereotyped by his successors.

Although it is occasionally asserted that the idea of *māyā* is as late in origin as the use of *māyā* to describe it, there is little foundation for this view, and passages may be found in the R̥gveda which show that even then it was felt that there was an underlying unity beneath apparent multiplicity; indeed, the doctrine that phenomena are unreal in relation to absolute being is common to all metaphysics.

In R̥gveda, i. cxiiv. 46, *ekam sad viprā bahudhā vadanti*, 'that which is one the sages call by many names,' it is felt that all plurality is a matter of words only, or in x. xc. 2, where the whole universe is said to be *puruṣa* alone, it is implied that all else but *puruṣa* is illusion.

It was with the introduction of the doctrine of the *ātman* in the Upaniṣads that this denial of the existence of the empirical universe became firmly established in India as a philosophic doctrine. The conception of an all-pervading *ātman*, the 'self' of the universe, necessitates the exclusion of all that is not the self, and hence implies its unreality. The substance of the teaching of the Upaniṣads is '*Brahman* is real, the universe false, the *ātman* is *brahman* and nothing else.' Although it is not possible to quote early forms of the statement that the universe is *māyā*, or illusion, it is frequently insisted that the *ātman* is the only reality, which means the same thing—i.e., all that is not the self (world, etc.) is not real; it is mere appearance or illusion. This is the teaching of Yājñavalkya in the *Bṛhadāraṇyaka Upaniṣad*:

'When the self is seen, heard, perceived, and known, the whole universe is known'; 'he who imagines there is plurality goes from death to death' (iv. iv. 19, v. 6).

With the knowledge of self phenomena become known as phases of it; they are provisionally real to a certain extent, but ignorance of the *ātman* regards them as independent of the *ātman*. We have not quite reached the stage of the later Vedānta, which regards phenomena as absolutely unreal, like a mirage. Ignorance, in the Upaniṣads, is an absence of true knowledge; in the later Vedānta it is rather an active force which conjures up the illusion of phenomena for the delusion of the self. In the Upaniṣads also we find a kind of pantheistic compromise which grants that the world does exist, but holds that the sole reality of the *ātman* is not in the least degree affected, for all is the *ātman*. This view pervades the *Chhandogya Upaniṣad*, e.g.:

'The *ātman* is above and below, behind and in front. The *ātman* is all the world' (vii. xxv. 2).

As time went on, *māyā* gained an ever-increasing independence as the substance *prakṛti* (nature), which was at first subordinate to the *ātman*. In post-Upaniṣadic literature the term appears frequently in a non-philosophic sense; a *mṛgamāyā* is an 'illusion gazelle' (i.e. not a real gazelle); a man who craftily seeks to gain money does it through *māyā*; *amāyayā*, lit. 'without *māyā*,' means 'honestly'. In these cases (for further references see Böhtlingk-Roth, *loc. cit.*) the original meaning of *māyā* persists.

In the philosophical sections of the *Mahābhārata* the term is used in its philosophical sense. Thus Viṣṇu, speaking as the supreme god, says: 'Entering into my own nature (*prakṛti*), I arise through *māyā*' (vi. xxviii. 6 f.); this explains the famous *avatāras* of the deity, 'Māyāvin' is one of the thousand names of Śiva (xiii. xvii. 1214). (On the question of *māyā* in the epic see E. W. Hopkins, *The Great Epic of India*, New York, 1901, pp. 138-142.)

The doctrine of *māyā* in the Vedānta forms the cardinal distinction from its great rival system, the Sāṅkhya (*q.v.*) philosophy. Vedānta is the system of *advaita* (non-duality); the phenomenal world does not exist; it is only *māyā*, arising from *avidyā*, that makes us erroneously think it to be real; *māyā* is overcome when he who ignorantly believed himself to be an individual realizes that in actuality he is one with the *ātman*; then only is salvation (*mokṣa*, lit. 'liberation') finally won. In the Sāṅkhya system, on the contrary, the phenomenal world is real; the Vedāntic *ātman* is ignored (Sāṅkhya is atheistic); the soul (*chit*, lit. 'thought') is involved in the woe of life because of *aviveka* (failure to distinguish between matter and soul), due to *avidyā*, etc.; salvation is gained by the complete isolation (*kaivalya*) of the soul from matter; and the soul then exists as an eternal, but unconscious, individuality. (On the distinctions between Vedānta and Sāṅkhya see especially Max Müller, *Six Systems*, p. 279 ff.)

One of the most important of the early works on Vedānta is the *Kārikā* of Gaṇḍapāda (8th cent. A.D.), one of whose pupils was a teacher of Śaṅkara. He is an uncompromising advocate of the doctrine of *māyā*, and strongly denies the existence of the universe. The waking world is no more real than the world of dreams. The *ātman* is both the knower and the known; his experiences exist within him through the power of *māyā*. As a rope in a dim light is mistaken for a snake, so the *ātman* is mistaken for the variety of experience (*jīva*). When the rope is recognized, the illusion of the snake at once disappears; when true knowledge of the *ātman* is attained, the illusion which makes us think of it as a multiplicity of experiences vanishes. The world has no more real existence than the snake, and, as one cannot remove or cast off what does not exist, it

is wrong to speak of obtaining freedom from it. The *ātman* cannot be said to create or cause the universe any more than the rope creates the snake. Production would be either from the existent or from the non-existent; but the former is impossible, for it would be producing what already exists, and the latter is equally impossible, for the non-existent—e.g., the son of a barren woman—cannot be the cause of anything; it cannot even be realized by the mind.

Gauḍapāda's monism assumed its final form in the commentaries of Śaṅkara (b. probably A.D. 788). Śaṅkara is well aware of the difficulties in the way of reconciling the various views of the Upaniṣads, and is further perplexed by the fact that as *śruti* ('revelation') they all ought to have equal weight; the latter difficulty he overcomes by his classification of knowledge as of two kinds: a higher, the knowledge of *brahman*, and a lower, including all that is not this metaphysical knowledge. He then investigates the cause of ignorance (*avidyā*), and concludes that it is to be sought in the knower. The phenomenal world is considered real so long as the unity of the *ātman* is not realized, just as the creations of a dream are thought to be real till the dreamer awakes. Just as a magician (*māyāvin*) causes a phantom, having no existence apart from him, to issue from his body, so the *ātman* creates a universe which is a mere mirage and in no way affects the self. It is through *māyā* that plurality is perceived where there is really only the *ātman*. Multiplicity is only a matter of name and form, which are the creations of ignorance, being neither the *ātman* nor different from it, through the power of illusion (*māyāsakti*). The Highest One manifests himself in various ways by *avidyā* as a magician assumes various forms by his wiles. Śaṅkara further defines two kinds of existence, empirical and metaphysical, for the first time emphasizing clearly a distinction which seems, however, to be known even in the Upaniṣads. The phenomenal universe is a fact of consciousness, and therefore has a sort of existence; all experience is true so long as the knowledge of the *ātman* is not attained, just as the experiences in a dream are real to the sleeper, until he awakes.

'... Therefore before the consciousness of identity with *brahman* is aroused, all worldly actions are justified' (on *Vedāntasūtras*, II. I. 121).

In spite of the discussion that has raged round it since Śaṅkara's time, the doctrine of *māyā* as enunciated by him still holds the field in India to-day and, as one of the fundamental doctrines of his Advaitist school, pervades the philosophy of the great mass of thinkers in India.

J. ALLAN.

MAYANS.—The territory of what is now the Republic of Guatemala, adjoining parts of the Republic of Honduras and of the Mexican States of Chiapas and Tabasco, and the peninsula of Yucatan, was inhabited in ancient times, as it is

to the present day, by a number of different tribes, speaking allied idioms and forming a linguistic family usually designated as 'Mayan,' from the name of its most conspicuous members, the people of Yucatan. This population is to be regarded as the second of the great culture-nations of Mexico and Central America, equal to the Mexicans in material and intellectual civilization and in some ways surpassing them, but, unfortunately, much less known than the Mexicans, as regards the special traits of their civilization, their history, and the elements of their daily life. The chief ancient monuments in Central America—Palenque in Chiapas, Menche Tinamit on the Usumacinta river, Quirigua in Guatemala, Copan in Honduras, Uxmal and Chich'en Itzá in Yucatan—are the work of members of that family. They were the great astronomers and mathematicians who calculated the duration of the revolution of Venus and, perhaps, of other planets as well, and were wont to write down and handle numbers exceeding a million. They had elaborated a system of hieroglyphic writing far superior to that of the Mexicans, but only partially deciphered as yet. They were unexcelled in the apprehension and reproduction of living forms of animals and men. As a whole, their civilization and their religion were closely allied to those of the Mexicans.

In their religious practices they were not so sanguinary as the Mexicans, human sacrifices being much less numerous and in many cases being replaced by the killing of dogs. They resembled the Mexicans in their methods of prayer and offerings, fasting, and torture, and in piercing their ears and tongues and drawing threads through the holes. They also sacrificed living animals by fire to the god of fire, and in some places tortured themselves by running with naked feet over burning coals.

Like the Mexicans, the Mayans divided the year into eighteen periods of twenty days each, and they also commenced their ceremonies early in the year, in our month of January, by renewing all kinds of ceremonial utensils—incense-burners, clay-idols, and the like. This feast was called *Oona*, and was devoted to the *chac*, the gods of labour, i.e. the rain-gods. When they had to make a new wooden image or, as they said, to create a god, the work began in the preceding months, and with great precautions (fasting, etc.), the artisans being confined to the house as long as the work went on. In March they had a great fire-ceremony, performed by the old men and directed to the rain-gods (*chac*) and to the old god Itzamná, who may be considered the god of life and the god of fire. This ceremony was called *tupp-kak*, 'extinguishing the fire.' They brought together every species of animal that was at hand; and, after having kindled a great fire, they killed them by cutting the breasts and tearing out the hearts, which were cast into the flame. The larger animals, such as jaguars, pumas, caimans, were not so easily captured, so they made imitations of their hearts from copal, which was their incense, and threw these into the fire. The hearts having been consumed, the priests extinguished the fire by pouring water from their jars upon it. This ceremony was intended to secure sufficient rain for the crops of the new year. Another ceremony was connected with this performance. They made a kind of terraced pyramid of stones, which seems to have been regarded as an image of the clouds. The priests anointed the lowest step with mud and the upper ones with blue colour, invoking the *chac* and Itzamná. This was, no doubt, another ceremony for bringing rain.

In April the cacao planters, who were also the great merchants, cacao being the staple merchan-

dise of ancient Central America, celebrated a great feast to the black god Ekchuah, the god of the caravans and the merchants, to the *chac*, and to Hobnil, the god of the bee-hives. They killed a dog of the spotted colour of the cacao-pod and offered blue iguanas, feathers of wild fowl, and incense. In the month of May there was another great feast, called *Pacumchac*, celebrated to Cit chac coh, the god of war. It began with a five nights' watch in the temple of the god of war, and during this time the war-chief, called *nacom* and elected for four years by the members of the tribe, was seated on a throne in the temple of the god of war and venerated like a deity with incense-burning. The people performed a dance called *holkon-okot*, 'warrior-dance.' At the end of the five days they performed the fire-ceremony described above, after which the war-chief was taken in a solemn procession all round the temple; a dog was sacrificed, and the heart offered to the god. The heart was put into a bowl and covered by another bowl, after which the assistant priests dashed to pieces some great jars full of water—undoubtedly another ceremony intended to produce rain for the crops. A great banquet of mead and general drunkenness followed. The same banquets and drinking-bouts were repeated in the course of the next three twentieths in all the smaller villages. These feasts were called *Zabacil than*, and it is expressly stated that they were made in order that the new year might be a fertile one and bring rich crops.

The month of July was reckoned as the beginning of the new year by the Yucatecans at the time of the conquest. The twentieth (*uinal*) in question was called Pop, 'straw-mat,' meaning 'dominion,' 'reign.' They swept their houses and the village streets and renewed all objects of domestic use—plates, jars, bowls, wooden chairs, garments, and the wrappings of their idols—throwing the old ones on the dust-heaps. The priests, who had fasted for one, two, or three months, eating only once a day and abstaining from sexual intercourse, assembled in the temple and kindled new fire by friction, twirling a wooden stick in the hole of another; this new fire was put into the brazier before the idol, and all the priests and principal men burned incense with it to the idol. In the following months all the professional instruments of the different classes of the people—the books of the priests, the implements for casting lots and the fetishes of the doctors, the weapons of the hunters, and the fishing-nets of the fishermen—were consecrated by anointing them with blue colour. This feast was called *Pocam*. In the month of September the bee-keepers had a special feast at which they brought offerings of incense and honey to their god Hobnil. In the month of October, called Xul by the Yucatecans, there was a great ceremony in the village of Mani, dedicated to the god Kukulcan, the 'feathered snake,' the Yucatec translation of the Mexican god Quetzalcoatl, who was venerated as a culture-hero in Yucatan, some of the most important towns of the peninsula, Mayapan, and Chich'en Itzá, having been founded by Mexican emigrants. The last feast in the year, celebrated at the time of our months November and December, corresponded in a way to the Mexican *Izcaltli*, ceremonies being performed to promote the growth of the youth and to strengthen them. Contrary to the custom of the Mexicans, the Yucatecans performed very particular and important ceremonies in the last five days of the year, which they called *ama kaba kin*, 'days without name,' i.e. 'unlucky' days, the names of which it is dangerous to pronounce. On these days they set up in the midst of the village the image of the deity that was to govern the

coming year, this god being one of four who corresponded to the four cardinal points and followed each other in turn. These gods were: (1) for the east and the years corresponding to the east, Ah bolon tz'acab, the god of fertility; (2) for the north and the years corresponding to the north, Kinch ahau, the sun-god; (3) for the west and the years corresponding to the west, Itzamná, the old god, the moon-god and the god of fire; (4) for the south and the years corresponding to the south, Uacmitun ahau, the 'lord of the six under-worlds,' the god of the dead. A number of different ceremonies and offerings were performed in honour of these gods, and the evil that was to befall the village, according to the character of the new year and of the heavenly quarter corresponding to the god thereof, was taken, represented by the figure of a demon, out of the village in the direction of the coming year.

The priests were called *ah-kin*, 'lords of days,' i.e. 'lords of day-signs,' 'dealers in prognostics,' 'sooth-sayers.' They were the leaders and teachers of the people—the learned men whose principal occupation was with books, pictographs, and all the traditional knowledge embodied in them. There is one marked difference between Mexican and Mayan priesthood: in Yucatan the office of sacrificer (*nacom*), who had to kill the victim, was not a highly honoured one, whereas in Mexico the highest priests and—in extraordinary celebrations, such as the inauguration of a newly-built temple—the kings themselves acted as sacrificers.

MAZANDARĀN.—The Persian region of Mazandarān,¹ or Tabaristān, is bounded on the north by the Caspian Sea and on the south by the Alburz Mountains, and extends from Astarābād in the east to the Pul-i-Rūd in the west. The winds from the Caspian bring abundant rain, and the country is heavily wooded, in contrast to the arid regions south of the Alburz. The climate is decidedly unhealthy, and the difficulty of access to the country, increased by lack of good roads, has combined with Mazandarān's insalubrity to exclude it from any generous share in the progress of Persia. It is to these disadvantages that the district owes its place in the history of religion in Irān.

Of the aboriginal inhabitants of Mazandarān we know nothing beyond the statement of Strabo (p. 515; cf. 520) that it was their custom to 'give their married women to other men after they themselves had had two or three children by them.' The *Bundahishn* (xv. 28) has a fantastic tradition of their origin, and the *Dinkart* (IX. xxi. 19) describes them as filthy and dwelling in holes.

In regard to the latter point, we may note that Firdausi (*Shāh-nāmah*, tr. A. G. and E. Warner, London, 1905 ff., II. 58) makes the Mazandarāni White Div inhabit a cavern, although one thinks involuntarily of the repeated Avesta statement that demons hide under earth or dwell in caves (Ys. ix. 15; Yt. xix. 81; Vend. III. 7, 10).

In the Avesta Mazandarān is the abode of the *Māzainya daēvas*, concerning whom E. W. West (*SBE* xviii. [1882] 93, n. 10) expresses the general

¹ The meaning of the name Mazandarān is not certain. The old native etymology (Ibn Isfandiyār, tr. Browne, p. 14) makes it a later form of *Mūzandarān, 'within [a mountain named] Mūz' (so also Curzon, *Persia*, I. 354 f.; Darmesteter's etymology [*Zend-Avesta*, II. 378, n. 821] is incorrect); but it more probably means 'Land of the Māzan Gate' (T. Nöldeke, *GIF* II. [1904] 178, n. 1). Tabaristān, the Arab. form of Pahlavi Tapuristān (on coins) or Tāparistān (*Bund.* XII. 17, xii. 15, xx. 27), is the land of the *Tārapōi* of Ptolemy (vii. II. 6) and the *Tārapōi* of Diodorus (II. 3) and Athenaeus (442 B; Marquart, *Erānsahr*, p. 129). F. Windischmann's identification of Mazandarān with Media (*Zoroastr. Stud.*, Berlin, 1863, p. 229) was wrong.

view when he says that 'these demons were, no doubt, merely idolaters,' while M. N. Dhalla (*Zoroastrian Theology*, New York, 1914, pp. 8, 160) sees in them the nomads of Māzandarān and Gilān, 'who poured down in great numbers and pillaged the possessions of the Iranians.' A number of the Avesta references to the Māzainya *daēvas* give no information as to their nature or habitat (Ys. lvii. 17, 32; Vend. ix. 13, x. 16, xvii. 9f.). We have, however, more precise indications as to their location in the account of the threefold sacrifice by the hero Haoshyangha Paradhātā on Mt. Hara to gain the victory over 'two-thirds of the Māzainyan demons' (Yt. v. 22. ix. 4, xv. 8. xix. 26), for Hara (or, as it is also called in the Avesta, Hara Bere-zaiti, 'lofty Hara') is generally—and probably correctly—identified with Alburz, though construed in a mythological, rather than a geographical, sense (e.g., Spiegel, *Erän. Alterthumskunde*, i. 191, 463, 482; Darmesteter, i. 101, n. 28; K. Geldner, *GrP* ii. 38, and especially Geiger, *Ostirän. Kultur*, pp. 42-45), and the 'peak' (*taera*, Yt. xv. 7; cf. xii. 25; Bund. v. 4; Ys. xlii. 3) of Hara is probably Mt. Damāvand (Geiger, *loc. cit.*). The identification of Mazan (the noun from which Māzainya is derived) with Māzandarān is also made by Neriosangh (c. A.D. 1200), who, in his Skr. paraphrase of the Pahlavi version of the *Yasna*, renders 'Māzainya' by 'Mājandara' or 'Mājandaradešiya' (Ys. lvii. 17, xxvii. 1, lvii. 32).

Closely associated with the Māzainya *daēvas* are the Varenyan *daēvas* and *dregvants*, or 'adherents of the Lie demon' (Ys. xxvii. 1; Yt. v. 22, xiii. 137, xv. 8, xix. 26; cf. Darmesteter, ii. 373, n. 33; Yt. x. 97, xiii. 71, and Vend. x. 14 are unimportant in this connexion). The land of Varena was the fourteenth best created by Ahura Mazda, but Angra Mainyu cursed it with 'untimely infirmities and non-Aryan over-lords' (Vend. i. 17).¹ It was 'four-eared' (*čathru-gaosha*, i.e. four-square or quadrangular [?]; cf. Darmesteter, ii. 14, n. 38), and was the birthplace of the hero Thraētaona or Faridūn, who overcame Aži Dahāka (Vend. i. 17; Yt. v. 33)—a tale which was discussed at length in the lost *Sūthar Nask* of the Avesta (*Dinkart*, ix. xxi. 17-24; cf. also viii. xiii. 9, ix. xxii. 4).² The location of Varena is a matter of some dispute. It was certainly near Tabaristān (Spiegel, i. 545), but is hardly to be identified with the modern village of Verek, south of Sari, as argued by Spiegel (i. 72, n. 2, 545) and F. Justi (*Handb. der Zend-sprache*, Leipzig, 1864, p. 270 [with earlier literature], *GrP* ii. 404). Equally uncertain is the view of C. de Harlez (*Avesta trad.*, Liège, 1875-77, i. 87, n. 2) that it was the modern Kirmān. A. V. W. Jackson (*GrP* ii. 663) and Dhalla (*loc. cit.*) identify it with Gilān, and Darmesteter (ii. 14, n. 38) with Tabaristān or Dailam. Tabaristān was formerly preferred by Geiger (*Ostirän. Kultur*, pp. 127f., 184); his later view (*GrP* ii. 391), identifying Varena with the Caspian Gates, seems scarcely an improvement. Neriosangh was ignorant of the meaning of the term, for he renders *Varenya* by *vibhramakara*, 'confusing,' and *kāma*, 'love' (on Yt. i. 19; Ys. xxvii. 1), confounding the epithet with the later Pahlavi Varenō, the demon of lust (Jackson, ii. 660, 663; Darmesteter, ii. 373, n. 33; L. C. Casartelli, *Philosophy of the Mazda-yasnan Religion under the Sassanids*, Bombay,

1889, pp. 91, 166). On the whole, Gilān appears to be the most probable identification.

It would seem that the legend of Haoshyangha refers to an early invasion of Māzandarān and Gilān by Iranians, and their conquest of it, at least in part. This is borne out by the local tradition of the early 13th cent., for Ibn Isfandiār (p. 15) held that

'until the time of Jamshīd it was in the possession of the demons. He conquered them, and bade them level the mountains with the plains, fill up the lakes, drain the fens into the sea, open up the country, and distribute the rivers and streams.'

The Iranian religion found some place, at all events, in Māzandarān, for tradition sees in Spitī and Erezrāspa, who are mentioned in Yt. xiii. 121, two pious men who came from Māzandarān to receive the faith from Frashashtra, the father-in-law of Zarathushtra (*Dinkart*, ix. xxi. 17-24).

In the Pahlavi texts the most interesting passage in the present connexion is found in the *Shikand-gumānig Vijār* (xvi. 28-36), which records a belief closely similar to the frequent Gnostic concept of the entanglement of light in darkness combined with a touch of the Iranian heresy of Zervanism.

'The rain was the seed of the Māzandarāns for the reason that when the Māzandarāns are bound on the celestial sphere, whose light is swallowed by them, and, in order to pass it from them through a new regulation, discrimination, and retention of the light of Time, the twelve glorious ones show the daughters of Time¹ to the household-attending male Māzandarāns, so that while the lust of those Māzandarāns, from seeing them, is well suited to them, and seed is discharged from them, the light which is within the seed is poured on to the earth. Trees, shrubs, and grain have grown therefrom, and the light which is within the Māzandarāns is discharged in the seed.'²

In the *Shāh-nāmah* Māzandarān is described with little geographical accuracy (Nöldeke, ii. 178), and the Kargasārs ('Vulture-heads'), who are frequently mentioned as inhabiting the country, like the Sagsārs ('Dog-heads'), Buzgūsh ('Goat-ears'), and Narmpāi ('Strap-feet', *ἵμνρόποδες*), betray the influence of pseudo-Callisthenes upon Firdausī (Nöldeke, ii. 146, n. 3). In his proper shape the king of Māzandarān had a boar's head (Warner, ii. 75). The land itself was

'The home of warlock-divs and under spells
Which none hath power to loose; . . .
To go or e'en to think of going thither
Is held unlucky!' (ib. 38f.).

Nevertheless, it was invaded unsuccessfully by Kai Kāūs and successfully by Rustam (ib. 30-41, 42-44, 57-78), one of the great achievements of the latter being the slaying of the 'White Demon,' whom Warner (ii. 27f.) holds to be a personification of the Māzandarānis, rendered pale by the unhealthiness of their climate. This 'White Div' was

'mountain-tall,
With shoulders, breast, and neck ten cords across' (ib. 55).

The magic exercised by the 'White Div' against Kai Kāūs reads like a description of a severe hail-storm (ib. 40); the only other point worth noting is that his blood cured failing sight (ib. 62).

Even in the Arab period Māzandarān remained imperfectly Islāmized. As late as the 10th cent. many of the inhabitants of Dailam and Gilān were 'plunged in ignorance' (i.e. heathenism), and some were Magians, this being particularly the case with those in the mountains, valleys, fortresses, and other inaccessible places (Mas'ūdī, *Prairies d'or*, ed. and tr. C. Barbier de Meynard and Pavet de Courteille, Paris, 1861-77, ix. 5). It was a

¹ The zodiacal signs, appointed as celestial leaders by Ahura Mazda (*Dinā-i-Mānīg-i-Xrat*, viii. 18).

² According to Darmesteter (ii. 373, n. 33) and West (*GrP* ii. 110), the Pahlavi *Jāmāsp-nāmah* raises the question whether the Māzandarānis were demons or men, and where their souls went after death, the reply being that they were all men, that some of them followed the religion of Ahura Mazda and others the law of Angra Mainyu, and that most of them went to heaven; but the text, as edited and translated by J. J. Modi (Bombay, 1903), contains no statement whatever on this matter.

¹ With these 'non-Aryan over-lords' Geiger (p. 185, n. 2) compares the *Avanika*, a tribe dwelling along the Caspian (Strabo, pp. 507f., 514; cf. W. Tomaschek, in Pauly-Wissowa, i. 2068; F. Andreas, ib. 2195).

² In a Turfan fragment Aži Dahāka, who was imprisoned in Damāvand, is called 'Mazan.' The adjective has thus far been found in two other passages, but in both cases the accompanying names are illegible (C. Salemann, *Manichäische Studien*, i. Petrograd, 1908, 95). For the local Muhammadan version, according to which Solomon imprisoned in Damāvand the *Jinn* who stole his ring, see Ibn Isfandiār, p. 86.

centre of the Hurramite and Zaidite sects of Muhammadanism (*ib.* vi. 188, vii. 117; cf. also Ibn Isfandiyār, pp. 158, 189-193).

The Zaidites call for no special remark, but the Hurramites may be briefly described, as being one of the many attempts at religious syncretism in W. Asia.

The exact meaning of the name is not absolutely certain. It is usually explained as from Pers. *surram*, 'cheerful' (i.e. 'Epiurean'; so T. Haarbrücker, in his note to his tr. of al-Shahrastānī's *Religionsparteien und Philosophenschulen*, Halle, 1850-51, II. 410, and Flügel, *ZDMG* xxiii. 531, note), but it has also been derived from the town of Hurram near Ardābil, which appears to have been an ancient centre of Mazdakite teaching (A. Müller, *Islam*, Berlin, 1885, I. 605, note). The present writer is inclined to trace the term to the name of Mazdak's wife, Hurramah, who, after her husband's execution, fled to Ray, where she carried on a successful propaganda of Mazdakite heresy, calling her teachings *Hurram-din* (cf. also C. Schefer, *Chrestomathie persane*, Paris, 1883-85, I. 170-175, where the relevant passage of Nizām-al-Mulk's *Kitāb al-Siyāsat* [ed. and tr. in full by Schefer, Paris, 1893] is given in text and translation; for the Mazdakite heresy see art. MAZDAK).

The Hurramites were divided into the Bābakīyah and Māzyāriyah (the latter also called Muḥammīrah, 'red-badged'). While there is abundant material regarding the rôle played for more than twenty years (815-838) in Tabaristān by Bābak (the Arabic spelling of the Iranian name Pāpak),¹ as well as by Māzyār,² for a knowledge of the special features of their sects we have only two sources—the *Fihrist* of Muḥammad ibn Ishāq al-Nadīm (written in A.D. 987-988, ed. G. Flügel, Leipzig, 1871-72, pp. 342, 30-344, 18, tr. Browne, *Lit. Hist.* pp. 324-327) and the *Tabṣīr fī al-dīn wa-tamayyis al-firāqat al-najīyat 'an al-firāq al-hālī-kīn* of Abū-l-Muzaḥḥar Ṭāhir ibn Muḥammad al-Isfārīnī († A.D. 1078; the passage in question is ed. by Flügel, *ZDMG* xxiii. 533, note).³

From the *Fihrist* we learn that Bābak was the natural son of an oil-seller who migrated from Otesiphon to the village of Blāl-ābād, not far from Ardābil and Arrāfān, and married, after an illicit amour with her, a one-eyed woman who later became the mother of Bābak. One day, while the boy was asleep, his mother saw a drop of blood under each hair on his breast and head, and from this she inferred that he 'was destined for some glorious mission.' Bābak later entered the service of Jāvidān,⁴ a Hurramī leader, and, when the latter died, in consequence of a wound received from the rival Hurramī chieftain, Abū 'Imrām, Jāvidān's wife, who had engaged in an intrigue with Bābak, and who had concealed from the public the news of her husband's death, told her lover that she would tell Jāvidān's followers that he had decided to die and cause his spirit to pass into Bābak, who was to slay the present rulers, restore the Mazdakites, and enrich his adherents. The plan was completely successful, and Bābak became the acknowledged leader of the sect, claiming to be God incarnate. After this, Bābak's mistress 'called for a cow, and commanded that it should be slain and flayed, and that its skin should be spread out, and on the skin she placed a bowl filled with wine, and into it she broke bread, which she placed round about the bowl. Then she called them, man by man, and bade each of them tread the skin with his foot, and take a piece of bread, plunge it in the wine, and eat it, saying: "I believe in thee, O Spirit of Bābak, as I believe in the spirit of Jāvidān"; and that each should then take the hand of Bābak, and do obeisance before it, and kiss it.' She then 'brought forth food and wine to them, and seated Bābak on her bed, and sat beside him publicly before them. And when they had drunk three draughts each, she took a sprig of basil and offered it to Bābak, and he took it from her hand, and this was their marriage' (Browne, p. 327).

It is thus clear that Bābak held the doctrines of *hulul* (the incarnation of God in human form), *tanāsuh* (passing of the soul from one body to another), and *rij'ah* (reincarnation), so that he belonged to the 'immoderate' Shi'ites as described by al-Shahrastānī (tr. Haarbrücker, I. 199 ff.; cf. Browne, p. 328). He appears to have been hostile to Islām, for Ibn Isfandiyār states (p. 153) that he 'ordered the Muhammadan mosques to be destroyed and all traces of Islām to be removed.' It is doubtful whether he was of Persian origin, for, according to the *Fihrist*, his father sang songs 'in

¹ See the references given by Browne, *Lit. Hist.* p. 323, n. 8; C. Huart, in *EF* I. [1913] 647, and Justi, *Iran. Namenbuch*, Marburg, 1896, p. 242.

² Justi, p. 202.

⁴ Cf. Justi, p. 112.

the Nabatean tongue,' and Bābak's own tongue 'was cramped by outlandish speech' (see, further, Browne, *loc. cit.*).

To this information al-Isfārīnī adds that the Māzyāriyah 'appealed to the religion of the Muḥammīrah,' and he says:

'By night the Bābakīyah in those mountains [of Tabaristān] agree upon every kind of depravity with women and flute-playing, etc.; and therein [i.e. at night] the men and the women agree together. Then the lamps and fires are extinguished, and every one of them rises up to one of the women who chances to sit with him. And these Hurramīyah assert that in the Ignorance they had a king named Sharvīn,¹ whom they deem greater than the prophets; and when they mourn for the dead, in his name they pay tears and lamentations, (even) their grief for him.'²

It is clear that the Bābakīyah were only a later phase of the sect founded by Mazdak, but in a degenerate form, marred by the cruelty which characterized the career of Bābak, who is said to have slain at least 255,500 persons during his years of power.

LITERATURE. — F. Spiegel, *Iranische Alterthumskunde*, Leipzig, 1871-78, I. 68-70, 585-592; W. Geiger, *Ostiran. Kultur im Alterthum*, Erlangen, 1882, pp. 42-45, 124 f., 127 f., 184, 187; J. Marquart, *Eransahr*, Berlin, 1901, pp. 129-135; G. N. Curzon, *Persia and the Persian Question*, London, 1892, I. 354-359 (with abundant references to earlier travellers); G. Küstenländer des caspischen Meeres*, 4 vols., Petrograd, 1850-58 (edd. of the local historians Zāhir al-Dīn [cf. also H. Ethé, *GrP* II. 362], 'Alī ibn Sams al-Dīn, 'Abd al-Fattāḥ Fīṣṣanī, and a volume of miscellaneous extracts); Muḥammad ibn al-Ḥasan ibn Isfandiyār, *Hist. of Tabaristān*, abridged tr. by E. G. Browne, London, 1905; G. Flügel, 'Bābek, seine Abstammung und erstes Auftreten,' *ZDMG* xxiii. [1869] 531-542; E. G. Browne, *Literary Hist. of Persia from the Earliest Times till Firdausi*, London, 1902, pp. 823-831. Much early literature on the history of the country has been lost—e.g., 'Alī ibn Muḥammad al-Madā'īnī's 9th cent. *Book of the Victories of the Mountains of Tabaristān and Book of Tabaristān in the Days of Rasā*, mentioned in the *Fihrist*, 103, 15. For the Māzandarānī dialect see W. Geiger, *GrP* I. II. [1901] 845 ff. (with copious references to earlier literature).

LOUIS H. GRAY.

MAZDA.—See ORMAZD.

MAZDAK.—I. History.—Mazdak, son of Bām-dādh, a Persian (probably a native of Susiana), was the leader of a communistic sect which towards the end of the 5th cent. A.D. became a formidable power in the Sasanian empire. According to some accounts, the original founder of the sect was a certain Zarādusht, son of Khurragān,³ on whose behalf Mazdak is said to have carried on propaganda among the populace, but in any case it was under Mazdak that the sect first gained importance. His temporary success was largely due to the state of anarchy then prevailing in Persia. The emperor Kawādh, who ascended the throne in A.D. 488, finding himself opposed by the nobility and the influential Zoroastrian priesthood, entered into a close alliance with the arch-heretic and embraced his revolutionary doctrines. The governing classes were strong enough to depose Kawādh in favour of his brother Jāmāsp; but after his restoration, which took place a few years later, the power of the Mazdakites continued to increase, though Kawādh does not seem to have supported them very actively. In the concluding years of his reign a bitter struggle was waged over the succession, which the Mazdakites endeavoured to secure for one of Kawādh's sons who was devoted to their cause, while the Zoroastrian priests, in agreement with the emperor himself, regarded

¹ See Justi, p. 290.

² Perhaps we may compare the nocturnal orgies against which the Gāthās polemicize (*Ys.* xxxii. 10, xlvi. 10; cf. O. Bartholomae, *Gāthas des Avesta*, Strassburg, 1905, p. 83 f.; J. H. Moulton, *Early Zoroastrianism*, London, 1913, pp. 72, 129); possibly, however, it was merely a current bit of scandalous gossip without much foundation.

³ The Mazdakites are called Zarādushtakān in the Syriac *Chronicle of Joshua the Stylite*, ed. W. Wright, Cambridge, 1882, § 20.

prince Khusrau as the presumptive heir to the throne. The course of the events which culminated in the massacre of Mazdak together with many thousands of his followers is uncertain. According to the narrative of a Persian official who was converted to Christianity and assumed the name of Timotheus (Joannes Malalas, in *PG* xvii. 654; Theophanes, *ib.* cviii. 395), Kawādīh pretended to yield to the Mazdakites, and, having appointed a day for his abdication, caused his soldiers to cut down all the Mazdakites who had assembled with their wives and children in the neighbourhood of Ctesiphon to witness the ceremony; he then gave orders that the surviving members of the sect should be seized and burned, and that their property should be confiscated. Most Muhammadan writers place this massacre in the reign of Khusrau, but the truth appears to be that, although it was carried out under Khusrau's direction and probably at his instigation, it preceded his accession (A.D. 531) by two or three years. Nöldeke assigns it to the end of 528 or the beginning of 529 (*Gesch. der Perser und Araber zur Zeit der Sasaniden*, Leyden, 1879, p. 465). The ruthless energy displayed by Khusrau on this occasion earned for him, it is said, the title of Anūshak-rubān (Anūsharwān, Nūshirwān), i.e. 'he of immortal spirit', and the further measures which he took were so effectual that henceforward the Mazdakites vanish from history. That they were entirely exterminated is scarcely credible. There is some ground for the suggestion that Mazdak's ideas maintained themselves in secret and found expression in various Antinomian sects which arose in Persia during the Muhammadan period (for an account of one of these see art. *MĀZANDARĀN*).

2. *Doctrine*.—It must be remembered that the whole of our information concerning Mazdak is derived from hostile sources. The epitaph written by an intolerant sacerdotal caste over heretics who had brought it to the verge of destruction may fairly be summed up in the words 'de mortuis nil nisi malum'; and, unfortunately, we have nothing from the Mazdakite side to set against the biased narrative of our Zoroastrian and Christian authorities. On the other hand, we cannot suppose that they have altogether obscured the essential character of Mazdakism, however they may have misunderstood or misrepresented it in detail. Its socialistic basis is well described in the following passage of Tabarī (Leyden ed., 1879-1901, i. 893. 11 f., translated by Nöldeke, *op. cit.* p. 154):

'Among the commands which he [Mazdak] laid upon the people and earnestly enjoined was this, that they should possess their property and families in common; it was, he said, an act of piety that was agreeable to God and would bring the most excellent reward hereafter; even if he had laid no religious commandments upon them, yet the good works with which God was well pleased consisted in such copartnership.'

In another passage (Tabarī, i. 885. 19 f. = Nöldeke, *op. cit.* p. 141) we read:

'They [the Mazdakites] asserted that God placed the means of subsistence (*arzāq*) in the world in order that His servants might share them in common, but men had wronged one another in that respect. The Mazdakites said that they would take from the rich for the benefit of the poor, and give back to those who had little their due portion at the expense of those who had much; and they declared that he who possessed more than his share of wealth, women, and property had no better right to it than any one else. The mob eagerly seized this opportunity, . . . and the Mazdakites became so powerful that they used to enter a man's house and forcibly deprive him of his dwelling, his womenfolk, and his property, since it was impossible for him to offer resistance. . . . Soon things came to such a pass that the father did not know his son nor the son his father.'

While the principle that every man is entitled to possess an equal amount of property involves logically and practically copartnership, the removal of class distinctions, and the abolition of marriage, it may be asked from what point of view the principle itself was regarded by Mazdak, whether these results of its application formed

part of his programme, and how far they were achieved by his followers. To take the last question first, Khusrau, in his speech to the priests and nobles after his coronation (Tabarī, i. 896. 15 f. = Nöldeke, *op. cit.* p. 160 f.), dwells upon the ruin of their religion and the heavy losses which they had incurred. The systematic regulations which he made for the purpose of compensating the sufferers, establishing the position of children of doubtful origin, etc., show that the social revolution must have developed considerably, and that the upper classes bore the brunt of it. Our authorities give great prominence to this aspect of Mazdakism, and they are justified in doing so. Mazdak was not a philosopher, like Plato, content to work out on paper a theory of the ideal communistic State. He was a militant social reformer, but he was something more. Nöldeke has remarked that what distinguishes Mazdakism from the organized socialism of modern times is its religious character, a peculiarity in which it resembles all Oriental movements of the same kind (*op. cit.* p. 459; cf. his art. 'Orientalischer Socialismus,' in *Deutsche Rundschau*, Feb. 1879, p. 234 f.). This character is preserved in the hostile Zoroastrian tradition. Mazdak's asceticism—he is said to have forbidden the slaughter of cattle for food—gave offence to the orthodox, who saw in him 'the ungodly fasting Ashemaogha' (Pahlavi commentary on *Vendidad*, iv. 49; *SBE* iv.² [1895] 48). The passages from Tabarī translated above, and still more the epic narrative of Firdausi (*Shāh-nāmah*, ed. Turner Macan, Calcutta, 1829, p. 1611 f.), which reflects the sentiments of the priesthood, bring out quite clearly the fact that Mazdak identified his doctrines of equality and fraternity with the religion of Zoroaster in its original uncorrupted form.

'I will establish this [communism] in order that the pure religion

May be made manifest and raised from obscurity.

Whoever follows any religion except this,

May the curse of God overtake that demon (*dēv*)!'

(*Shāh-nāmah*, p. 1613, line 11 ff.).

'Five things turn a man from righteousness;

The sage cannot add to these five:

Jealousy, anger, vengeance, need,

And the fifth one that masters him is covetousness.

If thou prevail against these five demons,

The way of the Almighty will be made manifest to thee.

Because of these five, we possess women and wealth,

Which have destroyed the good religion in the world.

Women and wealth must be in common,

If thou desirest that the good religion should not be harmed.

These two (women and wealth) produce jealousy and covetousness and need,

Which secretly unite with anger and vengeance.

The Demon (*dēv*) is always turning the heads of the wise,

Therefore these two things must be made common property' (*ib.* p. 1614, line 7 ff.).

Without claiming that Mazdak was animated by no other motives than those which his enemies attribute to him here, we may well believe that he regarded his communistic scheme as the only sure means of enabling mankind to attain the object which Zoroaster had set before them, namely, the defeat of the powers of darkness and the triumph of the spirit of light. The astonishing success of his propaganda is to be explained by the force of his appeal to Persian idealism. He would not have gained extensive support for his social programme unless it had been, ostensibly if not in fact, the instrument by which he hoped to accomplish a great religious reformation. In the main he appears to have held fast to Zoroastrianism, and no reliance can be placed on the statements of Shahrastānī and later writers who credit him with cosmological speculations closely akin to those of Mānī.

LITERATURE.—The principal references to Mazdak which occur in Greek, Syriac, Pahlavi, Arabic, and Persian literature are collected by T. Nöldeke, *Gesch. der Perser und Araber zur Zeit der Sasaniden*, Leyden, 1879, at the beginning of the fourth excursus, 'Ueber Mazdak und die Mazdakiten,' p. 465 f., which

is the best existing source of information on the whole subject, and by E. G. Browne, in his *Literary Hist. of Persia*, i., London, 1902, p. 169. See also F. Spiegel, *Erân. Alterthumskunde*, Leipzig, 1871-78, ii. 232-235; G. Rawlinson, *The Seventh Great Oriental Monarchy*, London, 1876, p. 342 f.; al-Bīrūnī, *The Chronology of Ancient Nations*, tr. C. E. Sachau, do. 1879, p. 192; Shahrastānī, tr. T. Haarbrücker, Halle, 1850-51, i. 291 ff.; *Dabistān*, tr. D. Shea and A. Troyer, Paris, 1843, i. 872 ff.; Shaikh Muhammad Iqbal, *The Development of Metaphysics in Persia*, London, 1908, p. 18 f. The collection of *riwāyat* of Dārāb Hormazdyār (ed. M. N. Unvāla, ii. 214-230—the edition has not yet been published) contains a long poem, written A.D. 1616, on Mazdak and Kawādh (briefly summarized by F. Rosenberg, *Notices de litt. persie*, Petrograd, 1909, p. 51 f.).

REYNOLD A. NICHOLSON.

MEAN.—The historic varieties of significance associated with this term are all evolved from the general idea of that which comes 'between' or in the 'middle.' Hence the term has an implication of double relationship to two other terms, the primitive significance being that which is 'between' two other things in reference to space or time.¹

As subst. and as adj. 'mean' entered Mid. Eng. from late Lat. *mediānus* through O. Fr. *mōen*, Mod. Fr. *moyen*. The Lat. original *mediānus* (like Eng. 'middle' through its A.S. original) is connected with one of the oldest and most widely spread roots in human language. Both as subst. and as adj. 'mean,' in the sense here defined, is to be distinguished from adj. 'mean' of A.S. origin (A.S. *gemæne*; O.H.G. *gemeint*, Mod. Germ. *gemeine*, akin to *communis*), which, originally signifying 'general' or 'common' to more persons than one, acquired the sense of 'middling' or 'moderate' and then of 'low' in rank or quality, ethically inferior or ignoble, esp. 'avaricious' or 'penurious.'

The idea of the mean was given an ethical application by Aristotle (*Eth. Nic.* ii. 6-8), in whose doctrine of virtue it holds the central place. Virtue consists in reasonable moderation, involving the avoidance, on the one side, of excess, and, on the other, of defect; in this sense virtue holds an intermediate position, and may be said to be a mean. Here the mean is not quantitative, and the notion of 'equal distance' from the extreme is not applicable. Every habit or action may err by excess or defect; between these opposed extremes (e.g., *θρασύτης* and *δουλία*) stands that degree of activity which characterizes virtuous conduct (in this instance, *ἀνδρεία*; cf. *Eth. Nic.* iii. 7, 1115^b-1116^a). Its 'distance' from the extremes will depend on the nature of the agent in relation to that of the moral case before him, and is therefore to be determined, not by any abstract considerations, but by the concrete rational judgment of the man of insight (*φρόνιμος* [*Eth. Nic.* ii. 6, 1107^a]).

This conception involves that of an adaptation or harmony of agent, act, and environment, similar to the harmony of parts displayed in a work of art; in fact, it expresses the aesthetic aspect of virtue. Aristotle is aware that, in the strictly ethical sense, virtue is always opposed to vice, and is therefore always an 'extreme' (ii. 6, 11, 1108^b 22; 17, 1107^a 6; Stewart, *Notes on the Nicomachean Ethics of Aristotle*, ii. 208). But, in laying stress on the aesthetic aspect, Aristotle is true to the Greek genius. The traditional Greek view of life made it natural that 'moderation,' 'measure,' and kindred conceptions should be appropriated to express excellence in life and action.

The typical Greek virtue is *σωφροσύνη* (most inadequately rendered 'temperance'), closely related to the traditional maxim *μηδὲν ἄγαν*. Its opposite is *ἄσβητος*. In Homer the object of moral condemnation is of the nature of 'excess,' 'going too far'; above all, 'wickedness' is *ἄσβητος*. In the case of the strong it is the insolence of brutality, especially in reference to the weak and the helpless; in the low and the weak it is irreverence in the presence of something higher.² When a man thinks of doing such things, he feels *αἰδώς*; if he does them, the seen and unseen witnesses feel *νέμεσις*, 'righteous indignation.'

There is an application of the Aristotelian principle of the mean in the general theory of knowledge, not, indeed, explicitly stated by Aristotle, but implicit in much of his thinking, as in that of Plato; it was made by Hegel into the first principle of thought and being in the applications of his *Logic*—his doctrine of thought as a dialectically progressive movement through the meeting

¹ From the sense of 'that which stands between two things,' the 'mean' (or plural 'means,' often used grammatically as a singular) may be used for that which produces a result, or, more generally, for any resources capable of producing a result.

² The case of Nabuchadnezzar (Dn 4:27) illustrates a form of *ἄσβητος*, portrayed in a specifically religious setting.

of opposites—to the history of human thought and endeavour; it is this that gives to his expositions of history all their strength and value, notwithstanding the excessively rigid formalism with which the principle is applied by him in certain cases. We can seldom find clearly marked theses and antitheses (in pairs) from the opposition of which the higher truth springs; we can find only conflicting *ἐνέργειαι*, streams of tendency, movements of thought.

A movement involving truth mingled with error is found in conflict with another movement, involving different truths mingled with different errors. What is required is a point of view above both the conflicting principles, from which to criticize them. This is the true 'middle way,' found, not by taking what the two extreme views have in common, and disregarding all their differences, but by finding a principle which contains more truth than either of the extremes, not less truth. The value of the conflicts and oppositions of history is to suggest the need for these higher—or, to vary the metaphor, deeper—truths, and sometimes also to suggest the way to reach them.

MADHYAMAKA, MADHYMIKA.

S. H. MELLONE.

MEAN (Chinese).—Outside of Greece, the theory of the mean received formal attention only in China, which produced the classic *Chung Yung*, commonly known as 'The Doctrine of the Mean,' though more exactly rendered 'Equilibrium and Harmony' (see above, p. 90^b), the authorship of which is attributed to the grandson of Confucius, Tzu Ssu, who flourished in the 5th cent. B.C.

Heaven has conferred a spiritual nature on man, and 'an accordance with this nature is called the path [of duty], which must never be abandoned (i. 1-2). The terms *chung* ('equilibrium') and *yung* ('harmony') are respectively absence of 'stirrings of pleasure, anger, sorrow, or joy,' and the state in which 'those feelings have been stirred, and they act in their due degree' (i. 4). Therefore, 'let the states of equilibrium and harmony exist in perfection, and a happy order will prevail throughout heaven and earth, and all things will be nourished and flourish' (i. 5). According to Confucius himself, the superior man embodies this ideal state, and 'perfect is the virtue which is according to the Mean' (ii. f.); yet some err by exceeding it, and some by falling short of it (iv. 1)—only the sage is in perfect harmony with it (xi. 3). As an example of the practical value of *chung yung*, Confucius cites the course pursued by the emperor Shun (2255-2205 B.C., according to Chinese tradition), who questioned men, 'took hold of their two extremes, [determined] the Mean, and employed it in [his government of] the people' (vi.); but yet, in spite of all, 'the course of the Mean cannot be attained to' (ix.). In a word, the superior man 'stands erect in the middle, without inclining to either side' (x. 5); if he goes beyond the mean, he checks himself; if he falls below it, he puts forth every effort to attain it (xiii. 4).

Yet 'the path is not far from man' (xiii. 1); but, even if 'common men and women, however much below the ordinary standard of character, can carry it into practice; yet in its utmost reaches, there is that which even the sage is not able to carry into practice' (xii. 2). One is not far from the path when he 'cultivates to the utmost the principles of his nature, and exercises them on

the principle of reciprocity' (xiii. 3); and yet 'were the superior man to speak of his way in all its greatness, nothing in the world would be found able to embrace it; and were he to speak of it in its minuteness, nothing in the world would be found able to split it' (xii. 2). 'The superior man does what is proper to the station in which he is; he does not desire to go beyond this. . . . The superior man can find himself in no situation in which he is not himself' and, if he fails in anything, he blames only himself (xiv. 1 f., 5). He advances in regular order from stage to stage (xv. 1), and constantly strives to advance and develop his virtuous nature that he may pursue the path of the mean (xxvii. 6). 'When occupying a high situation, he is not proud, and in a low situation, he is not insubordinate' (xxvii. 7); and it is characteristic of the superior man, though 'appearing insipid, yet never to produce satiety; while showing a simple negligence, yet to have his accomplishments recognized; while seemingly plain, yet to be discriminating' (xxxiii. 1). Among the many virtues of Confucius, special mention is made of the fact that he never swerved from the mean (xxxi. 1).

The remainder of the *Chung Yung* is devoted to laudation of filial piety, and to the duties of government, the obligation of absolute sincerity, the path of the sage, and the character of the ideal ruler—all of which depend on the cultivation of *chung yung*.

The mean is mentioned a number of times in the other Chinese Classics; e.g., the *Yi King* says (xlii. 3) that the ruler should 'be sincere and pursue the path of the Mean'; but these texts add nothing to the main discussion in the *Chung Yung*.

LITERATURE.—The *Chung Yung* is most conveniently ed. and tr. by J. Legge, *Chinese Classics*, Hongkong and London, 1861-73, i. 246-299 (cf. also his *Prolegomena* to this vol., pp. 86-55), and again tr. by him in *SBE* xxviii. [1885] 300-329.

LOUIS H. GRAY.

MECCA.—Mecca (Arabic Makkah) is a city in Central Arabia, famous as the birthplace of Islām, and, except for a short period at the commencement of the system, at all times its chief sanctuary. A variety of the name, Bakkah, occurs once in the Qur'ān (iii. 90), and this is probably the earlier form, though the etymology is uncertain. The classical geographers, who devote considerable attention to Arabia, are apparently not acquainted with this settlement; for the Makoraba of Ptolemy (vi. vii. 32) is derived from a different root. The 'Chronicles of Mecca,' of which the earliest extant is by Azraqī († 245 A.H.), so far as they treat of the pre-Islamic period, are collections of fables, in the main based on the Qur'ān, but to some extent influenced by the later history also. It would appear that, when Islām arose, there were no chronicles in existence dealing with the affairs of Central Arabia, and for some generations the days of paganism were regarded with a sort of horror, which prevented the preservation of precise information concerning them.

The references to the city in the Qur'ān throw little light on its early history. A *sūra* incorporated near the end of the collection (cv.) reminds the Prophet of the Owners of the Elephant, who were destroyed by birds (*abābil*), which flung at them stones of *sijil*. The tradition interprets this as an expedition by Abyssinians against the Meccan sanctuary, miraculously frustrated, but it is possible that this story is an invention of exegetes, who coupled *sūra* cv. with cvi., which more decidedly deals with Mecca, and is itself a fragment, scarcely to be construed in its present form. In the Qur'ān (the tribe in possession of the Meccan sanctuary) are advised to worship the Lord of this House, who has given them food after hunger and safety after fear. These two phenom-

ena, plenty and safety, are mentioned elsewhere in connexion with the Meccan sanctuary, the former as a result, it would seem, of visits from pilgrims, whereas the latter probably means safety for refugees; but the texts are not very clear. The sanctuary itself is called in the Qur'ān either 'the house,' or 'the house of Allāh, the Sanctuary,' or the Ka'bah (a word said to mean no more than 'house,' and perhaps the Ethiopic word for 'double,' i.e. two-storeyed), or 'the place of prostration, the Sanctuary.' In iii. 90 f. it is called 'the first house established for mankind, blessed and a guidance to the worlds, containing manifest signs, the station of Abraham, and whoever enters it is secure.' This would by itself imply that the Ka'bah was the first house ever built, as a model for all others, and that Abraham took refuge there and made it his abode. Elsewhere (xiv. 40) Abraham states that he had settled his family by it (or in it) in spite of the sterility of the valley, in order that they might pray there regularly; and he prays that the town (and not the house only) might be secure. In xxii. 27 he is represented as doing in his time much the same as was afterwards done by Muhammad: he was told to purify the house for those that perform the four ceremonies called *ṭawāf*, standing, inclination, and prostration. In ii. 119 f. Ishmael is coupled with Abraham; they laid the foundations of the house, and were told to purify it as before, the ceremony called *ukūf* being substituted for 'standing.' What may be inferred from these texts is perhaps that prior to Muhammad's time the Ka'bah was a sanctuary which enjoyed some popularity in part of Arabia, and that the right of sanctuary had to some extent been associated with the settlement of Mecca and with its inhabitants. The biography of the Prophet certainly implies that the Meccans had the very strongest objection to bloodshed, and possessed little aptitude for warfare. The association of Mecca with Abraham is unlikely to have been earlier than the Prophet, except so far as the N. Arabian tribes were known by monotheists, on the authority of Genesis, to be descended from the patriarch. It seems clear, however, that the Ka'bah was only one of many sanctuaries which were visited, and, if the word *ḥijjah*, which is used for 'pilgrimage,' be explicable from the Hebrew *hūg*, 'draw round,' the Arabian month which is called after it is likely to mean 'month of going-round,' i.e. the round of the sanctuaries, as opposed to the preceding 'month of squatting' at home. The word technically used of going round the Ka'bah, *ṭawāf*, seems also to be properly used of going a round, as, e.g., is done by a sentinel, and this ceremony may be due to a confusion of thought. The pilgrimage which became stereotyped in Islām involves visits to places which are likely to have been seats of distinct sanctuaries, some at a considerable distance from Mecca.

The difficult *sūra* cvi. speaks of 'winter and summer journeying,' which is traditionally interpreted of Meccan caravans, and in the biography of the Prophet these play an important part. The Muslim archaeologists suppose that the Quraish, owing to their character as 'Allāh's people,' enjoyed immunity from attack, and so had special facilities for the carrying trade. It is not easy to reconcile this with the primitive conditions which very clearly prevailed in Mecca at the rise of Islām, and the complete ignorance which the Qur'ān assumes for its inhabitants. If there be any truth in this carrying trade, it is likely to have been on a small scale.

In the Qur'ān Mecca is sometimes called 'the Mother of the villages,' i.e. the chief village; elsewhere the number of the villages is given as two, which the commentators suppose to mean Mecca

and Taïf; it is more probable that only Mecca is meant. Of walls we first hear in the reign of Muqtadir (A.D. 908-932), and these did not surround the settlement, which was naturally protected by mountains, but merely blocked the passes. Snouck Hurgronje¹ is probably right in thinking that the community first gathered round the well Zamzam, which furnishes a constant supply of brackish water. The tradition gives us the names of the tribes which formed the community, but scarcely hints at any sort of municipal organization or government. Still more surprising is the absence of all mention of priests, such as we should have expected to be associated with a sanctuary. The wealth of the tribes is likely to have consisted mainly in camels, but other forms were probably known; visitors to the shrine have at all times had to pay more or less heavily for the privilege, and this source of wealth is, as we have seen, indicated in the Qur'an. We possess only casual notices of the amounts demanded in later times, but these indicate that the piety of pilgrims often afforded a considerable revenue. The Fātimid khālifs expected the governor of Mecca to make the pilgrim-tax his chief source of revenue; besides this visitors' fee, they had to pay for admission to the sanctuary, and those who brought goods had to pay import duty. Attempts were made by pious sovereigns to abolish these dues, but they had a tendency to revive, and their analogues doubtless existed in the period before the rise of Islām.

Prior to the rise of Islām it would appear that some notions of Christianity had penetrated to Mecca, and the biographies of the Prophet profess to give us the names of persons who had either adopted that system or showed some leanings towards it. There appears to be no recollection of the existence of any Christian place of worship at any time in this city. The tradition represents the pagan inhabitants as tolerant towards religious innovators and dissentients, so long as the local beliefs and practices were not assailed; but the life of such a community was so intimately bound up with the local religion that it is difficult to suppose that dissent could remain quite immune from persecution.

There is reason for thinking that the Prophet's original attitude towards the Meccan religion was uncompromising, and that his success would have involved the abolition of the ceremonies of which the Ka'bah formed the centre. His rejection by the Jews of Medina (*q.v.*) caused him to contemplate a partial return to the system which he had abandoned, and some time before the taking of Mecca he obtained a truce enabling him to perform the pilgrimage with some ostentation. Doubtless this performance paved the way for the subjection of the place. But, when Mecca had become Islāmic, its position was modified in two important ways. On the one hand, it became the only sanctuary in Arabia; on the other hand, the presence of non-Muslims at the festival was forbidden. Since the pilgrimage was now made compulsory, Mecca lost nothing by this innovation.

It is uncertain whether the Prophet contemplated retaining Medina permanently as his capital or at some time making his native place the seat of government. There is no doubt that there were jealousies between the two places before the Prophet's death. None of his successors (except perhaps Abdallāh b. Zubair, whose occupation of the khalifate lasted some ten years) seems to have regarded Mecca as a suitable metropolis for political purposes, but its position as the central sanctuary has rarely been endangered. Certain fanatical sects, such as the Carmatians and Wahhābis (*qq.v.*), have at times done damage to its monuments, and

¹ *Mekka*, The Hague, 1888, i. 5.

the substitution of Baghdād or Jerusalem for it is said to have been considered by Umayyad and 'Abbāsīd khālifs, although they recognized in time that such experiments would have been fatal to Islām or to their thrones.

For the history of Mecca since its adoption of Islām we possess a series of Chronicles, of which those published by F. Wüstenfeld¹ cover the first millennium from the Hijrah, and to these Snouck Hurgronje² has added the substance of certain unpublished records which carry the history up to our time. Regular government was then introduced, perhaps for the first time, a prefect appointed by the sovereign being responsible for the maintenance of order. This personage was leader of the ceremonies at the time of the pilgrimage, unless the sovereign either came himself or sent a special representative. The governorships of the three towns, Mecca, Taïf, and Medina were at times united in the same person, at times distinct; the first was much the most important of the three. In 'Abbāsīd times it was the custom, at least for a considerable period, to appoint to the governorship some member of the reigning family. It would seem that the 'Alid pretenders, who rose in a fairly constant series, usually found some support in both sanctuaries, and on several occasions they fell for a time into the hands of these persons. After the reduction of the Baghdād khalifate to impotence—a process which began in the second half of the 3rd cent. of Islām—it would appear that the dependence of the sacred cities on the central government became lax, though historical details are wanting. About A.D. 960 an 'Alid named Ja'far made himself master of Mecca, and introduced the rule of the Sharifs, which has lasted to our day; this word, signifying 'noble,' is applied in Muslim countries to the descendants of the Prophet. He submitted to the suzerainty of the Fātimids now established in Egypt, but in most respects was an independent ruler. His successors shifted their allegiance from Cairo to Baghdād and back, according to the value of the gifts received; and throughout the subsequent history of Mecca recognition has been granted without difficulty to the suzerain who offered the highest price. According to Ibn Jubair,³ who visited Mecca in the years 1183 and 1185, the Sharifs were of the Zaidī sect, which, while recognizing the rights of the Prophet's descendants to the succession, held that considerations of expediency might justify their being ousted: the practice of the Sharifs was then in accordance with this doctrine. The dynasty founded by Ja'far was displaced at the beginning of the 13th cent. of our era by another, also claiming descent from 'Alī. The founder was one Qatadah, who appears to have energetically supported the rising Zaidite dynasty of San'a, but whose successors fell back into the former practice of recognizing the power which for the time was capable of displaying the greatest generosity. The 'Chronicles of Mecca' consist largely of the quarrels between Qatadah's descendants, which not infrequently had to be settled by the active interference of the Egyptian Sultāns, who, from the fall of Baghdād until the conquest of Egypt by the Ottomans, were ordinarily recognized as suzerains by the Sharifs. The Sharif 'Ajlan (1846-75), who for a time transferred his allegiance to the Mongol rulers of Persia, definitely rejected the Zaidī system and made that of Shāfi'ī dominant in Mecca, though the other orthodox systems were recognized; the dominance of the Hanafite school, which is the official system of the Ottoman government, dates from a much later time. A permanent garrison was first established

¹ *Chroniken der Stadt Mekka*, Leipzig, 1858-61.

² *Op. cit.*

³ *ed. M. J. de Goeje*, London, 1907, p. 101.

in the neighbourhood by the Egyptian Sultān Jaqmaq (1438-53). On the Ottoman conquest of Egypt in 1516 the allegiance of the Sharifs was transferred without difficulty to the Sultān of Constantinople. The new rulers interfered with the authority of the Sharifs to a greater extent than their predecessors, and the presence of a Turkish governor at Jeddah has constituted a permanent restriction upon it. The introduction of Turkish suzerainty also led to the adoption by the Sharifs of an intolerant attitude towards the Shi'ites of Persia, who could only with difficulty and at some risk obtain admission to the pilgrimage. In the 17th cent., owing to the decline of the Ottoman power, the Sharifs, who were almost always involved in family quarrels, became somewhat less dependent on Constantinople, and could even at times defy the representative of the metropolis at Jeddah. Both the sacred cities were threatened by the rise of the Wahhābīte movement towards the end of the 18th cent., and indeed in 1793 and 1798 appeals for help against this new power were addressed to the Ottoman Sultān. This was not forthcoming, owing to the European complications in which the Porte was involved, and in 1803 Mecca was evacuated by the Sharif, and presently occupied by the Wahhābīs, who reformed the place according to their ideas. The Sharif was, however, after a short time re-installed on his professing to adopt the Wahhābī tenets; and for some years Turkish subjects were excluded from the pilgrimage. In 1813 an expedition sent by Muhammad 'Alī, founder of the khedivial family in Egypt, succeeded in recovering the sacred cities, and a Turkish Pasha was installed in Mecca, where, however, the rule of the Sharif was nominally continued. After a time the Ottoman power was again represented by the governor of Jeddah.

Both the meaning and the limits of the sanctuary (*haram*) were extended by Islām. The sense of this Arabic word is 'to forbid,' and a sanctuary is a place where certain acts are forbidden, of which the most important is bloodshed; it is unlikely that this prohibition before Islāmic times extended beyond the Ka'bah itself. Azraqī is very likely right in asserting that at this time the dwellings of the citizens surrounded the Ka'bah, leaving only a small area (*finā*); the growth of the Muslim community rendered the destruction of these dwellings necessary; and operations of this kind were undertaken by the second and third khalifs. The area was further enlarged by the pretender 'Abdallāh b. Zubair, but the actual mosque surrounding the Ka'bah was first built by the Umayyad al-Walid I. (A.D. 705-715), who erected a colonnade with marble pillars and other luxurious decorations. Further additions to the area were made by the 'Abbāsīd Manṣūr (in 755), who also built a minaret, and who, in the inscription placed on his work, claims to have doubled the area. Further large additions were made by his successor, Mahdī, who at great cost had a torrent diverted with a view to bringing the site of the Ka'bah into the centre of the mosque. Yet further extensions were effected by Mutawakkil (856), who also introduced luxurious ornamentation. The frequent repairs required by the mosque were due in part to the floods by which Mecca was repeatedly visited, and to some extent to damage done during civil disorders. Under the khalif Mu'tamid considerable extensions and restorations were again carried out in the years 894-896, and the like are recorded for the year 918 under Muqtadir. Under this khalif serious mischief was wrought by the Carmatians, who massacred the pilgrims, and for a series of years practically put a stop to the institution; their atrocities culminated with the seizure in 317 A.H. of the Black Stone, which they conveyed to their headquarters in Hajar, whence

it (or some substitute) was sent back twenty years later. This fetish had already been seriously injured in the time of 'Abdallāh b. Zubair, when the Ka'bah was burned down, and, in spite of great precautions, it again suffered violence at the hands of an Egyptian Shi'ite in the year 414, and not long afterwards was broken into three pieces by some Persian fanatics. The kissing of this object, which forms one of the pilgrimage rites, is not mentioned in the Qur'ān, but probably is a survival from pagan times.

In 1399 a large part of the mosque was destroyed by fire, and orders were presently given by the Egyptian Sultān Faraj for its restoration with increased magnificence; this was finished by 1404. In 1551 the Ka'bah itself was found to be in need of repair, but before this could be effected the question was raised whether this sacred building could lawfully be touched by the builders; and the fanatical populace were inclined to side with those holding the negative view. The precedent of Abraham and Ishmael (Qur'ān, ii. 119) finally decided the question in favour of the restoration. In 1571 orders were given for the complete rebuilding of the mosque by the Ottoman Sultān Salīm II.,¹ who, however, did not live to complete the work; this fell to the lot of his successor Murād III. In the colonnades the principle was followed that three marble columns should be succeeded by one of black stone from a local quarry. Details of the numbers and the location of the columns in the old and in the new mosques are given by Wüstenfeld (iv. 318, 9), together with other statistics and dates. The existing mosque appears to be substantially that erected by Salīm and his successor.

It appears, then, from this sketch of the history of the mosque that little remains in Mecca for which any considerable antiquity can be claimed. The archaeological taste has rarely developed in eastern countries, and no trouble was taken either in Mecca or in Medina to preserve historic buildings or retain ancient sites. The theoretic sanctity of Mecca has never stood in the way of leaders who wished to effect their objects by violence; and the Umayyad Yazid, whose besieging forces were to some extent responsible for the burning of the Ka'bah in 64 A.H., did no more than would have been done by any other Muslim ruler who was engaged in suppressing a rebellion. Various buildings which figure in the early history of Islām were cleared away as the need for enlarging the temple area arose, and little regret was felt for them. On the other hand, many myths arose which have no justification in the Qur'ān; thus a stone which is called 'the station of Abraham' has acquired great sanctity, but in the Qur'ān (ii. 119, iii. 91) this phrase seems to mean only 'the dwelling-place of Abraham.' The jurist Mālik († 179 A.H.) asserts that this was restored by Omar to a place which it had occupied before the Days of Ignorance, on the faith of a chart preserved in the treasury of the Ka'bah.¹ As we have seen, the Black Stone, *Ḥaḡḡ*, is supposed to represent the 'right hand of Aīreem' is of very doubtful authenticity.

Besides the prohibition against bloodshed which theoretically covers the area occupied by the city, there are other legal peculiarities belonging to it. Closely allied to this prohibition is that against the chase, which is even extended to the cutting of trees and the plucking of herbs. This ordinance is modified in a variety of ways; it seems clear that the slaughter of noxious beasts is generally permitted, and weeding to a certain extent is also lawful. The slaughter of game has to be atoned for by compensation, on a scale fixed by the Qur'ān. There is some difference of opinion between jurists on the question whether rent may be taken for

¹ *Mudawwanat*, Cairo, 1828, ii. 212.

houses in Mecca; according to modern travellers, this question is purely academic, since the inhabitants largely earn their living by letting their houses to pilgrims.

The place of Mecca in the Muslim religion is otherwise not free from anomalies. On the one hand, it is clear that the standard of morality and piety practised by the inhabitants has at no time been particularly high, and various travellers have been shocked by their experiences; on the other hand, there is no doubt about the sanctity of the place and the spiritual benefits that accrue to those who go thither. These are not indeed free from danger; for, just as the value of good actions is higher in Mecca than elsewhere, so the debt incurred by evil deeds is there increased; and, according to the Sūfis, evil thoughts and intentions are punished in Mecca, but not elsewhere. If Abū Ṭalib al-Makki († 386 A.H.) is right, pious men in early times who went thither on pilgrimage used to pitch two tents, one within and another outside the sacred area, devoting the former exclusively to religious exercises.¹ The resulting danger was one of the reasons why continuous residence in Mecca was discouraged; two others urged by Ghazālī² († 505 A.H.) were the fear lest familiarity should breed contempt and the fact that absence makes the heart grow fonder. It could also be urged that, according to the Qur'an, 'the House' is a place of returning, i.e. one to be visited, not made a place of residence (ii. 119).

The various sovereigns who have been protectors or 'servants' of the sanctuaries have ordinarily been lavish in marks of their favour and somewhat jealous of munificence exercised by rival potentates; among the public works executed by these benefactors the greatest amount of space appears to be devoted in the Chronicles to the aqueducts; one which conveys water from Mt. Arafat to Mecca, utilizing a channel originally constructed by order of Zubaida, wife of Ḥārūn al-Rashīd, occupied fourteen years (965-979 A.H.) and cost enormous sums, owing to the difficulty of piercing the rock and the primitive character of the methods in use. Numerous colleges, hospitals, and almshouses have been erected by Islāmic sovereigns and their ministers, many of them furnished with endowments. The fate of all pious foundations in Mecca, according to Snouck Hurgronje,³ is the same: most of the houses that have any value have been at some time or other purchased in order to serve as endowment, but gradually passed from hand to hand in such a way that they retain the name *waqf* (on which see *ERE* vii. 877 f.), without serving any pious purpose. The name, however, prevents their being legally sold, yet sale is often necessary, and this is effected in fact, though new names are employed to serve instead of 'sale' and 'purchase.' An attempt was made by a Turkish resident in the middle of the 19th cent. to declare such transactions invalid, but his removal was effected before this could be carried out.

Some of the erection of the places of learning has not had the effect of rendering Mecca at any time a university centre, and its printing-press has contributed very little to Arabic literature; nevertheless as a gathering-place for the pious it has regularly served for the dissemination of ideas, which are worked out elsewhere. A. Le Chatelier, indeed, attributes the part played by Mecca in recent times to the influence of the Sanūsīs:

'La confrérie nouvelle rendit à la Mecque le rôle de foyer du fanatisme musulman, que lui avait fait perdre la caste sacerdotale' (*Les Confréries musulmanes du Hedjaz*, Paris, 1887, p. 18).

The author of a dialogue on Islāmic revival be-

³ *Op. cit.* p. 164.

tween Muslims of various nationalities recently placed the scene in Mecca.¹ Yet the cosmopolitan character of the pilgrimage appears from the time of the early Islāmic conquests to have rendered this sanctuary the place where it was easiest to address the Muslim world as a whole. Deeds of settlement of succession to the khālifate were issued and deposited here by Ḥārūn al-Rashīd.² If a man wished to procure a copy of a rare work, he would have a crier advertise the want among the pilgrims.³

In spite of the rule which forbids access to Mecca on the part of non-Muslims, many Europeans have undertaken the pilgrimage, some indeed having adopted Islām for the purpose of carrying out this project. In *Christians at Mecca* (London, 1909) Augustus Ralli gives accounts of sixteen such visitors, beginning with Ludovico Varthema, 'a gentleman of the city of Rome,' who reached the forbidden city in 1503. Since the publication of Ralli's collection two more English travellers have been added to the list: Hadji Khan and W. Sparrow, *With the Pilgrims to Mecca, 1902*, London, 1905; and A. J. B. Wavell, *A Modern Pilgrim in Mecca*, do. 1912. Among the records of these pilgrimages that by R. F. Burton (*Pilgrimage to El-Medīnah and Meccah*, London, 1855-56) is classical; it adds, however, very little topographical information to that which had been given to the world by J. L. Burckhardt (*Travels in Arabia*, London, 1829). Of the others the account of the city by Snouck Hurgronje (*op. cit.*, 1885) is the most important. In several cases the travellers were so fully occupied with the task of preserving their lives that they had no time to make observations of value; and in not a few instances the veracity of the narrators has been questioned, not without cause. Besides these accounts by Europeans there are many in existence by Muslims, some of whom have employed the French language. It is asserted that the number of the former who have succeeded in witnessing the pilgrimage and returning to tell the tale is small compared with that of those who have sacrificed their lives in the attempt; and those who have accomplished the task safely have in most cases done so by the exercise of great cunning and ingenuity. The plan of H. Maltzan (*Wallfahrt nach Mekka*, Leipzig, 1865), who, in order to pass for a Muslim, borrowed the personality of an Algerian, the latter undertaking to remain in hiding for the necessary period, may be commended both for boldness and for astuteness; it was not, however, free from danger.

MEDALS.—See COINS AND MEDALS.

MEDIAN RELIGION.—The religion of the ancient Medes is one of the most difficult and disputable questions in ancient Oriental history. The statements of the earlier classical authorities are not easy to reconcile with the Iranian Avesta, and fresh elements of difficulty have been introduced by the decipherment of the cuneiform inscriptions.

The actual facts are these. As far back as the 14th cent. B.C. the cuneiform documents of Boghaz Keui have shown that there was an Aryan, but not as yet Iranian, population in Mesopotamia who worshipped the gods Mithra, Varuna (written Uruwana and Aruna), Indra, and the two Nāsatyā, the Vedic correspondents of the Dioscuri (cf. E. Meyer, *SBAW*, 1908, pp. 14-19). In the 9th cent. B.C. this Aryan population had become Iranian.

and was settled east of the Zagros mountains, where it was known to the Assyrians as Madā, or Medes, a name also written Amadā, like Amardi for Mardi. From this time forward the names of the kings and chiefs of Media and the neighbouring districts mentioned on the Assyrian monuments are Iranian, and in a list of Median princes conquered by Sargon in 714-713 B.C. we find the name of Mazdaku, proving that Zoroaster's god Mazdā, 'the Wise,' was already worshipped (cf. also F. Hommel, *PSBA*, 1899, p. 132). The name of 'Mitra,' the sun-god, is also found in the tablets from Assur-bani-pal's library at Nineveh. On the other hand, Istuvegu, or Astyages, the last king of Ekbatana, is termed in the inscriptions, not 'King of Media,' but 'King of the *Ummān Manda*' or 'Hordes,' an archaistic title given by the Babylonians in early times to the northern barbarians, but applied in the Assyrian age to the Cimmerians and Scythians (*qq.v.*). The similarity of the names Madā and Manda raises the question whether the Medes of the classical writers who were conquered by Cyrus were not really Scythians whose religious beliefs and practices have been transferred to their Median subjects or neighbours.

Like the Medes, the Persians also were Iranians.¹ But here again the inscriptions make it doubtful whether Cyrus and Cambyses, the founders of the Persian empire, were of pure Iranian stock, and whether the religion of Cyrus, at all events, was not the polytheism of Susa (cf. art. ACHÆMENIANS, vol. i. p. 70). Both he and his son conformed to the ancient worship of Babylonia. Gaumāta (Gomates), 'the Magian,' is expressly stated by Darius (*Bh.* [Pers. text] i. 63 f.) to have destroyed the *āyadanā*, or 'prayer-chapels,' of Persia, a word which is translated 'temples of the gods' in the Babylonian version of the Behistūn inscription. These Darius claims to have restored, along with other possessions of the Persian and Median peoples, through the help of the 'great god Auramazdā,' the creator of the earth and heavens, who in the Susian version of the Behistūn inscription (iii. 77, 79) is specially called 'the god of the Aryans.' In the eyes of Darius he occupied much the same place as that occupied by Jahweh in the OT: he was the national god of the Persians and Medes and supreme over all other gods. The existence of the latter, however, was admitted: at Behistūn Darius says that he was assisted not only by Auramazdā but also by 'the other gods, all that there are.' Opposed to the righteous law of Auramazdā was 'the Lie' (*drauga*), the Achæmenian equivalent of the Zoroastrian Angra Mainyu (Ahriman [*q.v.*]). But there is no reference to the Zoroastrianism of the Avesta in the inscriptions of either Darius or his successors; their priests, moreover, were not Magians, whose overthrow and massacre were, on the contrary, commemorated in the festival of the Magophonia;² and the bodies of the Persian kings seem to have been buried in the ordinary way instead of being thrown to dogs or birds of prey.³ This, Herodotus says (i. 140), was a Magian custom.⁴

The date of Zoroaster (Zarathushtra) is uncertain,

¹ This is the general view, but J. H. Moulton (*Early Zoroastrianism*, London, 1918, pp. 223-235) doubts whether it is correct. He hints that the Medes were the aboriginal inhabitants, and that the Magi (*q.v.*) were their priests. If this be so, the Medes were neither Iranians nor Semites. He directly states (above, p. 243b) that the Medians 'belonged to neither of the two great races which divided Nearer Asia between them.' Prášek (*Gesch.* i. 8 ff.) urges, in more detail, a similar view.

² For a somewhat different explanation of the Magophonia, see art. FESTIVALS AND FASTS (Iranian), vol. v. p. 274 f.

³ See Moulton, pp. 195, 192 f., 202 f., 217; and cf. art. DEATH AND BURIAL OF THE DEAD (Persia), § 25.

⁴ The statement of Agathias (ii. 22), that the Medians buried the dead, whereas the Persians exposed them, is almost certainly wrong.

but modern scholarship is inclined to assign it to the 6th cent. B.C.; and Jackson¹ seems to be right in concluding that he arose in Media rather than in Bactria, the tradition which makes him a Bactrian being late.

Zoroaster is unknown to both Herodotus and Ctesias, the earliest mention of him occurring in a fragment questionably ascribed to Xanthus of Lydia and in Plato (*Alcib. I.*, 122). Herodotus makes the Magi a Median tribe (i. 101),² but he also implies that they were a class of priests (i. 140), and he describes certain of them as interpreters of dreams (i. 107). He further ascribes to them the Zoroastrian practices of reverencing the dog and destroying noxious animals (i. 140). No sacrifice could be offered without the presence of a Magus, who accompanied it with a hymn (the Avestan *Gāthā*); and there was neither altar, fire, nor libation (i. 132). The Greek historian adds (i. 131) that 'the Persians' (whose priests were the Median Magi) had 'no images of the gods and no temples or altars, considering the use of them a sign of folly.' They sacrificed to Zeus (Ahura Mazdā) on the summits of mountains, as well as 'to the sun and moon, to the earth, to fire, to water, and to the winds.' The worship of the goddess Anāhita, and presumably also of Mithra, the sun-god, referred to in two inscriptions of Artaxerxes Mnemon (*Susa* a, 4 f., *Ham.* 5 f.) was borrowed at a later date from 'the Arabians and Assyrians' (Herod. i. 131).³

On the other hand, the scourging of the Hellespont by Xerxes (Herod. vii. 35) is inconsistent with the belief that water was divine,⁴ and in Herodotus's account of Magian religion Avestan dualism is conspicuous by its absence. So, too, is any reference to the doctrine of a resurrection. The simplest way of explaining these anomalies is to suppose that the religious system described by Herodotus was that of the Medes, among whom the Magi were a sort of hereditary priests, like the Levites in Israel; and that the religious system of Darius represented the religion of the Persian aristocracy, but that the origin and fundamental principles of the two were the same. The conquest of Media by Persia would have introduced the Median forms of theology among the Persian people, though their influence would have been momentarily checked by the overthrow of Gomates and his party, who perhaps would have stood in much the same relation to the Achæmenian aristocracy as the Pharisees did to the Sadducees. Meanwhile the reformer Zarathushtra had appeared in Media, where he built upon pre-existing religious beliefs and practices and attracted the Magi to his side. The result in the course of centuries was the Mazdæism of the Avesta.

MEDIATION.—Mediation is a word of extreme vagueness, but is here considered only in its technical or quasi-technical applications in religion. In a sense all we are and have is mediated to us somehow. Our very being comes to us through our parents. The society into which we are born and in which we are trained mediates to us most of

¹ *Zoroaster*, pp. 219-225.

² For the argument that Magianism was Median in origin see esp. Prášek, ii. 114 f.

³ W. Geiger (*Ostiran. Kultur im Altertum*, Erlangen, 1882, pp. 458-462) derives the Zoroastrian fire-priests (*Athrauvas*) from Media.

⁴ See, however, Moulton, p. 215 f.

what we think of as intellectual, moral, and religious convictions. The greater part of what comes under these headings is not original achievement of our own, but inheritance or education; it comes to us in some way by the mediation of others. It may be possible to make our own what is thus mediated to us, and to become possessors, as it were, in our own right of what we have inherited or been taught; but, to begin with, every creature born in time owes to mediation of some sort the whole capital with which he adventures upon independent life.

1. The NT use of the term 'Mediator.'—The technical use of the word is most easily grasped if we start from that application of it which is most definite and concrete, viz. its application to the work of Christ. There are four NT passages where this is found: 1 Ti 2⁵, He 8⁶ 9¹⁵ 12²⁴. In all these passages Christ is represented as mediating between God and man. God and man have been estranged. The relation which normally subsists between them has been destroyed, and the work of the mediator is to restore it. In 1 Timothy this work is explicitly connected with the redemptive death of Christ; there is one mediator between God and men, Himself man, Christ Jesus, who gave Himself a ransom for all. The same connexion is implied in all the passages in Hebrews; there Jesus is spoken of as the mediator of a new or a better covenant. The covenant is the religious constitution under which God and men form one society, or live a common life. The old and inferior constitution, under which the ideal of religion was not realized, was the Levitical one. This was annulled because of its ineffective character, and in place of it, through the mediation of Jesus—i.e., by means of, and at the cost of, His incarnation and sacrifice—comes the Christian relation of men to God. In this the ends of religion are really attained. There is real forgiveness of sins, real purification of conscience, real and abiding access to God, and all due to the mediation of Christ. This use of the term 'mediation,' which may be called the specifically Christian one, is that which has been mainly developed in later theology. Christ's work as mediator is that in which He interposes between the holy God and sinful men who are estranged from each other, and makes peace. This specifically Christian use of the term, however, is only a continuation of its use in ordinary relations. In ancient as in modern times a State or a person could offer to 'mediate' between other States or persons at war. The substantive *μεσίτης* is used side by side with such terms as *διαλλακτήης*, *διατηγής*, and is defined by Suidas as = *εἰρηνοποιός*, 'peacemaker.' The verb *μεσιτεύειν*, which occurs once in the NT without an object (He 6¹⁷), though some here would supply *τὴν ὑπόσχεσιν*, 'His promise' is elsewhere usually transitive: *μεσιτεύσαι τὴν διάλυσιν ἐνδοίκως* (Polyb. xi. xxxiv. 3) = 'to achieve the settlement by friendly mediation.' A state of hostility or estrangement, in which the making of peace is the work of a third party, and can therefore be called mediation, is the background of the primary Christian use of the term.

2. Extension of mediation in the NT from redemption to creation.—But even in the NT it is not limited to this use. It is not only that peace with God, or the forgiveness of sins, or reconciliation, or eternal life for the spiritually dead is mediated through Christ and His redemption; Christ is presented also as the mediator of creation. All that is has come into being through Him. We find this stated without explanation, as if it were self-evident, or an agreed proposition among Christians, in 1 Co 8⁶. It is expanded in Col 1¹⁶, with a view to securing to Christ, who has just been referred to as the mediator of salvation (in whom

we have our redemption, the forgiveness of sins [v. 14]), a place of dignity above all angelic powers. In Colossæ, apparently, such powers were recognized by some as mediating between God and man in a way which trenched on Christ's prerogative as the one mediator; and it was an effective method of precluding this to show that all such powers, whatever they were called, owed their very being to Christ, and could therefore in no sense become His rivals. The connexion of ideas in He 1² is similar. It speaks of a Son whom God has appointed heir of all things, through whom also He made the worlds. The 'also' implies that the making of the worlds through the Son is what naturally corresponds to His being heir of all things. Probably no idea in the NT is so hard to enter into as this. When we think of Christ as mediating between God on the one hand and men alienated from God by sin on the other, we know where we are. We can speak on the basis of experience, and tell how Christ has come to us in our own estrangement, and made peace between us and God. We can speak of Him as mediator, because that is what He has been to ourselves. But creation is not a process, or an act, of which experience teaches us anything; it is not apparent that it needs to be, or that it can be, 'mediated' at all. The OT simply says that in the beginning God created the heaven and the earth. How does Paul come to say (Col 1¹⁶), In Him—that is, in Christ—were all things created? How did the thought originate in his mind? What exactly did it mean to him? We cannot accept it merely on his authority, as a piece of information about the beginning of things; the content of revelation—what a man knows by the inspiration of God—never has the character of information. Unless we can enter into the origin and process of the Apostle's thought, we can never really appropriate the idea in which it rests. The idea that not redemption only but creation as well is mediated through Christ, that to Him is due and by Him must be determined not only all that we can call reconciliation but all that we can call being, is so unexpected and so astounding that we cannot but ask how it took possession of his mind.

3. Rationale of this extension in Paul.—So far as can be seen, there are only two possible explanations of Paul's attitude. One is purely formal, and reduces the idea of mediation, so far as it applies to all being, to a pure formality. It assumes that Paul had identified Christ with some supernatural being to whom this attribute or function of mediating creation already belonged, and that with the identification there went, as a matter of course, the ascription of this attribute or function to Christ. This is supposed to explain why Paul, when he introduces the idea of creation through Christ, does it *simpliciter*, without any justification or explanation: he is only doing what every one would concede who agreed with him in identifying Jesus with the Christ. But to this there are many objections. As far as can be known, there was no trace whatever in the Pharisaism in which Paul was reared of any such idea as that the Messiah was participant in the creation of the world. Further, though this may be discounted as a subjective impression, Paul writes in Colossians with passionate earnestness on this subject, and not like a man manipulating borrowed ideas which have no vital relation to his experience. And, if it be said that it is not the Jewish eschatological Messiah with whom Jesus is identified by Paul, but a supernatural being of another sort—the Logos of popular Greek philosophy, of whom such things were predicated as Paul predicates of Christ in connexion with creation—then the further question is raised, How did Paul come to

make this identification? He never mentions the Logos by name. There is no indication in his writings that he knew anything about philosophy or that he had any interest in its problems. The Logos of the current philosophy, which did mediate somehow between God and the universe, was the philosophical solution of a difficulty which he had never felt: namely, how the transcendent God was to come into any relation to a material world. Paul was not troubled by this any more than the OT prophets or Jesus Himself, nor does he ever bring his doctrine of creation through Christ into any relation to it. The motive and the meaning of that doctrine must be sought elsewhere.

A real clue to his thought, as opposed to this formal one, may perhaps be found in another way. In Paul's experience as a Christian, Christ was everything. He had reconciled him to God and made him a new creature. He had put him in possession of the final truth and reality in the spiritual world, that which could never be transcended and could never fail. When he lived in Christ, he lived in the eternal world, and he felt that to that world and to the believer's interest in it everything else must be subservient. He could say, 'All things are yours' (1 Co 3²¹); 'All things work together for good to them that love God, to them that are called according to his purpose' (Ro 8²⁸). And 'all things' here must be taken without restriction. It means not only all that happens, but all that is. Creation must in the last resort be in alliance with the God and Father of our Lord Jesus Christ, and in league with His purposes. As J. Orr put it (*The Christian View of God and the World*, Edinburgh, 1893, p. 323), it must be built on redemption lines. That is the same as to say, it must be built on Christian lines; the world in which Christians live must be essentially a Christian world. It is not a world in which anything can defeat God's purpose in Christ; it is not a world in which the final sovereignty of Christ can be frustrated; it is a world which is essentially related to Christ, to His work of reconciliation, and to His supreme place at last as heir of all things. Now, is it not legitimate to say that a world which was created for Christ was created in Him and through Him? The difficulty of apprehending what is meant by the creation of the world through Christ is only one aspect of the difficulty of apprehending Christ's pre-existence, and that again is only one aspect of the omnipresent and insuperable difficulty of defining the relations of eternity and time. If pre-existence is a legitimate way of expressing the absolute significance of Jesus—the fact that what we see in Him is the eternal truth of what God is, and that therefore He belongs to the very being of God, 'before the foundation of the world'—then the mediation of creation through Christ is a legitimate way of putting the conviction that in the last resort, and in spite of appearances, the world in which we live is a Christian world, our ally, not our adversary, or, if our adversary, one who is necessary, that in conflict with and victory over him we may prove that we have found the way of salvation. Paul does not start with the speculative idea that creation could not be immediate, and that all material and spiritual existences—things on earth and in heaven, things visible and invisible—must owe their being to the mediation of some supernatural power which is identified in his mind, we cannot tell why, with Jesus. He does not start thus, and then give this vague speculative idea a particular application when he comes to explain the Christian redemption. On the contrary, he starts with Christ and with the experience of redemption which, as a matter of fact, is mediated

is something of absolute significance. It involves contact with ultimate realities, with the eternal truth and love of God in Christ; it kindles a light in the soul which must fall on everything in the world if we are to see it as it is; it involves no smaller a conviction than that the world is essentially a Christian world, and it is this conviction, which is still involved in Christian faith, that forms the vital content of Paul's doctrine that all things were created through Christ.

That the world has this character may, of course, be doubted. It may even be argued that no moral life, no life involving moral probation, is possible except with a background of nature which is morally indifferent; it is only in a world which is indifferent to the distinction of good and evil that man can prove his devotion to good for its own sake. But there is really no such world, though the lightning does not shun the good man's path. What the doctrine of creation mediated by Christ implies is that in the very constitution of nature it is possible to discover the same principles as are revealed in the life and work of Christ. If it were not so, no one with roots in nature would understand Christ when He appeared. The ultimate task of Christian philosophy is to discover spiritual law in the natural world. This is what Paul felt; it is what every idealistic philosophy teaches; it is the inspiration of the highest poetry; Wordsworth found in nature not an adversary or a neutral, but 'the soul of all my moral being.'

4. Mediation in the Fourth Gospel.—Without using words like *medians* and *mediateur* the Fourth Gospel makes perhaps a more conscious and continuous use of the idea of mediation than any other book of the NT. Leaving the Prologue out of account, it is mediation in the specifically Christian sense, just as in Paul and Hebrews. The whole book might be summed up in the phrase of 14⁶, 'No one cometh unto the Father, but by me.' It is to Jesus that men owe all the blessings which constitute salvation. They are variously described, most frequently as 'life' and 'eternal life,' but they come to men through Him and Him alone. Yet a counter or complementary truth is presented in the same Gospel. No man comes to the Father but by Jesus, yet no man comes to Jesus but him who is drawn by the Father (6⁴⁴). It is as though there were powers in the world antecedent to the historical Jesus which had Him in view, which prepared men to understand Him, and to welcome His mediation when He came. In the constitution of nature, in the impression which it makes as a whole on the spirit of man, in human life itself with its various experiences of success and failure, of wronging others and being wronged, of forgiving others and being forgiven by them, there is a sum or complex of forces which bears witness to Christ and constitutes a providential drawing of men by the Father to the Son.

But it is only when we receive the Son and believe in Him that we truly come to the Father. The earlier stages of religion are mediated to us through all the experiences of life; these provide for it a broad and indisputable basis here and now, and make it independent of any particular historical mediation—i.e., of any mediation through persons or facts which have their place in the past. But this immediate experience of religion—a religion, as some might call it, of pure inwardness and spirituality, which has its certainty in itself, and is not at the mercy of a historical criticism for which no fact is beyond question—does not, according to the Evangelist, enable men to dispense with what is mediated through Jesus; it only enables and prepares them to appreciate it. It is consummated through Him. Only he who

doxical as it may seem, this historical mediation does not shake the certainty of religion; the perfect religion does not become doubtful because the mediator of it lived in time. We are 'in Him that is true,' and he that believeth hath the witness in himself (1 Jn 5^{10, 20}).

In the prologue the idea of mediation is even more explicit than in the body of the Gospel, and it is wider in its range. The first three verses are more speculative than anything in Paul, and it is difficult to think otherwise than that the author has identified Jesus with the Logos of the current philosophy, and that he is speaking of Him in terms whose antecedents are philosophical rather than evangelical. The very ambiguity of the term Logos (*ratio, oratio*) may have commended it to him. It suited him equally well to have Jews feel that in Christ they had God's last word to man, and to have Greeks feel that in Christ they were in contact with the *reason* of the world, the rational principle or truth in which all things lived, and moved, and had their being. The one knowledge and the other alike, he would have held, were mediated to men through Jesus. It is by no means clear, however, that the prologue makes the Logos, as distinct from the historical Jesus, the mediator either of a universal revelation of God to man or of a special revelation of God to Israel. The interest of the Evangelist in such speculative ideas is perhaps less than has been assumed. The traditional and somewhat grandiose interpretation of the prologue, according to which the Incarnation does not appear until v. 14—an interpretation which has so commended the passage to those who delight in the idea of a general revelation in nature and history culminating in a final and adequate revelation in Christ—is almost certainly wrong. The movement of thought in the prologue is spiral. The Incarnation appears already in v. 4, and the history of Christianity up to the time of the writer is summarized in v. 6. Revelation in its full and specifically Christian sense, the mediation to men of that knowledge of God which is eternal life, is accomplished only through Jesus, the Word made flesh. The difference from Paul may be said to lie in this: in Paul Jesus mediates revelation through redemption (we know God as Father because He saves us by His Son), whereas in John He mediates redemption through revelation (we are saved from sin and death because through Jesus we have the knowledge of the Father). But the distinction is true only when it is not pressed. In both writers it is the specifically Christian sense of mediation that is vital: Jesus is the mediator between God and men. The wider sense of mediation, according to which Jesus mediates creation as well as redemption, while it is found in both, has not the same emphasis. The apostles seem to feel that their religion ultimately implies this, but it is not this that directly inspires or sustains it.

5. Mediation and Jesus' consciousness of Himself.—The most important of questions to the Christian religion is whether this specific sense of mediation, which is not only recognized by but pervades all the apostolic writings, is confirmed when we turn to the mind of Christ Himself. He never speaks of having anything to do with the creation of the world, but was He conscious of being in any sense a mediator between God and men? Did He stand between them to any intent? Did men in any sense owe to Him either the knowledge of God or reconciliation to God, or were these supreme spiritual blessings immediately open to them, in independence of Him? The questions have been answered in both ways. Harnack's famous *Das Wesen des Christentums*, Berlin, 1900, p. 91, that in the gospel as preached by Jesus the

Son has no place, but only the Father, is so qualified by other statements that its author can hardly be cited for the negative. Much more uncompromising representatives of this side are J. Weiss and W. Heitmüller. The former, in *Das Urchristentum* (Göttingen, 1914, p. 364), in discussing the relations of faith in Christ and faith in God (in Paul), explicitly renounces the idea of a necessary mediator of salvation. Christ was there, as a matter of fact, and therefore Paul had to give Him a place in his religion somehow; but Weiss, with a sense of his own daring,¹ declares that there was no necessity for His mission and work in the nature of God, and that God's eternal love, though Paul knew it only through Christ, must have had its way even if Christ had failed the redeeming work of the Father, or if God in the fullness of His love had been able to dispense with the sacrifice of Christ. There is not, indeed, any appeal here to the mind of Christ, with regard to mediation, but there is the expression of a conviction which forecloses any such appeal. In Heitmüller's *Jesus* (Tübingen, 1913) the denial is even vehement:

'It is quite beyond doubt that according to the preaching of Jesus we have to do in religion only with an immediate relation of man to God: between God and man nothing and no one has place, not even Jesus. Religious significance in the proper sense Jesus in any case does not claim' (p. 73).

But Heitmüller feels a certain embarrassment when he deals explicitly with some words of Jesus. He admits that they disclose not merely a prophetic but a superprophetic consciousness—e.g., the well-known passage Mt 11²⁷. To be the bearer of a unique revelation, the Son *simpliciter*—it almost terrifies us to think of it. It is not a divine self-consciousness, but it is almost more than human. It might impel us to ask whether it was compatible with soundness and clearness of mind. 'Here is the point at which the form of Jesus becomes mysterious to us, almost uncanny' (p. 71). Further on, he speaks of the riddle as insoluble (p. 89), but apparently he thinks that he has reduced it to less disquieting proportions when he writes (p. 126) that Jesus seems to have claimed for Himself *only* that He is the way to the Father. It is difficult to see how He could have claimed more. The opposite view, that the place which the NT generally assigns to Jesus, as the indispensable mediator between God and men, is in harmony with Jesus' consciousness of Himself, is argued in the present writer's *Jesus and the Gospel* (London, 1908, p. 159 ff. on the self-revelation of Jesus). The argument covers both the Johannine idea of the mediation of the knowledge of God (as in Mt 11²⁷) and the Pauline idea of the mediation of redemption (as in Mk 10⁴⁵). What it does not expressly extend to is the speculative idea that creation as well as revelation and redemption is mediated through Christ.

6. Other mediators than Jesus.—Emphasis is laid in the NT on the exclusive character of Christ's mediation: there is one God, and one mediator between God and men. This is the idea of such passages as Ac 4¹² ('none other name'), Col 2⁹ ('in him dwelleth all the fulness of the Godhead bodily, and in him ye are made full'), and He 7²⁴ (the priesthood which does not pass to, or cannot be treasured upon by, another), as well as of Jn 14⁶. What is in view in these passages is the idea that Christ in His work of reconciliation may have rivals or competitors, powers which in independence of Him prepare for His work, or supplement it, or enable men to dispense with it. This is unambiguously and exhaustively denied. The idea of mediation in the Christian sense has no application but to Him. Spiritual beings, whatever their name or degree—principalities, powers, dominions—owe their own being to Him, and have their functions,

¹ Wir müssen es aussprechen . . . ehrlicherweise muss man sagen' (ib.).

whatever they are, in a world which He has reconciled to God.

The exclusiveness of His mediation with regard to nature (being) as well as redemption is strongly asserted both in Col 1¹⁶ and in Jn 1⁸. Probably in both these passages, as well as in 1 Ti 2⁵, there is reference to forms of Gnosticism which it is difficult for us to define. For ancient thought generally, and therefore for ancient religion, the world was full of invisible powers of a personal or quasi-personal sort, and these easily asserted a place for themselves in the religious life. They came between God and the soul in ways that we cannot appreciate, and the interest of the apostles is to expel from the relations of God and the soul every power but that of Jesus. Their argument is that of experience against uncontrolled imagination. The controversies of later theologians, Catholic and Protestant, on the mediation (intercession) of saints are like this, but not identical. Those who admit that we can pray for one another have no ground for denying that the saints can pray for us. All that is to be said is that we do not know anything about it; but whatever the saints may do for us they can do only in dependence on Jesus, not as mediators who might bring us to God apart from Him. For statements on opposite sides of this question see Calvin's *Institutio*, III. xx. 20-27; *Westminster Confession*, ch. xxi. 2; Thomas Aquinas, *Summa Theol.*, III. qu. xxvi. art. 1 f.; S. J. Hunter, *Outlines of Dogmatic Theology*, London, 1895-96, §§ 574, 607; K. von Hase, *Handbuch der protestant. Polemik*, Leipzig, 1900, p. 294.

7. Mediation in the OT.—If we look back from the NT to the OT, we find much everywhere which can be described in terms of mediation, though *μεσότης* occurs only once in LXX (Job 9³³), where, according to T. K. Cheyne (*EB*, col. 3003), it answers to *מִשְׁפָּט*, and means a person who could interpose with authority between Job and his imperfect or arbitrary God—an arbitrator who would see justice done. This is akin to the *δαιμόνιος*, defined by Aristotle as *ὁ μέσος*, and often found in Greek as a synonym of *μεσότης*; but it is hardly the equivalent of the NT *μεσότης*, whether we regard revelation or reconciliation as that which comes to men through Him. If we confine our attention to the relations of God and man, in which the term mediation is properly applied, both aspects of it pervade the OT. Revelation, or the knowledge of God, is mediated to men through the prophet. It is not necessary to ask here how it is mediated to the prophet himself; for the purposes of religion he obtains it immediately. He stands in God's council and hears His voice; it is the voice of God Himself, or such an echo of it as the prophet's voice can utter, that is heard when He speaks. There is no external criterion for distinguishing the true voice of God from a voice which speaks lies in His name. The secret of the Lord is with them that fear Him (Ps 25¹⁴); they have, without knowing it, what the NT calls (1 Co 12³⁰) the gift of 'discernment of spirits.' As revelation is mediated through the prophet, so in the largest sense is reconciliation through the priest. The Levitical system may have been very imperfect—it was destined, indeed, to perish by its inadequacy; but the idea of it was to enable men to approach God, to give them peace with Him, to put it in their power, in spite of all that they had done, to have communion with God, living as members of a society of which He was the head. The Levitical system does not, of course, exhaust what the OT exhibits of the mediation of reconciliation. Much importance is attached to prayer; the hour of irremediable ruin is come—the final breach between God and His people—when Jeremiah hears that, though intercessors like Moses and Samuel stood before Jahweh, they could not

turn His heart toward Israel (Jer 15¹). The ministry of intercession mediates for man to God, as well as the ministry of sacrifice—unless we reduce the latter to the former, and regard sacrifice as in essence 'embodied prayer.' It is another form, possibly a form inferior to intercession because less spiritual, of showing the cost at which reconciliation is mediated to sinful men.

8. Later developments of mediation.—Though the main content of mediation in the OT may be condensed under prophecy and priesthood, it is not quite exhausted there. Especially in post-Exilic literature, where the transcendence of God is emphasized till it depresses the soul, we find intermediate beings appear whose functions are wider and less defined. Sometimes they have to do with the creation of the world, sometimes with its government in nature or in history; sometimes they are specially concerned with Israel's fortunes, or with the giving of the law; sometimes they are interested in individual men, attaching themselves to pure souls and making them prophets or sages. Foreign influences as well as philosophical necessities determined the form of such thoughts, and they grew to have a larger and larger space in many minds. In A. Bertholet's *Bibl. Theol. des alten Test.*, Tübingen, 1911, § 32, there is a sufficient account of this faith in intermediate beings (*Hypostasienlehre*), so far as it can be derived from the Greek Bible. The most important of them was Wisdom, though Wisdom, curiously enough, in spite of Mt 11¹⁹, Lk 11⁴⁹, seems to have fallen out of favour in the NT, and is not once mentioned where we might most have expected it, in the Johannine writings. Perhaps this was due, as J. Grill has suggested (*Untersuchungen über die Entstehung des vierten Evangeliums*, Tübingen, 1902, p. 199 f.), to the frequency with which in Gnosticism *σοφία* represented a lost æon which had to be redeemed (cf. *ERE* vi. 236 f.). Next in importance to Wisdom came the Word or Logos. On this see W. Bousset, *Die Religion des Judentums*, Berlin, 1906, p. 399, and cf. art. LOGOS, § 2. The doctrine of the Logos as 'mediating' is developed at great length and with infinite inconsistency in Philo. It can be best studied in E. Bréhier, *Les Idées philosophiques et religieuses de Philon d'Alexandrie*, Paris, 1908, ii. ch. ii. f. It is perhaps not unfair to say that in Philo the Logos mediates between God and the κόσμος; that it mediates, further, between God and man as made in the image of God and participant in reason, but that it is not a mediator in the specifically NT sense of the term, i.e., a mediator of redemption between God and sinners. The verbal coincidences between Philo and the NT often, perhaps always, conceal a wide divergence of meaning. A full discussion of what Jewish belief in mediating powers eventually came to may be found in F. Weber, *Die Lehren des Talmud*, Leipzig, 1886, ch. xiii. He enumerates five: (1) the angel Metatrôn, (2) the Word, or *Mēmra* (g.v.), of Jahweh, (3) the *Sh'khinah*, (4) the Spirit of God, and (5) the *Bath Qôl*, or heavenly voice through which revelation is given. Where the mind starts with these generalities, whether in a more speculative or in a more religious interest, it does not seem able or impelled to bring them to any convergence upon a single mediator; but the NT writers, starting from their experience of Christ as the only and the real revealer of God and reconciler of sinners to Him, are able to regard all these doctrines of mediating hypostases as hints or suggestions of what they possess in Jesus, and are not afraid in a manner to identify Him with them all. Whatever they promised or were intended to secure has been finally made good and secured through Him. He is the Wisdom of God—the Key to the world of nature, of history, and

ception in the NT lies in its identification of the loftiest ideal with the profoundest reality. The meek man is thus defined as one who not only 'counts it better to suffer than to do wrong' (Plato), but as one who 'resists not evil' (Mt 5³⁸). He is the one who surrenders the *immediate* interests of life, but in so doing he is not emptying his life but rather filling it with larger interests. 'In ceasing to contend for his own rights against others he makes the rights of all others his own.' Accordingly, Jesus calls upon His disciples to surrender even the most obvious rights of property (Mt 5⁴⁰). But the ground of such surrender is not the denial of individual rights on the part of Christ. On the contrary, He assigns the highest importance to individual work, and He confers upon the meek a title not only to the Kingdom of Heaven, but also to the inheritance of the earth (Mt 5⁵). Such possession, however, is to be realized only through spiritual development; that is to say, such possession is not to be won by self-assertion or by insistence upon individual interest, but only as the individual identifies the common welfare of men with his own. Hence Christ's refusal to take part in a selfish struggle for private gain, and His ultimate conquest of all opposition by depriving others of the very power of setting up interests in opposition to His own.

3. Philosophical conception.—(1) *Its place in the history of ethics.*—While other ethical systems have in many cases been characterized by lofty ideals of conduct, the profound conception of meekness indicated in the preceding paragraph is distinctive of Christian ethics. The ethical ideal has generally been conceived as pleasure in some form or other. Hedonism (*q.v.*) conceives it as the pleasure of the moment, but the objection to this view is that such transient pleasure cannot satisfy a consciousness that is not momentary. Eudæmonism (*q.v.*) seeks to repair this defect by setting up the happiness of the life as a whole as the *summum bonum*, but a fatal limitation of this view is that the happiness of life as a whole is incalculable. The balance of pleasures and of pains cannot be adjusted, and the values of competing pleasures cannot be quantitatively determined though they may be qualitatively distinguished. The same criticism applies to Utilitarianism (*q.v.*), for the greatest happiness of the greatest number is still less calculable than the happiness of the individual life as a whole. A further criticism applies to all three forms of Hedonistic ethics—the criticism that pleasure, if sought for itself, is not found. This radical defect can be met only by a radical change of ethical ideal. What the nature of the new standard is to be will depend upon the point of view taken. If this be the standpoint of Christian ethics, then the ultimate moral standard cannot be lower than the attainment of perfection; and an essential factor in the rule of conduct by which this ideal is to be realized is the quality of meekness (*πραότης, πραότης*, later form *πραΰτης*). True humbleness, gentleness, consideration for others, self-respect without vanity, reverence, and perfect humility—for all these qualities are connoted by the term 'meekness'—alone lead, according to Christian ethics, to the realization of moral perfection, and at the same time to the attainment of real temporal prosperity. In NT phraseology the meek are most truly happy (or blessed), because theirs is not only the Kingdom of Heaven, but also the inheritance of the earth.

But how is such a quality of character, which has for its distinctive feature an utter absence of self-assertion, actually to achieve the conquests and acquire the possessions which are thus ascribed to it?

(2) *Its relation to the doctrine of evolution.*—According to the principle of natural selection, it has been argued that in the evolutionary process the unworthy or 'unfit' must be set aside in order to make way for the survival of the fittest. There are some, therefore, who maintain that by supporting such institutions as hospitals, almshouses, and sanatoria we are retarding the process of evolution. It is argued that we are thus breeding degenerates and criminals, consumptives and lunatics, and, worst of all, taxing the sane, healthy, and law-abiding citizens for their support.

But this view fails to recognize all that the doctrine of evolution implies. It confuses this principle with that of letting the weakest go to the wall. It is hardly necessary to point out that by adopting such a principle we should blunt our finer feelings and should therefore sink in the moral scale. And the cost in time, money, and efficiency for other pursuits that is entailed in our care for the aged and diseased is negligible when compared with the moral gain. Thus we find that the preservation of the infirm and consideration for the weak are strictly compatible with, and, indeed, an essential factor in, the law of evolution, inasmuch as they tend to develop a quality of human character which has the highest survival value. The growth of the spiritual Kingdom and the dominance of the world by meekness and humility are thus progressively realized.

LITERATURE.—HDB, art. 'Meekness'; cf. art. 'Sermon on the Mount,' vol. v. p. 19; W. S. Bruce, *The Ethics of the Old Testament*, Edinburgh, 1896, *The Formation of Christian Character*², do. 1908; H. Sidgwick, *Outlines of Hist. of Ethics*, London, 1886, esp. ch. iii.; J. S. Mackenzie, *Manual of Ethics*⁴, do. 1904.

A. J. HORROCKS.

MEGARICS (*Μεγαρίκοι*).—Euclides of Megara is generally regarded as the founder of the Megaric school, though it would be more correct to keep the name for his successors a generation or two later. Euclides himself was an Eleatic and also an 'associate' (*ἐταῖρος*) of Socrates. The account of his philosophy given by E. Zeller (*Philosophie der Griechen*, II. i. 4, Leipzig, 1889, p. 244 f.) is vitiated by his adoption of Schleiermacher's identification of the Megarics with the 'friends of the forms' (*εἰδῶν φίλοι*) of Plato's *Sophist*. It is quite impossible to reconcile the few facts we know about the teaching of Euclides with the theory of plurality of forms, and Proclus, in his commentary on Plato's *Parmenides* (p. 149, ed. V. Cousin, Paris, 1820-27), states quite distinctly that the 'friends of the forms' were the 'wise men of Italy,' that is to say, the Pythagoreans. On such a point Proclus's testimony is conclusive, for he had access to and was familiar with the works of Plato's immediate successors.

The most trustworthy account that we have of the Megaric doctrine is that of Aristotle, the teacher of Alexander of Aphrodisias (2nd cent. A.D.), some extracts from whose *History of Philosophy* are preserved in the *Præparatio Evangelica* of Eusebius (xiv. 17). Its Eleatic origin is at once apparent from these, and Aristotle expressly says that it was first the doctrine of Xenophanes, Parmenides, Zeno, and Melissus, and later of Stilpo and the Megarics. In the first place, they made it their business to 'throw' (*καταβάλλειν*, a metaphor from wrestling) all sensation and appearance, and to trust in reasoning alone. The method which they adopted was that elaborated by Zeno, a method which was known as 'dialectic' by its admirers and as 'eristic' by its critics. It consisted in showing that two contradictory but equally cogent conclusions could be established with regard to everything without exception, and that there was therefore no truth at all in any of the appearances presented to our senses. That is

what Plato calls *ἀντιλογία*, and we still possess a curious fragment of a work in the Doric dialect, generally known as the *Dialektis* (the name is without authority), which applies the method to certain ethical antinomies. It is most natural to regard this work as a product of Megara, and we know that the Megarians clung with special tenacity to their native dialect.

The effect of this criticism is to leave us with nothing but the One or the Whole (*τὸ ἓν, τὸ ὅλον*) and to deprive the Many and the Parts of all claim to reality. That was the doctrine of Parmenides, but there is evidence that Euclides understood it in a rather different sense than the founder of his school, and it is here that we can trace the influence of Socrates. The One of the Eleatics had been a continuous, corporeal *plenum*, whether finite (Parmenides) or infinite (Melissus), but Euclides took the step of identifying it with the Good, which was 'called by many names, such as God, Wisdom (*φρόνησις*), and Mind (*νοῦς*). It was in this way that 'the Absolute' made its first appearance in the history of philosophy, and its claim to be the sole reality was based on the inherent contradictoriness of all appearance.

The philosophy of Euclides had a very great influence on Plato, who had taken refuge with him at Megara after the death of Socrates, and it is to this influence that we may most probably ascribe the unique position assigned to the Good in the *Republic*. It was impossible, however, for Plato to acquiesce permanently in an Absolutist doctrine of any kind; for that excluded from Reality what he was most interested in, the Soul, and especially the best Soul of all, namely God. The *Parmenides* and the *Sophist* are chiefly occupied with this problem, and it is plain that Plato believed himself to have disposed finally of the Absolute. That led, of course, to a breach between the Academy and their fellow-Socratics of Megara, and from this time forward we may discern the beginnings of a distinct Megaric school. As was natural, the negative dialectic was more zealously cultivated than the central doctrine of Euclides. When an abstract Absolute has been set up, there is not much more to be said about it, but the dialectical method is always available for the criticism of rival philosophies. Aristotle was naturally the chief object of the Megaric attack, which was led by Eubulides. Aristotle's own logical theory was to a large extent moulded by this situation, and the title given to his course on fallacies, the *Sophistici Elenchi*, bears witness to it; for, since the time of Plato's *Sophist*, the old term had been revived as a name for thinkers of the class known later as Megarics. The fallacies exposed by Aristotle are, in fact, for the most part, Megaric arguments, and that is the explanation of the sense in which the words 'sophism' and 'sophistry' have been used from that time to the present day. Many of these sophisms are well known, such as the Liar (*ψευδόμενος*), the Veiled Man (*ἐγκεκαλυμμένος*), the Heap (*συνεπής*), and the Bald Man (*φαλακρός*). As an extreme specimen, we may take the argument of the Horns: 'What you have not lost, you have. You have not lost horns. Therefore you have horns.' Some of the arguments are more serious, however, and raise the problem of continuity. The influence of Zeno is still felt in the *ratio ruentis acervi* (*συνεπής λόγος*), referred to by Horace (*Epist.* II. i. 45). The most important of all from a historical point of view, however, was the *κρηίδιον* of Diodorus Cronus († c. 307 B.C.), which continued to be discussed in the schools for centuries. Aristotle's favourite doctrine of potentiality and actuality (*δύναμις* and *ἐνέργεια*) was specially objectionable to the Megarics, and Dio-

dorus set himself to destroy the conception of possibility altogether. The argument may be stated thus: 'Nothing impossible can proceed from anything possible. But it is impossible that anything in the past should be other than it is. If it had ever been possible still further in the past for it to be other than it is, then an impossibility must have proceeded from a possibility. Therefore it was never possible that it should be other than it is. Therefore it is impossible that anything should happen which does not actually happen.' Chrysippus confessed that he could not solve this, and Epictetus still busied himself with it.

The definite constitution of the Megaric school as a philosophical sect was the work of Stilpo of Megara, who for some time after the death of Aristotle (322 B.C.) was the most important philosophical personality in Greece. When Ptolemy I. took Megara in 307 B.C. he tried to induce Stilpo to return with him to Alexandria, but the invitation was declined. From the few facts that are told of him it is plain that he revived the positive side of the doctrine of Euclides and insisted on the sole reality of the One. He argued that to speak of man is to speak of nobody; for it is not to speak of A any more than of B. In the same way, he refused to admit that a cabbage shown to him was cabbage. There was a cabbage in just the same sense ten thousand years ago. As he further denied the real existence of forms or species (*εἶδη*), whether in the Aristotelian or in the Platonic sense, it followed that everything was mere appearance. But what distinguished Stilpo from all his predecessors, so far as we know, and what made Megaricism a reality for the first time, was the ethical principle which he deduced from this apparently barren Absolutism. It was the only ethical principle that such a doctrine can yield, that of quietism and insensibility. Plato's nephew Speusippus had already maintained that pleasure and pain were both evils, and that good men aim at imperturbability (*ἀσχηματρία*), and the word 'apathy' (*ἀπάθεια*) occurs in the Platonic *Definitions* (413 A), which belong to the early Academy. In his *Ethics* (1104^b, 24) Aristotle alludes to those who define the various forms of goodness as *ἀπάθεια* and *ἡσυχία*. But it was Stilpo who made the doctrine live. Teles, who was his fellow-citizen and a little later in date, holds him up as the great example of indifference to the vicissitudes of fortune. It is unnecessary to suppose that he was influenced in this direction by the Cynics; for the doctrine follows quite naturally from his denial of reality to the world of sense, which he certainly derived from a very different source. As Zeno of Citium was a disciple of Stilpo, we may certainly regard him as a spiritual ancestor of Stoicism. The same tendency was represented by the school of Eretria, whose chief representative was Menedemus (c. 352-278 B.C.), and which regarded itself as an offshoot of the school of Elis, which looked upon Phædo as its founder. We know little about it, but its existence bears witness to the growth of the quietist ideal and its intimate connexion with a metaphysical theory which rejects the appearances of the world and holds fast to the One conceived as absolute.

LITERATURE.—There is little literature dealing with the Megarics outside the general histories of Philosophy, and what there is may be regarded as antiquated. It will be sufficient to mention C. Mallet, *Histoire de l'école de Mégare et des écoles d'Elis et d'Eretrie*, Paris, 1846.

JOHN BURNET.

MEIR. — Rabbi Meir, a Jewish sage who flourished in Palestine in the 2nd cent., belonged to the fourth generation of the Tannaim (Rabbis of the age of the Mishnah); he was one of the foremost disciples of Rabbi Aqiba, and helped, with

them, to give a new impulse to 'the study of the Law' (i.e. the consolidation and development of Jewish religious thought and practice) after the troubles attending the persecution under Hadrian. So great was the estimation in which he was held that, by one authority, those disciples are styled 'Meir and his associates' (*Midr. Rab.* to *Lv* 1¹¹). Learning, mental acuteness, and a ready wit combined with a lofty character to make him the remarkable man he was. His parentage and birth-place are either uncertain or unknown. Contrary to the Talmudic practice, he is cited without a patronymic, and his doubtful descent gave rise to the legend which made him a son of Nero, a fabled convert to Judaism (*Gitin*, 56a). Even his real name, Meashah (Moses), was half-forgotten. When Aqiba, flouting the edict of the Roman authorities, continued to teach, Meir stood by him (*Tōs. Brākhot*, ii. 6). His other masters were Rabbi Ishmael, to whom he went because he deemed himself intellectually unequal to the task of following Aqiba's discourses, and—a still more interesting fact—Elisha ben Abuyah, who was later to become an apostate and a declared friend of the Romans. From the latter, recreant though he was, Meir did not altogether dissociate himself in after years. He listened to his doctrine, and made discreet use of it.

'Like one who eats dates, he devoured the fruit, but threw away the stones' (*Hagigah*, 15b). His motive was not exclusively love of learning; there united with it grateful regard for one who had once been a cherished teacher, and likewise the hope of winning back the renegade; but his relations with Elisha were viewed with suspicion, and were partly the reason why his reputation with his contemporaries fell short of his posthumous fame.

Returning to Aqiba later on, Meir was ordained by that master, and began to teach in the Rabbinical schools. In his discourses he availed himself largely of the Haggādā (the homiletical method of Scriptural interpretation) and also of fables and parables. Thus it was said of him in later times that 'when Rabbi Meir died the parable-makers died with him' (*Sōṭah*, 49a). He is credited with being the author of three hundred fables, of which only a few have been preserved in the Talmudic writings (*Sanhedrin*, 38b). His knowledge of Latin and Greek also helped him in his Biblical lectures. His acquaintance with the sacred text was so extensive and precise that, when once, on his travels in Asia Minor, he entered a synagogue on the eve of the Feast of Purim and found that there was no copy of Esther forthcoming for public recital, he wrote out the entire book from memory (*Tōs. Megillah*, 2). For this intimate knowledge of the sacred text he was doubtless largely indebted to his profession as a scribe. Compared with the exegetical methods of his immediate teachers, his own mode of interpretation may be said to have been rationalistic. Keen and bold dialectic played a large part in his expositions, so that it was said of him (*Sanh.* 24a) that, in his lectures, he was like one who uprooted mountains and ground them together. He amazed and perplexed his colleagues by his daring decisions.

'He would declare the unclean permitted and the forbidden clean, and give his reasons' (*Erubim*, 13b).

It was usual to regard consecutive passages in the Bible as necessarily having a common subject-matter; Meir, however, held a different opinion. There are many such passages, he declared (*Siphre* to *Nu* 25), which have no organic connexion. This originality of his was viewed differently by different minds. Some admired his rationalism and courage; 'Meir's very staff,' they cried, 'teaches knowledge' (*Jerus. N'dhartin*, ix. 1). Others disapproved. 'Enough, Meir,' protested his

colleagues when once he was more than usually daring (*Midr. Rab.* to *Ca* 1¹²). Nevertheless, as Hamburger remarks (ii. 707; as to the protest see I. H. Weiss, *Gesch.* ii. 15), in virtue of his qualities of mind and heart, he breathed into Judaism the breath of a new life. As to the *Hālākā* (the body of decisions on ritual practice), his orderly and logical arrangement of the material contributed greatly to make the compilation of the Mishnā possible. He was a stringent upholder of the ritual Law; but he was even more strict with himself than with others.

'Never have I presumed to set aside, in my own personal practice, the decisions of my colleagues when those decisions have been more stringent than mine' (*Shabbath*, 134a). His strength of character is further illustrated by his opposition to Simeon ben Gamaliel II., then presiding over the Sanhedrin at Usha. To Meir had been assigned the office of *hakkām* of that body (as to the duties of that functionary see *JE*, art. 'Hakam'). Holding Simeon's knowledge of the Law inadequate, and resenting the President's excessive regard for his own dignity, he conspired with Rabbi Nāthān, one of his associates, to secure the Patriarch's deposition. Simeon, however, defeated the plot, and it was the conspirators who were ejected. Later on Nāthān was re-admitted, but Meir sturdily refused to make the necessary submission, and he narrowly escaped excommunication in consequence.

His domestic life was at once happier and sadder. His wife Beruria (Valeria) is one of the great women of the Talmud. The daughter of the martyr Rabbi Hananiah ben Teradion, who suffered under Hadrian, she was noted for both learning and moral worth. The touching story which records her wonderful fortitude in the hour of crushing calamity has been told again and again.

During Meir's absence at the academy one Sabbath eve, their two sons suddenly died. Beruria withheld the sad tidings from her husband until the day of peace was ended. Then she told him of it in a parable. 'A friend,' she said, 'left me some jewels to keep for him years ago—so long ago that I had come to look upon them as my own. Now, of a sudden, he has claimed them; but I find it hard to part with them. Must I really give them up?' 'Why ask such a question?' answered Meir, 'you should have restored them already.' 'I have done so,' she replied, as she led him to the death-chamber (*Midr. Mishle* to *Pr* 31¹⁰).

This is not the only instance in which the Talmud is just enough to admit that one of its greatest sages was taught by a woman; Beruria instructs her husband in the higher knowledge on another notable occasion.

Annoyed by the pin-pricks of uncouth neighbours, Meir angrily calls down imprecations upon his tormentors. His wife rebukes him. 'Rather,' she protests, 'let us pray that they may live to repent; for the Psalmist's supplication is not "Let sinners be consumed out of the earth," but "Let sin be consumed"' (the allusion is to *Ps* 104³³, where the Hebrew is susceptible of Beruria's interpretation; for the story see *Er.* 10a).

The Rabbi, despite a certain severity and intolerance, was worthy of his wife. His defects were the defects of his qualities. If sometimes he set his face like a flint towards other men's weaknesses, he was strong and brave when life's sorrows touched himself. He, too, could preach and practise the great duty of submission.

Echoing *Ec* 5², he says, 'Let thy words before God be few; school thyself to say, "Whatever God doeth He doeth well"' (*ib.* 60b). And, again, 'As we should thank God for the good, so should we praise Him for evil' (*ib.* 48b). God Himself suffers with His sorrowing children (*Mish. Sanh.* vi. 5).

Expounding in novel fashion the verse, 'A good name is better than precious ointment; and the day of death than the day of one's birth' (*Ec* 7¹), he said that death, the common lot of men, is good for those who pass hence with a good name (*Er.* 17a). Again, he said that what, according to *Gn* 1³, God saw and proclaimed 'very good' at the Creation was death (*Midr. Rab.* to the verse). The section of the Mishnā known as *Abodath*

(Ethics of 'the Fathers') assigns a typical maxim to each of the great Talmudic Rabbis. The maxim associated with Meir reads as follows:

'Limit thy toil for worldly goods and give thyself to the Torah; but be lowly of spirit towards all men' (*Abhōth*, iv. 10).

Meir was clearly no Pharisee of the baser sort; to be a sage was, for him, to have an incentive not to pride, but to humility. To study the Law, too, was not an end in itself; it must be made an impulse and inspiration to the noble life. Thus in another utterance of the sage he pictures God as saying:

'Devote thyself with all thy heart and soul to know my ways and to watch at the gates of my Law. Keep my Law in thy heart and my fear before thine eyes; guard thy mouth from sin, and purify thyself from all transgression. Then will I be with thee always' (*Ber.* 17a).

Equally notable are his teachings concerning social duty. Men are not to be judged by outward appearances.

'Look not at the flask, but at what it contains; there is many a new flask that contains old wine, many an old flask which has not even new wine in it' (*Abhōth*, iv. 20).

Nor are men to be judged by the honey of their words. If we have two friends, one of whom admonishes us and the other flatters, we should love the former, for he is leading us heavenwards (*Abhōth d' R. Nāthān*, 29). He preaches sincerity even in the small things of social intercourse; he warns us against inviting a friend to dinner when we know that he will not accept the invitation, and against offering him a present which we believe he will not take (*Bōraithā Hūllin*, 94a; *Tōs. Bābhā Bathrā*, vi. 14). It is a man's duty to adapt himself to the ideas and customs of the community in which he lives; in Rome he should do as Rome does. The angels, the sage points out, when they came down to earth and appeared to Abraham, ate like mortals; when Moses went up to heaven, he neither ate nor drank (*Midr. Rab. to Gn* 18³). Applying to Aaron the words (*Mal* 2⁸), 'he did turn many away from iniquity,' Meir thus characterized the great high priest:

'If Aaron chanced to meet a bad man, he was careful to salute him; so that, when the latter next time meditated an evil deed, he said to himself, "Woe is me! how shall I then look Aaron in the face?" In like manner, if two men quarrelled, Aaron would go to one of them and say, "See, my son, what thy friend is doing; he is beating his breast, rending his clothes, and crying: "Woe is me! how can I look my friend in the face, seeing that I have sinned against him?" Then he would go and say the same to the other; so that at length they embraced and were reconciled' (*Abhōth d' R. Nāthān*, 12).

Meir has left many maxims on the self-regarding duties also. He exhorts us to contentment with our worldly lot. 'Who is rich?' he asks, and he answers, 'He that hath peace of mind with his riches' (*Shab.* 25b). 'He that feels shame,' he says elsewhere, 'will not quickly be led into sin' (*N'dhārīm*, 20a). The sin of Samuel's sons (1 S 8³), he declared, lay in their demanding what was due to them (*Shab.* 56a). The Law (Ex 22¹) ordains that a man who steals an ox must make fivefold restitution; but, if he steals a sheep, the restitution is only fourfold. The difference is to be explained by the fact that, unlike sheep, the ox is a toiling animal. 'Here,' cries Meir, 'is a proof of the worth of labour in the sight of God!' (*M'khilā* to the verse). In common with the Rabbis who lived under Roman rule, and with the early Christians (see E. Gibbon, *Hist. of the Decline and Fall of the Roman Empire*, London, 1901-06, ii. 17), he condemns the theatre and the arena. The one is 'the seat of the scornful' (Ps 1¹), the other a place of execution (a reference to the cruelties of the gladiatorial contests) (*Abhōth d' R. Nāthān*, 37; *Abhōdhāh Zarāh*, 18b). He emphasizes the futility of human ambitions by an apt remark: man, he says, is born with his hands clenched as though he would grasp the whole world; he dies with his hands wide open, for he takes nothing with him (*Midr. Rab. to Ec* 5¹⁴).

Unbending to the ignorant ('am ha-areṣ [q.v.]) and the schismatic among his own people, Meir shows himself tolerant and liberal towards men of alien creed.

The Gentile who gives himself to the study of the Law is as worthy as the Jewish High Priest; for Holy Writ (Lv 18⁵), speaking of God's statutes, says that if a man do them, he shall live by them—a man, not a priest or a Levite (*Bābhā Qammā*, 38a; *Sanh.* 50a).

He had many conversations with Gentiles, chiefly polemical.

One of these opponents designates Israel a people condemned of God, driven by the Master from His house, and put in subjection to other lords. 'God,' argues the controversialist, 'has made you exiles in our midst; why, then, do you not assimilate with us?' Meir protests against the theory. 'Rather,' he affirms, 'we are to be likened to a son whom his father has discarded because of his evil life, but whom the paternal heart is ready to take back if he return penitently' (A. Jellinek, *Beth ham-Midrash*, Leipzig, 1868-78, i. 21). 'If,' asks another disputant, 'your God loves the poor, why does He not sustain them?' 'In order,' Meir replies, 'to give us an opportunity of escaping Gehenna by the practice of loving-kindness' (*Bābhā Bathrā*, 10a).

Like Aqiba, his master, Meir is pictured by the Talmud (*Qiddushin*, 81a) as undergoing the temptation of St. Anthony. Satan, so runs the legend, appears to the sage in the form of a beautiful woman, who would entice him with her wiles. But he escapes them. The legend puts in concrete shape the traditions concerning the Rabbi's unyielding rectitude which gathered about his name. Another story tells of a journey which he once made to Rome in order to rescue from a house of ill-fame his wife's sister, who had been taken captive after her father's martyrdom. It is said that his mission was successful (*Abhōdhāh Zarāh*, 18a).

Born, it is believed, in Asia Minor, Meir died in that country. He enjoined his disciples to bury him on the seashore, so that the waters which laved the land of his fathers might touch his bones (*Jerus. Kilayim*, 32c). 'He had no equal in his generation' is one Talmudic appreciation of him (*Erubhin*, 13b); and, in a public eulogy pronounced on him at Sepphoris, Rabbi Josē declared him to be 'a great man and a saint, but humble withal' (*Jerus. Ber.* ii. 7).

Of all the Tannaim, Meir's name is most widely known among the people. In the house of every pious Jew there is a money-box hung on the wall, in which the inmates deposit their alms for the poor of Palestine. This box bears the inscription 'Meir, Ba'al han-Nes' ('Meir, the wonder-worker'), an allusion to the miraculous power attributed to him in Talmudic and popular lore (see *J.E.* viii. 435).

(Eng. tr., London, 1891-92, ii.); *J.E.*, art. 'Meir'; I. H. Weiss, *Geschichte der jüd. Tradition*, Wilna, 1904, ii. 90 ff.

MORRIS JOSEPH.

MELANCHOLY.—In Greek physiology the bodily constitution of an individual, his appearance, his liability to disease, and also his mental character were explained by the proportions in which the four humours were distributed in his framework. These were blood, yellow bile, black bile, and phlegm, the predominance or excess of which gave respectively the sanguine, the choleric, the melancholic, and the phlegmatic 'temperament.' Melancholy (*μελας* and *χολή*) was thus the mental disposition of the melancholic temperament. The terms passed into literary and popular use, although the doctrine of the four humours, on which the distinctions were based, was forgotten or discarded. The names seemed, in fact, to correspond to certain broad differences, bodily and mental, among men, and writers on insanity are still careful, in their description of cases, to indicate the 'temperament' of each patient. The differences are now made to depend either upon the blood or upon the nervous system, or both. If the blood is decisive, the difference may be sought either in its substance—the number of red cor-

puscles, etc.—or in its circulation; if the nervous system, in the strength or the rate of reaction, or both. Henle made use of the conception of nerve-tone, which has since been retained and developed (*Anthropologische Vorträge*). No part of the nervous system, he showed, is ever wholly at rest during life; every stimulus finds a certain degree of excitation already present in the nerve-endings and nerve-fibres on which it acts; what we call rest is, therefore, a moderate degree of activity, which may rise or fall, and which is maintained by internal stimuli, acting through the blood. This is the 'tonus' of the nerves, their preparedness for action; the higher the tonus, the stronger the reaction. On the nerve-tone will, therefore, depend the sensitiveness of the individual, his prevailing emotional attitude, and his quickness and firmness of response. A low tone shows itself in the dull, heavy expression of face (in the phlegmatic, e.g.), the relaxed muscles, the deliberate movements, the tendency to 'run to fat'; a high tone in the vivid complexion, alert expression, and quick movements of the sanguine or choleric. The melancholic, according to Henle, has also a high nerve-tone, but reacts through the emotional or affective system, rather than the voluntary; whereas the choleric relieves feeling by prompt and strenuous action, the melancholic is denied this advantage; his melancholy is the brooding upon and nursing of emotions, a habit from which genius, or, it may be, merely hypochondria and hysteria, spring. Wundt's simple formula has been widely accepted: that temperament is primarily a question of emotion, that emotion undergoes two forms of change, one in intensity, or strength, the other in rate; hence the fourfold division: strong and quick—choleric; strong and slow—melancholic; weak and quick—sanguine; weak and slow—phlegmatic. Strong emotions under modern conditions mean a predominance of pain; slowness of change means that the mind takes time to follow out its own thoughts, is not wholly absorbed by the present but looks to the evil ahead. These tendencies characterize the melancholic (*Grundzüge der physiol. Psychologie*, iii. 637). The scheme is too simple to fit the complexities and subtleties of human character, however, and there is no general agreement even as to the number of distinct temperaments, as many as nine having been suggested.

1. Melancholy and pain.—Melancholy differs from the other dispositions in being a well-recognized temporary emotion or mood, as well as a prolonged or permanent trait, and also in being in an extreme form the most prominent symptom of a definite form of insanity—melancholia or mental depression. It has formed the theme of one of the most wonderful books in our language—*The Anatomy of Melancholy*, by Robert Burton, first published in 1621.

The melancholy with which he deals, and of which the 'causes, symptoms, prognostics, and cures' are set forth with such fertility of illustration, is 'an habit,—a chronic or continue disease, a settled humour,' but it is built up, as he recognizes, out of 'melancholy in disposition,' which is 'that transitory Melancholy which comes and goes upon the smallest occasion of sorrow, need, sickness, trouble, fear, grief, passion, or perturbation of the mind, any manner of care, discontent, or thought, which causeth anguish, dullness, heaviness and vexation of spirit, any ways opposite to pleasure, mirth, joy, delight, causing frowardness in us, or a dislike. In which equivocal and improper sense, we call him melancholy that is dull, sad, sour, lumpish, ill-disposed, solitary, any way moved, or displeased.' Melancholy in this sense is the character of Mortality' (l. 164 [ed. London, 1896]).

It might be said that this temporary melancholy is merely mental pain, however caused, and that the permanent disposition or habit is a state of mind in which mental pain is the dominant tone. The expression of melancholy is that of pain, the pale face, the drawn look, lips and eyebrows turned slightly downwards at the corners; the respiration slow and sighing, the pulse-beat slow, the tempera-

ture lowered, the nutrition-processes, including the appetite, impaired, so that the body seems insufficiently fed. One of the immediate consequences is also a loss of sensitiveness to outer impressions; they lose in clearness and distinctness; the judgment follows suit, and the whole mental character is, even though only for the moment, changed for the worse. In particular, egoism develops:

'The patient thinks only of himself and his sufferings; altruistic passions, family affection yield to an egoism of the most exacting and extreme type' (H. Beaunis, *Les Sensations internes*, Paris, 1889, p. 193 ff.).

Mental pain may be less acute, but it is more persistent than physical pain, and it has the same reverberation throughout the organism. The distinction between the two is probably artificial; mental pain accompanies all physical pain, while in its turn physical pain—discomfort, loss of nervous tone—is a constant accompaniment of mental pain. The most common cause of the former, physical pain, is the over-excitation or exhaustion of some sensory or motor nerve; so the most common cause of the latter, mental pain, is the over-strain or exhaustion of the brain centres and tracts concerned in ideation, emotion, memory, and will. Love and over-study were two of Burton's causes of melancholy. So melancholy may be regarded as a pain of fatigue, as due to excessive functioning on the emotional or intellectual side, especially when the strain has not been rewarded with success.

The extraordinary persistence of melancholy, the difficulty of distracting the mind from it, is due, as Beaunis urges, not merely to the fact that its causes—the desires, the memories—are persistent, but also to 'the sentiment of the irreparable, which is at the root of almost all mental pains, the idea that all is lost and without hope. The mother who knows that she will never see again the child that has died in her arms, the artist who sees that he will never be able to realise the ideal of his dreams, the inventor whose discovery is held up to ridicule, the poet whose verses, that he believes to be inspired, are laughed at, the thinker who seeks for truth and finds only doubt, the Christian who sees the foundering of his belief and of his faith, all have this sentiment of the irreparable, of the lost beyond return, which leaves behind only nothingness and despair' (ib. p. 234).

2. Melancholy and the sense of values.—Melancholy is the mood of an imaginative mind; it is true that an animal is sometimes described as 'melancholy'; a dog that has lost his master, a wild animal in captivity in a narrow space, a bird deprived of her mate: death, even self-inflicted death, is known to have followed such misfortunes. So a child may be 'melancholy' after the loss of a mother or a playmate. But in the strict sense melancholy is an adult and a human infirmity. Probably the time of its greatest frequency is the period of adolescence; in middle and old age it tends to disappear, to be replaced in senility, occasionally, by a state outwardly similar, but inwardly different. Byron's lameness and Heine's and Leopardi's delicate constitutions have suggested that physical disease may be the predisposing cause to melancholy; but, as Metchnikoff points out, Schopenhauer preserved his melancholy and pessimism to a vigorous old age, while there are innumerable cases of patients suffering from serious and even deadly diseases, yet retaining their native lightness of heart. If anything, melancholy is more common among the young, healthy, and vigorous. It does not really depend upon the health at all, but upon the sense or 'sentiment' of life. The typical case is Goethe, who in his own youth passed through the torment which he describes in *The Sorrows of Werther*, and had thoughts of suicide, but in his old age is described as casting off the sickly and morbid side of his character, replacing it by a serene and even joyous love of life (E. Metchnikoff, *Essais optimistes*, pt. viii.). The intensity of feeling is greater in the young than in the old, both for pleasure and for pain; hence they are more impressionable; but this is not due to the greater vitality or sensitive-

ness of their nervous system, but rather to the fact that the older man is better able, through his experience, to interpret the impressions, to see them in their true perspective, and in relation to life as a whole, whereas for the young each impression is taken in isolation, is weighed only in its relation to the immediate needs or desires of the self. Hence the vivid colouring of their life, the higher happiness, and the deeper pain. In the same way melancholy is more frequent in men than in women, in the northern races than in the southern races of Europe. A northern race, perhaps because its civilization is a more recent growth, is more conscious of itself, and less conscious of the wider group in which the loss of one individual is compensated by the gain of another. It was mainly from Russia, Germany, and Scandinavia that the melancholy school of writers of last century—the *Fin de Siècle*—came. Suicides are said to increase in number northwards, and one of the most common causes of suicide is melancholy (see Burton's discussion on suicide [i. 495]; and Metchnikoff, p. 306). At the back of all melancholy is fear—fear of pain in the first instance, then fear of loss, of failure, of death, of society's judgment upon oneself. The greater the value, or, rather, the greater the appreciation of a good, the greater the pain at its loss, and the greater the pain at the prospect of its loss. Hence melancholy is, paradoxically, more common in the idealist than in the materialist. Paul Bourget, writing of Baudelaire, finds the key to the profound melancholy of this rather repulsive figure in the mysticism and idealism of his early faith. When such a faith, the faith in the eternal, has been strongly held, its object deeply adored, the loss of faith in it, and of love, is irreparable. The individual may no longer have the intellectual need to believe, but he still has the need to feel as when he believed. The desires remain, strengthened by habit, and in the sensitive soul their influence is irresistible; yet their satisfaction is impossible. Melancholy then is the effect of failure of adaptation to the environment, in matters of faith and belief. The stronger the resistance of facts to the realization of the thinker's dream, the deeper his melancholy. To the mystic soul faith is not the mere acceptance of a formula or of a dogma; God is not for it a word, a symbol, an abstraction, but a real being in whose company the soul walks as a child in its father's, who loves it, knows it, understands it.

Once an illusion so strong and so sweet has gone, says Bourget, no substitute of less intensity will suffice; after the intoxication of opium, that of wine seems mean and paltry. Driven away at the touch of the world, faith leaves in such souls a gap through which all pleasure slips away. The more the sufferer tries to escape, the more securely is he held, until at last there remains as his only satisfaction 'the redoubtable but consoling figure of that which frees from all slaveries, and delivers from all doubts,—Death' (Paul Bourget, *Essais de psychologie contemporaine*, Paris, 1892, p. 21).

Still deeper is the melancholy of unsatisfied desire, when the failure of satisfaction lies, not in the resistance of external circumstance, but in the inability of the subject to enjoy, an inability which is itself a mark of exhaustion; it is the soul that has lived most, felt most strongly, indulged its passions to the full, till its power to feel is almost destroyed, that finds life most unbearable.

'Le mensonge du désir qui nous fait osciller entre la brutalité meurtrière des circonstances et les impuissances plus irréparables encore de notre sensibilité' (*ib.* p. 142).

It is the melancholy of nature after the storm, of evening, of the grey light that comes after the sunset, of the brown tints of autumn trees—exhaustion or decay after stress and life.

Less tragic is the melancholy that is associated with pensiveness, deliberation, thought, as in Milton's *Il Penseroso*—the melancholy of the poet

and of the philosopher. Beaunis connects this also with pain, however. When man reflects, he is forced to recognize, according to Beaunis, that he is born to pain, and that pleasure is only an accessory in his life.

'There is no physical pleasure which can compensate for an hour of *angina pectoris*, no mental enjoyment which does not disappear before the pain caused by the death of one we love, no intellectual pleasure which is not annulled when we think of how much is unknown in our fate. Pessimism, an irrefutable pessimism, is at the root of every reasoning, of every meditation' (p. 222).

Happily, he adds, most men do not reflect or meditate upon the fate either of themselves or of others; their interest faces outwards, not inwards; they have no time to worry over problems that great minds have found insoluble; or, if they do worry over them, they are able to set their worries at rest by the acceptance of a solution ready-made, on the authority of the Church or the pastor.

3. Melancholy and exhaustion.—The essential nature of melancholy has been probed more deeply from the point of view of pathology, and in various ways the idea of exhausted or decreased energy has been brought into connexion with the known laws of mental activity.

To Bevan Lewis melancholy means nervous enfeeblement; the subject is no longer able to do easily and smoothly even the most familiar and habitual acts; it is only with effort that he can think, or attend to what he hears or reads.

'It appears to us that the true explanation is due to mental operations being reduced in level so far as to establish conscious effort in lieu of the usual unconscious operations, or lapsed states of consciousness which accompany all intellectual processes. The restless movements of the intellectual eye (in the artist, poet, etc.), as well as those of the state of maniacal excitement, bespeak in the former case the exalted muscular element of thought, and in the latter a highly reflex excitability, but in the melancholic these muscles of relational life are usually at rest, the eye is fixed, dull, heavy, sluggish in its movements and painful in effort, the eyelids are drooped, the limbs motionless. The only muscles in a state of tension are those which subserve emotional life, viz. the small muscles of expression' (*Textbook on Mental Diseases*, p. 121). 'Failure in the muscular element of thought has as its results on the subjective side, enfeebled ideation and the sense of objective resistance' (*ib.* p. 122).

The eye sees less clearly, the mind interprets less accurately; the will acts less vigorously, and less effectively; it may be that the motor ideas, which are the cues, if not the excitants, of action, cannot be formed or recalled accurately in the mind; hence apathy and inaction. The environment, the non-ego, appears as antagonistic or foreign to the self; it is no longer the world in which we moved freely and easily, therefore pleasantly, but one which is new and strange, which resists our efforts and counters our desires. The result is a rise in the subject-consciousness; the mind is thrown back upon itself. The man broods upon his sufferings, which become his wrongs, and, in interpreting or explaining them, suspicion of others is the simplest and therefore the most frequent way out.

According to Pierre Janet's interpretation, melancholy represents a stage on the way to *misère psychologique*, or psychic misery, with its accompanying disaggregation of the personality, and subjugation of the conscious by the subconscious or unconscious self. There are innumerable degrees of attachment and detachment of acts and ideas to the self. In thought-reading and in table-turning we have simple instances of how acts are carried out which correspond to ideas or thoughts in the mind of the subject, yet the acts are neither voluntary nor conscious on his part; he is aware of the result, not of his own agency in it. In spiritualism—the possession of the medium by the supposed spirit of the dead, who gives through the medium information which the latter, in his normal state, is wholly unaware of enjoying—we have a more systematized form of the same thing.

Finally, in hypnotism, in hysteria, morbid impulses, fixed ideas, and obsessions, there are vivid examples of how thoughts, or, rather, systems of thought, though formed by the individual, may yet by the conditions of their occurrence appear entirely foreign to him; he is their slave, they take possession of him, he is carried away by them. Passions, of the source of which the patient is wholly unaware, dating back perhaps to a forgotten childhood, may yet lead to actions for which he cannot recognize his responsibility, which he may indeed forget immediately afterwards and, therefore, wholly fail to connect with his 'real' self. He is unaware even that he was the physical agent; any proof of this that can be brought forward must have a shattering effect upon the self-consciousness; the patient feels that he no longer has a grip of himself, that he may do some incredible act of violence, cruelty, immodesty, or crime. He becomes estranged from himself—and this doubleness is itself an added source of depression; it is the same in effect whether the two personalities succeed each other in time, as alternating personalities, or exist simultaneously, although acting separately; the disaggregation means an impairment of the self, often revealed by an actual loss of intellectual power, weakened concentration of attention and will. The subject becomes morbidly curious about his own feelings, his strength of will, his health, his prospects in life, etc. This subjectivity is the essence of the melancholy disposition. It remains to ask what is the cause of the disaggregation of consciousness, the psychological misery, of which melancholy is so prominent a symptom. According to Janet, the cause may be either physical or mental; physical, as the exhaustion of a prolonged illness, or of a sudden shock, or continued over-exertion, as in heavy physical strain; or mental, as in the shock of terror, excessive grief, prolonged mental worry, strong emotional excitement (e.g., religious). The great vital crises, at puberty, adolescence, and the change of life, with the feeling of strangeness which the loss of old and the gain of new sensations and impulses bring, are common causes of at least a temporary disaggregation and depression. The theory is not widely different in effect from that of Began Lewis; in both it is the co-ordinating power that fails, through nervous exhaustion; the elementary impressions and impulses fall apart, as it were, into their primitive independence; the subject seems out of touch with his environment, is unable to face the tasks of his social or occupational life. According to the degree of disaggregation or rise of subject-consciousness, there may be simple melancholy, hysteria, or actual insanity (P. Janet, *L'Automatisme psychologique*, pt. ii. chs. iii. and iv.).

4. Melancholy and personality.—The sense of mystery, of strangeness, of possession, that occurs in melancholy deserves to be considered in detail. In melancholy, as has been shown above (§ 3), the sensations are less clear, their threshold is higher, the perceptions based upon them are blurred, partly from the relaxation of the muscles of attention, partly from the absorption of the mind by the pain, real or imaginary. The individual neither sees nor hears so clearly as before; the commonest objects may look strange, the most familiar voice sound different; but these things are interpreted not as a change in the experiencing subject, but as a change in the objects experienced. One's friends, one's country, one's world have changed, and the subject is unable to face the great activity required to adapt himself to the new sphere. Still greater is the loss of clearness in the memories. The most vivid experiences, when they can no longer be clearly and definitely recalled, tend to lose the

warmth and intimacy which memories of 'my own experiences' should possess, as compared with those of others of which I have merely heard or read. Thus in mental exhaustion and depression the memories of my own life lose their emotional tone; they seem to belong to another than myself. It is true that this state lends itself to analysis, and that the habit of analysis, once formed, may continue when normal life has returned.

Amiel is said to have written: 'The desire to know, when it is turned upon the self, is punished like the curiosity of Psyche, by the flight of the beloved object; the outward-facing look makes for health; too prolonged a looking inwards brings us to nothingness. By analysis I am annihilated.' And again, 'All personal happenings, all special experiences are for me pretexts to meditation. Such is the life of the thinker. He depersonalises himself every day; if he consents to experiment and to act, it is the better to understand; if he wills, it is to know what will be. Although it is sweet to him to be loved, and he knows nothing sweeter, there again he seems to himself to be the occasion of the phenomenon rather than its end. He contemplates the spectacle of love, and love remains for him but a spectacle. He is nothing but a thinking subject, he retains nothing but the form of things' (see L. Dugas and F. Moutier, *La Dépersonnalisation*, Paris, 1911, p. 138 ff.).

This is an exact description of the frame of mind in the milder forms of melancholy, as that of the poet or artist, like Byron, Edgar Allan Poe, Heine, the young Goethe, etc. Shakespeare's Hamlet is a classical instance; they are not real experiencers, real agents, or lovers, but mere play-actors so far as emotion is concerned. Probably, however, their descriptions are the more accurate in that they are not blinded by passion, as is the cheerful ordinary mortal.

A somewhat different way of putting the case of melancholy might be drawn from the writings of S. Freud and others of his or allied schools—viz. that depression springs from the influence of a morbid complex on the personality. The complex may be any strong emotional experience, shock, terror, social disaster, etc. Wishes, desires, more or less closely connected with the shock-complex, are repressed, at first consciously, while suggestive ideas and associations, which arise from the same root, are expelled from the mind when they enter it. But a train of thought, when expelled, and a wish, when repressed, do not on that account cease to exist. They continue to live in the subconscious or in the unconscious, and may, so long as they are incomplete or unrealized, influence the conscious life indirectly. They may do this in two ways: (a) the complex draws off to itself, for its repression, a considerable degree of the available psychic energy; the individual is mentally weakened. As we have seen above, the greater effort required for the simplest, most habitual acts is felt as strain, as exhaustion, as pain; the self, with its distresses and difficulties, becomes more and more the centre of attention. (b) But, further, the complex, though itself driven below the level of consciousness, and shut off from direct connexion by the 'censor' of consciousness, is still enabled during moments of relaxation, half-sleep, reverie, distracted attention, etc., to send disguised messengers through. These take the form of dreams, phobias or terrors, obsessions, sudden impulses, etc. For the most part these dreams and impulsive acts are protective; they are a means of realizing, in however imperfect a way, the wish inspired by the complex; but the subject himself may be wholly unaware of this origin and of their meaning; they seem like an invasion of his personality by a foreign one. Painful experiences and memories have a far greater tenacity of life than pleasant; they have a high degree of 'perseveration,' as it has been called, i.e. the tendency to force their way into consciousness, of their own accord, and without any apparent stimulus or associative link. And, again, even the slightest of associations is enough to drag up

other hand, such memories are not 'sociable'; they do not bring other thoughts in their train; especially they lack 'determination'-value, the tendency to direct the mind systematically from one thought to a train of others; they tend to clog thought. The subject becomes more and more conscious of inefficiency in his profession or in his social life; and the consciousness of failure has the usual consequence of making the actual failure all the greater.

5. Melancholy and pessimism.—Melancholy and pessimism are two sides of the same state of mind, the one expressing the subjective attitude and disposition, the other the theoretical interpretation. Happiness becomes a dream which is never realized, and which it seems hopeless to pursue. Subjectively, indifference, apathy, want of feeling; objectively, death, seem the only desirable things. The ideas, imaginations, and suggestions that arise in the mind of the melancholic, according to a well-recognized law (see Störing, *Mental Pathology*, p. 222 ff.), tend to be of the same emotional tone as that of the disposition in which they are called up, i.e. painful, depressing; the melancholic sees only the sad, the tragic, the bitter side of things, the pain that is suffered, the sins and crimes and follies that are committed, not the pleasures, the kindness, the goodness, that are in things. Hence melancholy, whatever its source, has played a powerful part in religious movements. It is not only that religion and its history furnish the melancholy mind with a cohort of images of the most terrifying type, but also that the consciousness of the suffering self sends it to religion, to the idea of sin and its punishment, as the most obvious and nearest interpretation; and, finally, that religion offers the only adequate relief and hope of escape. Religious melancholy is the subject of one of Burton's most curious dissertations (pt. iii. sect. iv. membrum i.), and James's *Varieties of Religious Experience*, lects. vi. and vii., on 'The sick Soul,' give a modern presentation. It is there shown how, as in Tolstoi's case, melancholy may be accompanied by a total change in the estimate of the values of things: things that seemed of the utmost value before now seem worthless; they excite no emotion or interest whatever; and a consequence of this is that the world, and people, look different and are thought of differently—as strange and unreal. It is also shown that in a rational being the strangeness and change of feeling incite to a search for a reason, for an explanation, either directly in oneself or in the action of other beings upon oneself. Either of these ways may lead to religious conversion and relief.

6. Moroseness.—The pathologist Pinel, in his treatise on *Mental Alienation*, depicted melancholics as of two distinct types—the one filled with enthusiasm for art, for literature, for all that is great and noble, or, among ordinary people, merely pleasant, lively, and affectionate, yet apt to torment himself and his neighbours by bursts of anger and chimerical suspicions; the other is the type to which the Emperor Tiberius and Louis XI. of France belonged—men who are gloomy and taciturn, deeply suspicious of others, fond of solitude. Suspicion of others is the dominant mark, with cunning and duplicity of the most dishonourable and cruel kind, which, if power is added, become fiercer and less restrained as age increases (P. Pinel, *L'Aliénation mentale*, Paris, 1809, p. 161). This represents with some accuracy the morose type of melancholy. Moroseness springs from the disposition to regard others as having secret designs upon one's property or life or place, and to avoid them in consequence. It involves extreme self-centring and misanthropy. Melancholy is a disease of the imaginative, moroseness of the unimaginative

mind—the man who does not aspire beyond that which he has already attained, the man of narrow range of ideas, unable to appreciate the values that others place upon things, especially the ideal values. Probably the pivot of the morose character is, like that of melancholy, fear or anxiety.

As de Fursac has said of the miser, 'It is undoubtedly true that from insecurity springs anxiety, and that anxiety becomes a torture and a source of trouble for the mind. It has for effects the diminution of activity, the development of defensive tendencies to the detriment of the expansive tendencies, the cult of absolute security, and the horror of risk. It is intimately bound up with insociability' (*L'Avarice*, p. 23).

This is true also of the insecurity of power or of position, in narrow and selfish characters; there is no sense of the solidarity of the race, even of the family; the morose man sees only the bad side, the weaknesses of his neighbours; he has no sympathy with or any kind of feeling for others; he is vindictive, and, if opportunity allows, savage, brutal, cruel.

LITERATURE.—R. Burton, *The Anatomy of Melancholy*, Oxford, 1621 (by 'Democritus Junior'; the author's name was subscribed to an 'Apologetical Index' at the end of the volume). For the history of the theory of the 'temperaments' see W. Volkman, *Lehrbuch der Psychologie*, Cöthen, 1894 f., i. 205 ff.; J. Henle, *Anthropologische Vorträge*, Brunswick, 1878, p. 101 ff.; and W. Wundt, *Grundzüge der physiologischen Psychologie*, Leipzig, 1902-03, iii. 637 ff.; J. Sully, *Pessimism: a History and Criticism*, London and New York, 1891; W. James, *The Will to Believe*, do. 1897 ('Is life worth living?', p. 32 ff.); Elie Metchnikoff, *Essais optimistes*, Paris, 1907 (pt. vii. 'Pessimisme et optimisme'; pt. viii. 'Goethe et Faust'); P. J. L. MCINTYRE.

MELANESIANS.—1. Extent and limits of the subject.—The region of the South Pacific, which is called Melanesia, is well defined, except on the western side. The boundary on the east lies between Fiji, which is Melanesian, and Samoa, which is Polynesian. To the south the Melanesian island of New Caledonia is separated by a considerable space of ocean from New Zealand, which is Polynesian, as are the small islands of Micronesia on the north from the Melanesian Solomon group, but to the west the islands of Melanesia overlap New Guinea. Some of the inhabitants of that vast island are Melanesian, at any rate in language; but, though Melanesians have been called Papuans, there can be no doubt that Papua, or New Guinea, cannot be placed as a whole in Melanesia. Five distinct groups of islands are without question Melanesian: (1) the Solomon Islands, with the groups which connect them with New Guinea; (2) the Santa Cruz group; (3) the Banks' Islands and New Hebrides; (4) New Caledonia, with the Loyalty Islands; and (5) Fiji.

The first discovery in Melanesia was that of the Solomon Islands by Spaniards, under Mendafia, in 1567. In 1595 the same voyager discovered Santa Cruz; and in 1606 Quiros and Torres discovered the New Hebrides and Banks' Islands. The Dutch discovered Fiji in 1643. French voyagers in the latter part of the 18th cent., and finally Captain Cook in his second great voyage, completed the general survey of all the groups. In the records of these passing visits it is vain to seek for information concerning the religion of the natives. The discoverers saw what they believed to be temples, idols, worship and invocations of devils; they interpreted what they saw, as succeeding voyagers have done, according to their own conceptions of savage beliefs. It was not till missionaries, about the middle of the 19th cent., began to live in closer intercourse with the native people and to learn their languages that any certain knowledge

of Melanesian religion could be gained. The following account represents in the main the knowledge which has been gained by the Melanesian Mission of the Church of England. The religion of the Fijians is considered in another article (see FIIJ). The account here given has been drawn from the Solomon Islands, the Santa Cruz group, the Banks' Islands, and the Northern New Hebrides. It has been gathered from natives of those groups in native language, and much of it has been gained from what educated natives have written in a native language. Very little, however, has come from the Western Solomon Islands or the Southern New Hebrides; but there is every reason to believe that religious beliefs and practices in these islands do not differ considerably from those of the central parts of Melanesia.

2. Basis of Melanesian religion.—From whatever source they may have derived it, the Melanesians generally have held the belief that their life and actions were carried on in the presence and under the influence of a power superior to that of living man. This power, they thought, was all about them, attached to outward objects, such as stones, and exercised by persons, i.e., either by men, alive or dead, or by spirits who never were men. This 'sense of the Infinite,' as Max Müller (*Lectures on the Origin and Growth of Religion* [HL], London, 1878, lect. i.) calls it, was the foundation of the religious beliefs of the Melanesians; the general object of their religious practices was to obtain the advantage of this power for themselves. This power is impersonal, and not physical in itself, although it is always put in motion by a person; and all remarkable effects in nature were thought to be produced by it. It is not fixed in anything, but can abide and be conveyed in almost anything. All spirits, beings superior to men, have it; ghosts of dead men generally have it, and so do some living men. The most common name for it is *mana* (g.v.). The methods by which living men use and direct this power may well be called magical; the controlling force lies generally in words contained in chanted or muttered charms. If worship is addressed to beings who are not living men, and if the use of their power is sought from them to do good or to do harm, it is because such beings have this *mana*; the forms of words have efficacy because they derive it from the beings which have *mana*; a common object, such as a stone, becomes efficacious for certain purposes because such a being gives it *mana* power. In this way the influence of the unseen power pervades all life. All success and all advantage proceed from the favourable exercise of this *mana*; whatever evil happens has been caused by the direction of this power to harmful ends, whether by spirits, or ghosts, or men. In no case, however, does this power operate, except under the direction and control of a person—a living man, a ghost, or a spirit.

3. Objects of worship.—The objects of religious worship, therefore, were always persons to whom prayer or sacrifice was offered, or in whose names charms were recited, with the view of gaining supernatural power, or turning it, either directly or indirectly, to the advantage of the worshipper. These personal objects of worship are either spirits or ghosts. By spirits are meant personal beings in whom the spiritual power already mentioned naturally abides, and who never were men; by ghosts are meant the disembodied spirits or souls of dead men. To keep these distinct is essential to the understanding of Melanesian religion. Natives themselves are found to confuse them at times, while Europeans are usually content to call all alike deities, gods, or devils.

(1) *Spirits*.—A native of the Banks' Islands,

where spirits are called *vui*, wrote the following definition:

'What is a *vui*? It lives, thinks, has more intelligence than a man; knows things which are out of sight without seeing; is powerful with *mana*; has no form to be seen; and has no soul, because it is itself like a soul' (see Codrington, *Melanesians*, p. 123).

The *vui* of the Northern New Hebrides is of the same nature. Yet such spirits are seen, in a shadowy, unsubstantial form; and there are many spirits called by the same name to whom the definition does not accurately apply, while the stories concerning them treat them as if they were men with superhuman and quasi-magical powers. Still the natives steadily maintain that these are not, and never were, men. In the Solomon Islands beings were believed to exist who were personal, yet who had never been men, and who lacked the bodily nature of men, but they were very few and enjoyed little religious consideration. The term which is applied to such beings is also applied to some who had undoubtedly existed at some time as men. The question arises whether those beings, concerning whom stories were told and believed in the Banks' Islands and New Hebrides which showed them to be like men of more than human power and intelligence, should not be called gods. Such were *Qat* in the Banks' Islands, *Tagaro*, *Suge* (in various forms of the names) in the New Hebrides, and *Lata* in Santa Cruz. To such as these it would certainly not be improper to apply the word 'god.' But the native word by which they are known, such as *vui*, is applicable also to other beings for whom 'god' is too great a name, this category including elves, fairies, nameless beings of limited influence whose nature is still spiritual, so to speak, not corporeal. To describe all these, to distinguish them from dead men, the best general term seems 'spirit'; and it is to these beings that the religion of the New Hebrides and Banks' Islands looks, as possessing and wielding *mana*, the power which must be called spiritual, which men have not in themselves, and which they seek to obtain for their advantage by sacrifices, prayers, and charms.

(2) *Ghosts*.—It makes the matter clear if this term be used when the beings spoken of are simply men who are dead in the body while that part of them that is not bodily retains activity and intelligence. In the Banks' Islands and New Hebrides the word used is merely 'dead man,' such as *tamate* or *natmas*. In the Solomon Islands a very common word in various forms is *tindalo*. The question again occurs whether these should not rather be called gods. There are certainly some to whom prayers and sacrifices are offered, whose place and time in human life are forgotten or unknown, and whose existence as persons possessed of powers far superior to those of living men is alone present to the belief of the existing generation. Such may not unreasonably be called gods. But, whereas in the Eastern groups such beings are plainly called 'dead men,' it seems more correct, and serves better for clearness, to use an English word which shows them once to have been living men, and separates them from any such beings as are believed never to have belonged to human kind. The word 'god' cannot be a translation of 'dead man.' Where, as in the Solomon Islands, a distinct name, such as *tindalo*, is in use, this objection to the use of the word 'god' does not so plainly apply. Yet the natives emphatically declare that every *tindalo* was once a man, that the *tindalo* is the spirit (*tarunga*) which once was the seat and source of life, intelligence, and power in a man who was then in the body. The living men who worship the *tindalo* regard themselves as possessed of that non-corporeal nature which alone remains in the dead, and is the seat of the dead

man's superhuman power. They believe that some of them have a measure of that power, derived by them from the dead. They believe that, when they are dead, they will also, it may be, receive a great access of this power. The difference which they recognize between themselves and the *tindalo* is that they are alive and have but a comparatively small measure of spiritual power. But it should be understood that every living man does not become a *tindalo* after death. The large majority of men are of no great importance, and show no remarkable powers in their lifetime; alive they are nobodies, and such they remain when dead. But there are always some living men who show qualities which give them success and influence. Such success and influence are not ascribed by the natives to natural qualities, but to the possession of that spiritual power which they have obtained from the *tindalo* with whom they live in communication. When a great man dies, it is expected that he should prove to be a *tindalo*, a ghost worthy of worship, an effective helper, one whose relics will put the living in communication with him. Thus, after the death of Ganindo, a chief, a famous fighting man of Florida, his name was invoked and a sign of his power sought from him. On proof of this power a shrine was built for him, his head, his tools, and his weapons were preserved in it, and sacrifices with invocation were offered to him there. Such a one might, indeed, appear to European visitors to be a god; but to the natives of the place, who now worshipped him, and among whom he had lived as one of themselves, it was his ghost, in the common English sense of the term, who was among them.

Again, the question may arise whether this is not the worship of ancestors. The ghost of a dead man, however, who was well remembered in the flesh, and who was often, no doubt, younger in years than some of his worshippers, is not an ancestor. The natural tendency is, as new objects of worship of this character arise, and as one great man after another dies, to neglect and desert the ghosts and their shrines of the past generation, while the newer wonders and powers attract faith and veneration to new ghosts and shrines. As the object of worship thus became more of an ancestor, he was less an object of worship. But certainly there are some concerning whose time and place of life the natives profess themselves to be ignorant, but whose names, such as Daula and Hauri in Florida, are known to all, and who are now universally believed to be very powerful *tindalo*, though in ancient times they lived in human form on the island. These may be called ancestors, and they are worshipped, but not as ancestors.

The personal beings towards whom the religion of the Melanese turns, with the view of obtaining their *mana* for aid in the pursuits, dangers, and difficulties of life, are thus spirits and ghosts; and it is remarkable that the Melanese are thus divided by their religious practices into two groups. In the Western group, as in the Solomon Islands, there is a belief in spirits who never were men, but worship is directed to the ghosts of the dead; in the Eastern group, as in the Northern New Hebrides, the ghosts of the dead have indeed an important place, but worship is in the main addressed to spirits who have never been men. And in the arts of life and in the advance from savagery towards civilization, the Solomon Islander who worships ghosts certainly ranks before the New Hebrides man who worships spirits.

4. Prayers.—The Melanesian native, believing himself surrounded with unseen persons who can help him, naturally calls upon them in distress,

just as he called upon his father as a child. Such appeals are not prayers according to the meaning of the various native words which would be translated 'prayer' in English. Prayers in the native sense are forms of words; and, strictly speaking, they are formulas which are known only to some, and which have in themselves a certain efficacy and even compelling force. It may be said that exclamatory appeals in case of danger at sea and in the extremity of sickness are prayers in a true sense of the term, which yet to the native are not strictly prayers, because they have public utterance and an elastic form. A man in danger by the sea may call on his father, grandfather, or some ancestor to still the storm, lighten the canoe, and bring it to the shore; when fishing he may beg for success, and when successful may thank his helper. But in such cases a formula, if one were known, would always be preferred, and that would be a prayer in the native sense of the word. Charms, muttered or sung under the breath for magical purposes and in the treatment of sickness, are easily distinguished; but it must be said that in Florida, an important centre of Christian teaching in the Solomon Islands, the word used for Christian prayer is taken from these charms.

It is remarkable that in the Banks' Islands and the Northern New Hebrides, where spirits have a more important place in native religion than ghosts, all prayer must be addressed to the ghost of a dead person. Indeed, every proper form begins with the word *tataro*, which is, no doubt, a word meaning 'ghost.' It is true that in danger at sea a man will call on dead friends to help him, but this is not a true prayer (*tataro*) because no formula is employed. It is also true that men in danger call on spirits, either with or without a formula; but neither is a true *tataro*, since it is not addressed to ghosts. Many forms of words, moreover, which are true *tataro* prayers, are formulas for cursing as well as for petition. Such are used when a man throws a bit of his food aside before eating, and pours a libation before drinking *kava*, or when he pours water into an oven, since in them he asks for benefits to himself and mischief to his enemies. A *tataro* prayer is a spell; a call for help in danger is a cry.

5. Sacrifices.—There can be little doubt that sacrifices properly so called have a place in Melanesian religion. One simple form is probably universal. A fragment of food ready to be eaten, a bit of betel-nut, and a few drops of *kava* poured as a libation are offered at a common meal as the share of departed friends, who are often called by name, or as a memorial of them with which they will be gratified. This is accompanied with a prayer. With the same feeling of regard for the dead, food is laid on a grave or before a memorial image, and is then left to decay, or, as at Santa Cruz, is taken away and eaten by those who have made the offering. In a certain sense, no doubt, the dead are thought to eat the food. Yet the natives do not apply to these offerings the words which connote sacrifices in the strict sense of the term. In the Western Islands the offerings in sacrifices are made to ghosts and consumed by fire as well as eaten; in the Eastern groups they are made to spirits, and there is no sacrificial fire or meal. In the former nothing is offered but food; in the latter native money has a conspicuous place.

(1) *In the Solomon Islands.*—A sacrifice in San Cristoval, one of the Solomon Islands, has been thus described in writing by a native of the place:

'In my country they think ghosts are many, very many indeed, some very powerful, some not. There is one who is principal in war; this one is truly mighty and strong. When our people wish to fight with any other place, the chief men of the village and the sacrificers, and the old men, and the men elder and younger, assemble in the place sacred to this ghost;

and his name is Harumae. When they are thus assembled to sacrifice, the chief sacrificer goes and takes a pig. . . . The pig is killed (strangled), not by the chief sacrificer, but by those whom he chooses to assist him, near the sacred place. Then they cut it up; they take great care of the blood lest it should fall upon the ground; they bring a bowl and set the pig in it, and when the pig is cut up the blood runs down into this. When the cutting up is finished, the chief sacrificer takes a bit of flesh from the pig, and he takes a cocoa-nut shell and dips up some of the blood. Then he takes the blood and the bit of flesh and enters into the shrine, and calls that ghost and says, "Harumae! Chief in war! we sacrifice to you with this pig, that you may help us to smite that place; and whatsoever we shall carry away shall be yours, and we also will be yours." Then he burns the bit of flesh in a fire upon a stone, and pours down the blood upon the fire. Then the fire blazes up greatly to the roof, and the house is full of the smell of pig, a sign that the ghost has heard. But when the sacrificer went in he did not go boldly, but with awe; and this is the sign of it: as he goes into the holy house he puts away his bag, and washes his hands thoroughly, to show that the ghost shall not reject him with disgust" (Codrington, p. 120 f.).

The pig thus sacrificed was eaten by the worshippers. When this account was written, the older people well remembered Harumae as a living chief.

In the neighbouring island of Mala a native gives the names of seven kinds of sacrifice. (1) A man returning from a voyage puts food before the case which contains the relics of his father. (2) In sickness, or where failure of a crop shows that some ghost has been offended, a pig is offered as a substitute for the man whom the offended ghost is plaguing, and is strangled and burned whole on the stones of a sacred place, together with mixed food. The sacrificer calls aloud upon the offended ghost and upon many others, and sets a bit of the food which he has left unburned before the relic case of the dead man to whose ghost the pig was offered. (3) To 'clear the soul,' a pig or dog is killed and cooked; the sacrificer calls upon the ghost by name to clear away the mischief, and throws the sacrifice into the sea or sets it in the place sacred to the ghost invoked. (4) This is performed in the house of the sick person who is to benefit by it. A pig or dog is cooked and cut up; the names of the dead members of the family to which the ghost to be propitiated belonged are called out, with a petition to each on behalf of the sick man; the sacrificed animal is eaten by the males who are present. (5) (6) (7) are sacrifices of firstfruits—yams, flying-fish, and canarium nuts—which are presented as food to the ghost concerned, with the invocation of his name, and set in a sacred place.

In Florida and Ysabel, both belonging to the Solomon group, sacrifice is of the same character. There are those who know, having been taught by their fathers or mother's brothers, how to approach the powerful ghosts of the dead, some of whom were the objects of a more public and some of a more particular worship. Such a ghost of worship, called a *tindato*, had his shrine in which his relics were preserved. The officiating sacrificer is said to 'throw the sacrifice.' A certain *tindato*, whose worship and influence are not local, is called Manoga. A native writes:

"He who throws the sacrifice when he invokes this *tindato* heaves the offering round about, and calls him, first to the East where rises the sun, saying, "If thou dwellest in the East, where rises the sun, Manoga! come hither and eat thy mashed food." Then turning he lifts it towards where sets the sun, and says, "If thou dwellest in the West, where sets the sun, Manoga! come hither and eat thy food." There is not a quarter towards which he does not lift it up. And when he has finished lifting it he says, "If thou dwellest in heaven above, Manoga! come hither and eat thy food. If thou dwellest in the Pleiades or in Orion's belt; if below in Turivatu; if in the distant sea; if on high in the sun or in the moon; if thou dwellest inland or by the shore, Manoga! come hither and eat thy food!" (Codrington, p. 121 f.).

Whether, as in this case, the offering be vegetable food or whether it be a pig, a piece is consumed in the fire within the shrine, and the people without partake of the sacrificial food. In these islands, moreover, the sacrifice of the firstfruits must precede the general use of the products of each season.

Human sacrifices were occasionally made, and such were thought most effectual for the propitiation of an offended ghost. In this case the victim was not eaten by the assistants as when a pig was offered; but a piece of flesh was burned for the ghost's portion, and bits were eaten by young men to get fighting power, and by the sacrificer who had made the offering.

In the island of Santa Cruz the flesh of pigs or vegetable food is placed before the stock of wood that represents a person recently deceased for him to eat; feather-money and betel-nuts are laid out for ghosts, and food is thrown to them at sea. These are distinctly offered for the ghost to eat or use, but they are soon taken up and disposed of by the offerers as common things. Such offerings resemble those of food laid on graves or at the foot of an image in the Solomon Islands, which would not there have the name of sacrifices; but the full sacrifices of the Solomon Islands, as has been shown, have the sacrificial characteristics of intercession, propitiation, substitution, and a common meal.

(2) *In Banks' Islands and New Hebrides.*—To offerings here, no doubt, the name of sacrifice is far less properly applied, and yet it is almost necessary to employ it. The offerings are made in almost all cases to spirits, but in some cases to the ghosts of dead men. The offering is generally native money; nothing is killed or burned, nothing eaten; and the offering is laid upon a stone, cast into water, or scattered upon a snake or some other creature, the stone, the creature, or the sacred spot being chosen because of its connexion with the spirit who is to be conciliated or from whom benefits are sought. Access to the spirit is to be obtained through the sacred object; but the common worshipper or suppliant cannot obtain this access by himself, and is consequently obliged to use the services of a go-between who knows the stone or whatever it may be and through it is able to know and to approach the spirit. The worshipper generally gives native money to the 'owner,' as he is called, of the sacred object, who then gives a little money to the spirit, and perhaps pours the juice of a young coco-nut on the stone, while he makes his request on behalf of his client. There is thus an intercession, a propitiation, an offering of what the suppliant values and the spirit has pleasure in receiving. So far it is a religious action of a sacrificial character, and is distinct from prayer. In the New Hebrides, besides similar sacrifices to spirits, offerings are made to the ghosts of powerful men lately deceased, either at their graves or in the places which they haunt. Men who know these and have access to them take mats, food, and pigs (living or cooked) to the sacred place, and leave, or profess to leave, them there. Nowhere in these islands is there an order of men who can be called priests. The knowledge of the spirits and of the objects through which access to them can be obtained is open to all, and is possessed by many. Most of those who possess it have received it secretly from their fathers or elder relatives, but many have found it by happy accident for themselves, and have proved their connexion with the spirit by the success of their ministrations.

6. *Sacred places and objects.*—The sanctity which belongs to such stones or sacred spots as have been mentioned in connexion with sacrifice has, of course, a religious character. Native life in Melanesia is, for the most part, in continual contact with the prohibitions and restrictions which belong to this religious feeling. The sacred character of the object, whatever it may be, is derived from one of two causes: it may lie in the nature and associations of the thing itself, or

it may be conferred by men who have the *mana*, the spiritual power, to confer it. It may be said, generally speaking, that among these sacred objects there are no idols, in the strict sense of the term. It is true that images are made more or less in all quarters to represent the dead, being set up as memorials at funeral feasts, in burial-places, in canoe houses, and in places of general assembly. They are treated with respect; offerings of food are made, and other valuable things are occasionally laid before them; but the images are memorials of men deceased, likenesses to some extent, and representations; they are not worshipped, and are sacred only because of what they represent.

(1) *Stones*.—Sacred places almost always have stones in them. The presence of certain stones gives sanctity to the place in which they naturally lie; and, when a place has for other reasons become sacred, stones which have that character are brought and placed there. Here again recurs the important distinction between spirits and ghosts. The stones of the burial-place of a powerful man receive *mana* from him, or a man who had *mana* is buried near sacred stones, thus connecting the ghost and the stone. In other cases, the stone is believed to have such a relation to a spirit, who never was a living man, that it acquires a mysterious quality, and becomes the means by which the man who has the knowledge of the stone can have access to the spirit. Many sacred stones then are sepulchral, and this is usually the case in the Solomon Islands. The sacrifices already described are offered upon stones. A stone is also frequently sacred in the Eastern Islands because a *vui* (spirit) belongs to it. In this group stones may be divided into those that naturally lie where they are revered and those which have *mana* derived for various reasons from a spirit, and which are carried about and used for various purposes, and as amulets. The natives emphatically deny that the connexion between stones and spirits is like that which exists between the soul and body of man. Certain stones are kept in houses to protect them from thieves; and, if the shadow of a man falls on one of these, the ghost belonging to it is said to draw out his life and eat it. It has been supposed that the ghost which consumes the man's life must correspond in the stone to the soul in a living man; but the natives do not believe that the ghost dwells in the stone, but by it or, as they say, at it; they regard the stone as the instrument used by the spirit, which is able to lay hold on the man by the medium of his shadow.

(2) *Trees, streams, and living creatures*.—Trees are sacred because they grow in a sacred place, or because they have a sacred snake, *e.g.*, that haunts them. Some have a certain inherent awe attaching to their kind. The natives deny that they ever regarded a tree as having anything like a spirit of its own corresponding to the soul or *animus* of man. Streams, or rather pools, are sacred as the haunts of ghosts in the Western, and of spirits in the Eastern groups. The reflexion of a man's face upon such water gives the ghost or spirit the hold upon the man's soul by which it can be drawn out and its life destroyed. Among living creatures which are sacred, sharks have a conspicuous place. If one of remarkable size or colour haunts a shore or rock in the Solomon Islands, it is taken to be some one's ghost, and the name of the deceased is given to it. Before his death a man will give out that he will enter into a shark. In both cases it is well understood that the shark to which the ghost has betaken himself was, before it was thus occupied, a common shark; but, now that he is in it, the place where the man lived is visited by the fish, and the neighbours and relatives of the deceased respect and

feed it. A spirit, known to some one who sacrifices for it, can, in like manner, be introduced in the Banks' Islands into a shark, which thus becomes familiar. In the Solomon Islands a crocodile may be a *tindalo*, since the ghost of a recent ancestor may possibly have entered it, or may be known to have entered it. Almost any living creature that haunts a house, garden, or village may well be regarded as conveying a ghost. Among birds the frigate-bird is conspicuous for its sacred character in the Solomon Islands; the ghosts of deceased men of importance find their abode in them, and indeed ancient and widely venerated *tindalos* dwell in them. In all the groups there is something sacred about kingfishers. Snakes receive a certain veneration wherever they are found in a sacred place. The original female spirit, that never was a human being, believed in San Cristoval to have had the form of a snake, has given a sacred character to all snakes as her representatives. In the Banks' Islands, and still more in the New Hebrides, snakes with which certain *vui* associate themselves, and which therefore have much *mana*, are worshipped and receive offerings of money in sacred places. One amphibious snake is firmly believed to appear in human form to tempt a young man or woman.

Is, then, the religion of the Melaneseians altogether an animistic religion? Nowhere does there appear to be a belief in a spirit which animates any natural object, tree, waterfall, storm, stone, bird, or fish, so as to be to it what the soul of a man, as they conceive it, is to his body, or, in other words, so as to be the spirit of the object. The natives certainly deny that they hold any such belief; but they believe that the spirit of a man deceased, or a spirit never a man at all, abides near and with the object, which by this association receives supernatural power, and becomes the vehicle of such power for the purposes of those who know how to obtain it.

7. *Magic and charms*.—The belief in magic and the use of magic and charms do not perhaps properly belong to religion; but among Melaneseians it is hardly possible to omit this subject. The foundation of religion is the belief in the surrounding presence of a power greater than that of man; and in great part the practice of religion comes to be the method by which this power can be turned by men to their own purposes. The natives recognize, on the whole, a regular course of nature in the greater movements of things which affect their lives, but at every point they come in touch with what they take to be the exercise by men of the power which they derive from either ghosts or spirits. By means of this power, men who know the proper formula and rite can make rain or sunshine, wind or calm, cause sickness or remove it, know what is beyond the reach of common knowledge, bring good luck and prosperity, or blast and curse. No man has this power of himself, but derives it from a personal being, the ghost of a man deceased, or a spirit of a nature which is not human. By charms (certain forms of words muttered or chanted, which contain the names of the beings from whom the power is derived) this power becomes associated with the objects through which the power is to pass. These things are personal relics, such as hair or teeth, remains of food, herbs and leaves, bones of dead men, and stones of unusual shape. Through these objects wizards, doctors, weather-mongers, prophets, diviners, and dreamers do their work. There is no distinct order of magicians or medicine-men, just as there is no separate order of priests; the knowledge of one or more branches of the craft is handed down from father to son, from

uncle to sister's son, or, it may be, is bought and sold. Many men may be said to make a profession of magic, and to get property and influence thereby. A man cannot, it may be said, be a chief without a belief that he possesses this supernatural power. There is no doubt that those who exercise these arts really believe that a power resides in them, though, indeed, they are conscious of a good deal of deceit.

A great part of this is sympathetic magic, and seems to the people to have reason in it. The failure of some charm or of some magician does not discredit charms or magic, since the failure is due to the counteraction of another and stronger charm; and one doctor who has failed has been, secretly or openly, opposed by another who has on his side a more powerful ghost or spirit. Thus the people were at every turn in contact with the unseen world and its powers, and in this religion was certainly at work. It is not necessary to go into this subject in any detail. With regard to sickness, it is often said that savages do not believe that any one is naturally sick. That is not the case in Melanesia, in the case of such troubles as fever and ague; but any serious illness is believed to be caused by ghosts or spirits; and the more important the patient is the more reasonable it seems to ascribe his sickness to some ghost or spirit whom he has offended, or to the witchcraft of some enemy. It is not common to ascribe sickness to a spirit in those groups where spirits have so great a place in the religious regard of the people. There it is the ghosts of the dead who inflict sickness, and can be induced to remove it; for there is a certain malignity belonging to the dead, who dislike to see men well and living; a man who was powerful and malevolent when alive is more dangerous than ever when dead, because all human powers which are not merely bodily are believed to be enhanced by death. So, whether to cause sickness or to remove it, the doctor by his charms brings in the power of the dead. A wizard is paid by a man's enemy to bring the malignant influence of the dead upon him; he or his friends pay another to bring the power of other dead men to counteract the first and to save the endangered life; the wizard who is the more powerful—who has on his side the more or the stronger ghosts—will prevail, and the sick man will live or die accordingly. Two parties of such hostile ghosts are believed in San Cristoval to fight the battle out with ghostly spears. All success and prosperity in life, as well as health and strength, are held to depend on the spiritual power obtained by charms or resident in objects which are used with charms; the Melanesian in all his employments and enterprises depends upon unseen assistance, and a religious character is thus given to all his life.

8. *Tabu*.—This word, commonly *tapu* or *tambu* in the islands of Melanesia now under consideration, and established as an English term, was taken from the islands of Polynesia. In Melanesia the belief prevails, clearly marked by the use of distinct words in some islands, that an awful and, so to speak, religious character can be imposed on places, things, and actions by men who have the *mana* to do it. A place, *e.g.*, in which a powerful man has been buried, where a ghost has been seen, which a spirit haunts, is holy and awful of itself, never to be lightly invaded or used for common purposes. But a man who has the proper power can *tabu* a place as he chooses, and can forbid approach to it and common use of it. Behind the man who exercises this power is the ghost of the dead or the spirit whose power the man has. *Tabu* implies a curse. A chief will forbid something under a penalty. To

all appearance it is as a chief that he forbids, and as of a chief that his prohibition is respected; but in fact the sanction comes from the ghost or spirit behind him. If a common man assumes the power to *tabu*, as he may and sometimes does, he runs a serious risk; but if, on the other hand, he forbids the gathering of certain fruit, and sets his mark upon it, and then, as often naturally happens, some one who has disregarded his prohibition and taken the fruit falls ill or dies, this is at once a clear proof that the *tabu* is real, and any future prohibition made by him will be respected. Thus to a considerable degree, in the Banks' Islands at least, men of no great consequence, as well as the societies which are there so numerous, set marks of prohibition which meet with respect. Every such prohibition rests upon an unseen power; there is in it no moral sanction, but there is the consciousness of the presence of the unseen which certainly works much for morality. What is wrong in itself is by no means always *tabu*; but what is *tabu* is very often what the natives recognize as wrong in itself. For it must not be supposed that Melanesians know no moral distinction of right and wrong. Disobedience to parents, unkindness to the weak and sick, are no doubt common, but there is a general feeling, both strong and marked, that it is right to respect and love parents, and wrong to be unkind. Neighbours will carry food to the sick whose friends neglect them, and very plainly express their blame. Those who lie freely upon occasion respect truthfulness, and say that it is bad to tell lies.

9. *Totemism*.—If totems, properly so called, exist among Melanesians, they must be considered in treating their religion. A totem is defined by J. G. Frazer (*Totemism and Exogamy*, London, 1910, i. 3 f., 8) as being 'a class of material objects which a savage regards with superstitious respect, believing that there exists between him and every member of the class an intimate and altogether special relation.' The relation between a man and his totem has partly a religious and partly a social character. It is held that 'the members of a totem clan call themselves by the name of their totem, and commonly believe that they are actually descended from it.' Each one, moreover, 'believing himself to be descended from, and therefore akin to, his totem, the savage naturally treats it with respect. If it is an animal he will not, as a rule, kill or eat it.'

(1) Florida, in the Solomon Islands, where the native system as it is understood by themselves has been carefully explained by natives of some education, affords probably the best field for consideration of the subject. The people are divided into six exogamous kindreds, called *kema*, each with its distinguishing name, descent following the mother. Two of these kindreds are named from living creatures, a sea-eagle and a crab. Each of the six has some object which its members must avoid, and which they must abstain from eating, touching, approaching, or beholding. This is the *mbuto* of the *kema*. In one case, and one case only, this *mbuto* is the living creature from which the kin takes its name. The Kakaū kin may not eat the *kakau* crab, and that crab might accordingly be regarded as the totem of that Crab kindred. But the other kin which takes its name from a living creature, the Eagle kindred, is quite at liberty to kill or eat that bird; it, therefore, cannot be the totem of that kin. Again, a member of the Eagle kindred may not eat the common fruit pigeon, which is his *mbuto*, and would say that the pigeon was his ancestor. Here, then, the pigeon appears as the totem of the Eagle kin; they cannot eat it; it is their ancestor. But was a pigeon their ancestor

in the sense that they are descended from it? Decidedly not. It was a human ancestor who associated himself with the pigeon; the pigeon represents the dead man, the pigeon is a *tindalo*, a dead man of power. A native writes:

'We believe these *tindalo* to have been once living men; and something that was with them, or with which they had to do, has become a thing forbidden, *tambu*, and a thing abominable, *mbuto*, to those to whom the *tindalo* (once a living man) belongs' (Codrington, p. 31 f.).

That is to say, the pigeon represents the human ancestor; the man begat the generations of his kindred before he died and entered into a pigeon. The pigeon is not truly an ancestor, nor is it truly a totem. The native writer goes on to give the example of another kindred which avoids the giant clam, the traditional ancestor of which haunted a certain beach. That ghostly ancestor is represented by the clam on that beach, and a native will say that the clam is his ancestor, but without meaning more than he means when he says that an ancient weapon in a shrine is a dead chief, a *tindalo*, that is, belongs to him.

(2) In another of the Solomon Islands, Ulawa, not long ago the people would not eat the fruit of the banana, and had ceased to plant the tree. The elder natives would give to the fruit the name of a powerful man whom they remembered living, and say that they could not eat him, thus accounting for their avoidance of the banana as food. The explanation was that this man, before his death, announced that after death he would be in banana fruit, and that they were not to eat it. Soon he would have been an ancestor, the banana would be an ancestor, while clearly there was no descent from a banana in the belief of the people. This, then, is no totem, though it may illustrate the origin of totems.

(3) In the New Hebrides, in Aurora Island, there is a family named after the octopus. They do not call the octopus their ancestor, and they freely eat it; but their connexion with it is so intimate that a member of the family would go to the reef with a fisherman, call out his own name, and say that he wanted octopus, and then plenty would be taken. This, again, seems to approach totemism.

(4) In the Banks' Islands and New Hebrides, however, there is what comes very near to the 'individual totem.' Some men, not all, in Mota conceived that they had a peculiar connexion with a living creature, or it might be a stone, which had been found, either after search or unexpectedly, in some singular manner. If this was a living thing, the life of the man was bound up with its life; if an inanimate object, the man's health depended on its being unbroken and secure. A man would say that he had his origin in something that had presented itself to him. In Aurora also, in the New Hebrides, a woman dreams or fancies that there is something—e.g., a coco-nut—which has a particular relation to her unborn child, and this the child hereafter must never eat.

10. Societies, mysteries, and dances.—(1) *Societies*.—A very conspicuous feature of native life in the Torres Islands, Banks' Islands, and New Hebrides is the universal presence in those groups of a society, called by some form of the name *supwe*. There are, or were, certain objects commonly in view which, at first sight, could not fail to connect this with the religion of the people. The visitor to a village would see platforms built up with stones, with high, pointed, shrine-like little edifices upon them, within which were the embers of a fire below and images in human form above. If he hit upon a festival, he would see such images carried in the dance. But such appearances show, as a matter of fact, nothing else than the presence of this society, since they are merely the hearth and the emblems of the men of high rank in the

supwe, an institution which is entirely social, and has no religious character. To gain advance and distinction in it requires, no doubt, the spiritual power of *mana*, as does every other form of success, and so sacrifices, prayers, and charms are used; and doubtless the *supwe* is under the sanction of tabu. It is also true that a man's position after death is believed to depend in some measure on his rank and his liberality in this society. But the account of it cannot come under the head of religion.

(2) *Mysteries*.—A religious character attaches much more truly to the mysteries, the mysterious secret societies which hold an important place in native life in the Solomon Islands and in the Eastern groups. The lodges of these societies appear to visitors to be temples and seats of religious worship; the images within them seem to be idols. The mysteries are closely fenced by a strict initiation, and a rigid tabu guards them; to those outside the secret and unapproachable retreats the mysterious sounds and the appearance of the members in strange disguise convey a truly religious awe. In fact, the mysteries are professedly methods of communion with the dead, the ghosts which are everywhere, more or less, objects of religious worship. In the Banks' Islands the name of the mysteries was simply 'the Ghosts.' Yet, although within the mysterious precincts the ordinary forms of sacrifices and prayers were carried on to gain the assistance of the dead and communion with them, there was no esoteric article of belief made known and no secret form of worship practised. There were no forms of worship peculiar to the society, no objects of worship of a kind unknown to those without. There was no 'making of young men,' no initiation without which the native could not take his place among his people. The women and the children, perhaps, really believed that what they saw and heard was ghostly, but many an accident betrayed the neighbour in disguise; and the neophyte, when introduced into the sacred place, found himself in the company of his fellows of daily life. Still, since the presence of the dead was professed and believed, and since so much of the religion of the Melanesians, particularly in the Solomon Islands, was concerned with the ghosts of the dead, it is true that these secret societies and mysteries belong to the religion of the people.

(3) *Dances*.—This is by no means the case with dances. All the societies have their dances, which are part of the mysteries, and which it is the first task of the neophyte to learn. But there are dances everywhere in the public life of the people which, however difficult, all boys and young men desire to learn, and have to learn in secret before they can perform them at the feasts. The ghosts in Hades, in their shadowy life, dance as living men do. Visitors are too apt to speak of 'devil dances' and 'devil grounds'; but it may be said to be certain that dances, as such, have no religious or superstitious character in Melanesia.

11. *Creation, cosmogony*.—The consciousness of the relation of men to a creator is commonly accepted as a chief ground of natural religion. Consequently, when natives are asked (perhaps very imperfectly) who made them and the things around them, and they give the name of the maker to whom their origin is ascribed, they are thought to name their creator; and it is assumed that this creator is the chief object of their worship. Thus Qat, under the name Ikbak, was thought at first to be the chief deity at Mota; and the name of the supposed creator has elsewhere been taken as the name of God. But creation, the making of men and things, is by no means a proof of very great power, or a ground for great reverence, among Melanesian people. It

may almost be said that relation to a creator has no religious influence at all, though reference to Qat as the maker of men is made in correcting children in the Banks' Island. The existence of the world, as the natives conceived of it, and the course of all the great movements of nature, are quite independent of that creative power which was ascribed to certain spirits. The makers were spirits. In the Solomon Islands the belief in Kahausibware is characteristic. She was a female spirit in the shape of a snake; she made men, pigs, coco-nuts, fruit-trees, and food in San Cristoval; death had not yet appeared. There was a woman who had a child. The snake strangled the child; the mother chopped the snake in pieces; thenceforward all good things changed to worse, and death began. Respect is shown to snakes as the progeny or representatives of this female spirit, but she cannot be said to be worshipped.

In the Banks' Islands and the New Hebrides, as has been stated before, spirits are the principal objects of worship, and they are also believed to have had much to do with the fashioning of the world of man. Yet it must be borne in mind that they are by no means held to be originators; they came themselves into a world existing under circumstances such as those in which men now live, where there were houses and canoes, weapons and ornaments, fruits and gardens. In the Banks' Islands Qat held the highest place. He was born the eldest of twelve brothers, who dwelt in a village in Vanua Lava. There Qat began to make men, pigs, trees, rocks, as the fancy took him, in a land which already existed. His chief assistant in his work was another spirit (*vui*) named Marawa ('spider'); his brothers envied and thwarted him; when he made a wife for himself, they tried to kill him; he instructed them and played tricks on them. There were other spirits in the world when he was born, some enemies whom he had to overcome. From one of these spirits, dwelling in another group, named Night, he bought the night to relieve the tedium of perpetual daylight. Finally, when the world was settled and furnished, he made a canoe in the middle of the island of Santa Maria, where now is the great lake, collected his wife and brothers and living creatures into it, and in a flood caused by a deluge of rain was carried out into the sea and disappeared. The people believed that the best of everything was taken away by Qat, and looked for his return. Though no longer visible, he still controlled to a great extent the forces of nature, and he heard and answered the cries of men. In a way the natives looked upon him as an ancestor as well as their creator, but they were emphatic in their assertion that he was never a man himself; he was a spirit, a *vui*, of a nature different from that of man; and, because a spirit, he was master of all magic power, and full of that *mana* which was at work in all around. It is, however, scarcely possible to take him very seriously or allow him divine rank, even though he is the central figure in the origin of things and his influence is present and effective. In the New Hebrides nearest to the Banks' Islands Tagaro takes the place of Qat. He is no doubt the Tangaroa of Polynesia. He made things as Qat did; he had his brothers, ten of them, and there was another, Supwe, who thwarted Tagaro and made things wrong. Tagaro also went back to heaven. In other islands Supwe appears as the chief of this band of great spirits. In Santa Cruz, Lata corresponds, but not very closely, to Qat and Tagaro, since he also made men and animals.

These greater spirits are named and known as individual persons. Besides these, in all the islands are spirits innumerable and unnamed. These are

they whose representative form is very often a stone, who haunt the places which their presence makes sacred, who associate themselves with snakes, sharks, birds, and the various things through which men can communicate with them and draw from them the spiritual power from which comes all manner of success in life, and which can be turned to injury as well as succour. It may safely be said that these spirits were not malignant beings, though they were spiteful at times and were willing to do mischief to the enemies of their worshippers. The multitude of beings who in the Solomon Islands have power in storms, rain, drought, calms, and especially in the growth of food—the *vigona*, *hi'ona*, and others—seem to belong rather to the order of spirits than to that of the ghosts of the dead, and such they are acknowledged to be, though the natives speak of them as ghosts.

Thus the world of the Melanese was populous with living beings, visible and invisible, with men, with the ghosts of the dead, with spirits great and small; and pervading and surrounding all was a power which belonged to all spirits, to the dead as such, and to many men; all these could direct it and employ it, and it was everywhere at hand. The world so inhabited was bounded to the Melanese by the circle of the sea which surrounded the islands which were known to them, a circle which varied in place and size according to the position of the centre. The old world of the Banks' Islanders did not include the Solomon Islands; that of the Solomon Islanders was a much wider world. Wherever the circumference of the circle fell the sky was supposed to shut down fast upon it. Under this firmament the sun and moon made their journeys; and the stars hung in it. The heavenly bodies were not thought to be living beings, but rather rocks or islands. In the sun and moon were inhabitants with wives and families, in whom the sun and moon were personified and about whom many stories were told; but these have no religious character.

12. Death and after death.—Without some belief in a life after death, as well as in a power superior to that of living man, it is plain that the Melanesian religion could not be such as has been described. This implies a belief in a soul of man, though what that is they find it difficult to explain. They naturally use different words in their different languages, and these words convey various metaphors, when they are properly understood, the use of which probably involves a certain inconsistency. It may safely be said, however, that, whatever word they use, the Melanese mean that there is something essentially belonging to man's nature which carries life to the body, which is the seat of thought and intelligence, which exercises a power which is not of the body, which is invisible, and which, after it has become separate from the body in death, still has an individual existence. It is in a sense a spirit, and in some islands is so called; but it is quite distinct from those spiritual beings that never were the souls of men and therefore never disembodied. The soul can go out of a man in a dream or a faint; it can be drawn out of the body or injured in the body by magic or spiteful ghosts or spirits; when finally separated from the body in death it becomes a ghost. Such a soul is peculiar to man. It is true that, as will be seen in the account of Hades, there is something which is like the ghost of a pig, of a weapon or ornament, something that remains and has a shadowy form; but the natives will not allow that even a pig, an intelligent and important personage with a name, has a soul as a man has.

(1) *Death*.—It was not part of the original nature

of men that they should die. In stories the first men are represented as changing their skins, as snakes cast their slough, and returning to youth and strength, until by some accident or folly life could no longer be so renewed, and death came in. When it came, the way to the abode of the dead was opened and men departed to their own place, Hades. The funeral rites do not require description. The disembodied spirit is not thought generally willing to depart far from the body which it has left or the place in which it has lived; but, the body being buried, or otherwise disposed of, the ghost proceeds to its appointed place.

(2) *Hades*.—There is a great difference between the conception of the Solomon Islanders and that of the Banks' Islanders and New Hebrides people with regard to the place where the dead take up their abode. In the Eastern Islands Hades is in the under world; in the Solomon Islands the dead, though there is an under world, depart to islands and parts of islands belonging to their own group, and from Florida they were conveyed in a ghostly canoe, a 'ship of the dead.' In all parts of Melanesia alike the condition of the dead in these abodes is an empty continuation of the worldly life; in all parts the ghostly life is not believed to be eternal, except in so far as the native imagination has failed to follow their existence with any measure of time. But, though the dead congregate in Hades, they still haunt and frequent the homes of their lifetime, are active among the living, and, as has been shown, in the Solomon Islands the religion of the living is mainly concerned with the worship of the dead. In these islands the weapons, ornaments, and money of a man of consequence are buried with him or placed on his grave. Whether these decorate the dead or serve his use in Hades is uncertain. It is as when a dead man's fruit-trees are cut down, as they say, as a mark of respect; he ate of them, it is said, while he was alive, he will never eat again, and no one else shall have them.

The notion is general that the ghost does not at first realize its position, or move with strength in its new abode; and this condition depends to some extent on the period of the decay of the body; when that is gone, the ghost is active. It is to expedite this activity that in some parts the corpse is burned.

While in a general way the ghosts of the dead pass to their Hades above ground, there are some which have their principal abode in the sea. Before his death a man may declare his purpose of taking up his abode in a sea-bird or a shark, or the dead body may be sunk into the sea and not buried. These sea-ghosts have a great hold on the imagination of the natives of San Cristoval and the adjacent islands, and were frequently represented in their carvings and paintings. They appear as if made up of fishes, and fish are the spears and arrows with which they shoot disease into the living.

In Santa Cruz the dead, though they haunt the villages, go into the great volcano Tamami and pass below. In the Banks' Islands the common Hades has many entrances; in this they have villages in which they dwell as on earth, but in an empty life. The ghosts hang about their graves for a time, and it is not desired that they should remain, though at the death-feasts they have a portion thrown for them. The great man goes down to Panoi with his ornaments, that is, with an unsubstantial appearance of them. In the Northern New Hebrides there are passages to Hades at the ends of the islands, the northern or southern points, by which ghosts go down, and also return. In Lepers' Island the descent is by a lake which fills an ancient crater. Living persons

in all these islands have gone down to see their dead friends; they have seen the houses, the trees with red leaves, and the flowers, have heard the songs and dances, and have been warned not to eat the food of the ghosts.

(3) *Rewards and punishments*.—There remains the important question whether the condition of the dead is affected by the character of the living man; whether the dead are happier or less happy, in better or in worse condition, according as they have been, in native estimation, good men or bad on earth.

(a) *Solomon Islands*.—It cannot be said that in these islands the moral quality of men's lives affects their condition after death. When the canoe of the dead took the ghosts of Florida across to the neighbouring island of Guadalcanar, they found a ghost of worship, a *tindalo*, with a rod which he thrust into the cartilage of their noses to prove whether they were duly pierced. Those who passed this test had a good path which they could follow to the abodes of the dead; those who failed had to make their way as best they could with pain and difficulty. In Ysabel they present themselves to the master of their Hades at a pool, across which lies the narrow trunk of a tree. They show their hands; those who have the mark of the frigate-bird cut in them are allowed to pass; those who have not the mark are thrown from the trunk into the gulf beneath and perish.

(b) *Banks' Islands and New Hebrides*.—In these islands there is something which approximates to a judgment of a moral kind. It is true that, as a man's rank in the world has depended very much upon the number of the pigs he has slain for feasts, so the ghost fares badly who has not so done his duty by society. So in Pentecost Island, when the ghosts leap into the sea to go below, there is a shark waiting which will bite off the nose of a man who has not killed pigs; and in Aurora a fierce pig is ready to devour the ghost of a man who has not planted the tree that supplies material for the mats which are so highly valued. But there is a kind of judgment, a discrimination between good and bad, which has a moral character, and is, perhaps, well worthy of remark. Thus in the Banks' Islands it was believed that there was a good Hades and a bad. If one man had killed another by treachery or witchcraft, he would find himself opposed at the place of descent by the ghost of the man whom he had wronged; he dreaded the path which led to the bad place, and wandered on the earth. If a man had been slain in fair battle, his ghost would not withstand the ghost of the man who slew him. The bad, they said, were not admitted to the true Panoi, the Hades where there were flowers, though but shadows, and the empty semblance of social life. But who was the evil man? It was answered, 'One who killed another without cause or by charms, a thief, a liar, an adulterer.' Such in their Hades quarrel and are miserable; they haunt the living and do them what harm they can. The others, who lived as they ought to live, abide at least in harmony in Panoi after death.

It is very likely that these notions of something like retribution in the under world have not entered very deeply into the native mind, and are not generally entertained. But that such beliefs should have been received at all is enough to show that their sense of right and wrong has been carried by Melanesians into their prospect of a future state, a view which can hardly have failed to have something of a religious tendency, even if it cannot be said to prove in itself the existence of a religion which these islanders undoubtedly possess.

R. H. CODRINGTON.

MELETIANISM.—There were two Meletian schisms, each having considerable influence on the fortunes of the Arian controversy. The earlier took its name from the Meletius who was bishop of Lycopolis in Egypt; the later from the Meletius who was consecrated bishop of Antioch in A.D. 360.

1. The Meletian schism in Egypt.—*Μελέτιος* (Epiphanius) or *Μελέτιος* (Athanasius) was bishop of Lycopolis in Egypt, and his dispute with Peter, bishop of Alexandria, led to a schism which received attention at the Council of Niceæ. According to Athanasius (*Apol. c. Arianos*, 59), Meletius was condemned about A.D. 305 or 306, so that the quarrel was already of long standing when the Council assembled. The origin of it is extremely obscure. As Hefele points out (*Councils*, Eng. tr., i. 343 ff.), there are three separate accounts: (1) in documents discovered by Maffei and published in M. J. Routh, *Reliquiæ Sacre*, Oxford, 1814-18, iv.; (2) in the writings of Athanasius; (3) in Epiphanius. All these differ in their details as to the origin of the schism. The first of the three documents preserved in Routh is a letter of certain Christians in prison who were afterwards martyred by Diocletian (*Eus. HE viii. 10*). It is supposed that the actual writer of the letter was Phileas, bishop of Thmuis. Meletius is addressed as a fellow-minister (*κομμινιστήρ*, the document being preserved in Latin), so that the schism has evidently not yet begun, and he is blamed for ordaining clergy in strange dioceses, without the consent of his fellow-bishops or even of Peter of Alexandria. The second document is a note, added by an anonymous hand, to say that after the martyrdom of the bishop Meletius had gone to Alexandria and found two discontented men, Arius and Isidore, and proceeded to excommunicate the visitors (*πρεποβευρά*) appointed by Peter, who thereupon wrote the letter which makes the third of our documents, to the people of Alexandria, bidding them to avoid all communion with Meletius. From this very early and contemporary evidence we learn that Meletius's offence was that of trespassing on the rights of Peter and the other bishops by conferring orders out of his own diocese. It is to be noticed that these irregularities took place before the deposition of Meletius. Athanasius says nothing about the irregular ordinations. In his *Apology against the Arians* (ch. 59) he gives as the cause of the deposition of Meletius that he had been guilty of many offences, particularly of having sacrificed to idols and of having calumniated the bishops of Alexandria, Peter, Achillas, and Alexander (ch. 11). In his *Letter to the Bishops of Egypt and Libya* he asserts (ch. 22) that the Meletians were declared schismatics fifty-six years before, and that the Arians thirty-six years ago were convicted of heresy. Socrates (*HE i. 6*) gives practically the same account as Athanasius, and may, as Hefele suggests, have copied from him. The third version of the origin of the schism, however, differs materially from those which we have hitherto considered. It is given by Epiphanius (*Hær. lxxviii.*), and printed in Routh (iv. 105). Meletius, says this writer, was a perfectly orthodox bishop. Indeed, he credits him with having accused Arius to Alexander, with whom Meletius, though a schismatical bishop, was on good terms. The real cause of the dispute was, according to Epiphanius, the question of the treatment

of the lapsed. But Epiphanius's account, as Hefele shows, is full of inaccuracies, and contradicts the earliest evidence, as when, *e.g.*, he makes Meletius a fellow-prisoner with Peter. But he may have been correct as to the underlying cause of the schism, Meletius being, like Novatian at Rome and the Donatists in Africa, the representative of the severe disciplinarians. Epiphanius had, moreover, special knowledge of the Meletians from their schism having spread to his native place, Eleutheropolis. Perhaps because of his doctrinal orthodoxy, Meletius and his party were treated very leniently by the Council of Niceæ. It may be that canon 6, affirming the authority of the bishop of Alexandria, was directed against them; but in the synodal letter (*Soc. HE i. 9*) Meletius was not permitted to ordain or appoint clerics any more, and those whom he had ordained were to be admitted to the Church (*μυστικωτέρᾳ χειροτονίᾳ*) and to rank below the clergy ordained by Peter and his successors. Athanasius was much troubled by those schismatics who joined his opponents; and from their ranks came his bitter enemies, the priest Ischyrius, Arsenius, and many others. Athanasius bitterly regretted the decision of Niceæ in this matter (*Apol. c. Arianos*, 71 f., where a list of the followers of Meletius is given). The schism lasted down to the middle of the 5th century (*Soc. HE i. 8*).

2. The Meletian schism at Antioch.—The importance of the disputed episcopal succession at Antioch is due to the fact that it hindered the good understanding between the Roman and Alexandrian Churches and those Asiatic Christians who, though at heart orthodox, were less uncompromisingly Nicene than many of the Athanasian party. The dispute, which lasted for more than fifty years, ranged the great saints and Fathers of the later years of the 4th cent. in opposite camps. Against St. Basil, St. Gregory of Nazianzus, St. Flavian of Antioch, and St. John Chrysostom were opposed St. Damasus of Rome, St. Ambrose of Milan, St. Peter of Alexandria, and, much against his will, St. Athanasius himself. The merits of the controversy are perhaps as evenly distributed as the names on either side. To understand it aright it is necessary to trace the divisions of the patriarchal Church of Antioch from the days of the Nicene Council. Eustathius, the bishop, who had been one of the foremost champions of the accepted creed, was the first to suffer in its cause, being deprived of his see in A.D. 330, though not without a serious tumult in the city, owing to the machinations of Eusebius of Cæsarea and the 'conservative' faction. The see of Antioch was now filled by prelates who were hostile to the Nicene formula—Eulalius, Euphronius, Flacillus, Stephen, and Leontius, the last of whom, by prudently concealing his real opinions on vexed questions, preserved peace till his death in 357. He was succeeded by Eudoxius, 'the worst of all the Arians,' who was installed as bishop of Constantinople in A.D. 360. It now became necessary to provide a successor at Antioch, and Meletius was chosen, being supposed to be a man of peace in accord with the party in power (F. Cavallera, *Le Schisme d'Antioche*, p. 72, note). In his sermon, however, on Pr 8th he declared himself on the side of the Nicenes (Epiph. *Hær. lxxiii.*), and was at once deposed and exiled, and Euzoius put in his place. Thus Meletius, once the Arian nominee, had become a Catholic confessor. Since the deposition of Eustathius, the faithful Nicene remnant had remained apart under the care of the

priest Paulinus, and did not enjoy the prospect of communicating with the followers of Meletius, who, unlike them, had not borne the burden of the contest. The party of Paulinus, however, was not considerable—perhaps its insignificance induced Euzoïus, who is said to have had a regard for its leader, to allow it the use of a small church. Meletius's party, on the other hand, was numerous and increasing owing to the popularity of the bishop, and it seemed probable that under him the Catholics would ultimately be united. In 362 Athanasius held the small but important Council of Alexandria (see *ARIANISM*, vol. i. p. 780). A synodal letter, the *Tomus ad Antiochenos*, was sent to Antioch by the hands of the bishop Eusebius of Vercelli, who had attended the Council; but on his arrival he found that his companion in exile, Lucifer, bishop of Caliaris in Sardinia, had taken upon himself to consecrate Paulinus bishop of the old Nicene party at Antioch. As far as Antioch was concerned, the schism was unimportant. Meletius was universally beloved, and his moderation in regard to the points at issue in the controversy was more in consonance with Asiatic and Syrian Christianity than the uncompromising attitude of Alexandria and the West. Nor was Athanasius averse to a settlement, which let bygones be bygones, and allowed the good work done by Hilary of Poitiers in reconciling the bishops of Asia Minor to the Nicene Creed to bear fruit. But, not wishing to disavow Lucifer, the bishop of Alexandria recognized Paulinus, as did also the Roman see. The dispute had now reached a stage at which principles were involved not unlike those which made the unhappy Donatist schism so incurable in Africa—the difference being that the Donatists (*q.v.*) rejected bishops who had been unfaithful in regard to heathenism, and the Eustathians of Antioch those who had once been infected with heresy. The Roman see under Damasus declared unhesitatingly for Paulinus; but throughout the East Meletius was regarded as the champion of orthodoxy; and he was a sufferer under Valens for his adherence to the Nicene Creed. The Cappadocian fathers, Basil and the two Gregories, were devoted to Meletius, and John Chrysostom belonged to his church and was first ordained reader and afterwards deacon by him. The schism at Antioch embittered the life of St. Basil, who in vain appealed to Athanasius to recognize Meletius, and was seriously troubled by the uncompromising support which Damasus gave to Paulinus. Things were further complicated by Apollinaris, the famous bishop of Laodicea, who, though condemned for his erroneous opinions, is recognized not only as a defender of Nicene theology, but also as one of the profoundest thinkers of his time (see *APOLLINARISM*). Among his friends was the presbyter Vitalius, who had been made priest by Meletius, but was ultimately consecrated by Apollinaris as rival bishop to Paulinus (*c.* 375). Thus, including the Arians, the Church of Antioch was now divided into four parties, the three Nicene bishops being Meletius, Paulinus, and Vitalius. Strangely enough, not a shadow of suspicion rested on any one of these three rivals in regard to character. Meletius and Paulinus were both recognized as saints, while, despite the suspicious orthodoxy of his consecrator, Vitalius was highly respected by the most honoured churchmen of the day. Some hope of ending the schism was given when the six leading presbyters of the Church agreed to recognize either Meletius or Paulinus, if one survived the other. In 381 Meletius was at Constantinople, taking a leading part in the Second General Council. This Council was destined to affirm the creed of Nicæa and reunite the Church, though it proved unable to bring

peace to the distracted community at Antioch. Meletius died during the Council; and, for some unexplained reason, Flavian, one of the six presbyters who had agreed to recognize Paulinus if he survived, consented to be consecrated successor to Meletius. His action appears on the face of it indefensible; but, as he proved a remarkably saintly bishop, there may be some extenuating circumstances for his conduct of which we are not aware. The appointment of Flavian was one of the reasons for the Roman see's regarding the Council of Constantinople with disfavour. Paulinus was supported by the bishops of Egypt, Cyprus, and Arabia, whilst Palestine, Syria, and Phœnicia adhered to Flavian. Theodosius recognized Flavian, and, when the serious affair of the statues was causing anxiety in the city, it was he as its bishop who pleaded the cause of the people at Constantinople (A.D. 387). Paulinus died in 388; and before his death he consecrated Evagrius in his place—a most uncanonical proceeding. The Westerners seem to have supported the claims of Evagrius, and Ambrose urged Theodosius to compel Flavian to come to Italy and submit his claims to the decision of the Church there; Theophilus of Alexandria was naturally opposed to him, as were Epiphanius and Jerome. When, however, Evagrius died, no rival bishop was consecrated. On Chrysostom's appointment to Constantinople (398) he managed to heal the schism so far as Alexandria and Rome were concerned; and Flavian placed the names of his two rivals—Paulinus and Evagrius—on the diptychs of the Church. The Eustathians continued to hold separate meetings till the time of Alexander (414-415), who healed the schism by an act of Christian courtesy, visiting the Eustathian church on Easter day and being accorded a hearty welcome by the congregation. The schism was finally ended when Kalandion, patriarch of Antioch (481-485), brought back the relics of Eustathius. The schism of Antioch would be no more than a somewhat dull chapter in ecclesiastical history were it not for the underlying causes, indispensable for the right understanding of the intricate questions which make the religious divisions of the East so complicated. As has been indicated, there was a singular absence of bad feeling and, we may add, of bad motives. We hear nothing of the disorder and even crimes which mark the course of the Donatist schism. But throughout we can see how incompatible were the ideals of the great patriarchates of Rome and Egypt with those of the East. Meletius, Flavian, John Chrysostom, and Nestorius, the great Antiochenes, all felt the encroachments of the bishop of Alexandria supported—except in the case of Chrysostom—by Rome. What has been called the Meletian schism was a foreshadowing of troubles to come which rent the Church asunder, and it is a phase in the long struggle between the rival theologies of Alexandria and Antioch, which dates from the days of Origen.

F. J. FOAKES-JACKSON.

MEMORY.—1. Use of the term. —(a) The term 'memory' can be used in a wide biological sense to signify retention of the effects of stimulation. In this sense it is regarded by some writers as a fundamental attribute of living matter—a view

which was put forward by Ewald Hering in 1870, in a paper read before the Imperial Academy of Science at Vienna, 'On Memory as the Universal Function of Organized Matter.' Wherever there is life with growth and development, there memory must be predicated, since each new process is the outcome of the old and implies its retention.

Memory is a faculty not only of our conscious states, but also, and much more so, of our unconscious ones. . . . Our ideas do not exist continuously as ideas; what is continuous is the special disposition of nerve substance in virtue of which this substance gives out to-day the same sound which it gave yesterday, if it is properly struck. . . . The reproductions of organic processes, brought about by means of the memory of the nervous system, enter but partly within the domain of consciousness, remaining unperceived in other and not less important respects. . . . The memory of the so-called sympathetic ganglionic system is no less rich than that of the brain and spinal marrow. . . . A muscle becomes stronger the more we use it. . . . After each individual action it becomes more capable, more disposed towards the same kind of work, and has a greater aptitude for repetition of the same organic processes. It gains also in weight, for it assimilates more matter than when constantly at rest. We have here . . . the same power of reproduction which we encountered when we were dealing with nerve substance. . . . This growth and multiplication of cells is only a special phase of those manifold functions which characterize organized matter. . . . Reproduction of performance, therefore, manifests itself to us as reproduction of the cells themselves, as may be seen most plainly in the case of plants, whose chief work consists in growth, whereas with animal organism other faculties greatly preponderate.¹

Hering states the doctrine of the heredity of acquired characteristics with great simplicity.

'We have ample evidence of the fact that characteristics of an organism may descend to offspring which the organism did not inherit, but which it acquired owing to the special circumstances under which it lived. . . . What is the descent of special peculiarities but a reproduction on the part of organized matter of processes in which it once took part as a germ in the germ-containing organs of its parent, and of which it seems still to retain a recollection that reappears when time and occasion serve.'²

For Hering the marvels of instinct are but the marvels of habit handed on from generation to generation.

'He who marvels at the skill with which the spider weaves her web should bear in mind that she did not learn her art all on a sudden, but that innumerable generations of spiders acquired it toilsomely and step by step.'³

Samuel Butler, in *Life and Habit* (1877), set forth the same doctrine, although he was at that time ignorant of Hering's paper. Into a later book, entitled *Unconscious Memory*, he incorporated a translation of the German lecture.

At the present day a similar view of memory is presented by such biologists as Francis Darwin, R. Semon, and H. S. Jennings. It should be noticed that in such a biological doctrine of memory there is no necessary reference to consciousness. The structural development and behaviour of plants and animals may testify to memory in this wide sense without thereby giving evidence of consciousness.

(b) In a psychological use of the term such a reference is essential. As generally understood in psychology, memory denotes the retention of experience, and its subsequent reproduction with the consciousness that it belongs to the past. To remember is to refer back. The distinction between memory as a conscious experience and memory as a biological fact has been emphasized by H. Bergson in his distinction between the memory which imagines and the memory which repeats. All our bodily habits are memory in the latter sense, but not necessarily in the former. Acquired skill implies practice with the retention of past progress, but in the exercise of skill there need not be any conscious reference to those past exercises whereby this skill was acquired. Both forms of memory may be combined when performed habit or acquired skill is guided on any occasion by a conscious reference back to past efforts, successes, and failures. For Bergson the relation of the two forms of memory

portrays the relation of body to soul; each may enter into the service of the other.

'The bodily memory, made up of the sum of the sensori-motor systems organized by habit, is then a quasi-instantaneous memory to which the true memory of the past serves as base . . . the memory of the past offers to the sensori-motor mechanisms all the recollections capable of guiding them in their task and of giving to the motor reaction the direction suggested by the lessons of experience. . . . But, on the other hand, the sensori-motor apparatus furnish to ineffective, that is unconscious, memories, the means of taking on a body, of materializing themselves, in short, of becoming present. For, that a recollection should reappear in consciousness, it is necessary that it should descend from the heights of pure memory down to the precise point where action is taking place.'⁴

James Ward would subscribe to the biological doctrine of memory, but finds it meaningless save as interpreted in terms of the psychological.

'Nay, the bare term "retention" itself, and all cognate terms, such as "trace" or "residuum," are meaningless unless some present circumstance can be related to the past; thus they presuppose memory. The analogy of inscribed records is a favourite resort of those who strive to elucidate the nature of memory by physical imagery; we find it again and again in Locke, for example. Such an analogy is about on a par with that between the eye and a telescope—the one is a natural, the other an artificial, organ or instrument of vision; but neither will explain seeing as a psychological fact.'⁵ 'Records or memoranda alone are not memory, for they presuppose it. They may consist of physical traces; but memory, even when called "unconscious," suggests mind; . . . the mnemonic theory then, if it is to be worth anything, seems to me clearly to require not merely physical records or "engrams," but living experience or tradition.'⁶

(c) 'Memory' may be used to denote the retention of past experience without reference to the explicit reproduction of such experience. The essential difference of this use of the term from the biological use lies in the word 'experience' with its implication of mental processes. Writers on psychiatry, such as Morton Prince, S. Freud, and C. G. Jung, use the term 'memory' for the influence of past on present experience, whether the subject is conscious of such influence or not.

'When we conceive of memory as a process we have in mind the whole mechanism through the working of which this past experience is registered, conserved and reproduced, whether such reproduction be in consciousness or below the surface of consciousness.'⁷

In this sense all perception and all behaviour involve memory. Not only so, but these writers would include in their reference past experience of which the individual took no conscious note. Sensations received, and actions performed, with no consciousness of their occurrence, are said to be remembered and to be of great importance in determining future experience.

(d) As usually interpreted, memory belongs to cognition, but, inasmuch as all experience cannot be reduced to processes of cognition, so, it may be urged, neither can the retention and reproduction of experience. Such a theory requires that the emotional aspect of experience, feeling-tone, and conation be reproduced in memory as emotion, as feeling-tone, and as conation. Just as these aspects of consciousness are never experienced alone 'in abstracto' but always in a concrete whole of experience, so they will never be reproduced 'in abstracto,' but in a concrete whole with an idea or with an object of sense-perception in this or that action. In this article memory will be treated as implying the retention of past experience and the explicit reproduction of such experience in the form of ideas.

2. Reproduction of ideas.—It is a disputed point whether ideas of past experience ever arise spontaneously in consciousness or are always suggested by the datum of present consciousness. Evidence in favour of the former view is found in the experimental work of G. E. Müller and F. Schumann, A. Binet, and other experimental psychologists.

¹ Bergson, *Matter and Memory*, p. 197.

⁶ *Ib.* pp. 118, 122.

⁷ *Ib.* p. 129.

The latter view certainly represents the commoner form of memory. The attempt to classify the relation in which the suggested idea stood to the present consciousness gave rise to the 'laws of association.' The types of relationship, contiguity in time and place, similarity and contrast, were erected into principles of explanation. The present datum x was said to suggest the past experience y because previously x and y had been contiguous in time or place, or because they were similar, or, again, because they contrasted—three very different lines of explanation (see art. ASSOCIATION). Modern writers seek to find an explanation for this association of past and present in the direct and indirect connexions of experience brought about through our purposeful activities. Association is but a special form of the bonds existing between different moments of experience in virtue of the organization of experience into systems. Direct or indirect participation in some common system or whole constitutes the bond of union which enables a present datum to suggest past experience. The laws for the organization of experience, for the formation of spatial wholes, temporal wholes, trains of perception, trains of ideas, systems of conduct, are the ultimate principles of association. The conditions which determine the actual line of association followed on any given occasion are of two kinds—those which relate to the whole in which the present datum and a particular past experience participate, and those which relate to the special circumstances of the present moment of suggestion.

A whole which is closely organized will form a stronger basis for association than one which is loosely organized or which lacks a definite principle. A whole which has occurred repeatedly or recently is more influential than one which is of rare or long past occurrence. Experimental investigations have served to demonstrate the efficacy of close organization, intrinsic interest, repetition, and recency in determining suggestion. As illustrative of the influence of close organization one may cite H. Ebbinghaus's work with nonsense syllables. The only principle for organization was the spatial arrangement and time sequence of a string of syllables—e.g., duk, lil, bap, pom, etc.—memorized by reading aloud. Any interference with the spatial and temporal organization of the series rendered remembering of the same syllables slower, and the difficulty of remembering the syllables was in proportion to the degree to which the original spatial and temporal organization was disturbed. As compared with a whole which has meaning—e.g., a passage of prose or verse—these strings of nonsense syllables are more difficult to memorize, a fact which illustrates the influence of an intrinsic interest as a basis of organization. The work of L. Steffens and P. Ephrussi has emphasized the importance of attention with respect to the basis of organization. It has proved more economical to memorize material by repeating it as a whole than to memorize it piecemeal, provided the material is such as can be attended to without undue difficulty. Continuity of interest is preserved by this so-called 'global' method, whereas it is destroyed by the artificial sections of the 'partial' or piecemeal learning. The value of rhythm in organizing a sequence of experiences has been shown by Müller and Schumann, and is a commonplace of school practice. The influence of repetition in rendering suggestion certain and swift is illustrated by Müller and Schumann's researches. Experimental work by Müller and A. Pilzecker demonstrated the effect of recency in determining which of two possible lines of association suggestion should follow.

Of the conditions relating to the moment of

suggestion, two seem to be predominant—the emotional attitude of the individual, and the trend of his ideas. The influence of the first on the line of association is demonstrated by the emotional congruity between the attitude of the present and that of the experience recalled; in a Micawber-like mood we forget failures and recall only ambitions and achievements. The importance of the trend of present consciousness has been shown in much recent work. An investigation by H. J. Watt brought out the control over association exercised by the *Aufgabe*, or task, before the mind at the moment. On the relevance or irrelevance of the reproduced idea depends very largely the serviceableness of our memory in any given difficulty. Appositeness for the purpose of the present moment, for what W. James termed 'the topic' of the stream of thought, will give one line of association the advantage over another.

A question which has become important for psychology is dissociation. Some writers hold that, just as experience becomes organized into wholes and these wholes are interrelated one with another in still larger organizations, so also there takes place the opposite process, viz. dissociation. Through dissociation certain episodes of past experience or certain aspects of that experience drop out of a given organization; such episodes cannot then be reproduced; no suggestion of normal consciousness can connect itself with the dissociated contents of past experience. The theory is of great importance to psychopathology in its bearing on the amnesia of hypnosis and hysteria and on multiple personality. The process whereby the insulation of non-suggestible memories is brought about is described differently by different writers. Dissociation is the line of description followed by Morton Prince; repression (without the implication of dissociation) in virtue of some pain value is the line of description followed by the Freudian school.

3. Obliviscence and reminiscence.—The failure of reproduction, whatever may be the view taken as to disintegration, is by no means the same psychological fact as failure of retention; inability to recall does not in itself prove obliviscence or the decay of past experience. Whether there can be total obliviscence, whether any experience can cease to be influential in mental life, may be open to dispute. Certainly it would seem that many experiences cease to be retained as explicit ideas. In the absence of any interest to organize items of experience obliviscence would be the natural fading out of processes which had fulfilled their function. Ebbinghaus's experiments with nonsense syllables, already referred to, furnished a typical curve of the rate of forgetting such items. The principle of organization was mere spatial and temporal contiguity; no interest gave value to the series of syllables or rendered one syllable of greater worth than another. Ebbinghaus's curve shows that after an interval of twenty minutes 41.8 per cent of any series learnt was forgotten, after an interval of an hour 55.8 per cent was forgotten, after twenty-four hours 66.3 per cent, after six days 74.6 per cent, after thirty-one days 78.9 per cent. The fading away of the processes is rapid at first and very gradual afterwards. Experimental work, however, would also seem to indicate that experience does not necessarily begin to fade from the moment when it ceases to be 'present' experience. On the contrary, there is a certain amount of evidence that processes ripen or mature, the reproduction of past experience being clearer or fuller after some short lapse of time than immediately after the original occurrence. Some of the experimental work of A. Jost suggested this, and recent work with school-children has brought out the same feature. Thus, if the amount of ballad poetry

which children aged 12 can reproduce correctly immediately after learning be represented by 100, the amount which they can reproduce forty-eight hours later without any further learning will be 110. A similar increase in content reproduced is found in other kinds of school material. In the case of non-sense syllables, although forty-eight hours later some syllables can be reproduced which have not been remembered immediately after learning, the total amount reproduced is less. This tendency for 'reminiscence,' as it has been termed, is more marked in children than in adults. The greater organization of adult consciousness would enable any experience to attain its full value and association speedily, and, when reproduced, it is already developed, and henceforward decay rather than growth will be its life-history. In the case of the less organized experience of the child it may well be otherwise. The meaning and association of an experience would develop more slowly, and might be incomplete when the demand for reproduction followed at once upon its first reception.

4. Function of imagery.—Past experience reproduced as ideas depends very largely upon imagery. Imagery is of the same character as sense experience—visual, auditory, tactual, motor, etc. Francis Galton proposed grouping individuals into classes according to the kind of imagery used in reproduction—e.g., an audile, one who reproduced past experience in terms of auditory imagery, heard words descriptive of the facts recalled. Most people were said to belong to a mixed type, i.e. to use all varieties of imagery. It would seem, however, that the kind of imagery used, even by a so-called audile or a visualizer, depends very largely upon the idea reproduced and the purpose for which it is reproduced. The fragmentary character of images, their instability and lack of localization as compared with sense presentations, has always been recognized. The schematic and symbolic character of imagery with respect to the idea for which it stands has received more attention in recent research. The function of imagery would seem to be to provide a focus for attention, and thereby to give clearness and definiteness to ideas. It has been noticed that, where the process of reproduction takes place with difficulty or where a train of ideas develops slowly, there the presence of imagery is marked, and the imagery seems indispensable to the realization of the ideas in question. Where, on the other hand, ideas are reproduced easily or a train of ideas develops rapidly or is familiar in its character, there imagery is sketchy and in some cases scarcely recognizable. The question has been raised whether reproduction is possible without imagery, without even the symbolic imagery of words standing for the ideas reproduced. Here, as in so many other psychological problems, no dogmatic answer is possible in the present state of knowledge. There is much patient research in connexion with the question, and from it there should arise a clearer conception of the problem and of its solution.

On the development of memory and memory training see art. DEVELOPMENT (Mental).

BEATRICE EDGELL.

MEMRA.—The tendency of Hebrew imagery to personify abstract powers, such as sin, sheol, wisdom, is evident also in the manner in which the divine word or speech is represented in poetry and

elevated language. God's fiat by which creation came into being and continues to exist is spoken of as emanating from Him to execute His will. By the word of Jahweh 'were the heavens made' (Ps 33⁹). 'He sendeth his word, and healeth them' (107²⁰). In Is 55 the word proceeding from God's mouth assumes form and accomplishes His will as His plenipotentiary. In the Apocrypha also we meet with a few instances where the word stands for God:

It was the word that descended on the offspring of the fallen angels to pierce them with the sword (*Jub.* 5¹); it entered Abraham's heart (12¹⁷); it slew the first-born in Egypt; 'thine all-powerful word leaped from heaven out of the royal throne' (*Wis* 18²³).

But, while these instances are of rare occurrence in the Targumim—though nowhere else in Jewish post-Biblical literature—the word is already hypostatized under the form of *Mēmra*. The Aram. *mēmra*, emph. state *mēmra*, from *emar*, 'to speak,' signifies, like *lógos*, from *léγειν*, 'a word,' without the additional meaning of 'reason' connoted by *lógos*. It occurs about 180 times in the Onkelos Targum, 100 times in the so-called Jerusalem Targum, and 320 times in the pseudo-Jonathan (in the last two also מִמְרָא) for God.

It stands either in the const. state—e.g., Gn 15⁶ 'He believed in Jahweh' (Onk. renders 'in the Mēmra of Jahweh'), Ex 19¹⁷ 'Moses brought forth the people before the Mēmra of Jahweh' (in Jonathan 'before the Šekhināh'), Nu 23²¹ 'The Mēmra of Jahweh their God is their support, and the Šekhināh of their king is among them'—or with suffixes: 'It is a sign between my Mēmra and you' (Ex 8¹³); 'This Mēmra is a consuming fire' (Dt 9³); 'I will shield thee with my Mēmra until I have passed by' (Ex 33²²). It was employed by the Targumists in the place of God wherever anthropomorphisms, anthropopathisms, or any act inconsistent with the nature of a transcendent God, are predicated. Thus, 'By my Mēmra I have founded the earth, and by my strength I have hung up the heavens' (Is 48¹³). The mouth of Jahweh becomes the Mēmra of Jahweh (Gn 38.10). The Israelites said: 'Behold, Jahweh our God has shown us his glory (šēkāra), and his greatness, and we have heard the voice of his Mēmra' (Dt 5³⁴). It is His Mēmra that repents (Gn 6⁶ etc.); God swears by His Mēmra (Nu 14³⁵); 'for my sake' is rendered 'for the sake of my Mēmra' (Is 48¹⁴). The Mēmra gave the Law (Ex 20). 'These are the statutes . . . which Jahweh made between his Mēmra and the children of Israel' (Lv 26⁴⁶). The Mēmra accomplished the exodus from Egypt (Ex 3¹², etc.). 'Jahweh thy God, his Mēmra, is thy help who brought thee out of the land of Egypt' (Dt 20¹). Isaiah saw 'the glory of the Šekhināh of the King of the worlds Jahweh Šebnā'oth' (Is 6³), and then heard 'the voice of the Mēmra' (6⁸).

The above are only a few typical passages of the use of the *Mēmra* (for an exhaustive list see F. Weber, *Jüdische Theologie*, Leipzig, 1897, p. 180; A. Edersheim, *Life and Times of Jesus*, London, 1887, ii. 659 ff.; he was followed by W. Fairweather in *HDB* v. 284). What, then, did the Targumists understand by the *Mēmra*? A cursory glance at the Aramaic version will be necessary before we answer this question. The demand for a version in the Aramaic vernacular by the returned exiles must have been supplied very early; it is difficult to say how far back we are to place the institution of the office of the *Mthurg^mman* ('Dragoman,' 'Interpreter'), who rendered into the vernacular each verse of the Law and each three verses of the Prophets, as they were read publicly in the synagogue (cf. the office of the *Ερμηνευτής* in the early Christian communities). The frequent repetition must have produced a stereotyped version. The exclamation of Christ on the Cross in the Aramaic of Ps 22¹ indicates that the Bible was familiar to Him in that language; and St. Paul's quotation of Ps 68¹⁸ in Eph 4⁸ is more in accordance with the Targum than with our Mas. Text or the LXX. A written Targum on Job existed at the time of Gamaliel (*Shab.* 115a). Although neither Origen nor Jerome mentions the existence of a Targum, that of Onkelos had already at that time the position of a kind of authorized version.

'R. Jehudah says, whosoever transplants a verse (of the Bible) as it stands misrepresents the text, and whosoever adds to it is a blasphemer. Let him render it in accordance with our Targum' (*Kid.* 49a).

Jewish scholars agree that this refers to Onkelos (e.g., Maimonides, in *Yad*, Ishūth viii. 4; see also L. Zunz, *Gottesdienstliche Vorträge*, Frankfurt, 1892, ch. v.). The aim of the version was to give a correct rendering of the text. Where he differs from the original he does so in favour of the Halākha and popular usages:

Ex 23¹⁹ 34²⁴, Dt 14²¹ are rendered 'Ye shall not eat flesh with milk'; 'the fruit of the goodly tree' (Lv 23⁴⁰) is already called *chrdy*. 'The Passover shall be eaten in *one assembly*' (Heb. 'one house') (Ex 12⁴⁶) in accordance with *Pesah*. 86a.

It is obvious that the version was intended to embody Palestinian theology for popular use, and deviation from the original in the case of the names and acts of God was to guard against misconception of the nature and irreverent usage of the name of God. We find, accordingly, the divine unity insisted on:

Elōhim with a plural predicate is rendered in the singular (Gn 35⁷); Dt 4³⁵ is translated 'to know that Jahweh is God, there is none beside him'; 'Who is like unto thee among the gods?' (Ex 15¹¹) becomes 'There is none beside thee. Thou art God'; so 13¹¹ 'Jahweh is great, and there is no other God.'

Jahweh may not even be contrasted with other gods. Not even may the term 'god' be applied to other divinities.

They are either 'errors,' 'abominations' (Gn 35²), or 'terrors' (31³²); 'he brought him up to the high place of his terror' (Heb. 'Ba'al') (Nu 22⁴).

To avoid contrasting God with man or ascribing the same action to both, Onkelos would introduce a paraphrase: 'They believed in the Mēmra of Jahweh and in the prophecy of Moses' (Ex 14³¹), 'the people murmured against the Mēmra of Jahweh and strove with Moses' (Nu 21^{5,7}); or the construction would be changed into the passive: 'Let it not be spoken to us from before Jahweh' (Ex 20¹⁹). The same construction is employed when human actions and passions are ascribed to God:

'The voice of the lad was heard before God' (Gn 21¹⁷); 'the labour of my hands is revealed before God' (31⁴²); 'it is revealed before me' (Heb. 'I know') (Ex 31⁸); a Mēmra from before Jahweh came to Abimelech (Gn 20³); 'Balaam met with a Mēmra from before Jahweh' (Nu 23^{3,4}). This construction explains Onkelos's rendering of Dt 32²⁷, which accidentally resembles Jn 1¹⁰ 'By his word the world was created.' In the place of *וְיָרֵת עוֹלָם*, 'the everlasting arms,' he reads, like the Peshiṭta version, *וְיָרֵת הָעוֹלָם* 'he (the Mēmra) sowed (=created) the world,' which in the passive assumed the above rendering.

It is evident that a version made under the influence of rigid uncompromising monotheism and accepted as embodying Rabbinic theology would avoid the assumption of an intermediate being distinct from God. To compare the Mēmra with Philo's Logos would credit the Targumists with more theosophy than they otherwise claim, and it would be also unaccountable why only this term and nothing more of Philonic exegesis and mysticism should have found its way into the Targums. Its use in all the Targums rather warrants the assumption that its adoption is older than the Alexandrian Logos. We are inclined to think that it was introduced by the Mthurg^mmānīm when the name IHVH ceased to be pronounced and before Adonai was substituted, some time during the Persian period. The Mēmra, therefore, is the deity revealed in its activity, just as the Sh^khīnāh and Īkāra represent the divine majesty and glory. The term is based on Gn 1², emphasizing the fact that the world came into being by divine command.

Onkelos uses Mēmra when speaking of human authority:

'The Mēmra of Pharaoh' (Heb. 'the mouth of Pharaoh') (Gn 45²); 'he does not receive our Mēmra' (Heb. 'will not obey our voice') (Dt 21²⁰).

MEN, THE.—In the Gaelic-speaking portion of Scotland 'the Men' were for about two centuries the recognized leaders of religious thought, and the popular representatives of spiritual and

evangelical worship. They were called 'the Men' because they were laymen, and not ministers. The circumstances in which they arose varied in different districts; the causes to which they owed their origin admit of little doubt.

In the reign of James VI., Robert Bruce, the eminent Edinburgh preacher, was banished to Inverness. In a letter, written in Feb. 1613, to Sir James Semple, the laird of Belvise, the exiled minister says:

'If his Hieness wold command me to the scaffold, I have a good conscience to obey him, and it wold be more welcome to me nor this lingering death that I am in' (D. Calderwood, *Hist. of the Kirk of Scotland*, Edinburgh, 1842-49, vii. 183).

The 'lingering death' which Bruce deplored resulted in the establishment in Inverness of meetings for prayer and fellowship, and in the gathering together of bands of godly men whose influence continued to mould the religious life of the Highlands for many generations.

After the restitution and re-establishment of Episcopacy in Scotland in 1662, nearly 300 ministers relinquished their livings, and their places were filled in the greater number of parishes by ministers who did not possess the confidence of the people. In the more populous districts of the South, the unity of the people, and their devotion to Presbyterianism, enabled them to maintain their religious zeal by means of 'conventicles,' meetings for purposes of worship held in despite of the law. In the North a number of the ministers readily turned Episcopalian, and retained their livings. The people were less devoted to Presbyterianism, but, even so, the more devout among them were roused to opposition by the manner in which the vacant livings were filled. The parishes were large, the population was sparse, and combined action for the holding of religious meetings was almost impossible. Religious instruction was for a time neglected. The 'curates,' as the new incumbents were called, exercised little or no influence. When ministers were no longer regarded as leaders of the people in sacred things, there rose to take their place men of devout lives, of integrity of character, familiar with the Scriptures, and recognized as possessing spiritual gifts, who, going from parish to parish to hold meetings, were accepted as religious guides.

At a later period, the arbitrary manner in which patronage was exercised in the Presbyterian Church, and acquiesced in by Church courts, revived the influence and importance of an institution which had already obtained a foothold in many districts. Bands of earnest Christians boldly denounced legal arrangements which ignored religious needs and aspirations, and the people honoured them for doing so. Interest in a common object drew them together. They deplored the low state of religion in the land, they yearned for spirituality of worship and a greater knowledge of Holy Scripture among their countrymen. They held monthly or quarterly meetings for prayer and fellowship. These were occasions of high spiritual enjoyment. Sometimes the company sat up during the whole night, and passed the time in prayer and praise and spiritual conversation.

In order to prevent any misconstruction of their aims they provided themselves in some cases with carefully drafted constitutions. A document, dated 17th September 1788, setting forth the objects and rules of the society of the Men in Ross-shire shows that, while they deplored the low state of religion throughout the land, they did so not in a spirit of self-righteousness; they were at the same time faithful in dealing with one another. Among various evils they note, 'thrusting in ministers on reclaiming congregations with the force of the law of patronage—pastors who have nothing in view but the fleece.' The same docu-

ment gives as one of the rules of the society: 'Thirdly, as the Word of God requireth, that we should consider one another, to provoke unto love and good works; therefore, if one or more of us see or hear anything unbecoming in the walk, conduct, or expressions of one another, that we be free with one another according to the Scripture rule: "Go tell thy brother his fault," etc. (Mt 18¹⁶); "Thou shalt not hate thy brother in thine heart: thou shalt in any wise rebuke thy neighbour, and not suffer sin upon him" (Lv 19¹⁷). It adds: 'We are aware that this our meeting together, out of different parishes, will be misconstrued; but, so far as we know ourselves, we have no divisive views in it; nor do we make a faction, and we desire to give none offence.'

Soundness of judgment characterized their utterances and their conduct. Their activity was far removed from that fanatical enthusiasm into which religious zeal frequently degenerates. One exception, still referred to with bated breath, when referred to at all, indicates their general abhorrence of fanatical excess. They organized meetings for prayer and the reading of Scripture among the people. The first Sabbath school in Ross-shire was opened by one of them—Findlater, known as the 'Quaker merchant.' Before the Bible was translated into Gaelic, many of them were experts in making a running translation from the English version into the language of the people. The more gifted among them expounded the Word, and not a few became eloquent and powerful preachers, though lacking the training of the schools. The deep respect of the people for an ordained ministry was reflected in the fact that these spiritual guides, even when their influence was most powerful, were called not ministers or preachers, but 'the Men' (*na Daoine*).

By 'the Men' the evangelical spirit was kept alive in large districts, and the comforts of religion were administered in many a stricken home and in many a remote hamlet. They generally set apart one night of each week for prayer, and another for fellowship or conference. On the latter a portion of Scripture was selected to be the subject of discussion. This passage was referred to as the *Bonn Ceist*, or the 'Question.' The Men, each in turn, gave an exposition, generally bearing on experimental religion, and thus their gifts of speech and of scriptural interpretation were developed. Fitness to expound Scripture in public assemblies, combined with blamelessness of life, secured recognition as one of the Men. This exercise became so popular that, whenever the Sacrament of the Lord's Supper was administered, a day was set apart for the Men. Generally it was the Friday between the Fast-day and the day of Preparation. It was known as *Id na Ceist* ('the day of the Question'). Great gatherings were expected when popular Men came to 'the Communion.' Worshipers often travelled long distances, and from far and near; multitudes, who never became church members, attended faithfully on the Men's day.

The presiding minister opened the service with praise, prayer, and the reading of Scripture, and afterwards called for the passage which was to become the 'Question.' One of the more highly honoured of the Men announced a passage, indicating its bearing on Christian experience, and requesting speakers to deal with some such topic as 'marks by which God's children are distinguished from the world,' 'marks of true conversion,' 'marks of saving faith,' etc. Then the presiding minister called upon the most aged and experienced Christians present to give the 'marks' to their fellow-Christians. This service was generally held in the open air. Its popularity was such that the largest church could seldom contain

the congregation gathered that day. 'To rise to the question' on a Communion Friday stamped the speaker with the hall-mark of public recognition. Henceforward his position was assured. He was one of 'the Men.'

The popularity of the Men was a menace to the Church wherever its services were not characterized by evangelical faithfulness. Many of them would not partake of the Sacraments at the hands of ministers of whom they did not approve, and approved ministers were prevented by ecclesiastical discipline from receiving those who held aloof from the worship of their own parishes. Resolutions against the Men were passed in Presbyteries and Synods, but all efforts to crush them only increased their popularity. The people believed in them, honouring them for the strictness of their lives, and frequently asserting that they were possessed of the gift of prophecy.

In earlier times, wherever the doctrines of grace were faithfully proclaimed, the Men were faithful to the Church, and they undoubtedly created a taste for the more spiritual and evangelical preaching which began early in the 19th century. With the revival of evangelicalism the special circumstances in which they proved a religious force passed away. But power and influence once acquired are not readily abandoned. In many districts the Men heartily welcomed and warmly supported an evangelical ministry; in others they persistently and fiercely opposed all ecclesiastical influence. The estrangement continued too long. In parts of Sutherland, Inverness, and Ross-shire they continued to stand aloof, and in the more northern districts they formed bodies known as 'Separatists.' The more they diverged from the Church the more they developed contempt for all learning except a literal knowledge of the Authorized Version of Scripture. They became narrow and intolerant. Utterly disregarding all outward culture, they attempted to force upon the people a religion of loveless gloom. From one extreme it was easy to pass to others. Antinomianism was openly professed in some districts, and exorcism was practised in others. These fitful throes were the spurious imitations of a life that had gone. In later times opposition to instrumental music and church choirs, a severe observance of the Sabbath, a blind devotion to the recognized translation of Scripture, a general condemnation of scholarship, and a zeal for the doctrine of election which merged into fatalism characterized generally the scattered fragments of a body whose sway was at one time both powerful and beneficent.

But the old spirit has not altogether disappeared. A different type is occasionally met with. 'Men,' tender-hearted and spiritually-minded, still preserve the best traditions of a past age. In the absence of the minister one of these may be found here and there to conduct the Sunday service in church or meeting-house. Standing at the preacher's desk, equally ready to give an extempore address or to read a portion of some 18th cent. divine, he follows devoutly the usual order of service, except that he does not pronounce the benediction. These Men live saintly lives, they are honoured by the people, and they help to preserve the simplicity and spirituality of religion.

G. R. MACPHEIL.

MEN OF GOD.—*Lyudi bozhi*, or 'Men of God,' is the self-assumed name of a Russian sect who regard themselves as the only true worshippers of God; they believe that God is to be found only among themselves, ordinary Christian church-goers being, in their view, worldlings. By the outside world they are usually known as 'Khlysti,' i.e. 'Flagellants,' though they themselves repudiate this title. As a matter of fact, they are essentially

not flagellants but dancers, flagellation being a mere accompaniment of the dance, and not even a universal practice. The name is probably a corruption from 'Christü,' the oldest traceable title by which they designate themselves as those who have Christ in their midst, in their leaders.

Although the Men of God have many 'Christs,' they are not a Christological sect in the proper sense of the word, for their Christology is only one side of their doctrine of spiritual ecstasy; that is to say, they are a secret sect who practise asceticism and fall into trances. Their principal means for drawing down the Spirit is dancing (*radeniye*); other devices are the singing of songs, of which they have a great number, couched in highly poetical language, and fasts. A member of this sect who succeeds in receiving the Spirit in full measure becomes a Christ or even a God Zebaoth (a Christ of the highest rank) or a Mother of God; those who receive the Spirit in a less degree are invested with the title of one of the apostles, or of the ecclesiastical saints, and honoured as prophets or prophetesses. In their belief, even Jesus of Nazareth first became a Christ only through receiving the Spirit at His baptism. While these persons have received the Spirit as a permanent possession, ordinary members of the community may obtain Him temporarily through the same means.

Besides severe and often protracted fasts, complete sexual abstinence is a feature of their asceticism. Those who enter the sect as married people must henceforth live as brothers and sisters. Others are, as a rule, not permitted to marry at all, but may take a young woman into their house as 'spiritual sister' in 'spiritual marriage,' exclusive of sexual intercourse. The latter constituted the trespass of Adam and Eve, and is condemned as the sin *κατ' ἐφ' ἑσθ' ἡμέρας*; in accordance with this view, childbirth is regarded as extremely sinful, while children are despised as 'little sins.' Generally speaking, the Men of God aim at a monastic style of living, their houses being arranged as convents and the women wearing a kind of nun's dress. Like all Russian sectaries, they enforce complete abstinence from intoxicating liquors; even coffee, and in many communities tea also, is forbidden. On the whole the Khlystic system of morals lays so much stress on the mortification of the flesh (the resurrection of which they deny) that it has not been able to set up a practical ideal of life. Altruism appears among them essentially as sympathy, which has to display itself in the bestowal of alms. Besides practising asceticism, they lay great stress on the voluntary endurance of persecution from the State and from the Church, and the sect is persecuted even to the present day as 'extremely pernicious.' In earlier centuries the persecution was excessively brutal; attempts were made to crush them by the rack and the scaffold, but in vain, and they furnished many martyrs. Since the beginning of the 19th cent. those methods have been replaced by imprisonment and transportation to the Caucasus and Siberia.

The Men of God, however, seek to show the courage of their opinions not by open confession of their faith, but by concealment of it, and it is precisely their obstinacy in this matter that has often brought upon them increased severity of punishment. This concealment of their belief is due to their view of the Holy Spirit, whom they regard as a power which shuns observation, revealing Himself in secret and averse from publicity. If a man talks about the Spirit, he loses Him. Consequently not only are their ecstatic religious services secret, but they generally conceal the fact of their adherence to the sect. They outwardly

conform to the State Church, and attend Confession and Holy Communion, although they spit out the wine afterwards. They themselves celebrate communion with *kvass* (a sour drink from rye meal and malt) or with water.

Any one who desires admission into the sect must, at an initiatory rite, conducted with an extremely elaborate ceremonial, swear a solemn oath that under no circumstances whatever, not even under the severest persecution, will he disclose his belief either to his nearest relatives or to the ecclesiastical confessor. In reality this sect thoroughly despise the State Church as 'the world,' the kingdom of Satan, and regard the 'popes' (clergy) as Jewish priests and Pharisees. In opposition to the Orthodox Church, they are sure that they are the only true Church, the Kingdom of God on earth, because they alone possess the Spirit of God. The services of the Orthodox Church are useless, since they dispense with dancing, the proper means for bringing down the Spirit from heaven.

The Men of God have also services in which there is no dancing; these are the 'usual conferences,' and consist in singing, and the reading and exposition of Holy Scripture; but they are only assemblies for attracting adherents, and they hint darkly at the 'better services.' In reality the source of revelation for this sect is not Holy Scripture, but the Spirit which descends on them during the dance. Any one who feels the desire for the 'better services' must undergo long preparation before he is received into the sect by one of the leaders and admitted to them. In the 'better services' a kind of frenzied dance takes place, consisting of a series of variously arranged movements performed singly and collectively, while songs are sung without any instrumental accompaniment. The object of the dance is to induce at least some of the performers to fall into an ecstasy (named the 'bath of regeneration,' since the *radeniye* is regarded as the real spiritual baptism in opposition to the mere water-baptism of the Church). The 'Christs,' 'Mothers of God,' prophets and prophetesses especially, but sometimes also the ordinary members of the community, when in the ecstatic state, break into improvised doggerel, and prophesy the 'common fate' of their sect and the 'private fate' of individual members. This secret service closes with a common meal—the 'love-feast'—which is regarded as the true communion. The services generally begin in the evening, and continue far into the night.

The sectaries have also provided a substitute for the other sacraments of the State Church. But the ritual varies in the different congregations and even in the same congregation, according to circumstances. The Men of God do not believe, with the Orthodox Church, that a sacrament must have the prescribed form in order to be efficacious; in their view, the Spirit operates unfettered and creates for Himself whatever form He chooses. They seem to have special rites of their own, such as dancing round a tub filled with water at the summer solstice. Here, doubtless, we have to do with a relic of Slavic heathenism, and vestiges of heathen ideas are also found in their songs and liturgical formulae. This rite, however, has received a Christian colouring in the vision of the 'golden Christ,' who appears out of the steam above the vessel.

The attribution of sexual excesses and sacrificial rites to the Men of God appears, according to the Russian official reports themselves, to be utterly slanderous and merely a device of the State Church to combat the sect; and brand as hypocritical an asceticism which is more strenuous than her own.

Our earliest sources of information regarding the sect, which they call 'Christovshchina,' are Yevrosin (who wrote in 1691), Dimitri, bishop of Rostov (who wrote between 1702 and 1709), and Theophylact Lopatinski (1745), and further information is found in the reports of two trials of Khlysti held at Moscow between 1733-39 and 1745-57. The first shows the sect reckoning its adherents for the most part in the Moscow monasteries, among monks and nuns and peasants connected with the monasteries; it also comprised some tradespeople. In the monasteries it seems to have marked a reaction against deeply-rooted immorality. It also spread beyond Moscow, to the district of Moscow itself, to Yaroslav and Uglich, and to the town of Venyov, south of Moscow. In the first trial Prokofi Lupkin, a soldier of the bodyguard (*streletz*), appears as 'Christ,' his wife, Akulina Ivanovna, and the nuns Nastasya and Marfa (who were both finally beheaded in Petrograd) as 'Mothers of God.' Altogether more than 300 persons were condemned.

According to the reports of the second trial, the sect had considerably diminished in the Moscow monasteries, but, on the other hand, had spread much more widely among the peasant population as far as Petrograd and in the government districts of Vladimir and Nijni-Novgorod, while, at the same time, Moscow maintained its central position as the head-quarters of the sect.

Moscow was the scene of operations of the 'Christs' Serge Osipov, Vasili Stepanov, and, more famous than these, Andreyan Petrov, who, known as the 'Happy Idiot,' had the entrée to the houses of the aristocracy, and carried on his propaganda there for the sect not entirely without success. The communities of Khlysti in other places also possessed 'Christs' and 'Mothers of God.'

Lupkin and Petrov belong to the seven 'Christs' named by the legend which describes the origin of the Men of God (as the seventh they reckon Selivanov, the founder of the Skoptzy sect, which split off from the Khlystovshchina in 1772). Since the reports of the trials prove the correctness of the assertions of their tradition regarding the seven 'Christs' and the 'Mothers of God' Akulina and Nastasya, the tradition may be trusted as to what it relates concerning the earlier 'Christs' Danila Philipov and Ivan Suslov. Of these the first is said to have also ranked as 'God Zebaoth' and to have founded the sect about the middle of the 17th cent. in the government district of Kostroma, while the second, as his disciple, spread it in the Oka and Volga districts and introduced it into Moscow. The evidence of Dimitri and Theophylact as to the founder of the Khlystovshchina applies to Suslov; but ancient songs of the Khlysti speak of one 'Christ,' Averyan, who lived in the 14th cent., and of another, Yemelyan, who laboured in Moscow in the time of Ivan the Terrible. The majority of Russian scholars consider the sect much older than historical information reaches. Although the attempt to derive it from the heathenism of the Slavs and Finns must be pronounced unfortunate, owing to the decidedly Christian character of the sect, the suggestion which derives it from the Bogomils (*g.v.*) seems extremely credible; but, on the other hand, the Khlysti are entirely devoid of a trace of the Bogomilian cosmology, and they suggest rather the Messalians or Euchites (*g.v.*).

In the 19th cent. Kostroma and Moscow maintained their central importance in an ideal sense as places hallowed by tradition, especially in consequence of the intense activity of the 'Mother of God,' Ulyana Vasilyevna. The actual centre, however, was shifted in the middle of the century

south-eastward into the government districts of Nijni-Novgorod, Samara, and Tambov, through the activity of Radayev and the 'Christs' Vasili Shtsheglov and Arvakum Kopylov. The former, with his peculiar mystical teaching, and like some later 'Christs,' takes a special place among the Khlystovshchina inasmuch as, by appealing to the trance-producing spirit, he caused asceticism to fall into abeyance, and shamefully abused the devotion of his female followers. On the other hand, Vasili Shtsheglov and the 'Christs' resembling him have no immoral rites ascribed to them, but merely unchastity.

In the further course of the century the centre of the sect was pushed still further southward into the Caucasus territory, especially through the conspicuous energy of Kopylov's pupil, Perphil Katasonov. He and his followers again took the title 'God Zebaoth,' and ruled not only all the communities of the Caucasus, where the Khlysti, under their new name 'Shaloputy' ('eccentrics'), lead a considerably harassed existence, but also those of Southern Russia upwards to Smolensk, each of which has its own 'Christ.' Many Khlysti communities honour as a Christ the orthodox 'Father John of Kronstadt,' famous through Russia for his faith-healing.

The Khlysti communities are not large, since they depend for their increase, as they must, on account of their sexual abstinence, almost entirely on proselytism. Although they are now generally to be found everywhere in the Russian Empire where there are Russian peasantry, their total number, which can be only approximately reckoned, cannot exceed 200,000. Their significance for the national life, however, is, on account of their sober, industrious mode of life, far greater than this number would lead one to suppose. This article, the attitude of which is very different from that of Russian scholars, is based upon the writer's book, *Die russischen Sekten*, i. (Leipzig, 1907), which, besides the Khlysti, deals with such sects as the Skakuny, Malyovantzy, and Paniyashkovtzy, all of which are dependents of the different bodies of the Khlystovshchina. The latter have assumed special forms as they passed from the sphere of influence of the Greek Orthodox Church to that of the Lutherans, the Stundists, and the Molokani ('Milk-drinkers'). Among the Lutheran Finns of Ingermanland the sectaries are called Skakuny ('Hoppers'). Kondrati Malyovanny founded a sect intermediate between the Khlystovshchina and Stundism in Tarashtcha in the government district of Kieff about 1890, and his teaching caused an epidemic of trance-phenomena. The Molokani-Khlysti are called Pryguny ('Jumpers'). There were, and still are, numerous other bodies which, on account of some peculiarity, split off from the sect. Although the 'Worshippers of Napoleon,' who used to revere him as a 'Christ,' seem to have died out, the Adamites, who seek to get rid of modesty as a relic of the Fall, and, therefore, go naked at divine service and in their houses, still exist to-day. The sect of the Paniyashka regard the body as not only sinful but directly possessed by the devil, and intensify their asceticism accordingly.

LITERATURE.—The most important Russian works on the sect are: I. Dobrotvorski, *Lyudi bozhii: Russkaya sekta tak nazyvayemykh duchoomykh khristian* ('The Men of God: the Russian Sect of the so-called spiritual Christians'), Kasan, 1869; fragments of this have been translated into German by A. Pfizmaier in *SWA W* civ. [1883] and *DWA W* xxxiv. [1884] and xxxv. [1885]; N. Reutski, *Lyudi Bozhii i Skoptzy* ('The Men of God and Skoptzists'), Moscow, 1872; K. Kutešov, *Sekty Khlystov i Skoptzov* ('The Sects of the Khlysti and Skoptzists'), Kasan, 1882; Stavropol, 1900; A. Rozdestvenski, *Khlystovshchina i Skoptzshchestvo v Rossii* ('Khlystovshchina and Skoptzism in Russia'), Moscow, 1883. There are also numerous articles in newspapers.

K. GRASS.

MENCIUS.—**1. Life.**—Mencius, or Meng-tse (371-288 B.C.), second only to Confucius in the annals of orthodox Chinese philosophy, was born in Tsou of a family whose ancestral home was in Lu, the native State of Confucius. While still very young, he lost his father; he was educated by his mother, who is famous among the women of China for the care with which she brought up her son. Nothing is known of his other preceptors, except that they were of the school of Confucius, whom Mencius regarded as supreme among men, and proposed to himself as example (Mencius, II. i. 2, IV. ii. 22). When we get certain knowledge of him, he is a person already well known and accompanied by disciples, moving from one State to another according as the reception of himself and his doctrines was favourable or otherwise, accepting such gifts as he deemed consistent with his self-respect, and devoting himself to the exposition of his views on ethics and politics. This he did with acumen and considerable liveliness, frequently using illustrations, some of which are famous.

From the man of Sung, who assisted his corn to grow long by pulling it up, we are to learn the need of patience in the development of character (II. i. 2). The moral absurdity of not putting an immediate end to unrighteous practices is illustrated by the man who stole his neighbour's fowls, and who replied to one who remonstrated with him, 'I will diminish my appropriations, taking only one fowl a month till next year, and then I will make an end of the practice' (III. i. 5). The Niu mountain, whose natural vegetation is destroyed by axes and bills and the browsing of cattle, is a figure of human nature, which, through the occurrences of daily life, loses its native goodness and cannot regain it during the brief respite of the night or the calm of dawn (VI. i. 8).

In addressing himself to the princes and governors of his time, Mencius may sometimes have been guilty of undue compliance with the faulty dispositions of those with whom he dealt (I. ii. 5); if so, it was from no unworthy motive, but only to secure the more ready acceptance of his teaching. For the most part he spoke his mind with an admirable freedom, not overawed by 'the pomp and display' of the great (VII. ii. 34), but acting according to his own teaching that respect is best shown by giving righteous counsel (II. ii. 2). Mencius is quite conscious of his own worth. He alone in his age could bring tranquillity and good order to the empire (II. ii. 13). His words will not be altered by any future sage (III. ii. 9). He has, accordingly, a keen sense of the respect due to him (II. ii. 11, IV. i. 24), though he occasionally employs unworthy shifts to maintain his dignity (II. ii. 2). Looking on himself as the continuer of the Confucian teaching (VII. ii. 38), he regarded it as an urgent duty to oppose the teachings of Yang and Mo (III. ii. 9). This he did with vigour and acuteness, while always willing to receive repentant heretics without reproaches, not tying up the leg of a pig which had already been got back into the pen (VII. ii. 26). The last twenty years of his life Mencius spent in Lu, where, with the assistance of his disciples, he prepared that sole record of his teaching which is called by his name and now forms one of those standard writings known as *The Four Books*.

2. Ethics.—Mencius's view of human nature is fundamental. Man's nature is good in the sense that 'from the feelings proper to it it is constituted for the practice of what is good' (VI. i. 6). The four cardinal virtues—benevolence, righteousness, propriety, knowledge—are not infused into man from without, but have their rise from the feelings of commiseration, of shame and dislike, of modesty and compliance (reverence and respect [VI. i. 6]), of approving and disapproving (II. i. 6). These four principles are accepted as psychological facts not reducible, e.g., to any form of self-interest (II. i. 6). All that is needed for perfect

virtue, in which a man becomes possessor of himself (III. i. 4), is that these innate principles be developed (II. i. 6, VII. i. 15; cf. also 'All things are already complete in us' [VII. i. 4]); and for this human nature is self-sufficient; failure arises not from lack of ability, but simply from not making the necessary effort (I. i. 7, IV. i. 10). From another point of view Mencius analyses human nature into *chih* ('mind,' 'will,' *νοῦς*) and *ch'i* ('passion-nature,' *ψυχή*). The former is supreme, but the latter is not to be violently suppressed, but developed in accordance with righteousness. Otherwise one's nature suffers defeat—as it also suffers defeat through action in which the mind feels no complacency. The mating of the passion-nature with righteousness is to be accomplished only by persistent practice of righteousness; but, given a mind set on righteousness, this result necessarily follows (II. i. 2). The violent suppression of the passion-nature, by which the integrity of a man's being is impaired, must be distinguished from the abscission of desires in an ethical interest (VII. ii. 35). Mencius, in basing his ethics on human nature, appears to have been not unaware of the ambiguity of the term 'nature.' Such seems to be the drift of a Socratic argument in which he maintains that 'the nature is not to be confounded with the phenomena of life' (VI. i. 3 [Legge's tr.]). Elsewhere he points out that there are desires which are natural, but in connexion with them there is the appointment of heaven, and the superior man does not say of them, 'It is my nature.' There are also moral propensities which are the appointment of heaven, but which the superior man recognizes rather as natural (VII. ii. 24). In things equally natural there is a gradation of worth, which can be recognized by thinking (VI. i. 14f.). Moreover, the sense of shame, which a man may not lack (VII. i. 6f.), is indicative of his having a moral constitution, which alone is properly his nature. In the possession of this nature, good in its composition, all men are alike, evidence of this being found in the fact that, as in matters of physical taste, music, and beauty there are common standards, so also is it in morals (VI. i. 7). This originally good nature is the child heart (IV. ii. 12), which differentiates man from the lower animals (IV. ii. 19); and in possessing it the ordinary man is of one kind with the sages (II. i. 2, III. i. 1), who simply have apprehended before me what my mind also approves (VI. i. 7). The sages, however, are spontaneously what other men attain to by effort (IV. ii. 19, VII. ii. 33), though they, too, learned from other men (II. i. 8). The great man is he who does not lose his child heart (IV. ii. 12); but for most men it is lost, and the grand aim of education is its recovery (VI. i. 11). Morality is the supreme task laid on each man (IV. i. 19), which requires unremitting diligence (VI. i. 9, VII. ii. 21). Nothing can be done with self-satisfied conformists to current standards, those 'thieves of virtue' (VII. ii. 37); for it is necessary that morality should criticize itself (VII. i. 5). The way to sage-like virtue begins in ordinary duties (VI. ii. 2), and the carrying out of principles already possessed by all (VII. ii. 31). Vigorous action according to the law of 'reciprocity' is the closest approximation to perfect virtue (VII. i. 4). It is also perhaps hinted that virtue is the mean between extremes (II. i. 9, IV. ii. 6f., 10). For self-direction it is of the greatest importance 'to estimate the mind, i.e., to become acquainted with the real nature of one's motives (I. i. 7), and second thoughts are often best (IV. ii. 23). Life presents a series of alternatives of which the higher is, by reflexion, to be chosen in spite of

the seductions and obscurations of sense (VI. i. 15). Righteousness is to be preferred before life itself (VI. i. 10). The righteous man is beyond the reach of calamity (IV. ii. 28, VII. i. 21). The only inevitable calamity is self-incurred (IV. i. 8). True greatness is to practise virtue for the sake of oneself and of others, superior to the seductions or threats of riches, honours, poverty, and force (III. ii. 2). To rejoice in virtue breeds unconscious grace of deportment, which is the perfection of music (IV. i. 27; cf. VII. i. 21). 'Benevolence, righteousness, self-consecration, fidelity, with unwearied joy in these virtues—these constitute the nobility of Heaven' (VI. i. 16). Realized virtue is sure of a transforming influence on others (IV. i. 12); failure to evoke a response should lead to self-examination (IV. i. 4). Virtue cannot be selfish; to find purity by withdrawing from all contact with evil one must become an earthworm (III. ii. 10). Each man is responsible to the extent of his moral attainment for the instruction of others (V. i. 7), and to instruct others is the greatest fidelity (II. i. 8, III. i. 4), while neglect of this duty degrades the virtuous to the level of those whom they should teach (IV. ii. 7). Of the special virtues, filial piety is the only one that is referred to in any detail. Mencius quotes the definition of it as serving one's parents with propriety, burying them with propriety, and sacrificing to them with propriety (III. i. 2). The service of parents is the greatest of all services and the root of all others; it has regard not only to physical sustenance, but to the wishes of the parents (IV. i. 19); and it takes unquestioned precedence of duties to wife or children (IV. ii. 30). Filial piety completes itself in the funeral rites (IV. ii. 13); and, in view of the importance of sacrifice to ancestors, lack of posterity is the gravest instance of unfilial conduct (IV. i. 26).

3. *Politics.*—Mencius has no scheme of social reconstruction. Existing social usages (*e.g.*, concubinage) and the existing political arrangement—an empire consisting of small States, each with its own king, but owning the supremacy of one State whose ruler is emperor—all this Mencius simply accepts. What he is concerned with is the rectification of moral relations within this existent social framework. He follows the current analysis into the five relations of father and son, sovereign and minister, husband and wife, old and young, friend and friend; and desires the cultivation of the corresponding virtues, affection, righteousness, harmony in difference, order, fidelity (III. i. 4). Of these relations that male and female should dwell together is the greatest (V. i. 2); and within the family we have in service of parents and obedience to elder brothers the fundamental exemplifications of benevolence and righteousness (IV. i. 27, VII. i. 15). Mencius opposes any such obliteration of natural relations as he finds in Mo's doctrine of universal love. Men have 'a root,' *i.e.*, they have a special relation to their parents and therefore a special duty corresponding thereto (III. i. 5). So, too, Mencius opposes all pantisocratic schemes, and teaches that society implies a differentiation of function in which those who labour with the mind govern, and those who labour with their strength are governed (III. i. 4), and in which the teacher of righteousness has his due place (III. ii. 4). In Mencius's doctrine of the State two points are to be noted especially: the emphasis on morality and the democratic bias. Rule is based not on force, but on willing submission accorded to virtue (II. i. 3, IV. ii. 16). If the ruler be virtuous, his influence will extend to all his subjects (IV. i. 20, ii. 5). There is no secret of statecraft—it needs only that the ruler give scope to the innate

goodness of his nature (I. i. 7, II. i. 6). Let him dismiss all talk of 'profit,' and think only of benevolence and righteousness (I. i. 1). In the disordered times of Mencius such a benevolent government, having regard for the people's welfare (IV. i. 3, 9), would be immediately successful (II. i. 1). The truly benevolent ruler has no enemy within the empire (VII. ii. 4). Rulers are the shepherds and parents of their people (I. i. 4, 6), and must make it their first business to see that they (the people) have a certain livelihood, for without that they will abandon themselves to crime (I. i. 7). Mencius is very emphatic on the necessary precedence of a sound economic condition.

'When pulse and grain are as abundant as fire and water, how shall the people be other than virtuous?' (VII. i. 23).

Agriculture, therefore, and then education are prime interests of State (III. i. 3). The strength of a kingdom is in its morale (I. i. 5, IV. i. 1). Destruction is only self-incurred (IV. i. 8). A wise prince will be guided by his ministers (I. ii. 9), but he is himself ultimately responsible for the government of his State (I. ii. 6); he must treat his ministers with respect (II. ii. 2), regarding them as his hands and feet, and they will then regard him as their belly and heart (IV. ii. 3). In the appointment of ministers members of old established families are to be preferred, an ancient kingdom being one in which there are families with this tradition of service (I. ii. 7). Indeed, the art of governing lies in securing the approbation of these great families (IV. i. 6). New men, however, are not to be excluded (I. ii. 7); only the ruler must seek those by whom he may be taught (II. ii. 2). The love of what is good is the main qualification for being a minister, since those who have good thoughts will gladly lay them before him (VI. ii. 13). Let the ruler be guided in the appointment and dismissal of ministers by the voice of the people (I. ii. 7). In a State the people are the most important element; the spirits of the land and grain are the next; and the sovereign is the lightest. Therefore to gain the peasantry is the way to become emperor (VII. ii. 14). The voice of the people is determinative of the sovereignty in a kingdom (I. ii. 10), and in accordance with it a prince may rebel even against the emperor (I. ii. 3). For a sovereign forfeits his rights by wickedness and becomes a 'mere fellow' (I. ii. 8), and, if not removed by the members of the royal house (V. ii. 9) or other ministers (VII. i. 31), he may be removed by the leader of a righteous rebellion. He who takes on him this duty of removing his sovereign must be sure that he is 'the minister of heaven' (II. i. 5, ii. 8). He who is such is marked out by the appointment of heaven showing its will by his personal action and his conduct of affairs, which are such as to win universal submission.

'Heaven sees according as my people see; heaven hears according as my people hear' (V. i. 5).

All wars of ambition are condemned (IV. i. 14, VII. ii. 2), and ministers who encourage the ambitions of their prince are 'robbers of the people' (VI. ii. 9). If right government prevails in the empire, the princes of the feudatory States will be submissive one to another in proportion to their virtue, and not in proportion to their strength (IV. i. 7). As for the details of a truly benevolent government, 'never has any one fallen into error who followed the laws of the ancient kings' (IV. i. 1), whence sovereigns should imitate Yao, and ministers Shun (IV. i. 2, VI. ii. 10).

4. *Religion.*—References in the writings of Mencius to religious worship are merely incidental, and show that he accepted without criticism such worship of spirits and of ancestors as was then current. Of more interest are his references to heaven. He quotes, with approval, from the *Shu King*, or *Book*

of History, the saying that heaven, having produced the inferior people, appointed for them rulers and teachers to be assisting to God (i. ii. 3). As heaven protects all, so, in glad imitation, should the ruler of a great State protect a small State, while the ruler of a small State should recognize the decree of heaven and be willing to serve the great State (i. ii. 3). Such obedience to heaven ensures preservation, while disobedience entails destruction (iv. i. 7). So, generally, 'calamity and happiness are men's own seeking' (ii. i. 4), although heaven's decree and man's causality are both recognized:

'That which happens without a man's causing it is from the ordinance of heaven' (v. i. 6).

There is a decree for everything, and a man should receive submissively what can be correctly ascribed thereto; but he who understands what is meant will not stand under a precipitous wall, nor can death under fetters be justly ascribed to heaven's decree, though death in the discharge of duty may be so attributed (vii. i. 2). Man's duty, therefore, is to do the right and leave the issues to heaven (i. ii. 14, vii. i. 1), which in its painful discipline of individuals has moral ends in view (vi. ii. 15, vii. i. 18). From man's nature we can know heaven; and to preserve one's mental constitution and nourish one's nature is the way to serve heaven (vii. i. 1). To have no shame before heaven is one of the things in which the superior man delights (vii. i. 20). Heaven is the realized ideal after which man aspires (iv. i. 12). Specially suggestive is this saying:

'Though a man may be wicked, yet if he adjust his thoughts, fast, and bathe, he may sacrifice to Shang-ti' (iv. ii. 25; for the full connotation of Shang-ti see art. God [Chinese]).

5. In conclusion a few miscellaneous points may be noted. Mencius indicates the correct method for understanding Nature by obedience and not by violence in the investigation of her phenomena (iv. ii. 26). He gives us a good canon of interpretation:

'Those who explain the Odes (i.e. the classical *Shi King*) may not insist on one term so as to do violence to a sentence, nor on a sentence so as to do violence to the general scope' (v. i. 4).

To this may be added his comment on the *Book of History*, which may perhaps be generalized:

'It would be better to be without the *Book of History* than to give entire credit to it' (vii. ii. 8).

LITERATURE.—J. Legge, *The Chinese Classics*, Hongkong and London, 1861-78, II. The prolegomena and translation, without the Chinese text, are published separately, *The Life and Works of Mencius*, London, 1875. See also E. Faber, *The Mind of Mencius*, tr. A. B. Hutchinson, London, 1882.

P. J. MACLAGAN.

MENDELSSOHN.—Moses Mendelssohn, otherwise Rabbi Moses of Dessau, philosopher, writer, and Bible translator, was born 6th Sept. 1729 at Dessau, where his father, Mendel, was a poor scribe and teacher in a family descended from Rabbi Moses Isserles, a distinguished Talmudist and philosopher of the 16th cent., known as 'Rema.' Moses Mendelssohn was taught Rabbinics by the local Rabbi, David Fränkel, who published a commentary on the Palestinian Talmud in 1742. Fränkel was called to the Rabbinate of Berlin in that year, and the young student followed him there in 1743.

At Berlin Mendelssohn was taught French and English by A. S. Gumperz, and taught himself Latin and Greek. His taste for philosophy was inspired by the study of Maimonides' 'Guide of the Perplexed.' He earned a precarious livelihood as tutor in the home of a well-to-do Jewish silk merchant, Isaac Bernhard, in whose warehouse he afterwards, and throughout his life, was employed as book-keeper. His evenings and all his leisure he devoted to philosophy. He was a follower of Wolf and Leibniz, but was much influenced by the English School of empirics, especially Locke and Shaftesbury. His acquaintance with Lessing, who

was also born in 1729, began in 1754, when he defended Lessing's drama *Die Juden* against adverse criticism. Lessing became his lifelong friend, and dubbed him the second Spinoza. It was Lessing who had Mendelssohn's first work printed—the *Philosophische Gespräche* (1755). In 1755 they collaborated in an anonymous and piquant attack on the Berlin Academy—*Pope ein Metaphysiker!*, and the next year Mendelssohn translated Rousseau's *Discours sur l'origine... de l'inégalité parmi les hommes*, though he ridiculed the author's partiality for man in a state of nature. Though M. Steinschneider (*Cat. libr. Hebr. in Bibl. Bodleiana*, Berlin, 1852-60) enumerates 39 separate Hebrew works of his, and though he wrote Hebrew poetry when a child of ten, it is as a writer of classical German that Mendelssohn became famous. His essay on aesthetics, *Vom Erhabenen* (1757), was studied by Schiller and Herder. In admiration, rather than in Lessing's pity and terror, he found the moral object of Tragedy. The stories about his friendship with Frederick the Great are legendary. On the contrary, he criticized the king's *Poésies diverses* in 1760, and found fault with him for writing in French. The royal displeasure was so great that he was threatened with expulsion from Berlin, but the Marquis d'Argens intervened, and as a 'philosophe mauvais catholique' pleaded with his Majesty as a 'philosophe mauvais protestant' to grant to the 'philosophe mauvais juif' the privilege of residence.

In 1763 Mendelssohn was awarded by the Berlin Academy a prize of 50 ducats for his essay *Ueber die Evidenz der metaphysischen Wissenschaften*. In 1771 the Academy elected him a member, but Frederick the Great refused to confirm the appointment, and no protest, not even that of Queen Ulrica of Sweden, was of any avail to get the king to alter his decision with regard to the 'berühmter Jude.' Among his own brethren, and especially in Berlin, Mendelssohn enjoyed the highest esteem. In 1764 he was freed from Jewish communal dues, and in 1772 further honour was shown to him by his co-religionists.

His Socratic Dialogue called *Phaedon, oder über die Unsterblichkeit der Seele* was published in 1767, and created an immense sensation. It was translated into nearly all European languages. A Hebrew translation by I. B. Bing, with a preface by N. H. Wessely, appeared in 1787, and an English translation by C. Cullen in 1792. That work showed a notable reaction against the free thought of Voltaire, and was welcomed by the learned as well as by those in high places, from Winckelmann to Prince Carl of Brunswick. It was the first book of philosophy read and discussed by Goethe and later by Schiller, and dissuaded from suicide many disappointed or degenerate. Mendelssohn rapidly acquired a unique position among the intellectuals of Berlin. His chief friends, besides Lessing, were Hamann, Gleim, Wieland, and Herder, and the Swiss writers Zimmermann, Iselin, Gessner, and Lavater.

The last was the famous physiognomist, immortalized by Darwin; but it was in his capacity as a very zealous pastor that he caused the Jewish philosopher much trouble and annoyance. He publicly dedicated his translation of C. Bonnet's *Palingénésie philosophique* (1769) to Mendelssohn, and urged him to abandon Judaism and become a Christian. The Jew, having obtained the sanction of the 'Consistorium zur Censur,' replied in his *Schreiben an den Herrn Diakonus Lavater zu Zürich* (1770), manfully defending his position. It was not only yesterday that he had examined the evidences of his own religion. What but conviction would induce him to remain a persecuted Jew? He would never change his religion.

This reply produced a storm of protest. J. B. Kolbe in his *Antiphodon* (1770) was among those who heaped invective upon him in various pamphlets, of which his best biographer, M. Kayserling, gives a full list. Next year an anonymous *Pro-memoriam* appeared in his defence.

The attack, though it injured his health, turned his thoughts to Judaism and the Jews. As early as 1761 he had prepared a Hebrew Commentary on the Logic of Maimonides, and had presented the MS to one Samson Kalin, who published it as his own.

Perhaps his most important work, so far as his influence on his co-religionists was concerned, was his translation of the Pentateuch into classical German with a *biur*, or commentary, in Hebrew. His first assistant was Solomon Dubno († 1813), who quarrelled with Mendelssohn in 1780. Mendelssohn's brother Saul took Dubno's place in the translation of Exodus, but Hartwig Wessely, a scholar born rich, but afterwards impoverished, later became his chief collaborator. This translation of the Pentateuch met with much opposition from the orthodox Rabbis Landau, Jacob Lissa, Elijah Wilna, and Hirschel Levin (formerly chief Rabbi of London and then of Berlin) because of what they thought a heretical mistranslation in Lv 19¹⁷, where 'thou shalt rebuke thy neighbour' was toned down to 'canst'; but the storm of opposition ceased, largely through the aid of Italian Rabbis, who, though orthodox, were also enlightened.

Mendelssohn's translation of the Psalms, which had been begun before 1770, was not completed for thirteen years. During this period the translator took up the work only spasmodically and just when some particular Psalm suited his mood of the moment. It was intended for Christian rather than for Jewish readers, and it was first printed in German characters, not Hebrew. The publisher Maurer bought the MS for 500 thalers and published it in 1783, but lost money by the publication; next year it was published in Hebrew characters with a *biur* by one Joel Löwe. The Song of Deborah and the Song of Songs were the other Bible translations completed by Mendelssohn. His commentary on Ecclesiastes he had published anonymously in 1769. It was clear and sympathetic, but, though greatly admired by Herder, is notable chiefly for a novel division into sections, differing from the traditional chapters. Mendelssohn was a keen opponent of the higher criticism of those days, and scouted Bishop Benjamin Kennicott's textual alterations of the Bible. One immediate result of the translation was a change in the course of education of Jewish boys, and the inculcation of German rather than Jewish ideas. Part of the Jewish Liturgy was also translated by him, viz. the Haggadā, a Passover service—a fact which seems to have escaped the notice of bibliographers.

In 1776 Mendelssohn collected money—and students—for the unsectarian college 'Philanthropin' of Dessau. In 1781 he and his rich disciple, Isaac Daniel Itzig, founded the Jewish Free school in Berlin, the first institution of the kind, where not only Bible and Talmud, but also German, French, and sciences were taught by Jewish and Christian teachers. Similar institutions were afterwards founded on the same plan in Breslau and other cities.

After his wife's death, Lessing had to battle for tolerance in his *Anti-Goeze*, and conceived the idea of meeting the theologians with a comedy. This was the origin of his famous drama *Nathan der Weise*, which appeared in 1779, and which was in some respects a development of his youthful production *Die Juden*. Lessing himself founds the play on the story of the Jew Melchizedek in Boccaccio's *Decameron*. About no German work

except Goethe's *Faust* has so much been written. Nathan is Mendelssohn, Recha his daughter Dorothea, the templar Lessing, the Swiss widow Daja is intended for Lavater, the dervish is Mendelssohn's mathematical friend Abraham Wolf Rechenburg, and so on. The play itself is not a plea for Jews and Judaism, but for toleration and humanity, and an attack upon religious persecution of all kinds. In Vienna it was confiscated. The controversy engendered by *Nathan der Weise* led to a plea for the civil emancipation of the Jews by C. W. von Dohm (*Über die bürgerliche Verbesserung der Juden*, Berlin, 1781), translated into French by Mirabeau (London, 1787). Six hundred copies of this translation were forwarded to Paris for the use of the French States General, but lost in that troublous time, and eventually burnt in the Bastille. In 1782 Mendelssohn published a translation of Manasseh ben Israel's *Esperanza de Israel* (Amsterdam, 1650), with an introduction pleading for emancipation. He was again reproached for remaining a Jew, or for being a 'wobler' between Judaism and Christianity, and this induced him to write his *Jerusalem* (1783), a work on religious power and Judaism. In this book, translated into English in 1783, he vindicated his Judaism and explained why he was not a Christian. It is a plea for the separation of State and Church, and urges that 'Kirchenrecht' is incompatible with true religion. Judaism, he urged, has no dogmas or chains upon belief; Joseph Albo († 1444), who had reduced the thirteen creeds formulated by Maimonides to three (cf. *ERE* iv. 246ⁿ), was no heretic. Judaism required conformity with ceremonial law, but tolerated complete liberty of opinion.

In a Reader for his children, Mendelssohn substitutes in the creeds the words 'I recognize as true and certain' for the words 'I believe.' Ceremonial laws he regarded as a sort of living scripture and the great bond between Jew and Jew, urging that, even if their utility were no longer clear, they were still binding. Actions are our duty, but creeds, symbols, and formulas are the fetters of reason. In this way he reconciled the deism of Leibniz and the English deists with revealed law. His *Jerusalem* and his unfinished *Betrachtungen über Bonnet's Palingenesie* are both pleas for toleration, but not for uniformity of belief. In both he warns his disciples against prejudice, superstition, and even enthusiasm. *Jerusalem* excited an enormous sensation. Kant said that it was incontrovertible, and wrote a highly appreciative letter about it; Mirabeau said that it ought to be translated into every European language; Michaelis found fault with its condemnation of Anglican bishops for consenting to sign the Thirty-nine Articles, and Mendelssohn had to explain his position in the *Berliner Monatschrift*, of which he was one of the founders in 1783. By some contemporaries he was attacked as an atheist and by others as a 'Talmud Rabbi,' but he saw no inconsistency between his philosophical belief and his faith. His Hebrew works are written entirely from the Rabbinical standpoint, and he was a good Talmudist, as is proved by his correspondence with Jacob Emden.

Mendelssohn's *Morgenstunden*, like his Bible translation, was in the first instance intended to lead his son Joseph to a true belief in God. Its publication, in 1785, was designed as a refutation of Spinozism itself as well as of the charge that Lessing was a Spinozist. In 1853 Alexander von Humboldt, in a letter to M. Mortara, described how, in his youth, he and Mendelssohn's sons had heard these very *Morgenstunden* given forth by the philosopher in his study. In the first part Mendelssohn proves the existence of God; the nature of the Divine Being and His characteristics

were to be treated in the second part. Its philosophy is an attempt to advance upon the sensualism of Wolf by the help of English empiricism. He claimed that human common sense, when working hand in hand with reason, was infallible.

Though self-taught, Mendelssohn was neither a dilettante nor a popular philosopher. Hegel depreciates him as a philosopher, but, as a writer of German, his style furnishes the best example of German prose after Goethe and perhaps Lessing. Its characteristic was its Socratic irony. A predecessor of Kant, his writings are far easier to understand. Kant himself was proud that the Jewish scholar had attended one of his lectures, and was always polite to him, though he expressed disappointment that Mendelssohn had not reviewed his *Kritik der reinen Vernunft*, when it appeared in 1784. Simultaneously with the publication of the *Morgenstunden* appeared F. H. Jacobi's treatise *Ueber die Lehre des Spinoza an den Herrn Moses Mendelssohn*. Lavater had rebuked him for not being a Christian; Jacobi now charged him with atheism. He was profoundly disturbed by what he considered a cruel attack, and retaliated with his address *An die Freunde Lessings*. He brought the manuscript to his publisher Voss on 31st Dec. 1785, and died two days later of a paralytic stroke. There is little doubt that Jacobi's attack, in which Lavater, Herder, and Goethe had all sided against the Jewish philosopher, brought about his end.

He left three sons and three daughters. His sons Joseph and Abraham founded the famous banking house of Mendelssohn and Co., which still exists. The former in 1840 reviewed Rossetti's *Dante*. The great musician Felix Mendelssohn was Abraham's son; another grandson, G. B. Mendelssohn, edited the philosopher's complete works in 1843-45.

Mendelssohn's first biographer, his pupil I. A. Euchel, described him as short and broad-shouldered, but feeble and pigeon-breasted, with thick black hair, dark complexion, bright eyes, and high forehead, a voice soft and gentle, and in conversation crisp and persuasive, but never long-winded (*Tôlédôth Rambam*, Berlin, 1786).

There is much difference of opinion among Jews as to whether his influence has been beneficial to them or not. The general view seems to be that it has proved better for Jews than for Judaism. His chief opponents were the 19th cent. Russian intellectuals known as the Maskilim, especially Perez Smolenskin, who denounced him for denying Jewish nationalism, belittled his knowledge of the wisdom of Israel, and characterized him as a merchant rather than a Rabbi. Yet without doubt he was the first and most typical of modern Jews, the first to identify himself with another nation and yet remain a Jew.

'Judaism, which hitherto had impressed the whole mental activity of the Jew,' says Segal in *Aspects of Hebrew Genius* (p. 193), 'was narrowed down by Mendelssohn into a mere religion. . . . He separated the man from the Jew. . . . To Mendelssohn's followers such a dual life became difficult. . . . Traditional Judaism did not easily lend itself to be compressed and squeezed. . . . Mendelssohn's followers experienced the conflict between Judaism and Germanism at every step. . . . They threw off the burden of Judaism. . . . But . . . the period of the great apostasy . . . was followed by a period of religious reform and the readjustment of Judaism to the new conditions of Jewish existence.'

Jewish nationalists of the present time, not quite fairly, regard Mendelssohn as the chief cause of the desire for assimilation felt by a small section of their co-religionists. Mendelssohn was an apologist for religion in general rather than for Judaism in particular. That was his chief merit in a Voltairian age and in sceptical Berlin. The finest epigram about him, and one which he himself would have appreciated, is the distich,

Es ist ein Gott, das sagte Moses schon,
Doch den Beweis gab Moses Mendelssohn.

LITERATURE.—M. Kayserling, *Moses Mendelssohn*, Leipzig, 1862, 1888, is the standard biography; H. G. R. Mirabeau, *Sur Moses Mendelssohn, sur la réforme politique des Juifs et en particulier sur la révolution tentée en leur faveur en 1788 dans la Grande Bretagne*, London, 1787; M. Samuels, *Memoirs of Moses Mendelssohn*, do. 1827; M. Schwab, *Moses Mendelssohn: sa vie et ses œuvres*, Paris, 1868; M. Kayserling, *Moses Mendelssohn: Ungedrucktes und Unbekanntes*, Leipzig, 1883; E. Schreiber, *Moses Mendelssohn und seine Verdienste um das Judentum*, Bonn, 1879; *REV*, *passim*; M. Tuzber, *Šidqat Mosheh*, Hebrew Manuscript (MS Adler no. 163); A. S. Isaacs, *Step by Step*, Philadelphia, 1910. E. N. ADLER.

MENNONITES.—'Mennonites' is the name applied to those Protestant Christians who, on such subjects as the management of the congregation, baptism, oath-taking, ecclesiastical discipline, civil office, and the bearing of arms, agree wholly or partly with Menno Simons, from whom they derive their name.

1. **Distribution.**—The Mennonites have congregations in Switzerland (1500 souls), Germany (18,000), France (1200), Russia (70,000), the United States (about 120,000), and Canada (about 90,000); those in the Netherlands, though not the greatest in number (65,000), are the most important section.

(a) *Switzerland.*—Their true fatherland is Switzerland; they originated there in 1524, when Konrad Grebel and Felix Manz, members of the congregation of Zwingli, dissatisfied with their leader, condemned the baptism of infants as 'the greatest abomination of the devil and the Roman pope.' They founded a separate congregation in 1525 and baptized their members on confession of faith; a year afterwards they rejected the oath. It is possible, though not probable, that their opinions are connected with those of sects of the Middle Ages, especially the Waldenses. They wished to re-establish the Christianity of apostolic times and preserve only the two 'ceremonies' ordained by Christ; therefore they denied the Christian character of the civil authority, rejected paid ministry and the use of the sword, and demanded the exercise of the apostolic excommunication.

In the persecutions of the 16th cent. many of them died as martyrs or fled to South Germany, where they propagated their tenets. In the 17th cent. also the Mennonites in Switzerland were oppressed by the government; imprisonment and deportation to the Italian galleys greatly diminished their number. Again, at the beginning of the 18th cent., the persecution recommenced, and even in 1811 the Mennonites were molested. In the midst of these sufferings there arose differences between them: the more rigid—called 'Amman-sche' or 'Amische' after their leader Jacob Amman—disapproved of every luxury, and demanded that in case of excommunication all intercourse, even between husband and wife, should be, during the period of excommunication, broken off; the less rigid followed Hans Reist; the names of these parties (also 'Obere Mennoniten' and 'Untere Mennoniten') are still preserved among the Mennonites of America.

At the present day the Mennonites in Switzerland are enjoying a new prosperity. They are now free citizens of the State, which allows them exemption from oath-taking and from military service. They have their own organ, *Der Zionspilger* ('The Pilgrim to Zion').

(b) *Germany.*—The Mennonites in Germany have continued to survive in spite of great difficulties and oppressions. In the year 1867 they were obliged to give up one of their characteristics, viz. their defencelessness. Many of them, however, agreed with the resolution of the government, and obtained permission from it to serve in the baggage-train of the army. Interest in their history has been aroused recently by the writings of L. Keller

and Mrs. A. Brons; and, in 1884, in order to prevent the decline of their little number, the Mennonites founded the *Vereinigung der Mennonitengemeinden im deutschen Reiche* ('Union of the Congregations of Mennonites in the German Empire'). Their periodical, *Mennonitische Blätter*, has been issued since 1854.

They have congregations in Alsace, the Bavarian Palatinate, Baden, Württemberg, Hesse, Nassau, at the lower part of the Rhine, in Westphalia, East Friesland, at Hamburg, Friedrichstadt, and in West and East Prussia.

(c) *France*.—In France the Mennonites held their first conference at Toul in 1901; their paper, *Christ seul*, appeared in 1908.

(d) *Russia*.—An emigration of Mennonites to Russia took place when the celebrated empress Catharine had promised them great territories in her empire, where they would be permitted to live according to their own religion and customs. About 2000 left Prussia in 1788; and many others followed them until 1824. At first they suffered many trials, not the least of which were due to discord among themselves. As they persisted in their belief in apostolic succession, their congregation needed an elder who had received the imposition of hands. They prospered, however, in their new fatherland, which gave a shelter also to the fugitive Mennonites from Hungary. At present they have congregations in the districts of Jekaterinoslaw and Tauria, Warsaw, the Crimea, Saratow, Samara, Caucasus, and Chiwa. In their colonies the school management is excellently ordered, the church affairs are managed by the elders of the congregation, and the preachers, selected from among the brethren, fulfil not only the duties of their ministry, but also those of their civil calling.

In 1874 a great danger threatened the Mennonites: exemption from military service was abrogated, and thus the privilege conceded to them by the empress Catharine and the emperor Paul was annihilated. Large numbers of Mennonites prepared to quit Russia; in the years 1874-80 more than 15,000 left for America. This made an impression upon the Russian government; the emperor sent the minister, F. E. I. von Todtleben, to them; after mutual deliberation the resolution was made that the Mennonites could perform their military duties in the forestry of the State. This favourable arrangement has been maintained ever since; the Mennonites, however, according to their old traditions, have always sought to relieve the sufferings of war.

(e) *America*.—The Mennonites are far more numerous in America than in any other country. The first colonists were Dutchmen who, about 1650, settled in New Amsterdam (now New York). Under the pressure of the heavy persecutions in the Rhine-land, thirteen families at Crefeld resolved to emigrate to the New World. They landed on 8th October 1683, three pioneers having already bought 8000 acres of land in Pennsylvania from William Penn, and they founded Germantown (now part of Philadelphia). Seven other families followed in 1688; and from that time the emigration continued during the whole of the 18th cent. and still more during the 19th. In 1820 Swiss Mennonites came to America, followed in 1836 by many South Germans, and afterwards, as we have said, by whole congregations from Russia, besides one from Galicia and one from West Prussia.

The emigrants formed many friendly connexions with the Quakers and other sects, but they preserved their independence. They came with the hope of remaining free from all hindrances in following their own customs and institutions; some of them even entertained the desire to estab-

lish in the New World the true Kingdom of God according to His Ordinance. It was only after long deliberation that they dared to entrust the ministry of baptism and of the Lord's Supper to an elder who had not received the imposition of hands in Europe; and even now the most rigid of them will not permit their fellow-members to enter a 'church.'

The Mennonites have a great regard for their past history—and not unjustly. Their forefathers were the first to protest against slavery; they committed their scruples to writing on 18th April 1688, and delivered the document to the magistrate. In a manly and Christianlike spirit they declared: 'Freedom of conscience reigns here, which is right and rational, and personal freedom ought to reign here for every one, criminals of course excepted.' In the War of Independence their defencelessness was respected; nevertheless many emigrated in 1786 to Canada, as they could not approve of insurrection against the British government. Conservative in all things, they have not even yet, after two centuries, given up their old language, 'Pennsylvania Dutch.'

The Mennonites in America are divided into: (1) Old Mennonites, who form the great majority; their periodicals are the *Mennonitische Rundschau* and *The Herald of Truth* (the Germ. ed., *Herold der Wahrheit*, has ceased to appear since 1901—an evidence of the decline of the German language among them); (2) 'Amish' Mennonites; and (3) the 'General Conference.' Since 1860 the last-mentioned party has endeavoured to form an organization between all the Mennonites of America, respecting the autonomy and the peculiarities of each congregation. The foundation of Bethel College at Newton, Kans., was favoured by them.¹
